SECURITIES AND EXCHANGE COMMISSION

Washington, DC 20549

Form 19b-4

Proposed Rules

By

Public Company Accounting Oversight Board

In accordance with Rule 19b-4 under the
Securities Exchange Act of 1934

1. Text of the Proposed Rule

(a) Pursuant to the provisions of Section 107(b) of the Sarbanes-Oxley Act of 2002 (the "Act"), the Public Company Accounting Oversight Board (the "Board" or the "PCAOB") is filing with the Securities and Exchange Commission ("SEC" or "Commission") a proposed rule, Auditing Standard No. 2, “An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements.” The proposed rule consists of an auditing standard applicable to audits of internal control over financial reporting of issuers by registered public accounting firms and five appendices containing example reports and additional guidance. The proposed rule is attached as Exhibit A to this rule filing.

(b) Not applicable.

(c) Not applicable.

2. Procedures of the Board

(a) The Board approved the proposed rule, and authorized it for filing with the SEC, at its Open Meeting on March 9, 2004. No other action by the Board is necessary for the filing of this proposed rule.

(b) Questions regarding this rule filing may be directed to J. Gordon Seymour, Deputy General Counsel (202-207-9034; seymourg@pcaobus.org), Thomas Ray, Deputy Chief Auditor (202-207-9112; rayt@pcaobus.org), or Laura Phillips, Associate Chief Auditor (202-207-9111; phillipsl@pcaobus.org).

3. <u>Board's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rules</u>

(a) Purpose

Section 103(a)(1) of the Act authorized the PCAOB to establish, by rule, auditing standards to be used by registered public accounting firms in the preparation and issuance of audit reports, as required by the Act. PCAOB Rule 3100, “Compliance with Auditing and Related Professional Practice Standards,” requires auditors to comply with all applicable auditing and related professional practice standards established by the PCAOB. The Board has adopted as interim standards, on an initial, transitional basis, the generally accepted auditing standards described in the American Institute of Certified Public Accountants' ("AICPA") Auditing Standards Board's Statement on Auditing Standards No. 95, *Generally Accepted Auditing Standards,* in existence on April 16, 2003 (the "interim standards").

Section 103(a)(2)(A)(iii) of the Act requires the Board to include in the auditing standards it adopts a standard that describes in each audit report the scope of the auditor’s testing of the internal control structure and procedures of the issuer, required by Section 404(b) of the Act. This standard is the standard referred to in Section 103(a)(2)(A)(iii) and Section 404(b) of the Act.

The statutory basis for the proposed rules is Title I of the Act.

4. <u>Board's Statement on Burden on Competition</u>

The Board does not believe that the proposed rule will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Pursuant to the Act and PCAOB Rule 3100, registered public accounting firms must comply with all applicable auditing and related professional practice standards established by the PCAOB. Although compliance with the proposed rule will impose costs, those costs are necessary in order to implement the requirements of Sections 103 and 404 of the Act and will be imposed in a way that does not disproportionately or unnecessarily burden competition.

5. Board's Statement on Comments on the Proposed Rules Received from Members, Participants or Others

The Board released the proposed Auditing Standard for public comment on October 7, 2003. See Exhibit 2(a)A. The Board received 193 written comment letters relating to its proposal. See Exhibits 2(a)B and 2(a)C.

The Board has carefully considered all comments it has received. In response to the written comments received, the Board has clarified and modified certain aspects of the proposed rules. The Board's response to the comments it received and the changes made to the rules in response to these comments are summarized in Exhibit 3 to this filing.

6. Extension of Time Period for Commission Action

The Board consents to extend to 60 days the time period for Commission action described in Section 19(b)(2) of the Securities Exchange Act of 1934.

7. Basis for Summary Effectiveness Pursuant to Section 19(b)(3) or for Accelerated Effectiveness Pursuant to Section 19(b)(2)

Not applicable.

8. Proposed Rules Based on Rules of Another Board or of the Commission

The proposed rules are not based on the rules of another board or of the Commission.

9. Exhibits

Exhibit A –	Text of the Proposed Rule
Exhibit 1 –	Form of Notice of Proposed Rule for Publication in the Federal Register.
Exhibit 2(a)A –	PCAOB Release No. 2003-017 (October 7, 2003).
Exhibit 2(a)B –	Alphabetical List of Comments
Exhibit 2(a)C –	Written comments on the rule proposed in PCAOB Release No. 2003-017
Exhibit 3 –	PCAOB Release No. 2004-001 (March 9, 2004)

10. Signatures

Pursuant to the requirements of the Act and the Securities Exchange Act of 1934, as amended, the Board has duly caused this filing to be signed on its behalf by the undersigned thereunto duly authorized.

Public Company Accounting Oversight Board

By: ____________________
William J. McDonough
Chairman

EXHIBIT A --Text of the Proposed Rule

Table of Contents

Applicability of Standard

1. This standard establishes requirements and provides directions that apply when an auditor is engaged to audit both a company's financial statements and management's assessment of the effectiveness of internal control over financial reporting.

> Note: The term *auditor* includes both public accounting firms registered with the Public Company Accounting Oversight Board ("PCAOB" or the "Board") and associated persons thereof.

2. A company subject to the reporting requirements of the Securities Exchange Act of 1934 (an "issuer") is required to include in its annual report a report of management on the company's internal control over financial reporting. Registered investment companies, issuers of asset-backed securities, and nonpublic companies are not subject to the reporting requirements mandated by Section 404 of the Sarbanes-Oxley Act of 2002 (the "Act") (PL 107-204). The report of management is required to contain management's assessment of the effectiveness of the company's internal control over financial reporting as of the end of the company's most recent fiscal year, including a statement as to whether the company's internal control over financial reporting is effective. The auditor that audits the company's financial statements included in the annual

report is required to attest to and report on management's assessment. The company is required to file the auditor's attestation report as part of the annual report.

> Note: The term issuer means an issuer (as defined in Section 3 of the Securities Exchange Act of 1934), the securities of which are registered under Section 12 of that Act, or that is required to file reports under Section 15(d) of that Act, or that files or has filed a registration statement with the Securities and Exchange Commission ("SEC" or "Commission") that has not yet become effective under the Securities Act of 1933, and that it has not withdrawn.

> Note: Various parts of this standard summarize legal requirements imposed on issuers by the SEC, as well as legal requirements imposed on auditors by regulatory authorities other than the PCAOB. These parts of the standard are intended to provide context and to promote the auditor's understanding of the relationship between his or her obligations under this standard and his or her other legal responsibilities. The standard does not incorporate these legal requirements by reference and is not an interpretation of those other requirements and should not be so construed. (This Note does not apply to references in the standard to the existing professional standards and the Board's interim auditing and related professional practice standards.)

3. This standard is the standard on attestation engagements referred to in Section 404(b) of the Act. This standard is also the standard referred to in Section 103(a)(2)(A)(iii) of the Act. Throughout this standard, the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting required by Section 404(b) of the Act is referred to as the *audit of internal control over financial reporting*.

> Note: The two terms *audit of internal control over financial reporting* and *attestation of management's assessment of the effectiveness of internal control over financial reporting* refer to the same professional service. The first refers to the process, and the second refers to the result of that process.

Auditor's Objective in an Audit of Internal Control Over Financial Reporting

4. The auditor's objective in an audit of internal control over financial reporting is to express an opinion on management's assessment of the effectiveness of the company's internal control over financial reporting. To form a basis for expressing such an opinion, the auditor must plan and perform the audit to obtain reasonable assurance about whether the company maintained, in all material respects, effective internal control over financial reporting as of the date

specified in management's assessment. The auditor also must audit the company's financial statements as of the date specified in management's assessment because the information the auditor obtains during a financial statement audit is relevant to the auditor's conclusion about the effectiveness of the company's internal control over financial reporting. Maintaining effective internal control over financial reporting means that no material weaknesses exist; therefore, the objective of the audit of internal control over financial reporting is to obtain reasonable assurance that no material weaknesses exist as of the date specified in management's assessment.

5. To obtain reasonable assurance, the auditor evaluates the assessment performed by management and obtains and evaluates evidence about whether the internal control over financial reporting was designed and operated effectively. The auditor obtains this evidence from a number of sources, including using the work performed by others and performing auditing procedures himself or herself.

6. The auditor should be aware that persons who rely on the information concerning internal control over financial reporting include investors, creditors, the board of directors and audit committee, and regulators in specialized industries, such as banking or insurance. The auditor should be aware that external users of financial statements are interested in information on internal control over financial reporting because it enhances the quality of financial reporting and increases their confidence in financial information, including financial information issued between annual reports, such as quarterly information. Information on internal control over financial reporting is also intended to provide an early warning to those inside and outside the company who are in a position to insist on improvements in internal control over financial reporting, such as the audit committee and regulators in specialized industries. Additionally, Section 302 of the Act and Securities Exchange Act Rule 13a-14(a) or 15d-14(a),[1/] whichever applies, require management, with the participation of the principal executive and financial officers, to make quarterly and annual certifications with respect to the company's internal control over financial reporting.

Definitions Related to Internal Control Over Financial Reporting

7. For purposes of management's assessment and the audit of internal control over financial reporting in this standard, *internal control over financial reporting* is defined as follows:

> A process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing

[1/] See 17 C.F.R. 240.13a-14(a) or 17 C.F.R. 240.15d-14(a), whichever applies.

similar functions, and effected by the company's board of directors, management, and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

(1) Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company;

(2) Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and

(3) Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

Note: This definition is the same one used by the SEC in its rules requiring management to report on internal control over financial reporting, except the word "registrant" has been changed to "company" to conform to the wording in this standard. (See Securities Exchange Act Rules 13a-15(f) and 15d-15(f).[2/])

Note: Throughout this standard, *internal control over financial reporting* (singular) refers to the process described in this paragraph. Individual controls or subsets of controls are referred to as *controls* or *controls over financial reporting*.

8. A *control deficiency* exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis.

- A deficiency in *design* exists when (a) a control necessary to meet the control objective is missing or (b) an existing control is not properly designed so that, even if the control operates as designed, the control objective is not always met.

[2/] See 17 C.F.R. 240, 13a-15(f) and 15d-15(f).

- A deficiency in *operation* exists when a properly designed control does not operate as designed, or when the person performing the control does not possess the necessary authority or qualifications to perform the control effectively.

9. A *significant deficiency* is a control deficiency, or combination of control deficiencies, that adversely affects the company's ability to initiate, authorize, record, process, or report external financial data reliably in accordance with generally accepted accounting principles such that there is more than a remote likelihood that a misstatement of the company's annual or interim financial statements that is more than inconsequential will not be prevented or detected.

Note: The term "remote likelihood" as used in the definitions of *significant deficiency* and *material weakness* (paragraph 10) has the same meaning as the term "remote" as used in Financial Accounting Standards Board Statement No. 5, *Accounting for Contingencies* ("FAS No. 5"). Paragraph 3 of FAS No. 5 states:

> When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to remote. This Statement uses the terms *probable*, *reasonably possible*, and *remote* to identify three areas within that range, as follows:
>
> a. *Probable*. The future event or events are likely to occur.
> b. *Reasonably possible*. The chance of the future event or events occurring is more than remote but less than likely.
> c. *Remote*. The chance of the future events or events occurring is slight.

Therefore, the likelihood of an event is "more than remote" when it is either reasonably possible or probable.

Note: A misstatement is *inconsequential* if a reasonable person would conclude, after considering the possibility of further undetected misstatements, that the misstatement, either individually or when aggregated with other misstatements, would clearly be immaterial to the financial statements. If a reasonable person could not reach such a conclusion regarding a particular misstatement, that misstatement is *more than inconsequential*.

10. A *material weakness* is a significant deficiency, or combination of significant deficiencies, that results in more than a remote likelihood that a

material misstatement of the annual or interim financial statements will not be prevented or detected.

Note: In evaluating whether a control deficiency exists and whether control deficiencies, either individually or in combination with other control deficiencies, are significant deficiencies or material weaknesses, the auditor should consider the definitions in paragraphs 8, 9 and 10, and the directions in paragraphs 130 through 137. As explained in paragraph 23, the evaluation of the materiality of the control deficiency should include both quantitative and qualitative considerations. Qualitative factors that might be important in this evaluation include the nature of the financial statement accounts and assertions involved and the reasonably possible future consequences of the deficiency. Furthermore, in determining whether a control deficiency or combination of deficiencies is a significant deficiency or a material weakness, the auditor should evaluate the effect of compensating controls and whether such compensating controls are effective.

11. Controls over financial reporting may be *preventive controls* or *detective controls*.

- Preventive controls have the objective of preventing errors or fraud from occurring in the first place that could result in a misstatement of the financial statements.

- Detective controls have the objective of detecting errors or fraud that have already occurred that could result in a misstatement of the financial statements.

12. Even well-designed controls that are operating as designed might not prevent a misstatement from occurring. However, this possibility may be countered by overlapping preventive controls or partially countered by detective controls. Therefore, effective internal control over financial reporting often includes a combination of preventive and detective controls to achieve a specific control objective. The auditor's procedures as part of either the audit of internal control over financial reporting or the audit of the financial statements are not part of a company's internal control over financial reporting.

Framework Used by Management to Conduct Its Assessment

13. Management is required to base its assessment of the effectiveness of the company's internal control over financial reporting on a suitable, recognized control framework established by a body of experts that followed due-process procedures, including the broad distribution of the framework for public comment. In addition to being available to users of management's reports, a framework is suitable only when it:

- Is free from bias;

- Permits reasonably consistent qualitative and quantitative measurements of a company's internal control over financial reporting;

- Is sufficiently complete so that those relevant factors that would alter a conclusion about the effectiveness of a company's internal control over financial reporting are not omitted; and

- Is relevant to an evaluation of internal control over financial reporting.

Committee of Sponsoring Organizations Framework

14. In the United States, the Committee of Sponsoring Organizations ("COSO") of the Treadway Commission has published *Internal Control – Integrated Framework*. Known as the COSO report, it provides a suitable and available framework for purposes of management's assessment. For that reason, the performance and reporting directions in this standard are based on the COSO framework. Other suitable frameworks have been published in other countries and may be developed in the future. Such other suitable frameworks may be used in an audit of internal control over financial reporting. Although different frameworks may not contain exactly the same elements as COSO, they should have elements that encompass, in general, all the themes in COSO. Therefore, the auditor should be able to apply the concepts and guidance in this standard in a reasonable manner.

15. The COSO framework identifies three primary objectives of internal control: efficiency and effectiveness of operations, financial reporting, and compliance with laws and regulations. The COSO perspective on internal control over financial reporting does not ordinarily include the other two objectives of internal control, which are the effectiveness and efficiency of operations and compliance with laws and regulations. However, the controls that management designs and implements may achieve more than one objective. Also, operations and compliance with laws and regulations directly related to the presentation of and required disclosures in financial statements are encompassed in internal control over financial reporting. Additionally, not all controls relevant to financial reporting are accounting controls. Accordingly, all controls that could materially affect financial reporting, including controls that focus primarily on the effectiveness and efficiency of operations or compliance with laws and regulations and also have a material effect on the reliability of financial reporting, are a part of internal control over financial reporting. More information about the COSO framework is included in the COSO report and in AU sec. 319,

Consideration of Internal Control in a Financial Statement Audit.[3/] The COSO report also discusses special considerations for internal control over financial reporting for small and medium-sized companies.

Inherent Limitations in Internal Control Over Financial Reporting

16. Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper management override. Because of such limitations, there is a risk that material misstatements may not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process. Therefore, it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

The Concept of Reasonable Assurance

17. Management's assessment of the effectiveness of internal control over financial reporting is expressed at the level of *reasonable assurance*. The concept of reasonable assurance is built into the definition of internal control over financial reporting and also is integral to the auditor's opinion.[4/] Reasonable assurance includes the understanding that there is a remote likelihood that material misstatements will not be prevented or detected on a timely basis. Although not absolute assurance, reasonable assurance is, nevertheless, a high level of assurance.

18. Just as there are inherent limitations on the assurance that effective internal control over financial reporting can provide, as discussed in paragraph 16, there are limitations on the amount of assurance the auditor can obtain as a result of performing his or her audit of internal control over financial reporting. Limitations arise because an audit is conducted on a test basis and requires the

[3/] The Board adopted the generally accepted auditing standards, as described in the AICPA Auditing Standards Board's ("ASB") Statement on Auditing Standards No. 95, *Generally Accepted Auditing Standards,* as in existence on April 16, 2003, on an initial, transitional basis. The Statements on Auditing Standards promulgated by the ASB have been codified into the AICPA *Professional Standards,* Volume 1, as AU sections 100 through 900. References in this standard to AU sections refer to those generally accepted auditing standards, as adopted on an interim basis in PCAOB Rule 3200T.

[4/] See *Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports,* Securities and Exchange Commission Release No. 33-8238 (June 5, 2003) [68 FR 36636] for further discussion of reasonable assurance.

exercise of professional judgment. Nevertheless, the audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, testing and evaluating the design and operating effectiveness of internal control over financial reporting, and performing such other procedures as the auditor considers necessary to obtain reasonable assurance about whether internal control over financial reporting is effective.

19. There is no difference in the level of work performed or assurance obtained by the auditor when expressing an opinion on management's assessment of effectiveness or when expressing an opinion directly on the effectiveness of internal control over financial reporting. In either case, the auditor must obtain sufficient evidence to provide a reasonable basis for his or her opinion and the use and evaluation of management's assessment is inherent in expressing either opinion.

> Note: The auditor's report on internal control over financial reporting does not relieve management of its responsibility for assuring users of its financial reports about the effectiveness of internal control over financial reporting.

Management's Responsibilities in an Audit of Internal Control Over Financial Reporting

20. For the auditor to satisfactorily complete an audit of internal control over financial reporting, management must do the following:[5/]

a. Accept responsibility for the effectiveness of the company's internal control over financial reporting;

b. Evaluate the effectiveness of the company's internal control over financial reporting using suitable control criteria;

c. Support its evaluation with sufficient evidence, including documentation; and

d. Present a written assessment of the effectiveness of the company's internal control over financial reporting as of the end of the company's most recent fiscal year.

21. If the auditor concludes that management has not fulfilled the responsibilities enumerated in the preceding paragraph, the auditor should communicate, in writing, to management and the audit committee that the audit

[5/] Management is required to fulfill these responsibilities. See Items 308(a) and (c) of Regulation S-B and S-K, 17 C.F.R. 228.308 (a) and (c) and 229.308 (a) and (c), respectively.

of internal control over financial reporting cannot be satisfactorily completed and that he or she is required to disclaim an opinion. Paragraphs 40 through 46 provide information for the auditor about evaluating management's process for assessing internal control over financial reporting.

Materiality Considerations in an Audit of Internal Control Over Financial Reporting

22. The auditor should apply the concept of materiality in an audit of internal control over financial reporting at both the financial-statement level and at the individual account-balance level. The auditor uses materiality at the financial-statement level in evaluating whether a deficiency, or combination of deficiencies, in controls is a significant deficiency or a material weakness. Materiality at both the financial-statement level and the individual account-balance level is relevant to planning the audit and designing procedures. Materiality at the account-balance level is necessarily lower than materiality at the financial-statement level.

23. The same conceptual definition of materiality that applies to financial reporting applies to information on internal control over financial reporting, including the relevance of both quantitative and qualitative considerations.[6/]

- The quantitative considerations are essentially the same as in an audit of financial statements and relate to whether misstatements that would not be prevented or detected by internal control over financial reporting, individually or collectively, have a quantitatively material effect on the financial statements.

- The qualitative considerations apply to evaluating materiality with respect to the financial statements and to additional factors that relate to the perceived needs of reasonable persons who will rely on the information. Paragraph 6 describes some qualitative considerations.

Fraud Considerations in an Audit of Internal Control Over Financial Reporting

24. The auditor should evaluate all controls specifically intended to address the risks of fraud that have at least a reasonably possible likelihood of having a material effect on the company's financial statements. These controls may be a part of any of the five components of internal control over financial reporting, as discussed in paragraph 49. Controls related to the prevention and detection of

[6/] AU sec. 312, *Audit Risk and Materiality in Conducting an Audit*, provides additional explanation of materiality.

fraud often have a pervasive effect on the risk of fraud. Such controls include, but are not limited to, the:

- Controls restraining misappropriation of company assets that could result in a material misstatement of the financial statements;

- Company's risk assessment processes;

- Code of ethics/conduct provisions, especially those related to conflicts of interest, related party transactions, illegal acts, and the monitoring of the code by management and the audit committee or board;

- Adequacy of the internal audit activity and whether the internal audit function reports directly to the audit committee, as well as the extent of the audit committee's involvement and interaction with internal audit; and

- Adequacy of the company's procedures for handling complaints and for accepting confidential submissions of concerns about questionable accounting or auditing matters.

25. Part of management's responsibility when designing a company's internal control over financial reporting is to design and implement programs and controls to prevent, deter, and detect fraud. Management, along with those who have responsibility for oversight of the financial reporting process (such as the audit committee), should set the proper tone; create and maintain a culture of honesty and high ethical standards; and establish appropriate controls to prevent, deter, and detect fraud. When management and those responsible for the oversight of the financial reporting process fulfill those responsibilities, the opportunities to commit fraud can be reduced significantly.

26. In an audit of internal control over financial reporting, the auditor's evaluation of controls is interrelated with the auditor's evaluation of controls in a financial statement audit, as required by AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*. Often, controls identified and evaluated by the auditor during the audit of internal control over financial reporting also address or mitigate fraud risks, which the auditor is required to consider in a financial statement audit. If the auditor identifies deficiencies in controls designed to prevent and detect fraud during the audit of internal control over financial reporting, the auditor should alter the nature, timing, or extent of procedures to be performed during the financial statement audit to be responsive to such deficiencies, as provided in paragraphs .44 and .45 of AU sec. 316.

Performing an Audit of Internal Control Over Financial Reporting

27. In an audit of internal control over financial reporting, the auditor must obtain sufficient competent evidence about the design and operating effectiveness of controls over all relevant financial statement assertions related to all significant accounts and disclosures in the financial statements. The auditor must plan and perform the audit to obtain reasonable assurance that deficiencies that, individually or in the aggregate, would represent material weaknesses are identified. Thus, the audit is not designed to detect deficiencies in internal control over financial reporting that, individually or in the aggregate, are less severe than a material weakness. Because of the potential significance of the information obtained during the audit of the financial statements to the auditor's conclusions about the effectiveness of internal control over financial reporting, the auditor cannot audit internal control over financial reporting without also auditing the financial statements.

> Note: However, the auditor may audit the financial statements without also auditing internal control over financial reporting, for example, in the case of certain initial public offerings by a company. See the discussion beginning at paragraph 145 for more information about the importance of auditing both internal control over financial reporting as well as the financial statements when the auditor is engaged to audit internal control over financial reporting.

28. The auditor must adhere to the general standards (See paragraphs 30 through 36) and fieldwork and reporting standards (See paragraph 37) in performing an audit of a company's internal control over financial reporting. This involves the following:

a. Planning the engagement;

b. Evaluating management's assessment process;

c. Obtaining an understanding of internal control over financial reporting;

d. Testing and evaluating design effectiveness of internal control over financial reporting;

e. Testing and evaluating operating effectiveness of internal control over financial reporting; and

f. Forming an opinion on the effectiveness of internal control over financial reporting.

29. Even though some requirements of this standard are set forth in a manner that suggests a sequential process, auditing internal control over financial reporting involves a process of gathering, updating, and analyzing information.

Accordingly, the auditor may perform some of the procedures and evaluations described in this section on "Performing an Audit of Internal Control Over Financial Reporting" concurrently.

Applying General, Fieldwork, and Reporting Standards

30. The general standards (See AU sec. 150, *Generally Accepted Auditing Standards*) are applicable to an audit of internal control over financial reporting. These standards require technical training and proficiency as an auditor, independence in fact and appearance, and the exercise of due professional care, including professional skepticism.

31. *Technical Training and Proficiency*. To perform an audit of internal control over financial reporting, the auditor should have competence in the subject matter of internal control over financial reporting.

32. *Independence*. The applicable requirements of independence are largely predicated on four basic principles: (1) an auditor must not act as management or as an employee of the audit client, (2) an auditor must not audit his or her own work, (3) an auditor must not serve in a position of being an advocate for his or her client, and (4) an auditor must not have mutual or conflicting interests with his or her audit client.[7/] If the auditor were to design or implement controls, that situation would place the auditor in a management role and result in the auditor auditing his or her own work. These requirements, however, do not preclude the auditor from making substantive recommendations as to how management may improve the design or operation of the company's internal controls as a by-product of an audit.

33. The auditor must not accept an engagement to provide internal control-related services to an issuer for which the auditor also audits the financial statements unless that engagement has been specifically pre-approved by the audit committee. For any internal control services the auditor provides, management must be actively involved and cannot delegate responsibility for these matters to the auditor. Management's involvement must be substantive and extensive. Management's acceptance of responsibility for documentation and testing performed by the auditor does not by itself satisfy the independence requirements.

34. Maintaining independence, in fact and appearance, requires careful attention, as is the case with all independence issues when work concerning internal control over financial reporting is performed. Unless the auditor and the audit committee are diligent in evaluating the nature and extent of services

[7/] See the Preliminary Note of Rule 2-01 of Regulation S-X, 17 C.F.R. 210.2-01.

provided, the services might violate basic principles of independence and cause an impairment of independence in fact or appearance.

35. The independent auditor and the audit committee have significant and distinct responsibilities for evaluating whether the auditor's services impair independence in fact or appearance. The test for independence in fact is whether the activities would impede the ability of anyone on the engagement team or in a position to influence the engagement team from exercising objective judgment in the audits of the financial statements or internal control over financial reporting. The test for independence in appearance is whether a reasonable investor, knowing all relevant facts and circumstances, would perceive an auditor as having interests which could jeopardize the exercise of objective and impartial judgments on all issues encompassed within the auditor's engagement.

36. *Due Professional Care*. The auditor must exercise due professional care in an audit of internal control over financial reporting. One important tenet of due professional care is exercising professional skepticism. In an audit of internal control over financial reporting, exercising professional skepticism involves essentially the same considerations as in an audit of financial statements, that is, it includes a critical assessment of the work that management has performed in evaluating and testing controls.

37. *Fieldwork and Reporting Standards*. This standard establishes the fieldwork and reporting standards applicable to an audit of internal control over financial reporting.

38. The concept of materiality, as discussed in paragraphs 22 and 23, underlies the application of the general and fieldwork standards.

Planning the Engagement

39. The audit of internal control over financial reporting should be properly planned and assistants, if any, are to be properly supervised. When planning the audit of internal control over financial reporting, the auditor should evaluate how the following matters will affect the auditor's procedures:

- Knowledge of the company's internal control over financial reporting obtained during other engagements.
- Matters affecting the industry in which the company operates, such as financial reporting practices, economic conditions, laws and regulations, and technological changes.
- Matters relating to the company's business, including its organization, operating characteristics, capital structure, and distribution methods.

- The extent of recent changes, if any, in the company, its operations, or its internal control over financial reporting.

- Management's process for assessing the effectiveness of the company's internal control over financial reporting based upon control criteria.

- Preliminary judgments about materiality, risk, and other factors relating to the determination of material weaknesses.

- Control deficiencies previously communicated to the audit committee or management.

- Legal or regulatory matters of which the company is aware.

- The type and extent of available evidence related to the effectiveness of the company's internal control over financial reporting.

- Preliminary judgments about the effectiveness of internal control over financial reporting.

- The number of significant business locations or units, including management's documentation and monitoring of controls over such locations or business units. (Appendix B, paragraphs B1 through B17, discusses factors the auditor should evaluate to determine the locations at which to perform auditing procedures.)

Evaluating Management's Assessment Process

40. The auditor must obtain an understanding of, and evaluate, management's process for assessing the effectiveness of the company's internal control over financial reporting. When obtaining the understanding, the auditor should determine whether management has addressed the following elements:

- Determining which controls should be tested, including controls over all relevant assertions related to all significant accounts and disclosures in the financial statements. Generally, such controls include:

  – Controls over initiating, authorizing, recording, processing, and reporting significant accounts and disclosures and related assertions embodied in the financial statements.

- Controls over the selection and application of accounting policies that are in conformity with generally accepted accounting principles.
- Antifraud programs and controls.
- Controls, including information technology general controls, on which other controls are dependent.
- Controls over significant nonroutine and nonsystematic transactions, such as accounts involving judgments and estimates.
- Company level controls (as described in paragraph 53), including:
  - The control environment and
  - Controls over the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; to initiate, authorize, record, and process journal entries in the general ledger; and to record recurring and nonrecurring adjustments to the financial statements (for example, consolidating adjustments, report combinations, and reclassifications).

    Note: References to the period-end financial reporting process in this standard refer to the preparation of both annual and quarterly financial statements.

• Evaluating the likelihood that failure of the control could result in a misstatement, the magnitude of such a misstatement, and the degree to which other controls, if effective, achieve the same control objectives.

• Determining the locations or business units to include in the evaluation for a company with multiple locations or business units (See paragraphs B1 through B17).

• Evaluating the design effectiveness of controls.

• Evaluating the operating effectiveness of controls based on procedures sufficient to assess their operating effectiveness. Examples of such procedures include testing of the controls by internal audit, testing of controls by others under the direction of management, using a service organization's reports (See paragraphs B18 through B29), inspection of evidence of the application of controls, or testing by means of a self-assessment process, some of which might occur as part of management's ongoing monitoring activities. Inquiry alone is not adequate to complete this evaluation. To evaluate the effectiveness of the company's internal control over financial reporting, management must have evaluated controls over all relevant assertions related to all significant accounts and disclosures.

- Determining the deficiencies in internal control over financial reporting that are of such a magnitude and likelihood of occurrence that they constitute significant deficiencies or material weaknesses.

- Communicating findings to the auditor and to others, if applicable.

- Evaluating whether findings are reasonable and support management's assessment.

41. As part of the understanding and evaluation of management's process, the auditor should obtain an understanding of the results of procedures performed by others. Others include internal audit and third parties working under the direction of management, including other auditors and accounting professionals engaged to perform procedures as a basis for management's assessment. Inquiry of management and others is the beginning point for obtaining an understanding of internal control over financial reporting, but inquiry alone is not adequate for reaching a conclusion on any aspect of internal control over financial reporting effectiveness.

Note: Management cannot use the auditor's procedures as part of the basis for its assessment of the effectiveness of internal control over financial reporting.

42. *Management's Documentation*. When determining whether management's documentation provides reasonable support for its assessment, the auditor should evaluate whether such documentation includes the following:

- The design of controls over all relevant assertions related to all significant accounts and disclosures in the financial statements. The documentation should include the five components of internal control over financial reporting as discussed in paragraph 49, including the control environment and company-level controls as described in paragraph 53;

- Information about how significant transactions are initiated, authorized, recorded, processed and reported;

- Sufficient information about the flow of transactions to identify the points at which material misstatements due to error or fraud could occur;

- Controls designed to prevent or detect fraud, including who performs the controls and the related segregation of duties;

- Controls over the period-end financial reporting process;

- Controls over safeguarding of assets (See paragraphs C1 through C6); and

- The results of management's testing and evaluation.

43. Documentation might take many forms, such as paper, electronic files, or other media, and can include a variety of information, including policy manuals, process models, flowcharts, job descriptions, documents, and forms. The form and extent of documentation will vary depending on the size, nature, and complexity of the company.

44. Documentation of the design of controls over relevant assertions related to significant accounts and disclosures is evidence that controls related to management's assessment of the effectiveness of internal control over financial reporting, including changes to those controls, have been identified, are capable of being communicated to those responsible for their performance, and are capable of being monitored by the company. Such documentation also provides the foundation for appropriate communication concerning responsibilities for performing controls and for the company's evaluation of and monitoring of the effective operation of controls.

45. Inadequate documentation of the design of controls over relevant assertions related to significant accounts and disclosures is a deficiency in the company's internal control over financial reporting. As discussed in paragraph 138, the auditor should evaluate this documentation deficiency. The auditor might conclude that the deficiency is only a deficiency, or that the deficiency represents a significant deficiency or a material weakness. In evaluating the deficiency as to its significance, the auditor should determine whether management can demonstrate the monitoring component of internal control over financial reporting.

46. Inadequate documentation also could cause the auditor to conclude that there is a limitation on the scope of the engagement.

Obtaining an Understanding of Internal Control Over Financial Reporting

47. The auditor should obtain an understanding of the design of specific controls by applying procedures that include:

- Making inquiries of appropriate management, supervisory, and staff personnel;
- Inspecting company documents;
- Observing the application of specific controls; and
- Tracing transactions through the information system relevant to financial reporting.

48. The auditor could also apply additional procedures to obtain an understanding of the design of specific controls.

49. The auditor must obtain an understanding of the design of controls related to each component of internal control over financial reporting, as discussed below.

- *Control Environment*. Because of the pervasive effect of the control environment on the reliability of financial reporting, the auditor's preliminary judgment about its effectiveness often influences the nature, timing, and extent of the tests of operating effectiveness considered necessary. Weaknesses in the control environment should cause the auditor to alter the nature, timing, or extent of tests of operating effectiveness that otherwise should have been performed in the absence of the weaknesses.
- *Risk Assessment*. When obtaining an understanding of the company's risk assessment process, the auditor should evaluate whether management has identified the risks of material misstatement in the significant accounts and disclosures and related assertions of the financial statements and has implemented controls to prevent or detect errors or fraud that could result in material misstatements. For example, the risk assessment process should address how management considers the possibility of unrecorded transactions or identifies and analyzes significant estimates recorded in the financial statements. Risks relevant to reliable financial reporting also relate to specific events or transactions.
- *Control Activities*. The auditor's understanding of control activities relates to the controls that management has implemented to

prevent or detect errors or fraud that could result in material misstatement in the accounts and disclosures and related assertions of the financial statements. For the purposes of evaluating the effectiveness of internal control over financial reporting, the auditor's understanding of control activities encompasses a broader range of accounts and disclosures than what is normally obtained for the financial statement audit.

- *Information and Communication*. The auditor's understanding of management's information and communication involves understanding the same systems and processes that he or she addresses in an audit of financial statements. In addition, this understanding includes a greater emphasis on comprehending the safeguarding controls and the processes for authorization of transactions and the maintenance of records, as well as the period-end financial reporting process (discussed further beginning at paragraph 76).

- *Monitoring*. The auditor's understanding of management's monitoring of controls extends to and includes its monitoring of all controls, including control activities, which management has identified and designed to prevent or detect material misstatement in the accounts and disclosures and related assertions of the financial statements.

50. Some controls (such as company-level controls, described in paragraph 53) might have a pervasive effect on the achievement of many overall objectives of the control criteria. For example, information technology general controls over program development, program changes, computer operations, and access to programs and data help ensure that specific controls over the processing of transactions are operating effectively. In contrast, other controls are designed to achieve specific objectives of the control criteria. For example, management generally establishes specific controls, such as accounting for all shipping documents, to ensure that all valid sales are recorded.

51. The auditor should focus on combinations of controls, in addition to specific controls in isolation, in assessing whether the objectives of the control criteria have been achieved. The absence or inadequacy of a specific control designed to achieve the objectives of a specific criterion might not be a deficiency if other controls specifically address the same criterion. Further, when one or more controls achieve the objectives of a specific criterion, the auditor might not need to evaluate other controls designed to achieve those same objectives.

52. *Identifying Company-Level Controls*. Controls that exist at the company-level often have a pervasive impact on controls at the process, transaction, or

application level. For that reason, as a practical consideration, it may be appropriate for the auditor to test and evaluate the design effectiveness of company-level controls first, because the results of that work might affect the way the auditor evaluates the other aspects of internal control over financial reporting.

53. Company-level controls are controls such as the following:

- Controls within the control environment, including tone at the top, the assignment of authority and responsibility, consistent policies and procedures, and company-wide programs, such as codes of conduct and fraud prevention, that apply to all locations and business units (See paragraphs 113 through 115 for further discussion);

- Management's risk assessment process;

- Centralized processing and controls, including shared service environments;

- Controls to monitor results of operations;

- Controls to monitor other controls, including activities of the internal audit function, the audit committee, and self-assessment programs;

- The period-end financial reporting process; and

- Board-approved policies that address significant business control and risk management practices.

Note: The controls listed above are not intended to be a complete list of company-level controls nor is a company required to have all the controls in the list to support its assessment of effective company-level controls. However, ineffective company-level controls are a deficiency that will affect the scope of work performed, particularly when a company has multiple locations or business units, as described in Appendix B.

54. Testing company-level controls alone is not sufficient for the purpose of expressing an opinion on the effectiveness of a company's internal control over financial reporting.

55. *Evaluating the Effectiveness of the Audit Committee's Oversight of the Company's External Financial Reporting and Internal Control Over Financial Reporting*. The company's audit committee plays an important role within the control environment and monitoring components of internal control over financial reporting. Within the control environment, the existence of an effective audit committee helps to set a positive tone at the top. Within the monitoring

component, an effective audit committee challenges the company's activities in the financial arena.

> Note: Although the audit committee plays an important role within the control environment and monitoring components of internal control over financial reporting, management is responsible for maintaining effective internal control over financial reporting. This standard does not suggest that this responsibility has been transferred to the audit committee.

> Note: If no such committee exists with respect to the company, all references to the audit committee in this standard apply to the entire board of directors of the company.[8/] The auditor should be aware that companies whose securities are not listed on a national securities exchange or an automated inter-dealer quotation system of a national securities association (such as the New York Stock Exchange, American Stock Exchange, or NASDAQ) may not be required to have independent directors for their audit committees. In this case, the auditor should not consider the lack of independent directors at these companies indicative, by itself, of a control deficiency. Likewise, the independence requirements of Securities Exchange Act Rule 10A-3[9/] are not applicable to the listing of non-equity securities of a consolidated or at least 50 percent beneficially owned subsidiary of a listed issuer that is subject to the requirements of Securities Exchange Act Rule 10A-3(c)(2).[10/] Therefore, the auditor should interpret references to the audit committee in this standard, as applied to a subsidiary registrant, as being consistent with the provisions of Securities Exchange Act Rule 10A-3(c)(2).[11/] Furthermore, for subsidiary registrants, communications required by this standard to be directed to the audit committee should be made to the same committee or equivalent body that pre-approves the retention of the auditor by or on behalf of the subsidiary registrant pursuant to Rule 2-01(c)(7) of Regulation S-X[12/] (which might be, for example, the audit committee of the subsidiary registrant, the full board of the subsidiary registrant, or the audit committee of the subsidiary registrant's parent). In all cases, the auditor should interpret the terms "board of directors" and "audit committee" in this standard as being consistent with provisions for the use of those terms as defined in relevant SEC rules.

8/ See 15 U.S.C. 78c(a)58 and 15 U.S.C. 7201(a)(3).

9/ See 17 C.F.R. 240.10A-3.

10/ See 17 C.F.R. 240.10A-3(c)(2).

11/ See 17 C.F.R. 240.10A-3(c)(2).

12/ See 17 C.F.R. 210.2-01(c)(7).

56. The company's board of directors is responsible for evaluating the performance and effectiveness of the audit committee; this standard does not suggest that the auditor is responsible for performing a separate and distinct evaluation of the audit committee. However, because of the role of the audit committee within the control environment and monitoring components of internal control over financial reporting, the auditor should assess the effectiveness of the audit committee as part of understanding and evaluating those components.

57. The aspects of the audit committee's effectiveness that are important may vary considerably with the circumstances. The auditor focuses on factors related to the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting, such as the independence of the audit committee members from management and the clarity with which the audit committee's responsibilities are articulated (for example, in the audit committee's charter) and how well the audit committee and management understand those responsibilities. The auditor might also consider the audit committee's involvement and interaction with the independent auditor and with internal auditors, as well as interaction with key members of financial management, including the chief financial officer and chief accounting officer.

58. The auditor might also evaluate whether the right questions are raised and pursued with management and the auditor, including questions that indicate an understanding of the critical accounting policies and judgmental accounting estimates, and the responsiveness to issues raised by the auditor.

59. Ineffective oversight by the audit committee of the company's external financial reporting and internal control over financial reporting should be regarded as at least a significant deficiency and is a strong indicator that a material weakness in internal control over financial reporting exists.

60. *Identifying Significant Accounts*. The auditor should identify significant accounts and disclosures, first at the financial-statement level and then at the account or disclosure-component level. Determining specific controls to test begins by identifying significant accounts and disclosures within the financial statements. When identifying significant accounts, the auditor should evaluate both quantitative and qualitative factors.

61. An account is significant if there is more than a remote likelihood that the account could contain misstatements that individually, or when aggregated with others, could have a material effect on the financial statements, considering the risks of both overstatement and understatement. Other accounts may be significant on a qualitative basis based on the expectations of a reasonable user. For example, investors might be interested in a particular financial statement account even though it is not quantitatively large because it represents an important performance measure.

Note: For purposes of determining significant accounts, the assessment as to likelihood should be made without giving any consideration to the effectiveness of internal control over financial reporting.

62. Components of an account balance subject to differing risks (inherent and control) or different controls should be considered separately as potential significant accounts. For instance, inventory accounts often consist of raw materials (purchasing process), work in process (manufacturing process), finished goods (distribution process), and an allowance for obsolescence.

63. In some cases, separate components of an account might be a significant account because of the company's organizational structure. For example, for a company that has a number of separate business units, each with different management and accounting processes, the accounts at each separate business unit are considered individually as potential significant accounts.

64. An account also may be considered significant because of the exposure to unrecognized obligations represented by the account. For example, loss reserves related to a self-insurance program or unrecorded contractual obligations at a construction contracting subsidiary may have historically been insignificant in amount, yet might represent a more than remote likelihood of material misstatement due to the existence of material unrecorded claims.

65. When deciding whether an account is significant, it is important for the auditor to evaluate both quantitative and qualitative factors, including the:

- Size and composition of the account;
- Susceptibility of loss due to errors or fraud;
- Volume of activity, complexity, and homogeneity of the individual transactions processed through the account;
- Nature of the account (for example, suspense accounts generally warrant greater attention);
- Accounting and reporting complexities associated with the account;
- Exposure to losses represented by the account (for example, loss accruals related to a consolidated construction contracting subsidiary);
- Likelihood (or possibility) of significant contingent liabilities arising from the activities represented by the account;

- Existence of related party transactions in the account; and
- Changes from the prior period in account characteristics (for example, new complexities or subjectivity or new types of transactions).

66. For example, in a financial statement audit, the auditor might not consider the fixed asset accounts significant when there is a low volume of transactions and when inherent risk is assessed as low, even though the balances are material to the financial statements. Accordingly, he or she might decide to perform only substantive procedures on such balances. In an audit of internal control over financial reporting, however, such accounts are significant accounts because of their materiality to the financial statements.

67. As another example, the auditor of the financial statements of a financial institution might not consider trust accounts significant to the institution's financial statements because such accounts are not included in the institution's balance sheet and the associated fee income generated by trust activities is not material. However, in determining whether trust accounts are a significant account for purposes of the audit of internal control over financial reporting, the auditor should assess whether the activities of the trust department are significant to the institution's financial reporting, which also would include considering the contingent liabilities that could arise if a trust department failed to fulfill its fiduciary responsibilities (for example, if investments were made that were not in accordance with stated investment policies). When assessing the significance of possible contingent liabilities, consideration of the amount of assets under the trust department's control may be useful. For this reason, an auditor who has not considered trust accounts significant accounts for purposes of the financial statement audit might determine that they are significant for purposes of the audit of internal control over financial reporting.

68. Identifying Relevant Financial Statement Assertions. For each significant account, the auditor should determine the relevance of each of these financial statement assertions:[13/]

- Existence or occurrence;
- Completeness;
- Valuation or allocation;
- Rights and obligations; and

[13/] See AU sec. 326, *Evidential Matter*, which provides additional information on financial statement assertions.

- Presentation and disclosure.

69. To identify relevant assertions, the auditor should determine the source of likely potential misstatements in each significant account. In determining whether a particular assertion is relevant to a significant account balance or disclosure, the auditor should evaluate:

- The nature of the assertion;

- The volume of transactions or data related to the assertion; and

- The nature and complexity of the systems, including the use of information technology by which the company processes and controls information supporting the assertion.

70. *Relevant assertions* are assertions that have a meaningful bearing on whether the account is fairly stated. For example, valuation may not be relevant to the cash account unless currency translation is involved; however, existence and completeness are always relevant. Similarly, valuation may not be relevant to the gross amount of the accounts receivable balance, but is relevant to the related allowance accounts. Additionally, the auditor might, in some circumstances, focus on the presentation and disclosure assertion separately in connection with the period-end financial reporting process.

71. *Identifying Significant Processes and Major Classes of Transactions*. The auditor should identify each significant process over each major class of transactions affecting significant accounts or groups of accounts. Major classes of transactions are those classes of transactions that are significant to the company's financial statements. For example, at a company whose sales may be initiated by customers through personal contact in a retail store or electronically through use of the internet, these types of sales would be two major classes of transactions within the sales process if they were both significant to the company's financial statements. As another example, at a company for which fixed assets is a significant account, recording depreciation expense would be a major class of transactions.

72. Different types of major classes of transactions have different levels of inherent risk associated with them and require different levels of management supervision and involvement. For this reason, the auditor might further categorize the identified major classes of transactions by transaction type: routine, nonroutine, and estimation.

- Routine transactions are recurring financial activities reflected in the accounting records in the normal course of business (for example, sales, purchases, cash receipts, cash disbursements, payroll).

- Nonroutine transactions are activities that occur only periodically (for example, taking physical inventory, calculating depreciation expense, adjusting for foreign currencies). A distinguishing feature of nonroutine transactions is that data involved are generally not part of the routine flow of transactions.

- Estimation transactions are activities that involve management judgments or assumptions in formulating account balances in the absence of a precise means of measurement (for example, determining the allowance for doubtful accounts, establishing warranty reserves, assessing assets for impairment).

73. Most processes involve a series of tasks such as capturing input data, sorting and merging data, making calculations, updating transactions and master files, generating transactions, and summarizing and displaying or reporting data. The processing procedures relevant for the auditor to understand the flow of transactions generally are those activities required to initiate, authorize, record, process and report transactions. Such activities include, for example, initially recording sales orders, preparing shipping documents and invoices, and updating the accounts receivable master file. The relevant processing procedures also include procedures for correcting and reprocessing previously rejected transactions and for correcting erroneous transactions through adjusting journal entries.

74. For each significant process, the auditor should:

- Understand the flow of transactions, including how transactions are initiated, authorized, recorded, processed, and reported.

- Identify the points within the process at which a misstatement – including a misstatement due to fraud – related to each relevant financial statement assertion could arise.

- Identify the controls that management has implemented to address these potential misstatements.

- Identify the controls that management has implemented over the prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets.

Note: The auditor frequently obtains the understanding and identifies the controls described above as part of his or her performance of walkthroughs (as described beginning in paragraph 79).

75. The nature and characteristics of a company's use of information technology in its information system affect the company's internal control over financial reporting. AU sec. 319, *Consideration of Internal Control in a Financial Statement Audit*, paragraphs .16 through .20, .30 through .32, and .77 through .79, discuss the effect of information technology on internal control over financial reporting.

76. *Understanding the Period-end Financial Reporting Process*. The period-end financial reporting process includes the following:

- The procedures used to enter transaction totals into the general ledger;
- The procedures used to initiate, authorize, record, and process journal entries in the general ledger;
- Other procedures used to record recurring and nonrecurring adjustments to the annual and quarterly financial statements, such as consolidating adjustments, report combinations, and classifications; and
- Procedures for drafting annual and quarterly financial statements and related disclosures.

77. As part of understanding and evaluating the period-end financial reporting process, the auditor should evaluate:

- The inputs, procedures performed, and outputs of the processes the company uses to produce its annual and quarterly financial statements;
- The extent of information technology involvement in each period-end financial reporting process element;
- Who participates from management;
- The number of locations involved;
- Types of adjusting entries (for example, standard, nonstandard, eliminating, and consolidating); and
- The nature and extent of the oversight of the process by appropriate parties, including management, the board of directors, and the audit committee.

78. The period-end financial reporting process is always a significant process because of its importance to financial reporting and to the auditor's opinions on internal control over financial reporting and the financial statements. The auditor's understanding of the company's period-end financial reporting process and how it interrelates with the company's other significant processes assists the auditor in identifying and testing controls that are the most relevant to financial statement risks.

79. *Performing Walkthroughs*. The auditor should perform at least one walkthrough for each major class of transactions (as identified in paragraph 71). In a walkthrough, the auditor traces a transaction from origination through the company's information systems until it is reflected in the company's financial reports. Walkthroughs provide the auditor with evidence to:

- Confirm the auditor's understanding of the process flow of transactions;

- Confirm the auditor's understanding of the design of controls identified for all five components of internal control over financial reporting, including those related to the prevention or detection of fraud;

- Confirm that the auditor's understanding of the process is complete by determining whether all points in the process at which misstatements related to each relevant financial statement assertion that could occur have been identified;

- Evaluate the effectiveness of the design of controls; and

- Confirm whether controls have been placed in operation.

Note: The auditor can often gain an understanding of the transaction flow, identify and understand controls, and conduct the walkthrough simultaneously.

80. The auditor's walkthroughs should encompass the entire process of initiating, authorizing, recording, processing, and reporting individual transactions and controls for each of the significant processes identified, including controls intended to address the risk of fraud. During the walkthrough, at each point at which important processing procedures or controls occur, the auditor should question the company's personnel about their understanding of what is required by the company's prescribed procedures and controls and determine whether the processing procedures are performed as originally understood and on a timely basis. (Controls might not be performed regularly but still be timely.) During the walkthrough, the auditor should be alert for exceptions to the company's prescribed procedures and controls.

81. While performing a walkthrough, the auditor should evaluate the quality of the evidence obtained and perform walkthrough procedures that produce a level of evidence consistent with the objectives listed in paragraph 79. Rather than reviewing copies of documents and making inquiries of a single person at the company, the auditor should follow the process flow of actual transactions using the same documents and information technology that company personnel use and make inquiries of relevant personnel involved in significant aspects of the process or controls. To corroborate information at various points in the walkthrough, the auditor might ask personnel to describe their understanding of the previous and succeeding processing or control activities and to demonstrate what they do. In addition, inquiries should include follow-up questions that could help identify the abuse of controls or indicators of fraud. Examples of follow-up inquiries include asking personnel:

- What they do when they find an error or what they are looking for to determine if there is an error (rather than simply asking them if they perform listed procedures and controls); what kind of errors they have found; what happened as a result of finding the errors, and how the errors were resolved. If the person being interviewed has never found an error, the auditor should evaluate whether that situation is due to good preventive controls or whether the individual performing the control lacks the necessary skills.

- Whether they have ever been asked to override the process or controls, and if so, to describe the situation, why it occurred, and what happened.

82. During the period under audit, when there have been significant changes in the process flow of transactions, including the supporting computer applications, the auditor should evaluate the nature of the change(s) and the effect on related accounts to determine whether to walk through transactions that were processed both before and after the change.

> Note: Unless significant changes in the process flow of transactions, including the supporting computer applications, make it more efficient for the auditor to prepare new documentation of a walkthrough, the auditor may carry his or her documentation forward each year, after updating it for any changes that have taken place.

83. *Identifying Controls to Test*. The auditor should obtain evidence about the effectiveness of controls (either by performing tests of controls himself or herself, or by using the work of others)[14/] for all relevant assertions related to all

[14/] See paragraphs 108 through 126 for additional direction on using the work of others.

significant accounts and disclosures in the financial statements. After identifying significant accounts, relevant assertions, and significant processes, the auditor should evaluate the following to identify the controls to be tested:

- Points at which errors or fraud could occur;

- The nature of the controls implemented by management;

- The significance of each control in achieving the objectives of the control criteria and whether more than one control achieves a particular objective or whether more than one control is necessary to achieve a particular objective; and

- The risk that the controls might not be operating effectively. Factors that affect whether the control might not be operating effectively include the following:

  – Whether there have been changes in the volume or nature of transactions that might adversely affect control design or operating effectiveness;

  – Whether there have been changes in the design of controls;

  – The degree to which the control relies on the effectiveness of other controls (for example, the control environment or information technology general controls);

  – Whether there have been changes in key personnel who perform the control or monitor its performance;

  – Whether the control relies on performance by an individual or is automated; and

  – The complexity of the control.

84. The auditor should clearly link individual controls with the significant accounts and assertions to which they relate.

85. The auditor should evaluate whether to test preventive controls, detective controls, or a combination of both for individual relevant assertions related to individual significant accounts. For instance, when performing tests of preventive and detective controls, the auditor might conclude that a deficient preventive control could be compensated for by an effective detective control and, therefore, not result in a significant deficiency or material weakness. For example, a monthly reconciliation control procedure, which is a detective control, might detect an out-of-balance situation resulting from an unauthorized transaction

being initiated due to an ineffective authorization procedure, which is a preventive control. When determining whether the detective control is effective, the auditor should evaluate whether the detective control is sufficient to achieve the control objective to which the preventive control relates.

> Note: Because effective internal control over financial reporting often includes a combination of preventive and detective controls, the auditor ordinarily will test a combination of both.

86. The auditor should apply tests of controls to those controls that are important to achieving each control objective. It is neither necessary to test all controls nor is it necessary to test redundant controls (that is, controls that duplicate other controls that achieve the same objective and already have been tested), unless redundancy is itself a control objective, as in the case of certain computer controls.

87. Appendix B, paragraphs B1 through B17, provide additional direction to the auditor in determining which controls to test when a company has multiple locations or business units. In these circumstances, the auditor should determine significant accounts and their relevant assertions, significant processes, and major classes of transactions based on those that are relevant and significant to the consolidated financial statements. Having made those determinations in relation to the consolidated financial statements, the auditor should then apply the directions in Appendix B.

Testing and Evaluating Design Effectiveness

88. Internal control over financial reporting is effectively designed when the controls complied with would be expected to prevent or detect errors or fraud that could result in material misstatements in the financial statements. The auditor should determine whether the company has controls to meet the objectives of the control criteria by:

- Identifying the company's control objectives in each area;
- Identifying the controls that satisfy each objective; and
- Determining whether the controls, if operating properly, can effectively prevent or detect errors or fraud that could result in material misstatements in the financial statements.

89. Procedures the auditor performs to test and evaluate design effectiveness include inquiry, observation, walkthroughs, inspection of relevant documentation, and a specific evaluation of whether the controls are likely to prevent or detect errors or fraud that could result in misstatements if they are operated as prescribed by appropriately qualified persons.

90. The procedures that the auditor performs in evaluating management's assessment process and obtaining an understanding of internal control over financial reporting also provide the auditor with evidence about the design effectiveness of internal control over financial reporting.

91. The procedures the auditor performs to test and evaluate design effectiveness also might provide evidence about operating effectiveness.

Testing and Evaluating Operating Effectiveness

92. An auditor should evaluate the operating effectiveness of a control by determining whether the control is operating as designed and whether the person performing the control possesses the necessary authority and qualifications to perform the control effectively.

93. *Nature of Tests of Controls*. Tests of controls over operating effectiveness should include a mix of inquiries of appropriate personnel, inspection of relevant documentation, observation of the company's operations, and reperformance of the application of the control. For example, the auditor might observe the procedures for opening the mail and processing cash receipts to test the operating effectiveness of controls over cash receipts. Because an observation is pertinent only at the point in time at which it is made, the auditor should supplement the observation with inquiries of company personnel and inspection of documentation about the operation of such controls at other times. These inquiries might be made concurrently with performing walkthroughs.

94. Inquiry is a procedure that consists of seeking information, both financial and nonfinancial, of knowledgeable persons throughout the company. Inquiry is used extensively throughout the audit and often is complementary to performing other procedures. Inquiries may range from formal written inquiries to informal oral inquiries.

95. Evaluating responses to inquiries is an integral part of the inquiry procedure. Examples of information that inquiries might provide include the skill and competency of those performing the control, the relative sensitivity of the control to prevent or detect errors or fraud, and the frequency with which the control operates to prevent or detect errors or fraud. Responses to inquiries might provide the auditor with information not previously possessed or with corroborative evidence. Alternatively, responses might provide information that differs significantly from other information the auditor obtains (for example, information regarding the possibility of management override of controls). In some cases, responses to inquiries provide a basis for the auditor to modify or perform additional procedures.

96. Because inquiry alone does not provide sufficient evidence to support the operating effectiveness of a control, the auditor should perform additional tests of controls. For example, if the company implements a control activity whereby its sales manager reviews and investigates a report of invoices with unusually high or low gross margins, inquiry of the sales manager as to whether he or she investigates discrepancies would be inadequate. To obtain sufficient evidence about the operating effectiveness of the control, the auditor should corroborate the sales manager's responses by performing other procedures, such as inspecting reports or other documentation used in or generated by the performance of the control, and evaluate whether appropriate actions were taken regarding discrepancies.

97. The nature of the control also influences the nature of the tests of controls the auditor can perform. For example, the auditor might examine documents regarding controls for which documentary evidence exists. However, documentary evidence regarding some aspects of the control environment, such as management's philosophy and operating style, might not exist. In circumstances in which documentary evidence of controls or the performance of controls does not exist and is not expected to exist, the auditor's tests of controls would consist of inquiries of appropriate personnel and observation of company activities. As another example, a signature on a voucher package to indicate that the signer approved it does not necessarily mean that the person carefully reviewed the package before signing. The package may have been signed based on only a cursory review (or without any review). As a result, the quality of the evidence regarding the effective operation of the control might not be sufficiently persuasive. If that is the case, the auditor should reperform the control (for example, checking prices, extensions, and additions) as part of the test of the control. In addition, the auditor might inquire of the person responsible for approving voucher packages what he or she looks for when approving packages and how many errors have been found within voucher packages. The auditor also might inquire of supervisors whether they have any knowledge of errors that the person responsible for approving the voucher packages failed to detect.

98. *Timing of Tests of Controls*. The auditor must perform tests of controls over a period of time that is adequate to determine whether, as of the date specified in management's report, the controls necessary for achieving the objectives of the control criteria are operating effectively. The period of time over which the auditor performs tests of controls varies with the nature of the controls being tested and with the frequency with which specific controls operate and specific policies are applied. Some controls operate continuously (for example, controls over sales), while others operate only at certain times (for example, controls over the preparation of monthly or quarterly financial statements and controls over physical inventory counts).

99. The auditor's testing of the operating effectiveness of such controls should occur at the time the controls are operating. Controls "as of" a specific date encompass controls that are relevant to the company's internal control over financial reporting "as of" that specific date, even though such controls might not operate until after that specific date. For example, some controls over the period-end financial reporting process normally operate only after the "as of" date. Therefore, if controls over the December 31, 20X4 period-end financial reporting process operate in January 20X5, the auditor should test the control operating in January 20X5 to have sufficient evidence of operating effectiveness "as of" December 31, 20X4.

100. When the auditor reports on the effectiveness of controls "as of" a specific date and obtains evidence about the operating effectiveness of controls at an interim date, he or she should determine what additional evidence to obtain concerning the operation of the control for the remaining period. In making that determination, the auditor should evaluate:

- The specific controls tested prior to the "as of" date and the results of those tests;
- The degree to which evidence about the operating effectiveness of those controls was obtained;
- The length of the remaining period; and
- The possibility that there have been any significant changes in internal control over financial reporting subsequent to the interim date.

101. For controls over significant nonroutine transactions, controls over accounts or processes with a high degree of subjectivity or judgment in measurement, or controls over the recording of period-end adjustments, the auditor should perform tests of controls closer to or at the "as of" date rather than at an interim date. However, the auditor should balance performing the tests of controls closer to the "as of" date with the need to obtain sufficient evidence of operating effectiveness.

102. Prior to the date specified in management's report, management might implement changes to the company's controls to make them more effective or efficient or to address control deficiencies. In that case, the auditor might not need to evaluate controls that have been superseded. For example, if the auditor determines that the new controls achieve the related objectives of the control criteria and have been in effect for a sufficient period to permit the auditor to assess their design and operating effectiveness by performing tests of

controls,[15/] he or she will not need to evaluate the design and operating effectiveness of the superseded controls for purposes of expressing an opinion on internal control over financial reporting.

103. As discussed in paragraph 207, however, the auditor must communicate all identified significant deficiencies and material weaknesses in controls to the audit committee in writing. In addition, the auditor should evaluate how the design and operating effectiveness of the superseded controls relates to the auditor's reliance on controls for financial statement audit purposes.

104. *Extent of Tests of Controls*. Each year the auditor must obtain sufficient evidence about whether the company's internal control over financial reporting, including the controls for all internal control components, is operating effectively. This means that each year the auditor must obtain evidence about the effectiveness of controls for all relevant assertions related to all significant accounts and disclosures in the financial statements. The auditor also should vary from year to year the nature, timing, and extent of testing of controls to introduce unpredictability into the testing and respond to changes in circumstances. For example, each year the auditor might test the controls at a different interim period; increase or reduce the number and types of tests performed; or change the combination of procedures used.

105. In determining the extent of procedures to perform, the auditor should design the procedures to provide a high level of assurance that the control being tested is operating effectively. In making this determination, the auditor should assess the following factors:

- *Nature of the control*. The auditor should subject manual controls to more extensive testing than automated controls. In some circumstances, testing a single operation of an automated control may be sufficient to obtain a high level of assurance that the control operated effectively, provided that information technology general controls also are operating effectively. For manual controls, sufficient evidence about the operating effectiveness of the controls is obtained by evaluating multiple operations of the control and the results of each operation. The auditor also should assess the complexity of the controls, the significance of the judgments that must be made in connection with their operation, and the level of competence of the person performing the controls that is necessary for the control to operate effectively. As the complexity and level of judgment increase or the level of competence of the person

[15/] Paragraph 179 provides reporting directions in these circumstances when the auditor has not been able to obtain evidence that the new controls were appropriately designed or have been operating effectively for a sufficient period of time.

performing the control decreases, the extent of the auditor's testing should increase.

- *Frequency of operation*. Generally, the more frequently a manual control operates, the more operations of the control the auditor should test. For example, for a manual control that operates in connection with each transaction, the auditor should test multiple operations of the control over a sufficient period of time to obtain a high level of assurance that the control operated effectively. For controls that operate less frequently, such as monthly account reconciliations and controls over the period-end financial reporting process, the auditor may test significantly fewer operations of the control. However, the auditor's evaluation of each operation of controls operating less frequently is likely to be more extensive. For example, when evaluating the operation of a monthly exception report, the auditor should evaluate whether the judgments made with regard to the disposition of the exceptions were appropriate and adequately supported.

  Note: When sampling is appropriate and the population of controls to be tested is large, increasing the population size does not proportionately increase the required sample size.

- *Importance of the control*. Controls that are relatively more important should be tested more extensively. For example, some controls may address multiple financial statement assertions, and certain period-end detective controls might be considered more important than related preventive controls. The auditor should test more operations of such controls or, if such controls operate infrequently, the auditor should evaluate each operation of the control more extensively.

106. *Use of Professional Skepticism when Evaluating the Results of Testing*. The auditor must conduct the audit of internal control over financial reporting and the audit of the financial statements with professional skepticism, which is an attitude that includes a questioning mind and a critical assessment of audit evidence. For example, even though a control is performed by the same employee whom the auditor believes performed the control effectively in prior periods, the control may not be operating effectively during the current period because the employee could have become complacent, distracted, or otherwise not be effectively carrying out his or her responsibilities. Also, regardless of any past experience with the entity or the auditor's beliefs about management's honesty and integrity, the auditor should recognize the possibility that a material misstatement due to fraud could be present. Furthermore, professional skepticism requires the auditor to consider whether evidence obtained suggests that a material misstatement due to fraud has occurred. In exercising

professional skepticism in gathering and evaluating evidence, the auditor must not be satisfied with less-than-persuasive evidence because of a belief that management is honest.

107. When the auditor identifies exceptions to the company's prescribed control procedures, he or she should determine, using professional skepticism, the effect of the exception on the nature and extent of additional testing that may be appropriate or necessary and on the operating effectiveness of the control being tested. A conclusion that an identified exception does not represent a control deficiency is appropriate only if evidence beyond what the auditor had initially planned and beyond inquiry supports that conclusion.

Using the Work of Others

108. In all audits of internal control over financial reporting, the auditor must perform enough of the testing himself or herself so that the auditor's own work provides the principal evidence for the auditor's opinion. The auditor may, however, use the work of others to alter the nature, timing, or extent of the work he or she otherwise would have performed. For these purposes, the work of others includes relevant work performed by internal auditors, company personnel (in addition to internal auditors), and third parties working under the direction of management or the audit committee that provides information about the effectiveness of internal control over financial reporting.

> Note: Because the amount of work related to obtaining sufficient evidence to support an opinion about the effectiveness of controls is not susceptible to precise measurement, the auditor's judgment about whether he or she has obtained the principal evidence for the opinion will be qualitative as well as quantitative. For example, the auditor might give more weight to work he or she performed on pervasive controls and in areas such as the control environment than on other controls, such as controls over low-risk, routine transactions.

109. The auditor should evaluate whether to use the work performed by others in the audit of internal control over financial reporting. To determine the extent to which the auditor may use the work of others to alter the nature, timing, or extent of the work the auditor would have otherwise performed, in addition to obtaining the principal evidence for his or her opinion, the auditor should:

a. Evaluate the nature of the controls subjected to the work of others (See paragraphs 112 through 116);

b. Evaluate the competence and objectivity of the individuals who performed the work (See paragraphs 117 through 122); and

c. Test some of the work performed by others to evaluate the quality and effectiveness of their work (See paragraphs 123 through 125).

Note: AU sec. 322, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements*, applies to using the work of internal auditors in an audit of the financial statements. The auditor may apply the relevant concepts described in that section to using the work of others in the audit of internal control over financial reporting.

110. The auditor must obtain sufficient evidence to support his or her opinion. Judgments about the sufficiency of evidence obtained and other factors affecting the auditor's opinion, such as the significance of identified control deficiencies, should be those of the auditor. Evidence obtained through the auditor's direct personal knowledge, observation, reperformance, and inspection is generally more persuasive than information obtained indirectly from others, such as from internal auditors, other company personnel, or third parties working under the direction of management.

111. The requirement that the auditor's own work must provide the principal evidence for the auditor's opinion is one of the boundaries within which the auditor determines the work he or she must perform himself or herself in the audit of internal control over financial reporting. Paragraphs 112 through 125 provide more specific and definitive direction on how the auditor makes this determination, but the directions allow the auditor significant flexibility to use his or her judgment to determine the work necessary to obtain the principal evidence and to determine when the auditor can use the work of others rather than perform the work himself or herself. Regardless of the auditor's determination of the work that he or she must perform himself or herself, the auditor's responsibility to report on the effectiveness of internal control over financial reporting rests solely with the auditor; this responsibility cannot be shared with the other individuals whose work the auditor uses. Therefore, when the auditor uses the work of others, the auditor is responsible for the results of their work.

112. *Evaluating the Nature of the Controls Subjected to the Work of Others*. The auditor should evaluate the following factors when evaluating the nature of the controls subjected to the work of others. As these factors increase in significance, the need for the auditor to perform his or her own work on those controls increases. As these factors decrease in significance, the need for the auditor to perform his or her own work on those controls decreases.

- The materiality of the accounts and disclosures that the control addresses and the risk of material misstatement.

- The degree of judgment required to evaluate the operating effectiveness of the control (that is, the degree to which the evaluation of the effectiveness of the control requires evaluation of subjective factors rather than objective testing).

- The pervasiveness of the control.

- The level of judgment or estimation required in the account or disclosure.

- The potential for management override of the control.

113. Because of the nature of the controls in the control environment, the auditor should not use the work of others to reduce the amount of work he or she performs on controls in the control environment. The auditor should, however, consider the results of work performed in this area by others because it might indicate the need for the auditor to increase his or her work.

114. The control environment encompasses the following factors:[16/]

- Integrity and ethical values;

- Commitment to competence;

- Board of directors or audit committee participation;

- Management's philosophy and operating style;

- Organizational structure;

- Assignment of authority and responsibility; and

- Human resource policies and procedures.

115. Controls that are part of the control environment include, but are not limited to, controls specifically established to prevent and detect fraud that is at least reasonably possible to result in material misstatement of the financial statements.

Note: The term "reasonably possible" has the same meaning as in FAS No. 5. See the first note to paragraph 9 for further discussion.

116. The auditor should perform the walkthroughs (as discussed beginning at paragraph 79) himself or herself because of the degree of judgment required in

16/ See the COSO report and paragraph .110 of AU sec. 319, *Internal Control in a Financial Statement Audit*, for additional information about the factors included in the control environment.

performing this work. However, to provide additional evidence, the auditor may also review the work of others who have performed and documented walkthroughs. In evaluating whether his or her own evidence provides the principal evidence, the auditor's work on the control environment and in performing walkthroughs constitutes an important part of the auditor's own work.

117. *Evaluating the Competence and Objectivity of Others*. The extent to which the auditor may use the work of others depends on the degree of competence and objectivity of the individuals performing the work. The higher the degree of competence and objectivity, the greater use the auditor may make of the work; conversely, the lower the degree of competence and objectivity, the less use the auditor may make of the work. Further, the auditor should not use the work of individuals who have a low degree of objectivity, regardless of their level of competence. Likewise, the auditor should not use the work of individuals who have a low level of competence regardless of their degree of objectivity.

118. When evaluating the competence and objectivity of the individuals performing the tests of controls, the auditor should obtain, or update information from prior years, about the factors indicated in the following paragraph. The auditor should determine whether to test the existence and quality of those factors and, if so, the extent to which to test the existence and quality of those factors, based on the intended effect of the work of others on the audit of internal control over financial reporting.

119. Factors concerning the competence of the individuals performing the tests of controls include:

- Their educational level and professional experience.
- Their professional certification and continuing education.
- Practices regarding the assignment of individuals to work areas.
- Supervision and review of their activities.
- Quality of the documentation of their work, including any reports or recommendations issued.
- Evaluation of their performance.

120. Factors concerning the objectivity of the individuals performing the tests of controls include:

- The organizational status of the individuals responsible for the work of others ("testing authority") in testing controls, including—

a. Whether the testing authority reports to an officer of sufficient status to ensure sufficient testing coverage and adequate consideration of, and action on, the findings and recommendations of the individuals performing the testing.

b. Whether the testing authority has direct access and reports regularly to the board of directors or the audit committee.

c. Whether the board of directors or the audit committee oversees employment decisions related to the testing authority.

- Policies to maintain the individuals' objectivity about the areas being tested, including—

a. Policies prohibiting individuals from testing controls in areas in which relatives are employed in important or internal control-sensitive positions.

b. Policies prohibiting individuals from testing controls in areas to which they were recently assigned or are scheduled to be assigned upon completion of their controls testing responsibilities.

121. Internal auditors normally are expected to have greater competence with regard to internal control over financial reporting and objectivity than other company personnel. Therefore, the auditor may be able to use their work to a greater extent than the work of other company personnel. This is particularly true in the case of internal auditors who follow the *International Standards for the Professional Practice of Internal Auditing* issued by the Institute of Internal Auditors. If internal auditors have performed an extensive amount of relevant work and the auditor determines they possess a high degree of competence and objectivity, the auditor could use their work to the greatest extent an auditor could use the work of others. On the other hand, if the internal audit function reports solely to management, which would reduce internal auditors' objectivity, or if limited resources allocated to the internal audit function result in very limited testing procedures on its part or reduced competency of the internal auditors, the auditor should use their work to a much lesser extent and perform more of the testing himself or herself.

122. When determining how the work of others will alter the nature, timing, or extent of the auditor's work, the auditor should assess the interrelationship of the nature of the controls, as discussed in paragraph 112, and the competence and objectivity of those who performed the work, as discussed in paragraphs 117 through 121. As the significance of the factors listed in paragraph 112 increases, the ability of the auditor to use the work of others decreases at the same time

that the necessary level of competence and objectivity of those who perform the work increases. For example, for some pervasive controls, the auditor may determine that using the work of internal auditors to a limited degree would be appropriate and that using the work of other company personnel would not be appropriate because other company personnel do not have a high enough degree of objectivity as it relates to the nature of the controls.

123. *Testing the Work of Others*. The auditor should test some of the work of others to evaluate the quality and effectiveness of the work. The auditor's tests of the work of others may be accomplished by either (a) testing some of the controls that others tested or (b) testing similar controls not actually tested by others.

124. The nature and extent of these tests depend on the effect of the work of others on the auditor's procedures but should be sufficient to enable the auditor to make an evaluation of the overall quality and effectiveness of the work the auditor is considering. The auditor also should assess whether this evaluation has an effect on his or her conclusions about the competence and objectivity of the individuals performing the work.

125. In evaluating the quality and effectiveness of the work of others, the auditor should evaluate such factors as to whether the:

- Scope of work is appropriate to meet the objectives.
- Work programs are adequate.
- Work performed is adequately documented, including evidence of supervision and review.
- Conclusions are appropriate in the circumstances.
- Reports are consistent with the results of the work performed.

126. The following examples illustrate how to apply the directions discussed in this section:

- *Controls over the period-end financial reporting process*. Many of the controls over the period-end financial reporting process address significant risks of misstatement of the accounts and disclosures in the annual and quarterly financial statements, may require significant judgment to evaluate their operating effectiveness, may have a higher potential for management override, and may affect accounts that require a high level of judgment or estimation. Therefore, the auditor could determine that, based on the nature of controls over the period-end financial reporting process, he or she would need to perform more of the tests of those controls himself or herself. Further, because of the nature of the controls, the auditor should use the work of others only if the degree of competence and objectivity of the individuals performing the work is high; therefore, the auditor might use the work of internal auditors to some extent but not the work of others within the company.

- *Information technology general controls*. Information technology general controls are part of the control activities component of internal control; therefore, the nature of the controls might permit the auditor to use the work of others. For example, program change controls over routine maintenance changes may have a highly pervasive effect, yet involve a low degree of judgment in evaluating their operating effectiveness, can be subjected to objective testing, and have a low potential for management override. Therefore, the auditor could determine that, based on the nature of these program change controls, the auditor could use the work of others to a moderate extent so long as the degree of competence and objectivity of the individuals performing the test is at an appropriate level. On the other hand, controls to detect attempts to override controls that prevent unauthorized journal entries from being posted may have a highly pervasive effect, may involve a high degree of judgment in evaluating their operating effectiveness, may involve a subjective evaluation, and may have a reasonable possibility for management override. Therefore, the auditor could determine that, based on the nature of these controls over systems access, he or she would need to perform more of the tests of those controls himself or herself. Further, because of the nature of the controls, the auditor should use the work of others only if the degree of competence and objectivity of the individuals performing the tests is high.

- *Management self-assessment of controls*. As described in paragraph 40, management may test the operating effectiveness of controls using a self-assessment process. Because such an assessment is made by the same personnel who are responsible for performing the control, the individuals performing the self-assessment do not have sufficient objectivity as it relates to the subject matter. Therefore, the auditor should not use their work.

- *Controls over the calculation of depreciation of fixed assets*. Controls over the calculation of depreciation of fixed assets are usually not pervasive, involve a low degree of judgment in evaluating their operating effectiveness, and can be subjected to objective testing. If these conditions describe the controls over the calculation of depreciation of fixed assets and if there is a low potential for management override, the auditor could determine that, based on the nature of these controls, the auditor could use the work of others to a large extent (perhaps entirely) so long as the degree of competence and objectivity of the individuals performing the test is at an appropriate level.

- *Alternating tests of controls*. Many of the controls over accounts payable, including controls over cash disbursements, are usually not pervasive, involve a low degree of judgment in evaluating their operating effectiveness, can be subjected to objective testing, and have a low potential for management override. When these conditions describe the controls over accounts payable, the auditor could determine that, based on the nature of these controls, he or she could use the work of others to a large extent (perhaps entirely) so long as the degree of competence and objectivity of the individuals performing the test is at an appropriate level. However, if the company recently implemented a major information technology change that significantly affected controls over cash disbursements, the auditor might decide to use the work of others to a lesser extent in the audit immediately following the information technology change and then return, in subsequent years, to using the work of others to a large extent in this area. As another example, the auditor might use the work of others for testing controls over the depreciation of fixed assets (as described in the point above) for several years' audits but decide one year to perform some extent of the work himself or herself to gain an understanding of these controls beyond that provided by performing a walkthrough.

Forming an Opinion on the Effectiveness of Internal Control Over Financial Reporting

127. When forming an opinion on internal control over financial reporting, the auditor should evaluate all evidence obtained from all sources, including:

- The adequacy of the assessment performed by management and the results of the auditor's evaluation of the design and tests of operating effectiveness of controls;

- The negative results of substantive procedures performed during the financial statement audit (for example, recorded and unrecorded adjustments identified as a result of the performance of the auditing procedures); and

- Any identified control deficiencies.

128. As part of this evaluation, the auditor should review all reports issued during the year by internal audit (or similar functions, such as loan review in a financial institution) that address controls related to internal control over financial reporting and evaluate any control deficiencies identified in those reports. This review should include reports issued by internal audit as a result of operational audits or specific reviews of key processes if those reports address controls related to internal control over financial reporting.

129. *Issuing an Unqualified Opinion*. The auditor may issue an unqualified opinion only when there are no identified material weaknesses and when there have been no restrictions on the scope of the auditor's work. The existence of a material weakness requires the auditor to express an adverse opinion on the effectiveness of internal control over financial reporting (See paragraph 175), while a scope limitation requires the auditor to express a qualified opinion or a disclaimer of opinion, depending on the significance of the limitation in scope (See paragraph 178).

130. *Evaluating Deficiencies in Internal Control Over Financial Reporting*. The auditor must evaluate identified control deficiencies and determine whether the deficiencies, individually or in combination, are significant deficiencies or material weaknesses. The evaluation of the significance of a deficiency should include both quantitative and qualitative factors.

131. The auditor should evaluate the significance of a deficiency in internal control over financial reporting initially by determining the following:

- The likelihood that a deficiency, or a combination of deficiencies, could result in a misstatement of an account balance or disclosure; and

- The magnitude of the potential misstatement resulting from the deficiency or deficiencies.

132. The significance of a deficiency in internal control over financial reporting depends on the *potential* for a misstatement, not on whether a misstatement actually has occurred.

133. Several factors affect the *likelihood* that a deficiency, or a combination of deficiencies, could result in a misstatement of an account balance or disclosure. The factors include, but are not limited to, the following:

- The nature of the financial statement accounts, disclosures, and assertions involved; for example, suspense accounts and related party transactions involve greater risk.

- The susceptibility of the related assets or liability to loss or fraud; that is, greater susceptibility increases risk.

- The subjectivity, complexity, or extent of judgment required to determine the amount involved; that is, greater subjectivity, complexity, or judgment, like that related to an accounting estimate, increases risk.

- The cause and frequency of known or detected exceptions for the operating effectiveness of a control; for example, a control with an observed non-negligible deviation rate is a deficiency.

- The interaction or relationship of the control with other controls; that is, the interdependence or redundancy of the control.

- The interaction of the deficiencies; for example, when evaluating a combination of two or more deficiencies, whether the deficiencies could affect the same financial statement accounts and assertions.

- The possible future consequences of the deficiency.

134. When evaluating the likelihood that a deficiency or combination of deficiencies could result in a misstatement, the auditor should evaluate how the controls interact with other controls. There are controls, such as information technology general controls, on which other controls depend. Some controls function together as a group of controls. Other controls overlap, in the sense that these other controls achieve the same objective.

135. Several factors affect the magnitude of the misstatement that could result from a deficiency or deficiencies in controls. The factors include, but are not limited to, the following:

- The financial statement amounts or total of transactions exposed to the deficiency.

- The volume of activity in the account balance or class of transactions exposed to the deficiency that has occurred in the current period or that is expected in future periods.

136. In evaluating the magnitude of the potential misstatement, the auditor should recognize that the maximum amount that an account balance or total of transactions can be overstated is generally the recorded amount. However, the recorded amount is not a limitation on the amount of potential understatement. The auditor also should recognize that the risk of misstatement might be different for the maximum possible misstatement than for lesser possible amounts.

137. When evaluating the significance of a deficiency in internal control over financial reporting, the auditor also should determine the level of detail and degree of assurance that would satisfy prudent officials in the conduct of their own affairs that they have reasonable assurance that transactions are recorded as necessary to permit the preparation of financial statements in conformity with generally accepted accounting principles. If the auditor determines that the deficiency would prevent prudent officials in the conduct of their own affairs from concluding that they have reasonable assurance,[17/] then the auditor should deem the deficiency to be at least a significant deficiency. Having determined in this manner that a deficiency represents a significant deficiency, the auditor must further evaluate the deficiency to determine whether individually, or in combination with other deficiencies, the deficiency is a material weakness.

> Note: Paragraphs 9 and 10 provide the definitions of significant deficiency and material weakness, respectively.

138. Inadequate documentation of the design of controls and the absence of sufficient documented evidence to support management's assessment of the operating effectiveness of internal control over financial reporting are control deficiencies. As with other control deficiencies, the auditor should evaluate these deficiencies as to their significance.

139. The interaction of qualitative considerations that affect internal control over financial reporting with quantitative considerations ordinarily results in deficiencies in the following areas being at least significant deficiencies in internal control over financial reporting:

- Controls over the selection and application of accounting policies that are in conformity with generally accepted accounting principles;
- Antifraud programs and controls;
- Controls over non-routine and non-systematic transactions; and
- Controls over the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; initiate, authorize, record, and process journal entries into the general ledger; and record recurring and nonrecurring adjustments to the financial statements

[17/] See SEC Staff Accounting Bulletin Topic 1M2, *Immaterial Misstatements That Are Intentional*, for further discussion about the level of detail and degree of assurance that would satisfy prudent officials in the conduct of their own affairs.

140. Each of the following circumstances should be regarded as at least a significant deficiency and as a strong indicator that a material weakness in internal control over financial reporting exists:

- Restatement of previously issued financial statements to reflect the correction of a misstatement.

  Note: The correction of a misstatement includes misstatements due to error or fraud; it does not include restatements to reflect a change in accounting principle to comply with a new accounting principle or a voluntary change from one generally accepted accounting principle to another generally accepted accounting principle.

- Identification by the auditor of a material misstatement in financial statements in the current period that was not initially identified by the company's internal control over financial reporting. (This is a strong indicator of a material weakness even if management subsequently corrects the misstatement.)

- Oversight of the company's external financial reporting and internal control over financial reporting by the company's audit committee is ineffective. (Paragraphs 55 through 59 present factors to evaluate when determining whether the audit committee is ineffective.)

- The internal audit function or the risk assessment function is ineffective at a company for which such a function needs to be effective for the company to have an effective monitoring or risk assessment component, such as for very large or highly complex companies.

  Note: The evaluation of the internal audit or risk assessment functions is similar to the evaluation of the audit committee, as described in paragraphs 55 through 59, that is, the evaluation is made within the context of the monitoring and risk assessment components. The auditor is not required to make a separate evaluation of the effectiveness and performance of these functions. Instead, the auditor should base his or her evaluation on evidence obtained as part of evaluating the monitoring and risk assessment components of internal control over financial reporting.

- For complex entities in highly regulated industries, an ineffective regulatory compliance function. This relates solely to those aspects of the ineffective regulatory compliance function in which associated violations of laws and regulations could have a material effect on the reliability of financial reporting.

- Identification of fraud of any magnitude on the part of senior management.

  Note: The auditor is required to plan and perform procedures to obtain reasonable assurance that material misstatement caused by fraud is detected by the auditor. However, for the purposes of evaluating and reporting deficiencies in internal control over financial reporting, the auditor should evaluate fraud of any magnitude (including fraud resulting in immaterial misstatements) on the part of senior management of which he or she is aware. Furthermore, for the purposes of this circumstance, "senior management" includes the principal executive and financial officers signing the company's certifications as required under Section 302 of the Act as well as any other member of management who play a significant role in the company's financial reporting process.

- Significant deficiencies that have been communicated to management and the audit committee remain uncorrected after some reasonable period of time.

- An ineffective control environment.

141. Appendix D provides examples of significant deficiencies and material weaknesses.

Requirement for Written Representations

142. In an audit of internal control over financial reporting, the auditor should obtain written representations from management:

a. Acknowledging management's responsibility for establishing and maintaining effective internal control over financial reporting;

b. Stating that management has performed an assessment of the effectiveness of the company's internal control over financial reporting and specifying the control criteria;

c. Stating that management did not use the auditor's procedures performed during the audits of internal control over financial reporting or the financial statements as part of the basis for management's assessment of the effectiveness of internal control over financial reporting;

d. Stating management's conclusion about the effectiveness of the company's internal control over financial reporting based on the control criteria as of a specified date;

e. Stating that management has disclosed to the auditor all deficiencies in the design or operation of internal control over financial reporting identified as part of management's assessment, including separately disclosing to the auditor all such deficiencies that it believes to be significant deficiencies or material weaknesses in internal control over financial reporting;

f. Describing any material fraud and any other fraud that, although not material, involves senior management or management or other employees who have a significant role in the company's internal control over financial reporting;

g. Stating whether control deficiencies identified and communicated to the audit committee during previous engagements pursuant to paragraph 207 have been resolved, and specifically identifying any that have not; and

h. Stating whether there were, subsequent to the date being reported on, any changes in internal control over financial reporting or other factors that might significantly affect internal control over financial reporting, including any corrective actions taken by management with regard to significant deficiencies and material weaknesses.

143. The failure to obtain written representations from management, including management's refusal to furnish them, constitutes a limitation on the scope of the audit sufficient to preclude an unqualified opinion. As discussed further in paragraph 178, when management limits the scope of the audit, the auditor should either withdraw from the engagement or disclaim an opinion. Further, the auditor should evaluate the effects of management's refusal on his or her ability to rely on other representations, including, if applicable, representations obtained in an audit of the company's financial statements.

144. AU sec. 333, *Management Representations*, explains matters such as who should sign the letter, the period to be covered by the letter, and when to obtain an updating letter.

Relationship of an Audit of Internal Control over Financial Reporting to an Audit of Financial Statements

145. The audit of internal control over financial reporting should be integrated with the audit of the financial statements. The objectives of the procedures for

the audits are not identical, however, and the auditor must plan and perform the work to achieve the objectives of both audits.

146. The understanding of internal control over financial reporting the auditor obtains and the procedures the auditor performs for purposes of expressing an opinion on management's assessment are interrelated with the internal control over financial reporting understanding the auditor obtains and procedures the auditor performs to assess control risk for purposes of expressing an opinion on the financial statements. As a result, it is efficient for the auditor to coordinate obtaining the understanding and performing the procedures.

Tests of Controls in an Audit of Internal Control Over Financial Reporting

147. The objective of the tests of controls in an audit of internal control over financial reporting is to obtain evidence about the effectiveness of controls to support the auditor's opinion on whether management's assessment of the effectiveness of the company's internal control over financial reporting is fairly stated. The auditor's opinion relates to the effectiveness of the company's internal control over financial reporting as of a *point in time* and *taken as a whole*.

148. To express an opinion on internal control over financial reporting effectiveness as of a *point in time*, the auditor should obtain evidence that internal control over financial reporting has operated effectively for a sufficient period of time, which may be less than the entire period (ordinarily one year) covered by the company's financial statements. To express an opinion on internal control over financial reporting effectiveness *taken as a whole*, the auditor must obtain evidence about the effectiveness of controls over all relevant assertions related to all significant accounts and disclosures in the financial statements. This requires that the auditor test the design and operating effectiveness of controls he or she ordinarily would not test if expressing an opinion only on the financial statements.

149. When concluding on the effectiveness of internal control over financial reporting for purposes of expressing an opinion on management's assessment, the auditor should incorporate the results of any additional tests of controls performed to achieve the objective related to expressing an opinion on the financial statements, as discussed in the following section.

Tests of Controls in an Audit of Financial Statements

150. To express an opinion on the financial statements, the auditor ordinarily performs tests of controls and substantive procedures. The objective of the tests of controls the auditor performs for this purpose is to assess control risk. To assess control risk for specific financial statement assertions at less than the maximum, the auditor is required to obtain evidence that the relevant controls operated effectively during the *entire period* upon which the auditor plans to

place reliance on those controls. However, the auditor is not required to assess control risk at less than the maximum for *all* relevant assertions and, for a variety of reasons, the auditor may choose not to do so.[18/]

151. When concluding on the effectiveness of controls for the purpose of assessing control risk, the auditor also should evaluate the results of any additional tests of controls performed to achieve the objective related to expressing an opinion on management's assessment, as discussed in paragraphs 147 through 149. Consideration of these results may require the auditor to alter the nature, timing, and extent of substantive procedures and to plan and perform further tests of controls, particularly in response to identified control deficiencies.

Effect of Tests of Controls on Substantive Procedures

152. Regardless of the assessed level of control risk or the assessed risk of material misstatement in connection with the audit of the financial statements, the auditor should perform substantive procedures for all relevant assertions related to all significant accounts and disclosures. Performing procedures to express an opinion on internal control over financial reporting does not diminish this requirement.

153. The substantive procedures that the auditor should perform consist of tests of details of transactions and balances and analytical procedures. Before using the results obtained from substantive analytical procedures, the auditor should either test the design and operating effectiveness of controls over financial information used in the substantive analytical procedures or perform other procedures to support the completeness and accuracy of the underlying information. For significant risks of material misstatement, it is unlikely that audit evidence obtained from substantive analytical procedures alone will be sufficient.

154. When designing substantive analytical procedures, the auditor also should evaluate the risk of management override of controls. As part of this process, the auditor should evaluate whether such an override might have allowed adjustments outside of the normal period-end financial reporting process to have been made to the financial statements. Such adjustments might have resulted in artificial changes to the financial statement relationships being analyzed, causing the auditor to draw erroneous conclusions. For this reason, substantive analytical procedures alone are not well suited to detecting fraud.

155. The auditor's substantive procedures must include reconciling the financial statements to the accounting records. The auditor's substantive procedures also should include examining material adjustments made during the course of

18/ See paragraph 160 for additional documentation requirements when the auditor assesses control risk as other than low.

preparing the financial statements. Also, other auditing standards require auditors to perform specific tests of details in the financial statement audit. For instance, AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*, requires the auditor to perform certain tests of details to further address the risk of management override, whether or not a specific risk of fraud has been identified. Paragraph .34 of AU Sec. 330, *The Confirmation Process*, states that there is a presumption that the auditor will request the confirmation of accounts receivable. Similarly, paragraph .01 of AU Sec. 331, *Inventories*, states that observation of inventories is a generally accepted auditing procedure and that the auditor who issues an opinion without this procedure "has the burden of justifying the opinion expressed."

156. If, during the audit of internal control over financial reporting, the auditor identifies a control deficiency, he or she should determine the effect on the nature, timing, and extent of substantive procedures to be performed to reduce the risk of material misstatement of the financial statements to an appropriately low level.

Effect of Substantive Procedures on the Auditor's Conclusions About the Operating Effectiveness of Controls

157. In an audit of internal control over financial reporting, the auditor should evaluate the effect of the findings of all substantive auditing procedures performed in the audit of financial statements on the effectiveness of internal control over financial reporting. This evaluation should include, but not be limited to:

- The auditor's risk evaluations in connection with the selection and application of substantive procedures, especially those related to fraud (See paragraph 26);
- Findings with respect to illegal acts and related party transactions;
- Indications of management bias in making accounting estimates and in selecting accounting principles; and
- Misstatements detected by substantive procedures. The extent of such misstatements might alter the auditor's judgment about the effectiveness of controls.

158. However, the absence of misstatements detected by substantive procedures does not provide evidence that controls related to the assertion being tested are effective.

Documentation Requirements

159. In addition to the documentation requirements in AU sec. 339, *Audit Documentation*, the auditor should document:

- The understanding obtained and the evaluation of the design of each of the five components of the company's internal control over financial reporting;
- The process used to determine significant accounts and disclosures and major classes of transactions, including the determination of the locations or business units at which to perform testing;
- The identification of the points at which misstatements related to relevant financial statement assertions could occur within significant accounts and disclosures and major classes of transactions;
- The extent to which the auditor relied upon work performed by others as well as the auditor's assessment of their competence and objectivity;
- The evaluation of any deficiencies noted as a result of the auditor's testing; and
- Other findings that could result in a modification to the auditor's report.

160. For a company that has effective internal control over financial reporting, the auditor ordinarily will be able to perform sufficient testing of controls to be able to assess control risk for all relevant assertions related to significant accounts and disclosures at a low level. If, however, the auditor assesses control risk as other than low for certain assertions or significant accounts, the auditor should document the reasons for that conclusion. Examples of when it is appropriate to assess control risk as other than low include:

- When a control over a relevant assertion related to a significant account or disclosure was superseded late in the year and only the new control was tested for operating effectiveness.
- When a material weakness existed during the period under audit and was corrected by the end of the period.

161. The auditor also should document the effect of a conclusion that control risk is other than low for any relevant assertions related to any significant

accounts in connection with the audit of the financial statements on his or her opinion on the audit of internal control over financial reporting.

Reporting on Internal Control Over Financial Reporting

Management's Report

162. Management is required to include in its annual report its assessment of the effectiveness of the company's internal control over financial reporting in addition to its audited financial statements as of the end of the most recent fiscal year. Management's report on internal control over financial reporting is required to include the following:[19/]

- A statement of management's responsibility for establishing and maintaining adequate internal control over financial reporting for the company;

- A statement identifying the framework used by management to conduct the required assessment of the effectiveness of the company's internal control over financial reporting;

- An assessment of the effectiveness of the company's internal control over financial reporting as of the end of the company's most recent fiscal year, including an explicit statement as to whether that internal control over financial reporting is effective; and

- A statement that the registered public accounting firm that audited the financial statements included in the annual report has issued an attestation report on management's assessment of the company's internal control over financial reporting.

163. Management should provide, both in its report on internal control over financial reporting and in its representation letter to the auditor, a written conclusion about the effectiveness of the company's internal control over financial reporting. The conclusion about the effectiveness of a company's internal control over financial reporting can take many forms; however, management is required to state a direct conclusion about whether the company's internal control over financial reporting is effective. This standard, for example, includes the phrase "management's assessment that W Company maintained effective internal control over financial reporting as of [*date*]" to illustrate such a conclusion. Other phrases, such as "management's assessment that W Company's internal control over financial reporting as of [*date*] is sufficient to meet the stated objectives," also might be used. However, the conclusion

[19/] See Item 308(a) of Regulation S-B and S-K, 17 C.F.R. 228.308(a) and 17 C.F.R. 229.308(a), respectively.

should not be so subjective (for example, "very effective internal control") that people having competence in and using the same or similar criteria would not ordinarily be able to arrive at similar conclusions.

164. Management is precluded from concluding that the company's internal control over financial reporting is effective if there are one or more material weaknesses.[20/] In addition, management is required to disclose all material weaknesses that exist as of the end of the most recent fiscal year.

165. Management might be able to accurately represent that internal control over financial reporting, as of the end of the company's most recent fiscal year, is effective even if one or more material weaknesses existed during the period. To make this representation, management must have changed the internal control over financial reporting to eliminate the material weaknesses sufficiently in advance of the "as of" date and have satisfactorily tested the effectiveness over a period of time that is adequate for it to determine whether, as of the end of the fiscal year, the design and operation of internal control over financial reporting is effective.[21/]

Auditor's Evaluation of Management's Report

166. With respect to management's report on its assessment, the auditor should evaluate the following matters:

a. Whether management has properly stated its responsibility for establishing and maintaining adequate internal control over financial reporting.

b. Whether the framework used by management to conduct the evaluation is suitable. (As discussed in paragraph 14, the framework described in COSO constitutes a suitable and available framework.)

[20] See Item 308(a)(3) of Regulation S-B and S-K, 17 C.F.R. 228.308(a) and 17 C.F.R. 229.308(a), respectively.

[21] However, when the reason for a change in internal control over financial reporting is the correction of a material weakness, management and the auditor should evaluate whether the reason for the change and the circumstances surrounding the change are material information necessary to make the disclosure about the change not misleading in a filing subject to certification under Securities Exchange Act Rule 13a-14(a) or 15d-14(a), 17 C.F.R. 240.13a-14(a) or 17 C.F.R. 240.15d-14(a). See discussion beginning at paragraph 200 for further direction.

c. Whether management's assessment of the effectiveness of internal control over financial reporting, as of the end of the company's most recent fiscal year, is free of material misstatement.

d. Whether management has expressed its assessment in an acceptable form.

– Management is required to state whether the company's internal control over financial reporting is effective.

– A negative assurance statement indicating that, "Nothing has come to management's attention to suggest that the company's internal control over financial reporting is not effective," is not acceptable.

– Management is not permitted to conclude that the company's internal control over financial reporting is effective if there are one or more material weaknesses in the company's internal control over financial reporting.

e. Whether material weaknesses identified in the company's internal control over financial reporting, if any, have been properly disclosed, including material weaknesses corrected during the period.[22/]

Auditor's Report on Management's Assessment of Internal Control Over Financial Reporting

167. The auditor's report on management's assessment of the effectiveness of internal control over financial reporting must include the following elements:

a. A title that includes the word *independent*;

b. An identification of management's conclusion about the effectiveness of the company's internal control over financial reporting as of a specified date based on the control criteria [for example, criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)];

22/ See paragraph 206 for direction when a material weakness was corrected during the fourth quarter and the auditor believes that modification to the disclosures about changes in internal control over financial reporting are necessary for the annual certifications to be accurate and to comply with the requirements of Section 302 of the Act.

c. An identification of the title of the management report that includes management's assessment (the auditor should use the same description of the company's internal control over financial reporting as management uses in its report);

d. A statement that the assessment is the responsibility of management;

e. A statement that the auditor's responsibility is to express an opinion on the assessment and an opinion on the company's internal control over financial reporting based on his or her audit;

f. A definition of internal control over financial reporting as stated in paragraph 7;

g. A statement that the audit was conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States);

h. A statement that the standards of the Public Company Accounting Oversight Board require that the auditor plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects;

i. A statement that an audit includes obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as the auditor considered necessary in the circumstances;

j. A statement that the auditor believes the audit provides a reasonable basis for his or her opinions;

k. A paragraph stating that, because of inherent limitations, internal control over financial reporting may not prevent or detect misstatements and that projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate;

l. The auditor's opinion on whether management's assessment of the effectiveness of the company's internal control over financial reporting as of the specified date is fairly stated, in all material respects, based on the control criteria (See discussion beginning at paragraph 162);

m. The auditor's opinion on whether the company maintained, in all material respects, effective internal control over financial reporting as of the specified date, based on the control criteria;

n. The manual or printed signature of the auditor's firm;

o. The city and state (or city and country, in the case of non-U.S. auditors) from which the auditor's report has been issued; and

p. The date of the audit report.

168. Example A-1 in Appendix A is an illustrative auditor's report for an unqualified opinion on management's assessment of the effectiveness of the company's internal control over financial reporting and an unqualified opinion on the effectiveness of the company's internal control over financial reporting.

169. *Separate or Combined Reports*. The auditor may choose to issue a combined report (that is, one report containing both an opinion on the financial statements and the opinions on internal control over financial reporting) or separate reports on the company's financial statements and on internal control over financial reporting. Example A-7 in Appendix A is an illustrative combined audit report on internal control over financial reporting. Appendix A also includes examples of separate reports on internal control over financial reporting.

170. If the auditor chooses to issue a separate report on internal control over financial reporting, he or she should add the following paragraph to the auditor's report on the financial statements:

> We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of W Company's internal control over financial reporting as of December 31, 20X3, based on [*identify control criteria*] and our report dated [*date of report, which should be the same as the date of the report on the financial statements*] expressed [*include nature of opinions*].

and add the following paragraph to the report on internal control over financial reporting:

> We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [*identify financial statements*] of W Company and our report dated [*date of report, which should be the same as the date of the report on the effectiveness of*

internal control over financial reporting] expressed [*include nature of opinion*].

171. *Report Date*. As stated previously, the auditor cannot audit internal control over financial reporting without also auditing the financial statements. Therefore, the reports should be dated the same.

172. When the auditor elects to issue a combined report on the audit of the financial statements and the audit of internal control over financial reporting, the audit opinion will address multiple reporting periods for the financial statements presented but only the end of the most recent fiscal year for the effectiveness of internal control over financial reporting and management's assessment of the effectiveness of internal control over financial reporting. See a combined report in Example A-7 in Appendix A.

173. *Report Modifications*. The auditor should modify the standard report if any of the following conditions exist.

a. Management's assessment is inadequate or management's report is inappropriate. (See paragraph 174.)

b. There is a material weakness in the company's internal control over financial reporting. (See paragraphs 175 through 177.)

c. There is a restriction on the scope of the engagement. (See paragraphs 178 through 181.)

d. The auditor decides to refer to the report of other auditors as the basis, in part, for the auditor's own report. (See paragraphs 182 through 185.)

e. A significant subsequent event has occurred since the date being reported on. (See paragraphs 186 through 189.)

f. There is other information contained in management's report on internal control over financial reporting. (See paragraphs 190 through 192.)

174. *Management's Assessment Inadequate or Report Inappropriate*. If the auditor determines that management's process for assessing internal control over financial reporting is inadequate, the auditor should modify his or her opinion for a scope limitation (discussed further beginning at paragraph 178). If the auditor determines that management's report is inappropriate, the auditor should modify his or her report to include, at a minimum, an explanatory paragraph describing the reasons for this conclusion.

175. *Material Weaknesses*. Paragraphs 130 through 141 describe significant deficiencies and material weaknesses. If there are significant deficiencies that, individually or in combination, result in one or more material weaknesses, management is precluded from concluding that internal control over financial reporting is effective. In these circumstances, the auditor must express an adverse opinion on the company's internal control over financial reporting.

176. When expressing an adverse opinion on the effectiveness of internal control over financial reporting because of a material weakness, the auditor's report must include:

- The definition of a material weakness, as provided in paragraph 10.

- A statement that a material weakness has been identified and included in management's assessment. (If the material weakness has not been included in management's assessment, this sentence should be modified to state that the material weakness has been identified but not included in management's assessment. In this case, the auditor also is required to communicate in writing to the audit committee that the material weakness was not disclosed or identified as a material weakness in management's report.)

- A description of any material weaknesses identified in a company's internal control over financial reporting. This description should provide the users of the audit report with specific information about the nature of any material weakness, and its actual and potential effect on the presentation of the company's financial statements issued during the existence of the weakness. This description also should address requirements described in paragraph 194.

177. Depending on the circumstances, the auditor may express both an unqualified opinion and an other-than-unqualified opinion within the same report on internal control over financial reporting. For example, if management makes an adverse assessment because a material weakness has been identified and not corrected ("…internal control over financial reporting is not effective…"), the auditor would express an unqualified opinion on management's assessment ("…management's assessment that internal control over financial reporting is not effective is fairly stated, in all material respects…"). At the same time, the auditor would express an adverse opinion about the effectiveness of internal control over financial reporting ("In our opinion, because of the effect of the material weakness described…, the company's internal control over financial reporting is not effective."). Example A-2 in Appendix A illustrates the form of the report that is appropriate in this situation. Example A-6 in Appendix A illustrates a report that reflects disagreement between management and the auditor that a material weakness exists.

178. *Scope Limitations*. The auditor can express an unqualified opinion on management's assessment of internal control over financial reporting and an unqualified opinion on the effectiveness of internal control over financial reporting only if the auditor has been able to apply all the procedures necessary in the circumstances. If there are restrictions on the scope of the engagement imposed by the circumstances, the auditor should withdraw from the engagement, disclaim an opinion, or express a qualified opinion. The auditor's decision depends on his or her assessment of the importance of the omitted procedure(s) to his or her ability to form an opinion on management's assessment of internal control over financial reporting and an opinion on the effectiveness of the company's internal control over financial reporting. However, when the restrictions are imposed by management, the auditor should withdraw from the engagement or disclaim an opinion on management's assessment of internal control over financial reporting and the effectiveness of internal control over financial reporting.

179. For example, management might have identified a material weakness in its internal control over financial reporting prior to the date specified in its report and implemented controls to correct it. If management believes that the new controls have been operating for a sufficient period of time to determine that they are both effectively designed and operating, management would be able to include in its assessment its conclusion that internal control over financial reporting is effective as of the date specified. However, if the auditor disagrees with the sufficiency of the time period, he or she would be unable to obtain sufficient evidence that the new controls have been operating effectively for a sufficient period. In that case, the auditor should modify the opinion on the effectiveness of internal control over financial reporting and the opinion on management's assessment of internal control over financial reporting because of a scope limitation.

180. When the auditor plans to disclaim an opinion and the limited procedures performed by the auditor caused the auditor to conclude that a material weakness exists, the auditor's report should include:

- The definition of a material weakness, as provided in paragraph 10.

- A description of any material weaknesses identified in the company's internal control over financial reporting. This description should provide the users of the audit report with specific information about the nature of any material weakness, and its actual and potential effect on the presentation of the company's financial statements issued during the existence of the weakness. This description also should address the requirements in paragraph 194.

181. Example A-3 in Appendix A illustrates the form of report when there is a limitation on the scope of the audit causing the auditor to issue qualified opinions.

Example A-4 illustrates the form of report when restrictions on the scope of the audit cause the auditor to disclaim opinions.

182. *Opinions Based, in Part, on the Report of Another Auditor*. When another auditor has audited the financial statements and internal control over financial reporting of one or more subsidiaries, divisions, branches, or components of the company, the auditor should determine whether he or she may serve as the principal auditor and use the work and reports of another auditor as a basis, in part, for his or her opinions. AU sec. 543, *Part of Audit Performed by Other Independent Auditors*, provides direction on the auditor's decision of whether to serve as the principal auditor of the financial statements. If the auditor decides it is appropriate to serve as the principal auditor of the financial statements, then that auditor also should be the principal auditor of the company's internal control over financial reporting. This relationship results from the requirement that an audit of the financial statements must be performed to audit internal control over financial reporting; only the principal auditor of the financial statements can be the principal auditor of internal control over financial reporting. In this circumstance, the principal auditor of the financial statements needs to participate sufficiently in the audit of internal control over financial reporting to provide a basis for serving as the principal auditor of internal control over financial reporting.

183. When serving as the principal auditor of internal control over financial reporting, the auditor should decide whether to make reference in the report on internal control over financial reporting to the audit of internal control over financial reporting performed by the other auditor. In these circumstances, the auditor's decision is based on factors similar to those of the independent auditor who uses the work and reports of other independent auditors when reporting on a company's financial statements as described in AU sec. 543.

184. The decision about whether to make reference to another auditor in the report on the audit of internal control over financial reporting might differ from the corresponding decision as it relates to the audit of the financial statements. For example, the audit report on the financial statements may make reference to the audit of a significant equity investment performed by another independent auditor, but the report on internal control over financial reporting might not make a similar reference because management's evaluation of internal control over financial reporting ordinarily would not extend to controls at the equity method investee.[23/]

185. When the auditor decides to make reference to the report of the other auditor as a basis, in part, for his or her opinions, the auditor should refer to the

[23/] See Appendix B, paragraph B15, for further discussion of the evaluation of the controls over financial reporting for an equity method investment.

report of the other auditor when describing the scope of the audit and when expressing the opinions.

186. *Subsequent Events*. Changes in internal control over financial reporting or other factors that might significantly affect internal control over financial reporting might occur subsequent to the date as of which internal control over financial reporting is being audited but before the date of the auditor's report. The auditor should inquire of management whether there were any such changes or factors. As described in paragraph 142, the auditor should obtain written representations from management relating to such matters. Additionally, to obtain information about whether changes have occurred that might affect the effectiveness of the company's internal control over financial reporting and, therefore, the auditor's report, the auditor should inquire about and examine, for this subsequent period, the following:

- Relevant internal audit reports (or similar functions, such as loan review in a financial institution) issued during the subsequent period;

- Independent auditor reports (if other than the auditor's) of significant deficiencies or material weaknesses;

- Regulatory agency reports on the company's internal control over financial reporting; and

- Information about the effectiveness of the company's internal control over financial reporting obtained through other engagements.

187. The auditor could inquire about and examine other documents for the subsequent period. Paragraphs .01 through .09 of AU sec. 560, *Subsequent Events*, provides direction on subsequent events for a financial statement audit that also may be helpful to the auditor performing an audit of internal control over financial reporting.

188. If the auditor obtains knowledge about subsequent events that materially and adversely affect the effectiveness of the company's internal control over financial reporting as of the date specified in the assessment, the auditor should issue an adverse opinion on the effectiveness of internal control over financial reporting (and issue an adverse opinion on management's assessment of internal control over financial reporting if management's report does not appropriately assess the affect of the subsequent event). If the auditor is unable to determine the effect of the subsequent event on the effectiveness of the company's internal control over financial reporting, the auditor should disclaim opinions. As described in paragraph 190, the auditor should disclaim an opinion

on management's disclosures about corrective actions taken by the company after the date of management's assessment, if any.

189. The auditor may obtain knowledge about subsequent events with respect to conditions that did not exist at the date specified in the assessment but arose subsequent to that date. If a subsequent event of this type has a material effect on the company, the auditor should include in his or her report an explanatory paragraph describing the event and its effects or directing the reader's attention to the event and its effects as disclosed in management's report. Management's consideration of such events to be disclosed in its report should be limited to a change that has materially affected, or is reasonably likely to materially affect, the company's internal control over financial reporting.

190. *Management's Report Containing Additional Information*. Management's report on internal control over financial reporting may contain information in addition to management's assessment of the effectiveness of its internal control over financial reporting. Such information might include, for example:

- Disclosures about corrective actions taken by the company after the date of management's assessment;
- The company's plans to implement new controls; and
- A statement that management believes the cost of correcting a material weakness would exceed the benefits to be derived from implementing new controls.

191. If management's assessment includes such additional information, the auditor should disclaim an opinion on the information. For example, the auditor should use the following language as the last paragraph of the report to disclaim an opinion on management's cost-benefit statement:

> We do not express an opinion or any other form of assurance on management's statement referring to the costs and related benefits of implementing new controls.

192. If the auditor believes that management's additional information contains a material misstatement of fact, he or she should discuss the matter with management. If the auditor concludes that there is a valid basis for concern, he or she should propose that management consult with some other party whose advice might be useful, such as the company's legal counsel. If, after discussing the matter with management and those management has consulted, the auditor concludes that a material misstatement of fact remains, the auditor should notify management and the audit committee, in writing, of the auditor's views concerning the information. The auditor also should consider consulting the

auditor's legal counsel about further actions to be taken, including the auditor's responsibility under Section 10A of the Securities Exchange Act of 1934.[24/]

> Note: If management makes the types of disclosures described in paragraph 190 outside its report on internal control over financial reporting and includes them elsewhere within its annual report on the company's financial statements, the auditor would not need to disclaim an opinion, as described in paragraph 191. However, in that situation, the auditor's responsibilities are the same as those described in paragraph 192 if the auditor believes that the additional information contains a material misstatement of fact.

193. *Effect of Auditor's Adverse Opinion on Internal Control Over Financial Reporting on the Opinion on Financial Statements*. In some cases, the auditor's report on internal control over financial reporting might describe a material weakness that resulted in an adverse opinion on the effectiveness of internal control over financial reporting while the audit report on the financial statements remains unqualified. Consequently, during the audit of the financial statements, the auditor did not rely on that control. However, he or she performed additional substantive procedures to determine whether there was a material misstatement in the account related to the control. If, as a result of these procedures, the auditor determines that there was not a material misstatement in the account, he or she would be able to express an unqualified opinion on the financial statements.

194. When the auditor's opinion on the financial statements is unaffected by the adverse opinion on the effectiveness of internal control over financial reporting, the report on internal control over financial reporting (or the combined report, if a combined report is issued) should include the following or similar language in the paragraph that describes the material weakness:

> This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 20X3 financial statements, and this report does not affect our report dated [*date of report*] on those financial statements. [*Revise this wording appropriately for use in a combined report*.]

195. Such disclosure is important to ensure that users of the auditor's report on the financial statements understand why the auditor issued an unqualified opinion on those statements.

196. Disclosure is also important when the auditor's opinion on the financial statements is affected by the adverse opinion on the effectiveness of internal control over financial reporting. In that circumstance, the report on internal

[24/] See Section 10A of the Securities Exchange Act of 1934, 15 U.S.C. 78j-1.

control over financial reporting (or the combined report, if a combined report is issued) should include the following or similar language in the paragraph that describes the material weakness:

> This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 20X3 financial statements.

197. *Subsequent Discovery of Information Existing at the Date of the Auditor's Report on Internal Control Over Financial Reporting*. After the issuance of the report on internal control over financial reporting, the auditor may become aware of conditions that existed at the report date that might have affected the auditor's opinions had he or she been aware of them. The auditor's evaluation of such subsequent information is similar to the auditor's evaluation of information discovered subsequent to the date of the report on an audit of financial statements, as described in AU sec. 561, *Subsequent Discovery of Facts Existing at the Date of the Auditor's Report*. That standard requires the auditor to determine whether the information is reliable and whether the facts existed at the date of his or her report. If so, the auditor should determine (1) whether the facts would have changed the report if he or she had been aware of them and (2) whether there are persons currently relying on or likely to rely on the auditor's report. For instance, if previously issued financial statements and the auditor's report have been recalled and reissued to reflect the correction of a misstatement, the auditor should presume that his or her report on the company's internal control over financial reporting as of same specified date also should be recalled and reissued to reflect the material weakness that existed at that date. Based on these considerations, paragraph .06 of AU sec. 561 provides detailed requirements for the auditor.

198. *Filings Under Federal Securities Statutes*. AU sec. 711, *Filings Under Federal Securities Statutes*, describes the auditor's responsibilities when an auditor's report is included in registration statements, proxy statements, or periodic reports filed under the federal securities statutes. The auditor should also apply AU sec. 711 with respect to the auditor's report on management's assessment of the effectiveness of internal control over financial reporting included in such filings. In addition, the direction in paragraph .10 of AU sec. 711 to inquire of and obtain written representations from officers and other executives responsible for financial and accounting matters about whether any events have occurred that have a material effect on the audited financial statements should be extended to matters that could have a material effect on management's assessment of internal control over financial reporting.

199. When the auditor has fulfilled these responsibilities and intends to consent to the inclusion of his or her report on management's assessment of the effectiveness of internal control over financial reporting in the securities filing, the auditor's consent should clearly indicate that both the audit report on financial

statements and the audit report on management's assessment of the effectiveness of internal control over financial reporting (or both opinions if a combined report is issued) are included in his or her consent.

Auditor's Responsibilities for Evaluating Management's Certification Disclosures About Internal Control Over Financial Reporting

Required Management Certifications

200. Section 302 of the Act, and Securities Exchange Act Rule 13a-14(a) or 15d-14(a), whichever applies,[25/] requires a company's management, with the participation of the principal executive and financial officers (the certifying officers), to make the following quarterly and annual certifications with respect to the company's internal control over financial reporting:

- A statement that the certifying officers are responsible for establishing and maintaining internal control over financial reporting;

- A statement that the certifying officers have designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under their supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles; and

- A statement that the report discloses any changes in the company's internal control over financial reporting that occurred during the most recent fiscal quarter (the company's fourth fiscal quarter in the case of an annual report) that have materially affected, or are reasonably likely to materially affect, the company's internal control over financial reporting.

201. When the reason for a change in internal control over financial reporting is the correction of a material weakness, management has a responsibility to determine and the auditor should evaluate whether the reason for the change and the circumstances surrounding that change are material information necessary to make the disclosure about the change not misleading.[26/]

25/ See 17 C.F.R., 240.13a-14a or 15d-14a, whichever applies.

26/ See Securities Exchange Act Rule 12b-20, 17 C.F.R. 240.12b-20.

Auditor Evaluation Responsibilities

202. The auditor's responsibility as it relates to management's quarterly certifications on internal control over financial reporting is different from the auditor's responsibility as it relates to management's annual assessment of internal control over financial reporting. The auditor should perform limited procedures quarterly to provide a basis for determining whether he or she has become aware of any material modifications that, in the auditor's judgment, should be made to the disclosures about changes in internal control over financial reporting in order for the certifications to be accurate and to comply with the requirements of Section 302 of the Act.

203. To fulfill this responsibility, the auditor should perform, on a quarterly basis, the following procedures:

- Inquire of management about significant changes in the design or operation of internal control over financial reporting as it relates to the preparation of annual as well as interim financial information that could have occurred subsequent to the preceding annual audit or prior review of interim financial information;
- Evaluate the implications of misstatements identified by the auditor as part of the auditor's required review of interim financial information (See AU sec. 722, *Interim Financial Information*) as it relates to effective internal control over financial reporting; and
- Determine, through a combination of observation and inquiry, whether any change in internal control over financial reporting has materially affected, or is reasonably likely to materially affect, the company's internal control over financial reporting.

Note: Foreign private issuers filing Forms 20-F and 40-F are not subject to quarterly reporting requirements, therefore, the auditor's responsibilities would extend only to the certifications in the annual report of these companies.

204. When matters come to auditor's attention that lead him or her to believe that modification to the disclosures about changes in internal control over financial reporting is necessary for the certifications to be accurate and to comply with the requirements of Section 302 of the Act and Securities Exchange Act Rule 13a-14(a) or 15d-14(a), whichever applies,[27/] the auditor should

[27/] See 17 C.F.R. 240.13a-14(a) or 17 C.F.R. 240.15d-14(a), whichever applies.

communicate the matter(s) to the appropriate level of management as soon as practicable.

205. If, in the auditor's judgment, management does not respond appropriately to the auditor's communication within a reasonable period of time, the auditor should inform the audit committee. If, in the auditor's judgment, the audit committee does not respond appropriately to the auditor's communication within a reasonable period of time, the auditor should evaluate whether to resign from the engagement. The auditor should evaluate whether to consult with his or her attorney when making these evaluations. In these circumstances, the auditor also has responsibilities under AU sec. 317, *Illegal Acts by Clients*, and Section 10A of the Securities Exchange Act of 1934.[28/] The auditor's responsibilities for evaluating the disclosures about changes in internal control over financial reporting do not diminish in any way management's responsibility for ensuring that its certifications comply with the requirements of Section 302 of the Act and Securities Exchange Act Rule 13a-14(a) or 15d-14(a), whichever applies.[29/]

206. If matters come to the auditor's attention as a result of the audit of internal control over financial reporting that lead him or her to believe that modifications to the disclosures about changes in internal control over financial reporting (addressing changes in internal control over financial reporting occurring during the fourth quarter) are necessary for the annual certifications to be accurate and to comply with the requirements of Section 302 of the Act and Securities Exchange Act Rule 13a-14(a) or 15d-14(a), whichever applies,[30/] the auditor should follow the same communication responsibilities as described in paragraphs 204 and 205. However, if management and the audit committee do not respond appropriately, in addition to the responsibilities described in the preceding two paragraphs, the auditor should modify his or her report on the audit of internal control over financial reporting to include an explanatory paragraph describing the reasons the auditor believes management's disclosures should be modified.

Required Communications in An Audit of Internal Control Over Financial Reporting

207. The auditor must communicate in writing to management and the audit committee all significant deficiencies and material weaknesses identified during the audit. The written communication should be made prior to the issuance of

28/ See 15 U.S.C. 78j-1.

29/ See 17 C.F.R. 240.13a-14(a) or 17 C.F.R. 240.15d-14(a), whichever applies.

30/ See 17 C.F.R. 240.13a-14(a) or 17 C.F.R. 240.15d-14(a), whichever applies.

the auditor's report on internal control over financial reporting. The auditor's communication should distinguish clearly between those matters considered to be significant deficiencies and those considered to be material weaknesses, as defined in paragraphs 9 and 10, respectively.

208. If a significant deficiency or material weakness exists because the oversight of the company's external financial reporting and internal control over financial reporting by the company's audit committee is ineffective, the auditor must communicate that specific significant deficiency or material weakness in writing to the board of directors.

209. In addition, the auditor should communicate to management, in writing, all deficiencies in internal control over financial reporting (that is, those deficiencies in internal control over financial reporting that are of a lesser magnitude than significant deficiencies) identified during the audit and inform the audit committee when such a communication has been made. When making this communication, it is not necessary for the auditor to repeat information about such deficiencies that have been included in previously issued written communications, whether those communications were made by the auditor, internal auditors, or others within the organization. Furthermore, the auditor is not required to perform procedures sufficient to identify all control deficiencies; rather, the auditor should communicate deficiencies in internal control over financial reporting of which he or she is aware.

> Note: As part of his or her evaluation of the effectiveness of internal control over financial reporting, the auditor should determine whether control deficiencies identified by internal auditors and others within the company, for example, through ongoing monitoring activities and the annual assessment of internal control over financial reporting, are reported to appropriate levels of management in a timely manner. The lack of an internal process to report deficiencies in internal control to management on a timely basis represents a control deficiency that the auditor should evaluate as to severity.

210. These written communications should state that the communication is intended solely for the information and use of the board of directors, audit committee, management, and others within the organization. When there are requirements established by governmental authorities to furnish such reports, specific reference to such regulatory agencies may be made.

211. These written communications also should include the definitions of control deficiencies, significant deficiencies, and material weaknesses and should clearly distinguish to which category the deficiencies being communicated relate.

212. Because of the potential for misinterpretation of the limited degree of assurance associated with the auditor issuing a written report representing that no significant deficiencies were noted during an audit of internal control over financial reporting, the auditor should not issue such representations.

213. When auditing internal control over financial reporting, the auditor may become aware of fraud or possible illegal acts. If the matter involves fraud, it must be brought to the attention of the appropriate level of management. If the fraud involves senior management, the auditor must communicate the matter directly to the audit committee as described in AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*. If the matter involves possible illegal acts, the auditor must assure himself or herself that the audit committee is adequately informed, unless the matter is clearly inconsequential, in accordance with AU sec. 317, *Illegal Acts by Clients*. The auditor also must determine his or her responsibilities under Section 10A of the Securities Exchange Act of 1934.[31/]

214. When timely communication is important, the auditor should communicate the preceding matters during the course of the audit rather than at the end of the engagement. The decision about whether to issue an interim communication should be determined based on the relative significance of the matters noted and the urgency of corrective follow-up action required.

Effective Date

215. Companies considered *accelerated filers* under Securities Exchange Act Rule 12b-2[32/] are required to comply with the internal control reporting and disclosure requirements of Section 404 of the Act *for fiscal years ending on or after November 15, 2004*. (Other companies have until fiscal years ending on or after July 15, 2005, to comply with these internal control reporting and disclosure requirements.) Accordingly, independent auditors engaged to audit the financial statements of accelerated filers for fiscal years ending on or after November 15, 2004, also are required to audit and report on the company's internal control over financial reporting as of the end of such fiscal year. This standard is required to be complied with for such engagements, except as it relates to the auditor's responsibilities for evaluating management's certification disclosures about internal control over financial reporting. The auditor's responsibilities for evaluating management's certification disclosures about internal control over financial reporting described in paragraphs 202 through 206 take effect beginning with the first quarter after the auditor's first audit report on the company's internal control over financial reporting.

216. Early compliance with this standard is permitted.

31/ See 15 U.S.C. 78j-1.

32/ See 17 C.F.R. 240.12b-2.

APPENDIX A

Illustrative Reports on Internal Control Over Financial Reporting

A1. Paragraphs 167 through 199 of this standard provide direction on the auditor's report on management's assessment of internal control over financial reporting. The following examples illustrate how to apply that direction in several different situations.

ILLUSTRATIVE REPORT
PAGE

Example A-1

ILLUSTRATIVE REPORT EXPRESSING AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND AN UNQUALIFIED OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING (SEPARATE REPORT)[33/]

Report of Independent Registered Public Accounting Firm

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit.

[*Scope paragraph*]

33/ If the auditor issues separate reports on the audit of internal control over financial reporting and the audit of the financial statements, both reports should include a statement that the audit was conducted in accordance with standards of the Public Company Accounting Oversight Board (United States).

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Also in our opinion, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated*

Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."].

[*Explanatory paragraph*]

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [*identify financial statements*] of W Company and our report dated [*date of report, which should be the same as the date of the report on the effectiveness of internal control over financial reporting*] expressed [*include nature of opinion*].

Example A-2

ILLUSTRATIVE REPORT EXPRESSING AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND AN ADVERSE OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF THE EXISTENCE OF A MATERIAL WEAKNESS

Report of Independent Registered Public Accounting Firm

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company did not maintain effective internal control over financial reporting as of December 31, 20X3, because of the effect of [*material weakness identified in management's assessment*], based on [*Identify criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit.

[*Scope paragraph*]

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Explanatory paragraph*]

A material weakness is a control deficiency, or combination of control deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. The following material weakness has been identified and included in management's assessment. [*Include a description of the material weakness and its effect on the achievement of the objectives of the control criteria.*] This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 20X3 financial statements, and this report does not affect our report dated [*date of report, which should be the same as the date of this report on internal control*] on those financial statements.[34/]

[*Opinion paragraph*]

In our opinion, management's assessment that W Company did not maintain effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Also, in our opinion, because of the effect of the material weakness described above on the achievement of the objectives of the control criteria, W Company has not maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[*Signature*]

[*City and State or Country*]

[*Date*]

Example A-3

ILLUSTRATIVE REPORT EXPRESSING A QUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND A QUALIFIED OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF A LIMITATION ON THE SCOPE OF THE AUDIT

Report of Independent Registered Public Accounting Firm

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the*

[34/] Modify this sentence when the auditor's opinion on the financial statements is affected by the adverse opinion on the effectiveness of internal control over financial reporting, as described in paragraph 196.

Treadway Commission (COSO)."]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit.

[*Scope paragraph*]

Except as described below, we conducted our audit in accordance the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Explanatory paragraph that describes scope limitation*]

A material weakness is a control deficiency, or combination of control deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. The following material weakness has been identified and included in management's assessment.[35/] Prior to December 20, 20X3, W Company had an inadequate system for recording cash receipts, which could have prevented the Company from recording cash receipts on accounts receivable completely and properly. Therefore, cash received could have been diverted for unauthorized use, lost, or otherwise not properly recorded to accounts receivable. We believe this condition was a material weakness in the design or operation of the internal control of W Company in effect prior to December 20, 20X3. Although the Company implemented a new cash receipts system on December 20, 20X3, the system has not been in operation for a sufficient period of time to enable us to obtain sufficient evidence about its operating effectiveness.

[*Definition paragraph*]

[35/] If the auditor has identified a material weakness that is not included in management's assessment, add the following wording to the report: "In addition, we have identified the following material weakness that has not been identified as a material weakness in management's assessment."

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, except for the effect of matters we might have discovered had we been able to examine evidence about the effectiveness of the new cash receipts system, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Also, in our opinion, except for the effect of matters we might have discovered had we been able to examine evidence about the effectiveness of the new cash receipts system, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[*Explanatory paragraph*]

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [*identify financial statements*] of W Company and our report dated [*date of report, which should be the same as* *the date of the report on the effectiveness of internal control over financial reporting*] expressed [*include nature of opinion*].

[*Signature*]

[*City and State or Country*]

[*Date*]

Example A-4

ILLUSTRATIVE REPORT DISCLAIMING AN OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND DISCLAIMING AN OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF A LIMITATION ON THE SCOPE OF THE AUDIT

W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting.

[*Omit scope paragraph*]

[*Explanatory paragraph that describes scope limitation*][36/]

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over

36/ If, through the limited procedures performed, the auditor concludes that a material weakness exists, the auditor should add the definition of material weakness (as provided in paragraph 10) to the explanatory paragraph. In addition, the auditor should include a description of the material weakness and its effect on the achievement of the objectives of the control criteria.

financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

Since management [*describe scope restrictions*] and we were unable to apply other procedures to satisfy ourselves as to the effectiveness of the company's internal control over financial reporting, the scope of our work was not sufficient to enable us to express, and we do not express, an opinion either on management's assessment or on the effectiveness of the company's internal control over financial reporting.

[*Explanatory paragraph*]

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [*identify financial statements*] of W Company and our report dated [*date of report, which should be the same as the date of the report on the effectiveness of internal control over financial reporting*] expressed [*include nature of opinion*].

Example A-5

ILLUSTRATIVE REPORT EXPRESSING AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING THAT REFERS TO THE REPORT

OF OTHER AUDITORS AS A BASIS, IN PART, FOR THE AUDITOR'S OPINION AND AN UNQUALIFIED OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING

Report of Independent Registered Public Accounting Firm

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit. We did not examine the effectiveness of internal control over financial reporting of B Company, a wholly owned subsidiary, whose financial statements reflect total assets and revenues constituting 20 and 30 percent, respectively, of the related consolidated financial statement amounts as of and for the year ended December 31, 20X3. The effectiveness of B Company's internal control over financial reporting was audited by other auditors whose report has been furnished to us, and our opinion, insofar as it relates to the effectiveness of B Company's internal control over financial reporting, is based solely on the report of the other auditors.

[*Scope paragraph*]

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit and the report of the other auditors provide a reasonable basis for our opinion.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, based on our audit and the report of the other auditors, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Also, in our opinion, based on our audit and the report of the other auditors, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[*Explanatory paragraph*]

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [*identify financial statements*] of W Company and our report dated [*date of report, which should be the same as the date of the report on the effectiveness of internal control over financial reporting*] expressed [*include nature of opinion*].

Example A-6

ILLUSTRATIVE REPORT EXPRESSING AN ADVERSE OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND AN ADVERSE OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF THE EXISTENCE OF A MATERIAL WEAKNESS

Report of Independent Registered Public Accounting Firm

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit.

[*Scope paragraph*]

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Explanatory paragraph*]

A material weakness is a control deficiency, or combination of control deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. We have identified the following material weakness that has not been identified as a material weakness in management's assessment [*Include a description of the material weakness and its effect on the achievement of the objectives of the control criteria.*] This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 20X3 financial statements, and this report does not affect our report dated [*date of report, which should be the same as the date of this report on internal control*] on those financial statements.[37/]

[*Opinion paragraph*]

In our opinion, because of the effect of the material weakness described above on the achievement of the objectives of the control criteria, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is not fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Also, in our opinion, because of the effect of the material weakness described above on the

[37/] Modify this sentence when the auditor's opinion on the financial statements is affected by the adverse opinion on the effectiveness of internal control over financial reporting.

achievement of the objectives of the control criteria, W Company has not maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

Example A-7

ILLUSTRATIVE COMBINED REPORT EXPRESSING AN UNQUALIFIED OPINION ON FINANCIAL STATEMENTS, AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND AN UNQUALIFIED OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING

Report of Independent Registered Public Accounting Firm

[*Introductory paragraph*]

We have audited the accompanying balance sheets of W Company as of December 31, 20X3 and 20X2, and the related statements of income, stockholders' equity and comprehensive income, and cash flows for each of the years in the three-year period ended December 31, 20X3. We also have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on these financial statements, an opinion on management's assessment, and an opinion on the effectiveness of the company's internal control over financial reporting based on our audits.

[*Scope paragraph*]

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audit of financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of W Company as of December 31, 20X3 and 20X2, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 20X3 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Furthermore, in our opinion, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

APPENDIX B

Additional Performance Requirements and Directions; Extent-of-Testing Examples

Tests to be Performed When a Company Has Multiple Locations or Business Units

B1. To determine the locations or business units for performing audit procedures, the auditor should evaluate their relative financial significance and the risk of material misstatement arising from them. In making this evaluation, the auditor should identify the locations or business units that are individually important, evaluate their documentation of controls, and test controls over significant accounts and disclosures. For locations or business units that contain specific risks that, by themselves, could create a material misstatement, the auditor should evaluate their documentation of controls and test controls over the specific risks.

B2. The auditor should determine the other locations or business units that, when aggregated, represent a group with a level of financial significance that could create a material misstatement in the financial statements. For that group, the auditor should determine whether there are company-level controls in place. If so, the auditor should evaluate the documentation and test such company-level controls. If not, the auditor should perform tests of controls at some of the locations or business units.

B3. No further work is necessary on the remaining locations or businesses, provided that they are not able to create, either individually or in the aggregate, a material misstatement in the financial statements.

Locations or Business Units That Are Financially Significant

B4. Because of the importance of financially significant locations or business units, the auditor should evaluate management's documentation of and perform tests of controls over all relevant assertions related to significant accounts and disclosures at each financially significant location or business unit, as discussed in paragraphs 83 through 105. Generally, a relatively small number of locations or business units will encompass a large portion of a company's operations and financial position, making them financially significant.

B5. In determining the nature, timing, and extent of testing at the individual locations or business units, the auditor should evaluate each entity's involvement, if any, with a central processing or shared service environment.

Locations or Business Units That Involve Specific Risks

B6. Although a location or business unit might not be individually financially significant, it might present specific risks that, by themselves, could create a material misstatement in the company's financial statements. The auditor should test the controls over the specific risks that could create a material misstatement in the company's financial statements. The auditor need not test controls over all relevant assertions related to all significant accounts at these locations or business units. For example, a business unit responsible for foreign exchange trading could expose the company to the risk of material misstatement, even though the relative financial significance of such transactions is low.

Locations or Business Units That Are Significant Only When Aggregated with Other Locations and Business Units

B7. In determining the nature, timing, and extent of testing, the auditor should determine whether management has documented and placed in operation company-level controls (See paragraph 53) over individually unimportant locations and business units that, when aggregated with other locations or business units, might have a high level of financial significance. A high level of financial significance could create a greater than remote risk of material misstatement of the financial statements.

B8. For the purposes of this evaluation, company-level controls are controls management has in place to provide assurance that appropriate controls exist throughout the organization, including at individual locations or business units.

B9. The auditor should perform tests of company-level controls to determine whether such controls are operating effectively. The auditor might conclude that he or she cannot evaluate the operating effectiveness of such controls without visiting some or all of the locations or business units.

B10. If management does not have company-level controls operating at these locations and business units, the auditor should determine the nature, timing, and extent of procedures to be performed at each location, business unit, or combination of locations and business units. When determining the locations or business units to visit and the controls to test, the auditor should evaluate the following factors:

- The relative financial significance of each location or business unit.
- The risk of material misstatement arising from each location or business unit.
- The similarity of business operations and internal control over financial reporting at the various locations or business units.
- The degree of centralization of processes and financial reporting applications.
- The effectiveness of the control environment, particularly management's direct control over the exercise of authority delegated to others and its ability to effectively supervise activities at the various locations or business units. An ineffective control environment over the locations or business units might constitute a material weakness.
- The nature and amount of transactions executed and related assets at the various locations or business units.
- The potential for material unrecognized obligations to exist at a location or business unit and the degree to which the location or business unit could create an obligation on the part of the company.
- Management's risk assessment process and analysis for excluding a location or business unit from its assessment of internal control over financial reporting.

B11. Testing company-level controls is not a substitute for the auditor's testing of controls over a large portion of the company's operations or financial position. If the auditor cannot test a large portion of the company's operations and financial position by selecting a relatively small number of locations or business units, he or she should expand the number of locations or business units selected to evaluate internal control over financial reporting.

Note: The evaluation of whether controls over a large portion of the company's operations or financial position have been tested should be made at the overall level, not at the individual significant account level.

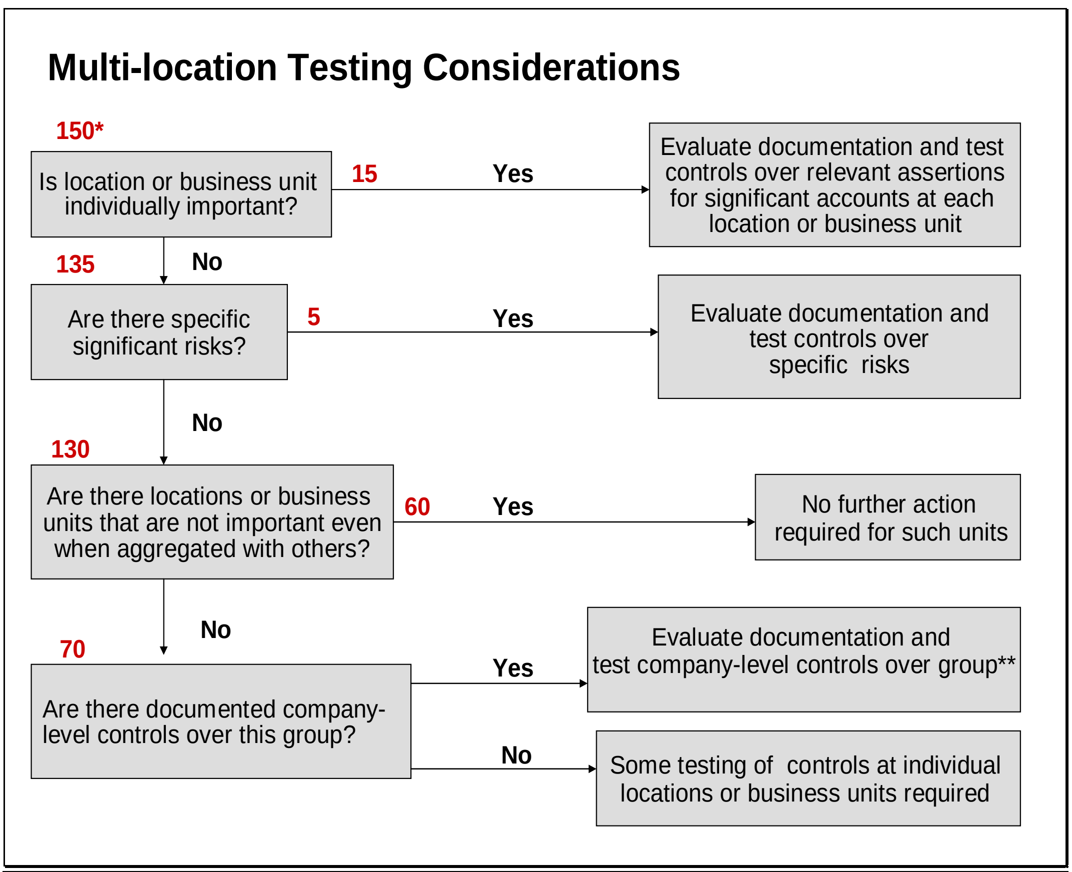
Locations and Business Units That Do Not Require Testing

B12. No testing is required for locations or business units that individually, and when aggregated with others, could not result in a material misstatement to the financial statements.

Multi-Location Testing Considerations Flowchart

B13. Illustration B-1 depicts how to apply the directions in this section to a hypothetical company with 150 locations or business units, along with the auditor's testing considerations for those locations or business units.

Illustration B-1



* Numbers represent number of locations affected.
** See paragraph B7.

Special Situations

B14. The scope of the evaluation of the company's internal control over financial reporting should include entities that are acquired on or before the date of management's assessment and operations that are accounted for as discontinued operations on the date of management's assessment. The auditor should consider this multiple locations discussion in determining whether it will be necessary to test controls at these entities or operations.

B15. For equity method investments, the evaluation of the company's internal control over financial reporting should include controls over the reporting in accordance with generally accepted accounting principles, in the company's financial statements, of the company's portion of the investees' income or loss, the investment balance, adjustments to the income or loss and investment balance, and related disclosures. The evaluation ordinarily would not extend to controls at the equity method investee.

B16. In situations in which the SEC allows management to limit its assessment of internal control over financial reporting by excluding certain entities, the auditor may limit the audit in the same manner and report without reference to the limitation in scope. However, the auditor should evaluate the reasonableness of management's conclusion that the situation meets the criteria of the SEC's allowed exclusion and the appropriateness of any required disclosure related to such a limitation. If the auditor believes that management's disclosure about the limitation requires modification, the auditor should follow the same communication responsibilities as described in paragraphs 204 and 205. If management and the audit committee do not respond appropriately, in addition to fulfilling those responsibilities, the auditor should modify his or her report on the audit of internal control over financial reporting to include an explanatory paragraph describing the reasons why the auditor believes management's disclosure should be modified.

B17. For example, for entities that are consolidated or proportionately consolidated, the evaluation of the company's internal control over financial reporting should include controls over significant accounts and processes that exist at the consolidated or proportionately consolidated entity. In some instances, however, such as for some variable interest entities as defined in Financial Accounting Standards Board Interpretation No. 46, *Consolidation of Variable Interest Entities,* management might not be able to obtain the information necessary to make an assessment because it does not have the ability to control the entity. If management is allowed to limit its assessment by excluding such entities,[38/] the auditor may limit the audit in the same manner and

[38/] It is our understanding that the SEC Staff may conclude that management can limit the scope of its assessment if it does not have the authority to affect, and therefore cannot assess, the controls in place over certain amounts. This would relate to entities that are consolidated or proportionately consolidated when the issuer does not have sufficient control over the entity to assess and affect controls. If management's report on its assessment of the effectiveness of internal control over financial reporting is limited in that manner, the SEC staff may permit the company to disclose this fact as well as information about the magnitude of the amounts included in the financial statements report without reference to the limitation in scope. In this case, the evaluation of the company's internal control over financial reporting should include evaluation of controls over the reporting in accordance with generally accepted accounting principles, in the company's financial statements, of the company's portion of the entity's income or loss, the investment balance, adjustments to the income or loss and investment balances, and related disclosures. However, the auditor should evaluate the reasonableness of management's conclusion that it does not have the ability to obtain the necessary information as well as the appropriateness of any required disclosure related to such a limitation.

Use of Service Organizations

B18. AU sec. 324, *Service Organizations,* applies to the audit of financial statements of a company that obtains services from another organization that are part of its information system. The auditor may apply the relevant concepts described in AU sec. 324 to the audit of internal control over financial reporting. Further, although AU sec. 324 was designed to address auditor-to-auditor communications as part of the audit of financial statements, it also is appropriate for management to apply the relevant concepts described in that standard to its assessment of internal control over financial reporting.

B19. Paragraph .03 of AU sec. 324 describes the situation in which a service organization's services are part of a company's information system. If the service organization's services are part of a company's information system, as described therein, then they are part of the information and communication component of the company's internal control over financial reporting. When the service organization's services are part of the company's internal control over financial reporting, management should consider the activities of the service organization in making its assessment of internal control over financial reporting, and the auditor should consider the activities of the service organization in determining the evidence required to support his or her opinion.

> Note: The use of a service organization does not reduce management's responsibility to maintain effective internal control over financial reporting.

B20. Paragraphs .07 through .16 in AU sec. 324 describe the procedures that management and the auditor should perform with respect to the activities performed by the service organization. The procedures include:

---

from entities whose controls cannot be assessed. This disclosure would be required in each filing, but outside of management's report on its assessment of the effectiveness of internal control over financial reporting.

a. Obtaining an understanding of the controls at the service organization that are relevant to the entity's internal control and the controls at the user organization over the activities of the service organization, and

b. Obtaining evidence that the controls that are relevant to management's assessment and the auditor's opinion are operating effectively.

B21. Evidence that the controls that are relevant to management's assessment and the auditor's opinion are operating effectively may be obtained by following the procedures described in paragraph .12 of AU sec. 324. These procedures include:

a. Performing tests of the user organization's controls over the activities of the service organization (for example, testing the user organization's independent reperformance of selected items processed by the service organization or testing the user organization's reconciliation of output reports with source documents).

b. Performing tests of controls at the service organization.

c. Obtaining a service auditor's report on controls placed in operation and tests of operating effectiveness, or a report on the application of agreed-upon procedures that describes relevant tests of controls.

Note: The service auditor's report referred to above means a report with the service auditor's opinion on the service organization's description of the design of its controls, the tests of controls, and results of those tests performed by the service auditor, and the service auditor's opinion on whether the controls tested were operating effectively during the specified period (in other words, "reports on controls placed in operation and tests of operating effectiveness" described in paragraph .24b of AU sec. 324). A service auditor's report that does not include tests of controls, results of the tests, and the service auditor's opinion on operating effectiveness (in other words, "reports on controls placed in operation" described in paragraph .24a of AU sec. 324) does not provide evidence of operating effectiveness. Furthermore, if the evidence regarding operating effectiveness of controls comes from an agreed-upon procedures report rather than a service auditor's report issued pursuant to AU sec. 324, management and the auditor should evaluate whether the agreed-upon procedures report provides sufficient evidence in the same manner described in the following paragraph.

B22. If a service auditor's report on controls placed in operation and tests of operating effectiveness is available, management and the auditor may evaluate whether this report provides sufficient evidence to support the assessment and opinion, respectively. In evaluating whether such a service auditor's report provides sufficient evidence, management and the auditor should consider the following factors:

- The time period covered by the tests of controls and its relation to the date of management's assessment,

- The scope of the examination and applications covered, the controls tested, and the way in which tested controls relate to the company's controls,

- The results of those tests of controls and the service auditor's opinion on the operating effectiveness of the controls.

Note: These factors are similar to factors the auditor would consider in determining whether the report provides sufficient evidence to support the auditor's assessed level of control risk in an audit of the financial statements as described in paragraph .16 of AU sec. 324.

B23. If the service auditor's report on controls placed in operation and tests of operating effectiveness contains a qualification that the stated control objectives might be achieved only if the company applies controls contemplated in the design of the system by the service organization, the auditor should evaluate whether the company is applying the necessary procedures. For example, completeness of processing payroll transactions might depend on the company's validation that all payroll records sent to the service organization were processed by checking a control total.

B24. In determining whether the service auditor's report provides sufficient evidence to support management's assessment and the auditor's opinion, management and the auditor should make inquiries concerning the service auditor's reputation, competence, and independence. Appropriate sources of information concerning the professional reputation of the service auditor are discussed in paragraph .10a of AU sec. 543, *Part of Audit Performed by Other Independent Auditors.*

B25. When a significant period of time has elapsed between the time period covered by the tests of controls in the service auditor's report and the date of management's assessment, additional procedures should be performed. The auditor should inquire of management to determine whether management has identified any changes in the service organization's controls subsequent to the period covered by the service auditor's report (such as changes communicated to management from the service organization, changes in personnel at the service organization with whom management interacts, changes in reports or other data received from the service organization, changes in contracts or service level agreements with the service organization, or errors identified in the service organization's processing). If management has identified such changes, the auditor should determine whether management has performed procedures to evaluate the effect of such changes on the effectiveness of the company's internal control over financial reporting. The auditor also should consider whether the results of other procedures he or she performed indicate that there have been changes in the controls at the service organization that management has not identified.

B26. The auditor should determine whether to obtain additional evidence about the operating effectiveness of controls at the service organization based on the procedures performed by management or the auditor and the results of those procedures and on an evaluation of the following factors. As these factors increase in significance, the need for the auditor to obtain additional evidence increases.

- The elapsed time between the time period covered by the tests of controls in the service auditor's report and the date of management's assessment,
- The significance of the activities of the service organization,
- Whether there are errors that have been identified in the service organization's processing, and
- The nature and significance of any changes in the service organization's controls identified by management or the auditor.

B27. If the auditor concludes that additional evidence about the operating effectiveness of controls at the service organization is required, the auditor's additional procedures may include:

- Evaluating the procedures performed by management and the results of those procedures.
- Contacting the service organization, through the user organization, to obtain specific information.
- Requesting that a service auditor be engaged to perform procedures that will supply the necessary information.
- Visiting the service organization and performing such procedures.

B28. Based on the evidence obtained, management and the auditor should determine whether they have obtained sufficient evidence to obtain the reasonable assurance necessary for their assessment and opinion, respectively.

B29. The auditor should not refer to the service auditor's report when expressing an opinion on internal control over financial reporting.

Examples of Extent-of-Testing Decisions

B30. As discussed throughout this standard, determining the effectiveness of a company's internal control over financial reporting includes evaluating the design and operating effectiveness of controls over all relevant assertions related to all significant accounts and disclosures in the financial statements. Paragraphs 88 through 107 provide the auditor with directions about the nature, timing, and extent of testing of the design and operating effectiveness of internal control over financial reporting.

B31. Examples B-1 through B-4 illustrate how to apply this information in various situations. These examples are for illustrative purposes only.

Example B-1 – ***Daily Programmed Application Control and Daily Information Technology-Dependent Manual Control***

The auditor has determined that cash and accounts receivable are significant accounts to the audit of XYZ Company's internal control over financial reporting. Based on discussions with company personnel and review of company documentation, the auditor learned that the company had the following procedures in place to account for cash received in the lockbox:

a. The company receives a download of cash receipts from the banks.

b. The information technology system applies cash received in the lockbox to individual customer accounts.

c. Any cash received in the lockbox and not applied to a customer's account is listed on an exception report (Unapplied Cash Exception Report).

- Therefore, the application of cash to a customer's account is a programmed application control, while the review and follow-up of unapplied cash from the exception report is a manual control.

To determine whether misstatements in cash (existence assertion) and accounts receivable (existence, valuation, and completeness) would be prevented or detected on a timely basis, the auditor decided to test the controls provided by the system in the daily reconciliation of lock box receipts to customer accounts, as well as the control over reviewing and resolving unapplied cash in the Unapplied Cash Exception Report.

Nature, Timing, and Extent of Procedures. To test the programmed application control, the auditor:

- Identified, through discussion with company personnel, the software used to receive the download from the banks and to process the transactions and determined that the banks supply the download software.

  -- The company uses accounting software acquired from a third-party supplier. The software consists of a number of modules. The client modifies the software only for upgrades supplied by the supplier.

- Determined, through further discussion with company personnel, that the cash module operates the lockbox functionality and the posting of cash to the general ledger. The accounts receivable module posts the cash to individual customer accounts and produces the Unapplied Cash Exception Report, a standard report supplied with the package. The auditor agreed this information to the supplier's documentation.

- Identified, through discussions with company personnel and review of the supplier's documentation, the names, file sizes (in bytes), and locations of the executable files (programs) that operate the functionality under review. The auditor then identified the compilation dates of these programs and agreed them to the original installation date of the application.

- Identified the objectives of the programs to be tested. The auditor wanted to determine whether only appropriate cash items are posted to customers' accounts and matched to customer number, invoice number, amount, etc., and that there is a listing of inappropriate cash items (that is, any of the above items not matching) on the exception report.

In addition, the auditor had evaluated and tested general computer controls, including program changes (for example, confirmation that no unauthorized changes are undertaken) and logical access (for example, data file access to the file downloaded from the banks and user access to the cash and accounts receivable modules) and concluded that they were operating effectively.

To determine whether such programmed controls were operating effectively, the auditor performed a walkthrough in the month of July. The computer controls operate in a systematic manner, therefore, the auditor concluded that it was sufficient to perform a walkthrough for only the one item. During the walkthrough, the auditor performed and documented the following items:

a. Selected one customer and agreed the amount billed to the customer to the cash received in the lockbox.

b. Agreed the total of the lockbox report to the posting of cash receipts in the general ledger.

c. Agreed the total of the cash receipt download from the bank to the lockbox report and supporting documentation.

d. Selected one customer's remittance and agreed amount posted to the customer's account in the accounts receivable subsidiary ledger.

To test the detective control of review and follow up on the Daily Unapplied Cash Exception Report, the auditor:

a. Made inquiries of company personnel. To understand the procedures in place to ensure that all unapplied items are resolved, the time frame in which such resolution takes place, and whether unapplied items are handled properly within the system, the auditor discussed these matters with the employee responsible for reviewing and resolving the Daily Unapplied Cash Exception Reports. The auditor learned that, when items appear on the Daily-Unapplied Cash Exception Report, the employee must manually enter the correction into the system. The employee typically performs the resolution procedures the next business day. Items that typically appear on the Daily Unapplied Cash Exception Report relate to payments made by a customer without reference to an invoice number/purchase order number or to underpayments of an invoice due to quantity or pricing discrepancies.

b. Observed personnel performing the control**.** The auditor then observed the employee reviewing and resolving a Daily Unapplied Cash Exception Report. The day selected contained four exceptions – three related to payments made by a customer without an invoice number, and one related to an underpayment due to a pricing discrepancy.

- For the pricing discrepancy, the employee determined, through discussions with a sales person, that the customer had been billed an incorrect price; a price break that the sales person had granted to the customer was not reflected on the customer's invoice. The employee resolved the pricing discrepancy, determined which invoices were being paid, and entered a correction into the system to properly apply cash to the customer's account and reduce accounts receivable and sales accounts for the amount of the price break.

c. Reperformed the control. Finally, the auditor selected 25 Daily Unapplied Cash Exception Reports from the period January to September. For the reports selected, the auditor reperformed the follow-up procedures that the employee performed. For instance, the auditor inspected the documents and sources of information used in the follow-up and determined that the transaction was properly corrected in the system. The auditor also scanned other Daily Unapplied Cash Exception Reports to determine that the control was performed throughout the period of intended reliance.

Because the tests of controls were performed at an interim date, the auditor had to determine whether there were any significant changes in the controls from interim to year-end. Therefore, the auditor asked company personnel about the procedures in place at year-end. Such procedures had not changed from the interim period, therefore, the auditor observed that the controls were still in place by scanning Daily Unapplied Cash Exception Reports to determine the control was performed on a timely basis during the period from September to year-end.

Based on the auditor's procedures, the auditor concluded that the employee was clearing exceptions in a timely manner and that the control was operating effectively as of year-end.

Example B-2 – ***Monthly Manual Reconciliation***

The auditor determined that accounts receivable is a significant account to the audit of XYZ Company's internal control over financial reporting. Through discussions with company personnel and review of company documentation, the auditor learned that company personnel reconcile the accounts receivable subsidiary ledger to the general ledger on a monthly basis. To determine whether misstatements in accounts receivable (existence, valuation, and completeness) would be detected on a timely basis, the auditor decided to test the control provided by the monthly reconciliation process.

Nature, Timing, and Extent of Procedures. The auditor tested the company's reconciliation control by selecting a sample of reconciliations based upon the number of accounts, the dollar value of the accounts, and the volume of transactions affecting the account. Because the auditor considered all other receivable accounts immaterial, and because such accounts had only minimal transactions flowing through them, the auditor decided to test only the reconciliation for the trade accounts receivable account. The auditor elected to perform the tests of controls over the reconciliation process in conjunction with the auditor's substantive procedures over the accounts receivable confirmation procedures, which were performed in July.

To test the reconciliation process, the auditor:

a. Made inquiries of personnel performing the control. The auditor asked the employee performing the reconciliation a number of questions, including the following:

- What documentation describes the account reconciliation process?
- How long have you been performing the reconciliation work?
- What is the reconciliation process for resolving reconciling items?
- How often are the reconciliations formally reviewed and signed off?

- If significant issues or reconciliation problems are noticed, to whose attention do you bring them?

- On average, how many reconciling items are there?

- How are old reconciling items treated?

- If need be, how is the system corrected for reconciling items?

- What is the general nature of these reconciling items?

b. Observed the employee performing the control**.** The auditor observed the employee performing the reconciliation procedures. For nonrecurring reconciling items, the auditor observed whether each item included a clear explanation as to its nature, the action that had been taken to resolve it, and whether it had been resolved on a timely basis.

c. Reperformed the control**.** Finally, the auditor inspected the reconciliations and reperfomed the reconciliation procedures. For the May and July reconciliations, the auditor traced the reconciling amounts to the source documents on a test basis. The only reconciling item that appeared on these reconciliations was cash received in the lockbox the previous day that had not been applied yet to the customer's account. The auditor pursued the items in each month's reconciliation to determine that the reconciling item cleared the following business day. The auditor also scanned through the file of all reconciliations prepared during the year and noted that they had been performed on a timely basis. To determine that the company had not made significant changes in its reconciliation control procedures from interim to year-end, the auditor made inquiries of company personnel and determined that such procedures had not changed from interim to year-end. Therefore, the auditor verified that controls were still in place by scanning the monthly account reconciliations to determine that the control was performed on a timely basis during the interim to year-end period.

Based on the auditor's procedures, the auditor concluded that the reconciliation control was operating effectively as of year-end.

Example B-3 – ***Daily Manual Preventive Control***

The auditor determined that cash and accounts payable were significant accounts to the audit of the company's internal control over financial reporting. Through discussions with company personnel, the auditor learned that company personnel make a cash disbursement only after they have matched the vendor invoice to the receiver and purchase order. To determine whether misstatements in cash (existence) and accounts payable (existence, valuation, and completeness) would be prevented on a timely basis, the auditor tested the control over making a cash disbursement only after matching the invoice with the receiver and purchase.

Nature, Timing, and Extent of Procedures. On a haphazard basis, the auditor selected 25 disbursements from the cash disbursement registers from January through September. In this example, the auditor deemed a test of 25 cash disbursement transactions an appropriate sample size because the auditor was testing a manual control performed as part of the routine processing of cash disbursement transactions through the system. Furthermore, the auditor expected no errors based on the results of company-level tests performed earlier. [If, however, the auditor had encountered a control exception, the auditor would have attempted to identify the root cause of the exception and tested an additional number of items. If another control exception had been noted, the auditor would have decided that this control was not effective. As a result, the auditor would have decided to increase the extent of substantive procedures to be performed in connection with the financial statement audit of the cash and accounts payable accounts.]

a. After obtaining the related voucher package, the auditor examined the invoice to see if it included the signature or initials of the accounts payable clerk, evidencing the clerk's performance of the matching control. However, a signature on a voucher package to indicate signor approval does not necessarily mean that the person carefully reviewed it before signing. The voucher package may have been signed based on only a cursory review, or without any review.

b. The auditor decided that the quality of the evidence regarding the effective operation of the control evidenced by a signature or initials was not sufficiently persuasive to ensure that the control operated effectively during the test period. In order to obtain additional evidence, the auditor reperformed the matching control corresponding to the signature, which included examining the invoice to determine that (a) its items matched to the receiver and purchase order and (b) it was mathematically accurate.

Because the auditor performed the tests of controls at an interim date, the auditor updated the testing through the end of the year (initial tests are through September to December) by asking the accounts payable clerk whether the control was still in place and operating effectively. The auditor confirmed that understanding by performing a walkthrough of one transaction in December.

Based on the auditor's procedures, the auditor concluded that the control over making a cash disbursement only after matching the invoice with the receiver and purchase was operating effectively as of year-end.

Example B-4 – ***Programmed Prevent Control and Weekly Information Technology-Dependent Manual Detective Control***

The auditor determined that cash, accounts payable, and inventory were significant accounts to the audit of the company's internal control over financial reporting. Through discussions with company personnel, the auditor learned that the company's computer system performs a three-way match of the receiver, purchase order, and invoice. If there are any exceptions, the system produces a list of unmatched items that employees review and follow up on weekly.

In this case, the computer match is a programmed application control, and the review and follow-up of the unmatched items report is a detective control. To determine whether misstatements in cash (existence) and accounts payable/inventory (existence, valuation, and completeness) would be prevented or detected on a timely basis, the auditor decided to test the programmed application control of matching the receiver, purchase order, and invoice as well as the review and follow-up control over unmatched items.

Nature, Timing, and Extent of Procedures. To test the programmed application control, the auditor:

a. Identified, through discussion with company personnel, the software used to process receipts and purchase invoices. The software used was a third-party package consisting of a number of modules.

b. Determined, through further discussion with company personnel, that they do not modify the core functionality of the software, but sometimes make personalized changes to reports to meet the changing needs of the business. From previous experience with the company's information technology environment, the auditor believes that such changes are infrequent and that information technology process controls are well established.

c. Established, through further discussion, that the inventory module operated the receiving functionality, including the matching of receipts to open purchase orders. Purchase invoices were processed in the accounts payable module, which matched them to an approved purchase order against which a valid receipt has been made. That module also produced the Unmatched Items Report, a standard report supplied with the package to which the company has not made any modifications. That information was agreed to the supplier's documentation and to documentation within the information technology department.

d. Identified, through discussions with the client and review of the supplier's documentation, the names, file sizes (in bytes), and locations of the executable files (programs) that operate the functionality under review. The auditor then identified the compilation dates of the programs and agreed them to the original installation date of the application. The compilation date of the report code was agreed to documentation held within the information technology department relating to the last change made to that report (a change in formatting).

e. Identified the objectives of the programs to be tested. The auditor wanted to determine whether appropriate items are received (for example, match a valid purchase order), appropriate purchase invoices are posted (for example, match a valid receipt and purchase order, non-duplicate reference numbers) and unmatched items (for example, receipts, orders or invoices) are listed on the exception report. The auditor then reperformed all those variations in the packages on a test-of-one basis to determine that the programs operated as described.

In addition, the auditor had evaluated and tested general computer controls, including program changes (for example, confirmation that no unauthorized changes are undertaken to the functionality and that changes to reports are appropriately authorized, tested, and approved before being applied) and logical access (for example, user access to the inventory and accounts payable modules and access to the area on the system where report code is maintained), and concluded that they were operating effectively. (Since the computer is deemed to operate in a systematic manner, the auditor concluded that it was sufficient to perform a walkthrough for only the one item.)

To determine whether the programmed control was operating effectively, the auditor performed a walkthrough in the month of July. As a result of the walkthrough, the auditor performed and documented the following items:

a. Receiving cannot record the receipt of goods without matching the receipt to a purchase order on the system. The auditor tested that control by attempting to record the receipt of goods into the system without a purchase order. However, the system did not allow the auditor to do that. Rather, the system produced an error message stating that the goods could not be recorded as received without an active purchase order.

b. An invoice will not be paid unless the system can match the receipt and vendor invoice to an approved purchase order. The auditor tested that control by attempting to approve an invoice for payment in the system. The system did not allow the auditor to do that. Rather, it produced an error message indicating that invoices could not be paid without an active purchase order and receiver.

c. The system disallows the processing of invoices with identical vendor and identical invoice numbers. In addition, the system will not allow two invoices to be processed against the same purchase order unless the sum of the invoices is less than the amount approved on the purchase order.

The auditor tested that control by attempting to process duplicate invoices. However, the system produced an error message indicating that the invoice had already been processed.

d. The system compares the invoice amounts to the purchase order. If there are differences in quantity/extended price, and such differences fall outside a pre-approved tolerance, the system does not allow the invoice to be processed. The auditor tested that control by attempting to process an invoice that had quantity/price differences outside the tolerance level of 10 pieces, or $1,000. The system produced an error message indicating that the invoice could not be processed because of such differences.

e. The system processes payments only for vendors established in the vendor master file. The auditor tested that control by attempting to process an invoice for a vendor that was not established in the vendor master file. However, the system did not allow the payment to be processed.

f. The auditor tested user access to the vendor file and whether such users can make modifications to such file by attempting to access and make changes to the vendor tables. However, the system did not allow the auditor to perform that function and produced an error message stating that the user was not authorized to perform that function.

g. The auditor verified the completeness and accuracy of the Unmatched Items Report by verifying that one unmatched item was on the report and one matched item was not on the report.

Note: It is inadvisable for the auditor to have uncontrolled access to the company's systems in his or her attempts described above to record the receipt of goods without a purchase order, approve an invoice for payment, process duplicate invoices, etc. These procedures ordinarily are performed in the presence of appropriate company personnel so that they can be notified immediately of any breach to their systems.

To test the detect control of review and follow up on the Unmatched Items Report, the auditor performed the following procedures in the month of July for the period January to July:

a. Made inquiries of company personnel. To gain an understanding of the procedures in place to ensure that all unmatched items are followed-up properly and that corrections are made on a timely basis, the auditor made inquiries of the employee who follows up on the weekly-unmatched items reports. On a weekly basis, the control required the employee to review the Unmatched Items Report to determine why items appear on it. The employee's review includes proper follow-up on items, including determining whether:

- All open purchase orders are either closed or voided within an acceptable amount of time.
- The requesting party is notified periodically of the status of the purchase order and the reason for its current status.
- The reason the purchase order remains open is due to incomplete shipment of goods and, if so, whether the vendor has been notified.
- There are quantity problems that should be discussed with purchasing.

b. Observed the performance of the control**.** The auditor observed the employee performing the control for the Unmatched Items Reports generated during the first week in July.

c. Reperformed the control**.** The auditor selected five weekly Unmatched Items Reports, selected several items from each, and reperformed the procedures that the employee performed. The auditor also scanned other Unmatched Items Reports to determine that the control was performed throughout the period of intended reliance.

To determine that the company had not made significant changes in their controls from interim to year-end, the auditor discussed with company personnel the procedures in place for making such changes. Since the procedures had not changed from interim to year-end, the auditor observed that the controls were still in place by scanning the weekly Unmatched Items Reports to determine that the control was performed on a timely basis during the interim to year-end period.

Based on the auditor's procedures, the auditor concluded that the employee was clearing exceptions in a timely manner and that the control was operating effectively as of year-end.

APPENDIX C

Safeguarding of Assets

C1. *Safeguarding of assets* is defined in paragraph 7 as those policies and procedures that "provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements." This definition is consistent with the definition provided in the Committee of Sponsoring Organizations (COSO) of the Treadway Commission's Addendum, *Reporting to External Parties*, which provides the following definition of internal control over safeguarding of assets:

> Internal control over safeguarding of assets against unauthorized acquisition, use or disposition is a process, effected by an entity's board of directors, management and other personnel, designed to provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the entity's assets that could have a material effect on the financial statements. Such internal control can be judged effective if the board of directors and management have reasonable assurance that unauthorized acquisition, use or disposition of the entity's assets that could have a material effect on the financial statements is being prevented or detected on a timely basis.

C2. For example, a company has safeguarding controls over inventory tags (preventive controls) and also performs periodic physical inventory counts (detective control) timely in relation to its quarterly and annual financial reporting dates. Although the physical inventory count does not safeguard the inventory from theft or loss, it prevents a material misstatement to the financial statements if performed effectively and timely.

C3. Therefore, given that the definitions of material weakness and significant deficiency relate to the likelihood of misstatement of the financial statements, the failure of a preventive control such as inventory tags will not result in a significant deficiency or material weakness if the detective control (physical inventory) prevents a misstatement of the financial statements. The COSO Addendum also indicates that to the extent that such losses might occur, controls over financial reporting are effective if they provide reasonable assurance that those losses are properly reflected in the financial statements, thereby alerting financial statement users to consider the need for action.

> Note: *Properly reflected* in the financial statements includes both correctly recording the loss and adequately disclosing the loss.

C4. Material weaknesses relating to controls over the safeguarding of assets would only exist when the company does not have effective controls (considering both safeguarding and other controls) to prevent or detect a material misstatement of the financial statements.

C5. Furthermore, management's plans that could potentially affect financial reporting in future periods are not controls. For example, a company's business continuity or contingency planning has no effect on the company's current abilities to initiate, authorize, record, process, or report financial data. Therefore, a company's business continuity or contingency planning is not part of internal control over financial reporting.

C6. The COSO Addendum provides further information about safeguarding of assets as it relates to internal control over financial reporting.

APPENDIX D

Examples of Significant Deficiencies and Material Weaknesses

D1. Paragraph 8 of this standard defines a control deficiency. Paragraphs 9 and 10 go on to define a significant deficiency and a material weakness, respectively.

D2. Paragraphs 22 through 23 of this standard discuss materiality in an audit of internal control over financial reporting, and paragraphs 130 through 140 provide additional direction on evaluating deficiencies in internal control over financial reporting.

D3. The following examples illustrate how to evaluate the significance of internal control deficiencies in various situations. These examples are for illustrative purposes only.

Example D-1— ***Reconciliations of Intercompany Accounts Are Not Performed on a Timely Basis***

Scenario A – Significant Deficiency. The company processes a significant number of routine intercompany transactions on a monthly basis. Individual intercompany transactions are not material and primarily relate to balance sheet activity, for example, cash transfers between business units to finance normal operations.

A formal management policy requires monthly reconciliation of intercompany accounts and confirmation of balances between business units. However, there is not a process in place to ensure performance of these procedures. As a result, detailed reconciliations of intercompany accounts are not performed on a timely basis. Management does perform monthly procedures to investigate selected large-dollar intercompany account differences. In addition, management prepares a detailed monthly variance analysis of operating expenses to assess their reasonableness.

Based only on these facts, the auditor should determine that this deficiency represents a significant deficiency for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be more than inconsequential, but less than material, because individual intercompany transactions are not material, and the compensating controls operating monthly should detect a material misstatement. Furthermore, the transactions are primarily restricted to balance sheet accounts. However, the compensating detective controls are designed only to detect material misstatements. The controls do not address the detection of misstatements that are more than inconsequential but less than material. Therefore, the likelihood that a misstatement that was more than inconsequential, but less than material, could occur is more than remote.

Scenario B - Material Weakness. The company processes a significant number of intercompany transactions on a monthly basis. Intercompany transactions relate to a wide range of activities, including transfers of inventory with intercompany profit between business units, allocation of research and development costs to business units and corporate charges. Individual intercompany transactions are frequently material.

A formal management policy requires monthly reconciliation of intercompany accounts and confirmation of balances between business units. However, there is not a process in place to ensure that these procedures are performed on a consistent basis. As a result, reconciliations of intercompany accounts are not performed on a timely basis, and differences in intercompany accounts are frequent and significant. Management does not perform any alternative controls to investigate significant intercompany account differences.

Based only on these facts, the auditor should determine that this deficiency represents a material weakness for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be material, because individual intercompany transactions are frequently material and relate to a wide range of activities. Additionally, actual unreconciled differences in intercompany accounts have been, and are, material. The likelihood of such a misstatement is more than remote because such misstatements have frequently occurred and compensating controls are not effective, either because they are not properly designed or not operating effectively. Taken together, the magnitude and likelihood of misstatement of the financial statements resulting from this internal control deficiency meet the definition of a material weakness.

Example D-2—***Modifications to Standard Sales Contract Terms Not Reviewed To Evaluate Impact on Timing and Amount of Revenue Recognition***

Scenario A – Significant Deficiency. The company uses a standard sales contract for most transactions. Individual sales transactions are not material to the entity. Sales personnel are allowed to modify sales contract terms. The company's accounting function reviews significant or unusual modifications to the sales contract terms, but does not review changes in the standard shipping terms. The changes in the standard shipping terms could require a delay in the timing of revenue recognition. Management reviews gross margins on a monthly basis and investigates any significant or unusual relationships. In addition, management reviews the reasonableness of inventory levels at the end of each accounting period. The entity has experienced limited situations in which revenue has been inappropriately recorded in advance of shipment, but amounts have not been material.

Based only on these facts, the auditor should determine that this deficiency represents a significant deficiency for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be more than inconsequential, but less than material, because individual sales transactions are not material and the compensating detective controls operating monthly and at the end of each financial reporting period should reduce the likelihood of a material misstatement going undetected. Furthermore, the risk of material misstatement is limited to revenue recognition errors related to shipping terms as opposed to broader sources of error in revenue recognition. However, the compensating detective controls are only designed to detect material misstatements. The controls do not effectively address the detection of misstatements that are more than inconsequential but less than material, as evidenced by situations in which transactions that were not material were improperly recorded. Therefore, there is a more than remote likelihood that a misstatement that is more than inconsequential but less than material could occur.

Scenario B - Material Weakness. The company has a standard sales contract, but sales personnel frequently modify the terms of the contract. The nature of the modifications can affect the timing and amount of revenue recognized. Individual sales transactions are frequently material to the entity, and the gross margin can vary significantly for each transaction.

The company does not have procedures in place for the accounting function to regularly review modifications to sales contract terms. Although management reviews gross margins on a monthly basis, the significant differences in gross margins on individual transactions make it difficult for management to identify potential misstatements. Improper revenue recognition has occurred, and the amounts have been material.

Based only on these facts, the auditor should determine that this deficiency represents a material weakness for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be material, because individual sales transactions are frequently material, and gross margin can vary significantly with each transaction (which would make compensating detective controls based on a reasonableness review ineffective). Additionally, improper revenue recognition has occurred, and the amounts have been material. Therefore, the likelihood of material misstatements occurring is more than remote. Taken together, the magnitude and likelihood of misstatement of the financial statements resulting from this internal control deficiency meet the definition of a material weakness.

Scenario C – Material Weakness. The company has a standard sales contract, but sales personnel frequently modify the terms of the contract. Sales personnel frequently grant unauthorized and unrecorded sales discounts to customers without the knowledge of the accounting department. These amounts are deducted by customers in paying their invoices and are recorded as outstanding balances on the accounts receivable aging. Although these amounts are individually insignificant, they are material in the aggregate and have occurred consistently over the past few years.

Based on only these facts, the auditor should determine that this deficiency represents a material weakness for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be material, because the frequency of occurrence allows insignificant amounts to become material in the aggregate. The likelihood of material misstatement of the financial statements resulting from this internal control deficiency is more than remote (even assuming that the amounts were fully reserved for in the company's allowance for uncollectible accounts) due to the likelihood of material misstatement of the gross accounts receivable balance. Therefore, this internal control deficiency meets the definition of a material weakness.

Example D-3—***Identification of Several Deficiencies***

Scenario A – Material Weakness. During its assessment of internal control over financial reporting, management identified the following deficiencies. Based on the context in which the deficiencies occur, management and the auditor agree that these deficiencies individually represent significant deficiencies:

- Inadequate segregation of duties over certain information system access controls.

- Several instances of transactions that were not properly recorded in subsidiary ledgers; transactions were not material, either individually or in the aggregate.

- A lack of timely reconciliations of the account balances affected by the improperly recorded transactions.

Based only on these facts, the auditor should determine that the combination of these significant deficiencies represents a material weakness for the following reasons: Individually, these deficiencies were evaluated as representing a more than remote likelihood that a misstatement that is more than inconsequential, but less than material, could occur. However, each of these significant deficiencies affects the same set of accounts. Taken together, these significant deficiencies represent a more than remote likelihood that a material misstatement could occur and not be prevented or detected. Therefore, in combination, these significant deficiencies represent a material weakness.

Scenario B – Material Weakness. During its assessment of internal control over financial reporting, management of a financial institution identifies deficiencies in: the design of controls over the estimation of credit losses (a critical accounting estimate); the operating effectiveness of controls for initiating, processing, and reviewing adjustments to the allowance for credit losses; and the operating effectiveness of controls designed to prevent and detect the improper recognition of interest income. Management and the auditor agree that, in their overall context, each of these deficiencies individually represent a significant deficiency.

In addition, during the past year, the company experienced a significant level of growth in the loan balances that were subjected to the controls governing credit loss estimation and revenue recognition, and further growth is expected in the upcoming year.

Based only on these facts, the auditor should determine that the combination of these significant deficiencies represents a material weakness for the following reasons:

- The balances of the loan accounts affected by these significant deficiencies have increased over the past year and are expected to increase in the future.

- This growth in loan balances, coupled with the combined effect of the significant deficiencies described, results in a more than remote likelihood that a material misstatement of the allowance for credit losses or interest income could occur.

Therefore, in combination, these deficiencies meet the definition of a material weakness.

APPENDIX E

BACKGROUND AND BASIS FOR CONCLUSIONS

Table of Contents — ***Paragraph***

Introduction

E1. This appendix summarizes factors that the Public Company Accounting Oversight Board (the "Board") deemed significant in reaching the conclusions in the standard. This appendix includes reasons for accepting certain views and rejecting others.

Background

E2. Section 404(a) of the Sarbanes-Oxley Act of 2002 (the "Act"), and the Securities and Exchange Commission's (SEC) related implementing rules, require the management of a public company to assess the effectiveness of the company's internal control over financial reporting, as of the end of the company's most recent fiscal year. Section 404(a) of the Act also requires management to include in the company's annual report to shareholders management's conclusion as a result of that assessment of whether the company's internal control over financial reporting is effective.

E3. Sections 103(a)(2)(A) and 404(b) of the Act direct the Board to establish professional standards governing the independent auditor's attestation and reporting on management's assessment of the effectiveness of internal control over financial reporting.

E4. The backdrop for the development of the Board's first major auditing standard was, of course, the spectacular audit failures and corporate malfeasance that led to the passage of the Act. Although all of the various components of the Act work together to help restore investor confidence and help prevent the types of financial reporting breakdowns that lead to the loss of investor confidence, Section 404 of the Act is certainly one of the most visible and tangible changes required by the Act.

E5. The Board believes that effective controls provide the foundation for reliable financial reporting. Congress believed this too, which is why the new reporting by management and the auditor on the effectiveness of internal control over financial reporting received such prominent attention in the Act. Internal control over financial reporting enhances a company's ability to produce fair and complete financial reports. Without reliable financial reports, making good judgments and decisions about a company becomes very difficult for anyone, including the board of directors, management, employees, investors, lenders, customers, and regulators. The auditor's reporting on management's assessment of the effectiveness of internal control over financial reporting provides users of that report with important assurance about the reliability of the company's financial reporting.

E6. The Board's efforts to develop this standard were an outward expression of the Board's mission, "to protect the interests of investors and further the public interest in the preparation of informative, fair, and independent audit reports." As part of fulfilling that mission as it relates to this standard, the Board considered the advice that respected groups had offered to other auditing standards setters in the past. For example, the Public Oversight Board's Panel on Audit Effectiveness recommended that "auditing standards need to provide clear, concise and definitive imperatives for auditors to follow."[39/] As another example, the International Organization of Securities Commissioners advised the International Auditing and Assurance Standards Board "that the IAASB must take care to avoid language that could inadvertently encourage inappropriate shortcuts in audits, at a time when rigorous audits are needed more than ever to restore investor confidence."[40/]

[39/] Panel on Audit Effectiveness, *Report and Recommendations*, sec. 2.228 (August 31, 2000).

[40/] April 8, 2003 comment letter from the International Organization of Securities Commissions to the International Auditing and Assurance Standards Board regarding the proposed international standards on audit risk (Amendment to ISA 200, "Objective and Principles Governing an Audit of Financial Statements;" proposed ISAs, "Understanding the Entity and Its Environment and Assessing the Risks of Material Misstatement;" "Auditor's Procedures in Response to Assessed Risks;" and "Audit Evidence").

E7. The Board understood that, to effectively fulfill its mission and for this standard to achieve its ultimate goal of restoring investor confidence by increasing the reliability of public company financial reporting, the Board's standard must contain clear directions to the auditor consistent with investor's expectations that the reliability of financial reporting be significantly improved. Just as important, the Board recognized that this standard must appropriately balance the costs to implement the standard's directions with the benefits of achieving these important goals. As a result, all of the Board's decisions about this standard were guided by the additional objective of creating a rational relationship between costs and benefits.

E8. When the Board adopted its interim attestation standards in Rule 3300T on an initial, transitional basis, the Board adopted a pre-existing standard governing an auditor's attestation on internal control over financial reporting.[41/] As part of the Board's process of evaluating that pre-existing standard, the Board convened a public roundtable discussion on July 29, 2003 to discuss issues and hear views related to reporting on internal control over financial reporting. The participants at the roundtable included representatives from public companies, accounting firms, investor groups, and regulatory organizations. Based on comments made at the roundtable, advice from the Board's staff, and other input the Board received, the Board determined that the pre-existing standard governing an auditor's attestation on internal control over financial reporting was insufficient for effectively implementing the requirements of Section 404 of the Act and for the Board to appropriately discharge its standard-setting obligations under Section 103(a) of the Act. In response, the Board developed and issued, on October 7, 2003, a proposed auditing standard titled, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with An Audit of Financial Statements.*

E9. The Board received 189 comment letters on a broad array of topics from a variety of commenters, including auditors, investors, internal auditors, issuers, regulators, and others. Those comments led to changes in the standard, intended to make the requirements of the standard clearer and more operational. This appendix summarizes significant views expressed in those comment letters and the Board's responses.

Fundamental Scope of the Auditor's Work in an Audit of Internal Control over Financial Reporting

E10. The proposed standard stated that the auditor's objective in an audit of internal control over financial reporting was to express an opinion on

41/ The pre-existing standard is Chapter 5, "*Reporting on an Entity's Internal Control Over Financial Reporting*" of Statement on Standards for Attestation Engagements (SSAE) No. 10, *Attestation Standards: Revision and Recodification* (AICPA, *Professional Standards,* Vol. 1, AT sec. 501). SSAE No. 10 has been codified into AICPA *Professional Standards,* Volume 1, as AT sections 101 through 701.

management's assessment of the effectiveness of the company's internal control over financial reporting. To render such an opinion, the proposed standard required the auditor to obtain reasonable assurance about whether the company maintained, in all material respects, effective internal control over financial reporting as of the date specified in management's report. To obtain reasonable assurance, the auditor was required to evaluate both management's process for making its assessment and the effectiveness of internal control over financial reporting.

E11. Virtually all investors and auditors who submitted comment letters expressed support for this approach. Other commenters, primarily issuers, expressed concerns that this approach was contrary to the intent of Congress and, therefore, beyond what was specifically required by Section 404 of the Act. Further, issuers stated their views that this approach would lead to unnecessary and excessive costs. Some commenters in this group suggested the auditor's work should be limited to evaluating management's assessment process and the testing performed by management and internal audit. Others acknowledged that the auditor would need to test at least some controls directly in addition to evaluating and testing management's assessment process. However, these commenters described various ways in which the auditor's own testing could be significantly reduced from the scope expressed in the proposed standard. For instance, they proposed that the auditor could be permitted to use the work of management and others to a much greater degree; that the auditor could use a "risk analysis" to identify only a few controls to be tested; and a variety of other methods to curtail the extent of the auditor's work. Of those opposed to the scope, most cited their belief that the scope of work embodied in the standard would lead to a duplication of effort between management and the auditor which would needlessly increase costs without adding significant value.

E12. After considering the comments, the Board retained the approach described in the proposed standard. The Board concluded that the approach taken in the standard is consistent with the intent of Congress. Also, to provide the type of report, at the level of assurance called for in Sections 103 and 404, the Board concluded that the auditor must evaluate both management's assessment process and the effectiveness of internal control over financial reporting. Finally, the Board noted the majority of the cost to be borne by companies (and ultimately investors) results directly from the work the company will have to perform to maintain effective internal control over financial reporting and to comply with Section 404(a) of the Act. The cost of the auditor's work as described in this standard ultimately will represent a smaller portion of the total cost to companies of implementing Section 404.

E13. The Board noted that large, federally insured financial institutions have had a similar internal control reporting requirement for over ten years. The Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) has required, since 1993, managements of large financial institutions to make an assessment of internal control over financial reporting effectiveness and the institution's independent auditor to issue an attestation report on management's assessment.

E14. The attestation standards under which FDICIA engagements are currently performed are clear that, when performing an examination of management's assertion on the effectiveness of internal control over financial reporting (management's report on the assessment required by Section 404(a) of the Act must include a statement as to whether the company's internal control over financial reporting is effective), the auditor may express an opinion either on management's assertion (that is, whether management's assessment about the effectiveness of the internal control over financial reporting is fairly stated) or directly on the subject matter (that is, whether the internal control over financial reporting is effective) because the level of work that must be performed is the same in either case.

E15. The Board observed that Congress indicated an intent to require an examination level of work in Section 103(a) of the Act, which states, in part, that each registered public accounting firm shall:

> describe in each audit report the scope of the auditor's testing of the internal control structure and procedures of the issuer, required by Section 404(b), and present (in such report or in a separate report)—
>
> (I) the findings of the auditor from such testing;
>
> **(II) an evaluation of whether such internal control structure and procedures—**
>
> **(aa) include maintenance of records that in reasonable detail accurately reflect the transactions and dispositions of the assets of the issuer;**
>
> **(bb) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the issuer are being made only in accordance with authorizations of management and directors of the issuer**; and
>
> (III) a description, at a minimum, of material weaknesses in such internal controls, and of any material noncompliance found on the basis of such testing. [emphasis added].

E16. The Board concluded that the auditor must test internal control over financial reporting directly, in the manner and extent described in the standard, to make the evaluation described in Section 103. The Board also interpreted

Section 103 to provide further support that the intent of Congress was to require an opinion on the effectiveness of internal control over financial reporting.

E17. The Board concluded that the auditor must obtain a high level of assurance that the conclusion expressed in management's assessment is correct to provide an opinion on management's assessment. An auditing process restricted to evaluating what management has done would not provide the auditor with a sufficiently high level of assurance that management's conclusion is correct. Instead, it is necessary for the auditor to evaluate management's assessment process to be satisfied that management has an appropriate basis for its statement, or assertion, about the effectiveness of the company's internal control over financial reporting. It also is necessary for the auditor to directly test the effectiveness of internal control over financial reporting to be satisfied that management's conclusion is correct, and that management's assertion is fairly stated.

E18. This testing takes on added importance with the public nature of the internal control reporting. Because of the auditor's association with a statement by management that internal control over financial reporting is effective, it is reasonable for a user of the auditor's report to expect that the auditor tested the effectiveness of internal control over financial reporting. For the auditor to do otherwise would create an expectation gap, in which the assurance that the auditor obtained is less than what users reasonably expect.

E19. Auditors, investors, and the Federal bank regulators reaffirmed in their comment letters on the proposed auditing standard that the fundamental approach taken by the Board was appropriate and necessary. Investors were explicit in their expectation that the auditor must test the effectiveness of controls directly in addition to evaluating management's assessment process. Investors further recognized that this kind of assurance would come at a price and expressed their belief that the cost of the anticipated benefits was reasonable. The federal banking regulators, based on their experience examining financial institutions' internal control assessments and independent auditors' attestation reports under FDICIA, commented that the proposed auditing standard was a significant improvement over the existing attestation standard.

Reference to Audit vs. Attestation

E20. The proposed standard referred to the attestation required by Section 404(b) of the Act as the *audit* of internal control over financial reporting instead of an *attestation* of management's assessment. The proposed standard took that approach both because the auditor's objective is to express an opinion on management's assessment of the effectiveness of internal control over financial reporting, just as the auditor's objective in an audit of the financial statements is to express an opinion on the fair presentation of the financial statements, and because the level of assurance obtained by the auditor is the same in both cases. Furthermore, the proposed standard described an *integrated* audit of the financial statements and internal control over financial reporting and allowed the auditor to express his or her opinions on the financial statements and on the effectiveness of internal control in separate reports or in a single, combined report.

E21. Commenters' views on this matter frequently were related to their views on whether the proposed scope of the audit was appropriate. Those who agreed that the scope in the proposed standard was appropriate generally agreed that referring to the engagement as an *audit* was appropriate. On the other hand, commenters who objected to the scope of work described in the proposed standard often drew an important distinction between an *audit* and an *attestation.* Because Section 404 calls for an *attestation*, they believed it was inappropriate to call the engagement anything else (or to mandate a scope that called for a more extensive level of work).

E22. Based, in part, on the Board's decisions about the scope of the audit of internal control over financial reporting, the Board concluded that the engagement should continue to be referred to as an "audit." This term emphasizes the nature of the auditor's objective and communicates that objective most clearly to report users. Use of this term also is consistent with the integrated approach described in the standard and the requirement in Section 404 of the Act that this reporting not be subject to a separate engagement.

E23. Because the Board's standard on internal control is an auditing standard, it is preferable to use the term *audit* to describe the engagement rather than the term *examination*, which is used in the attestation standards to describe an engagement designed to provide a high level of assurance.

E24. Finally, the Board believes that using the term *audit* helps dispel the misconception that an audit of internal control over financial reporting is a different level of service than an attestation of management's assessment of internal control over financial reporting.

Form of the Auditor's Opinion

E25. The proposed auditing standard required that the auditor's opinion in his or her report state whether management's assessment of the effectiveness of the company's internal control over financial reporting as of the specified date is fairly stated, in all material respects, based on the control criteria. However, the proposed standard also stated that nothing precluded the auditor from auditing management's assessment and opining directly on the effectiveness of internal control over financial reporting. This is because the scope of the work, as defined by the proposed standard, was the same, regardless of whether the auditor reports on management's assessment or directly on the effectiveness of internal control over financial reporting. The form of the opinion was essentially interchangeable between the two.

E26. However, if the auditor planned to issue other than an unqualified opinion, the proposed standard required the auditor to report directly on the effectiveness of the company's internal control over financial reporting rather than on management's assessment. The Board initially concluded that expressing an opinion on management's assessment, in these circumstances, did not most effectively communicate the auditor's conclusion that internal control was not effective. For example, if management expresses an adverse assessment because a material weakness exists at the date of management's assessment ("…internal control over financial reporting is not effective…") and the auditor expresses his or her opinion on management's assessment ("…management's assessment that internal control over financial reporting is not effective is fairly stated, in all material respects…"), a reader might not be clear about the results of the auditor's testing and about the auditor's conclusions. The Board initially decided that reporting directly on the effectiveness of the company's internal control over financial reporting better communicates to report users the effect of such conditions, because direct reporting more clearly states the auditor's conclusions about the effectiveness of internal control over financial reporting ("In our opinion, because of the effect of the material weakness described…, the Company's internal control over financial reporting is not effective.").

E27. A number of commenters were supportive of the model described in the previous paragraph, as they agreed with the Board's reasoning. However, several commenters believed that report users would be confused as to why the form of the auditor's opinion would be different in various circumstances. These commenters thought that the auditor's opinion should be consistently expressed in all reports. Several auditors recommended that auditors always report directly on the effectiveness of the company's internal control over financial reporting. They reasoned that the scope of the audit—which always would require the auditor to obtain reasonable assurance about whether the internal control over financial reporting was effective—would be more clearly communicated, in all cases, by the auditor reporting directly on the effectiveness of internal control over financial reporting. Other commenters suggested that the auditor always should express two opinions: one on management's assessment and one directly on the effectiveness of internal control over financial reporting. They believed the Act called for two opinions: Section 404 calls for an opinion on management's assessment, while Section 103 calls for an opinion directly on the effectiveness of internal control over financial reporting.

E28. The Board believes that the reporting model in the proposed standard is appropriate. However, the Board concluded that the expression of two opinions—one on management's assessment and one on the effectiveness of internal control over financial reporting—in all reports is a superior approach that balances the concerns of many different interested parties. This approach is consistent with the scope of the audit, results in more consistent reporting in differing circumstances, and makes the reports more easily understood by report users. Therefore, the standard requires that the auditor express two opinions in all reports on internal control over financial reporting.

Use of the Work of Others

E29. After giving serious consideration to a rational relationship between costs and benefits, the Board decided to change the provisions in the proposed standard regarding using the work of others. The proposed standard required the auditor to evaluate whether to use the work of others, such as internal auditors and others working under the direction of management, and described an evaluation process focused on the competence and objectivity of the persons who performed the work that the auditor was required to use when determining the extent to which he or she could use the work of others.

E30. The proposed standard also described two principles that limited the auditor's ability to use of the work of others. First, the proposed standard defined three categories of controls and the extent to which the auditor could use the work of others in each of those categories:

- Controls for which the auditor should not rely on the work of others, such as controls in the control environment and controls specifically intended to prevent or detect fraud that is reasonably likely to have a material effect on the company's financial statements,

- Controls for which the auditor may rely on the work of others, but his or her reliance on the work of others should be limited, such as controls over nonroutine transactions that are considered high risk because they involve judgments and estimates, and

- Controls for which the auditor's reliance on the work of others is not specifically limited, such as controls over routine processing of significant accounts.

E31. Second, the proposed standard required that, on an overall basis, the auditor's own work must provide the principal evidence for the audit opinion (this is referred to as the *principal evidence provision*).

E32. In the proposed standard, these two principles provided the auditor with flexibility in using the work of others while preventing him or her from placing inappropriate over-reliance on the work of others. Although the proposed standard required the auditor to reperform some of the tests performed by others to use their work, it did not establish specific requirements for the extent of the reperformance. Rather, it allowed the auditor to use his or her judgment and the directions provided by the two principles discussed in the previous two paragraphs to determine the appropriate extent of reperformance.

E33. The Board received a number of comments that agreed with the proposed three categories of controls and the principal evidence provision. However, most commenters expressed some level of concern with the categories, the principal evidence provision, or both.

E34. Comments opposing or criticizing the categories of controls varied from general to very specific. In general terms, many commenters (particularly issuers) expressed concern that the categories described in the proposed standard were too restrictive. They believed the auditor should be able to use his or her judgment to determine in which areas and to what extent to rely on the work of others. Other commenters indicated that the proposed standard did not place enough emphasis on the work of internal auditors whose competence and objectivity, as well as adherence to professional standards of internal auditing, should clearly set their work apart from the work performed by others in the organization (such as management or third parties working under management's direction). Further, these commenters believed that the standard should clarify that the auditor should be able to use work performed by internal auditors extensively. In that case, their concerns about excessive cost also would be partially alleviated.

E35. Other commenters expressed their belief that the proposed standard repudiated the approach established in AU sec. 322, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements,* for the auditor's use of the work of internal auditors in a financial statement audit. Commenters also expressed very specific and pointed views on the three categories of controls. As defined in the proposed standard, the first category (in which the auditor should not use the work of others at all) included:

- Controls that are part of the control environment, including controls specifically established to prevent and detect fraud that is reasonably likely to result in material misstatement of the financial statements.

- Controls over the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; to initiate, record, and process journal entries in the general ledger; and to record recurring and nonrecurring adjustments to the financial statements (for example, consolidating adjustments, report combinations, and reclassifications).

- Controls that have a pervasive effect on the financial statements, such as certain information technology general controls on which the operating effectiveness of other controls depend.

- Walkthroughs.

E36. Commenters expressed concern that the prohibition on using the work of others in these areas would (a) drive unnecessary and excessive costs, (b) not give appropriate recognition to those instances in which the auditor evaluated internal audit as having a high degree of competence and objectivity, and (c) be impractical due to resource constraints at audit firms. Although each individual area was mentioned, the strongest and most frequent objections were to the restrictions imposed over the inclusion in the first category of walkthroughs, controls over the period-end financial reporting process, and information technology general controls. Some commenters suggested the Board should consider moving these areas from the first category to the second category (in which using the work of others would be limited, rather than prohibited); others suggested removing any limitation on using the work of others in these areas altogether.

E37. Commenters also expressed other concerns with respect to the three control categories. Several commenters asked for clarification on what constituted *limited* use of the work of others for areas included in the second category. Some commenters asked for clarification about the extent of reperformance necessary for the auditor to use the work of others. Other commenters questioned the meaning of the term *without specific limitation* in the third category by asking, did this mean that the auditor could use the work of others in these areas without performing *or* reperforming *any* work in those areas?

E38. Although most commenters suggested that the principal evidence threshold for the auditor's own work be retained, some commenters objected to the principal evidence provision. Although many commenters identified the broad array of areas identified in the first category (in which the auditor should not use the work of others at all) as the key driver of excessive costs, others identified the principal evidence provision as the real source of their excessive cost concerns. Even if the categories were redefined in such a way as to permit the auditor to use the work of others in more areas, any associated decrease in audit cost would be limited by the principal evidence provision which, if retained, would still require significant original work on the part of the auditor. On the other hand, both investors and auditors generally supported retaining the principal evidence provision as playing an important role in ensuring the independence of the auditor's opinion and preventing inappropriate overreliance on the work of internal auditors and others.

E39. Commenters who both supported and opposed the principal evidence provision indicated that implementing it would be problematic because the nature of the work in an audit of internal control over financial reporting does not lend itself to a purely quantitative measurement. Thus, auditors would be forced to use judgment when determining whether the principal evidence provision has been satisfied.

E40. In response to the comments, the Board decided that some changes to the guidance on using the work of others were necessary. The Board did not intend to reject the concepts in AU sec. 322 and replace them with a different model. Although AU sec. 322 is designed to apply to an audit of financial statements, the Board concluded that the concepts contained in AU sec. 322 are sound and should be used in an audit of internal control over financial reporting, with appropriate modification to take into account the differences in the nature of the evidence necessary to support an opinion on financial statements and the evidence necessary to support an opinion on internal control effectiveness. The Board also wanted to make clear that the concepts in AU sec. 322 also may be applied, with appropriate auditor judgment, to the relevant work of others.

E41. The Board remained concerned, however, with the possibility that auditors might overrely on the work of internal auditors and others. Inappropriate overreliance can occur in a variety of ways. For example, an auditor might rely on the work of a highly competent and objective internal audit function for proportionately too much of the evidence that provided the basis for the auditor's opinion. Inappropriate overreliance also occurs when the auditor incorrectly concludes that internal auditors have a high degree of competence and objectivity when they do not, perhaps because the auditor did not exercise professional skepticism or due professional care when making his or her evaluation. In either case, the result is the same: unacceptable risk that the auditor's conclusion that internal control over financial reporting is effective is incorrect. For example, federal bank regulators commented that, in their experience with FDICIA, auditors have a tendency to rely too heavily on the work of management and others, further noting that this situation diminishes the independence of the auditor's opinion on control effectiveness.

E42. The Board decided to revise the categories of controls by focusing on the nature of the controls being tested, evaluating the competence and objectivity of the individuals performing the work, and testing the work of others. This allows the auditor to exercise substantial judgment based on the outcome of this work as to the extent to which he or she can make use of the work of internal auditors or others who are suitably qualified.

E43. This standard emphasizes the direct relationship between the assessed level of competence and objectivity and the extent to which the auditor may use the work of others. The Board included this clarification to highlight the special status that a highly competent and objective internal auditor has in the auditor's work as well as to caution against inappropriate overreliance on the work of management and others who would be expected to have lower degrees of competence and objectivity in assessing controls. Indeed, the Board noted that, with regard to internal control over financial reporting, internal auditors would normally be assessed as having a higher degree of competence and objectivity than management or others and that an auditor will be able to rely to a greater extent on the work of a highly competent and objective internal auditor than on work performed by others within the company.

E44. The Board concluded that the principal evidence provision is critical to preventing overreliance on the work of others in an audit of internal control over financial reporting. The requirement for the auditor to perform enough of the control testing himself or herself so that the auditor's own work provides the principal evidence for the auditor's opinion is of paramount importance to the auditor's assurance providing the level of reliability that investors expect. However, the Board also decided that the final standard should articulate clearly that the auditor's judgment about whether he or she has obtained the principal evidence required is qualitative as well as quantitative. Therefore, the standard now states, "Because the amount of work related to obtaining sufficient evidence to support an opinion about the effectiveness of controls is not susceptible to precise measurement, the auditor's judgment about whether he or she has obtained the principal evidence for the opinion will be qualitative as well as quantitative. For example, the auditor might give more weight to work performed on pervasive controls and in areas such as the control environment than on other controls, such as controls over low-risk, routine transactions."

E45. The Board also concluded that a better balance could be achieved in the standard by instructing the auditor to factor into the determination of the extent to which to use the work of others an evaluation of the nature of the controls on which others performed their procedures.

E46. Paragraph 112 of the standard provides the following factors the auditor should consider when evaluating the nature of the controls subjected to the work of others:

- The materiality of the accounts and disclosures that the control addresses and the risk of material misstatement.

- The degree of judgment required to evaluate the operating effectiveness of the control (that is, the degree to which the evaluation of the effectiveness of the control requires evaluation of subjective factors rather than objective testing).

- The pervasiveness of the control.

- The level of judgment or estimation required in the account or disclosure.

- The potential for management override of the control.

E47. As these factors increase in significance, the need for the auditor to perform his or her own work on those controls increases. As these factors decrease in significance, the auditor may rely more on the work of others. Because of the nature of controls in the control environment, however, the standard does not allow the auditor to use the work of others to reduce the amount of work he or she performs on such controls. In addition, the standard also does not allow the auditor to use the work of others in connection with the performance of walkthroughs of major classes of transactions because of the high degree of judgment required when performing them (See separate discussion in paragraphs E51 through E57).

E48. The Board decided that this approach was responsive to those who believed that the auditor should be able to use his or her judgment in determining the extent to which to use the work of others. The Board designed the requirement that the auditor's own work must provide the principal evidence for the auditor's opinion as one of the boundaries within which the auditor determines the work he or she must perform himself or herself in the audit of internal control over financial reporting. The other instructions about using the work of others provide more specific direction about how the auditor makes this determination, but allow the auditor significant flexibility to use his or her judgment to determine the work necessary to obtain the principal evidence, and to determine when the auditor can use the work of others rather than perform the work himself or herself. Although some of the directions are specific and definitive, such as the directions for the auditor to perform tests of controls in the control environment and walkthroughs himself or herself, the Board decided that these areas were of such audit importance that the auditor should always perform this testing as part of obtaining the principal evidence for his or her opinion. The Board concluded that this approach appropriately balances the use of auditor judgment and the risk of inappropriate overreliance.

E49. The Board was particularly concerned by comments that issuers might choose to reduce their internal audit staff or the extent of internal audit testing in the absence of a significant change in the proposed standard that would significantly increase the extent to which the auditor may use the work of internal auditors. The Board believes the standard makes clear that an effective internal audit function does permit the auditor to reduce the work that otherwise would be necessary.

E50. Finally, as part of clarifying the linkage between the degree of competence and objectivity of the others and the ability to use their work, the Board decided that additional clarification should be provided on the extent of testing that should be required of the work of others. The Board noted that the interaction of the auditor performing walkthroughs of every significant process and the retention of the principal evidence provision precluded the need for the auditor to test the work of others in every significant account. However, testing the work of others is an important part of an ongoing assessment of their competence and objectivity. Therefore, as part of the emphasis on the direct relationship between the assessed level of competence and objectivity to the extent of the use of the work of others, additional provisions were added discussing how the results of the testing of the work of others might affect the auditor's assessment of competence and objectivity. The Board also concluded that testing the work of others should be clearly linked to an evaluation of the quality and effectiveness of their work.

Walkthroughs

E51. The proposed standard included a requirement that the auditor perform walkthroughs, stating that the auditor should perform a walkthrough for all of the company's significant processes. In the walkthrough, the auditor was to trace all types of transactions and events, both recurring and unusual, from origination through the company's information systems until they were included in the company's financial reports. As stated in the proposed standard, walkthroughs provide the auditor with evidence to:

- Confirm the auditor's understanding of the process flow of transactions;
- Confirm the auditor's understanding of the design of controls identified for all five components of internal control over financial reporting, including those related to the prevention or detection of fraud;
- Confirm that the auditor's understanding of the process is complete by determining whether all points in the process at which misstatements related to each relevant financial statement assertion that could occur have been identified;
- Evaluate the effectiveness of the design of controls; and
- Confirm whether controls have been placed in operation.

E52. A number of commenters expressed strong support for the requirement for the auditor to perform walkthroughs as described in the proposed standard. They agreed that auditors who did not already perform the type of walkthrough described in the proposed standard should perform them as a matter of good practice. These commenters further recognized that the first-hand understanding an auditor obtains from performing these walkthroughs puts the auditor in a much better position to design an effective audit and to evaluate the quality and effectiveness of the work of others. They considered the walkthrough requirement part of "getting back to basics," which they viewed as a positive development.

E53. Some commenters expressed general support for walkthroughs as required procedures, but had concerns about the scope of the work. A number of commenters suggested that requiring walkthroughs of *all* significant processes and *all* types of transactions would result in an overwhelming and unreasonable number of walkthroughs required. Commenters made various suggestions for alleviating this problem, including permitting the auditor to determine, using broad auditor judgment, which classes of transactions to walk through or refining the scope of "all types of transactions" to include some kind of consideration of risk and materiality.

E54. Other commenters believed that required walkthroughs would result in excessive cost if the auditor were prohibited from using the work of others. These commenters suggested that the only way that required walkthroughs would be a reasonable procedure is to permit the auditor to use the work of others. Although commenters varied on whether the auditor's use of the work of others for walkthroughs should be liberal or limited, and whether it should include management or be limited to internal auditors, a large number of commenters suggested that limiting walkthroughs to only the auditor himself or herself was impractical.

E55. The Board concluded that the objectives of the walkthroughs cannot be achieved second-hand. For the objectives to be effectively achieved, the auditor must perform the walkthroughs himself or herself. Several commenters who objected to the prohibition on using the work of internal auditors for walkthroughs described situations in which internal auditors would be better able to effectively perform walkthroughs because internal auditors understood the company's business and controls better than the external auditor and because the external auditor would struggle in performing walkthroughs due to a lack of understanding. The Board observed that these commenters' perspectives support the importance of requiring the external auditor to perform walkthroughs. If auditors struggle to initially perform walkthroughs because their knowledge of the company and its controls is weak, then that situation would only emphasize the necessity for the auditor to increase his or her level of understanding. After considering the nature and extent of the procedures that would be required to achieve these objectives, the Board concluded that performing walkthroughs would be the most efficient means of doing so. The first-hand understanding the auditor will obtain of the company's processes and its controls through the walkthroughs will translate into increased effectiveness and quality throughout the rest of the audit, in a way that cannot be achieved otherwise.

E56. The Board also decided that the scope of the transactions that should be subjected to walkthroughs should be more narrowly defined. To achieve the objectives the Board intended for walkthroughs to accomplish, the auditor should not be forced to perform walkthroughs on what many commenters reasoned was an unreasonably large population. The Board decided that the auditor should be able to use judgment in considering risk and materiality to determine which transactions and events within a given significant process to walk through. As a result, the directions in the standard on determining significant processes and major classes of transactions were expanded, and the population of transactions for which auditors will be required to walk through narrowed by replacing "all types of transactions" with "major classes of transactions."

E57. Although judgments of risk and materiality are inherent in identifying major classes of transactions, the Board decided to also remove from the standard the statement, "walkthroughs are required procedures" as a means of further clarifying that auditor judgment plays an important role in determining the major classes of transactions for which to perform a walkthrough. The Board observed that leading off the discussion of walkthroughs in the standard with such a sentence could be read as setting a tone that diminished the role of judgment in selecting the transactions to walk through. As a result, the directions in the standard on performing walkthroughs begin with, "The auditor should perform at least one walkthrough for each major class of transactions…" The Board's decision to eliminate the statement "walkthroughs are required procedures" should not be viewed as an indication that performing walkthroughs are optional under the standard's directions. The Board believes the auditor might be able to achieve the objectives of a walkthrough by performing a combination of procedures, including inquiry, inspection, observation, and reperformance; however, performing a walkthrough represents the most efficient and effective means of doing so. The auditor's work on the control environment and walkthroughs is an important part of the principal evidence that the auditor must obtain himself or herself.

Small Business Issues

E58. Appendix E of the proposed standard discussed small and medium-sized company considerations. Comments were widely distributed on this topic. A number of commenters indicated that the proposed standard gave adequate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized companies. Other commenters, particularly smaller issuers and smaller audit firms, indicated that the proposed standard needed to provide much more detail on how internal control over financial reporting could be different at a small or medium-sized issuer and how the auditor's approach could differ. Some of these commenters indicated that the concepts articulated in the Board's proposing release concerning accommodations for small and medium-sized companies were not carried through to the proposed standard itself.

E59. On the other hand, other commenters, particularly large audit firms and investors, expressed views that the proposed standard went too far in creating too much of an accommodation for small and medium-sized issuers. In fact, many believed that the proposed standard permitted those issuers to have less effective internal control over financial reporting than larger issuers, while providing guidance to auditors permitting them to perform less extensive testing at those small and medium-sized issuers than they might have at larger issuers. These commenters stressed that effective internal control over financial reporting is equally important at small and medium-sized issuers. Some commenters also expressed concerns that the guidance in proposed Appendix E appeared to emphasize that the actions of senior management, if carried out with integrity, could offset deficiencies in internal control over financial reporting, such as the lack of written policies and procedures. Because the risk of management override of controls is higher in these types of environments, such commenters were concerned that the guidance in proposed Appendix E might result in an increased fraud risk at small and medium-sized issuers. At a minimum, they argued, the interpretation of Appendix E might result in a dangerous expectation gap for users of their internal control reports. Some commenters who were of this view suggested that Appendix E be deleted altogether or replaced with a reference to the report of the Committee of Sponsoring Organizations (COSO) of the Treadway Commission, *Internal Control—Integrated Framework*, which they felt contained sufficient guidance on small and medium-sized company considerations.

E60. Striking an appropriate balance regarding the needs of smaller issuers is particularly challenging. The Board considered cautionary views about the difficulty in expressing accommodations for small and medium-sized companies without creating an inappropriate second class of internal control effectiveness and audit assurance. Further, the Board noted that the COSO framework currently provides management and the auditor with more guidance and flexibility regarding small and medium-sized companies than the Board had provided in the proposed Appendix E. As a result, the Board eliminated proposed Appendix E and replaced the appendix with a reference to COSO in paragraph 15 of the standard. The Board believes providing internal control criteria for small and medium-sized companies within the internal control framework is more appropriately within the purview of COSO. Furthermore, the COSO report was already tailored for special small and medium-sized company considerations. The Board decided that emphasizing the existing guidance within COSO was the best way of recognizing the special considerations that can and should be given to small and medium-sized companies without inappropriately weakening the standard to which these smaller entities should, nonetheless, be held. If additional tailored guidance on the internal control framework for small and medium-sized companies is needed, the Board encourages COSO, or some other appropriate body, to develop this guidance.

Evaluation of the Effectiveness of the Audit Committee

E61. The proposed standard identified a number of circumstances that, because of their likely significant negative effect on internal control over financial reporting, are significant deficiencies as well as *strong indicators* that a material weakness exists. A particularly notable significant deficiency and strong indicator of a material weakness was the ineffective oversight by the audit committee of the company's external financial reporting and internal control over financial reporting. In addition, the proposed standard required the auditor to evaluate factors related to the effectiveness of the audit committee's oversight of the external financial reporting process and the internal control over financial reporting.

E62. This provision related to evaluating the effectiveness of the audit committee was included in the proposed standard for two primary reasons. First, the Board initially decided that, because of the significant role that the audit committee has in the control environment and monitoring components of internal control over financial reporting, an ineffective audit committee is a gravely serious control weakness that is strongly indicative of a material weakness. Most auditors should have already been reaching this conclusion when confronted with an obviously ineffective audit committee. Second, highlighting the adverse consequences of an ineffective audit committee would, perhaps, further encourage weak audit committees to improve.

E63. Investors supported this provision. They expressed an expectation that the auditor would evaluate the audit committee's effectiveness and speak up if the audit committee was determined to be ineffective. Investors drew a link among restoring their confidence, audit committees having new and enhanced responsibilities, and the need for assurance that audit committees are, in fact, meeting their responsibilities.

E64. Auditors also were generally supportive of such an evaluation. However, many requested that the proposed standard be refined to clearly indicate that the auditor's responsibility to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting is not a separate and distinct evaluation. Rather, the evaluation is one element of the auditor's overall understanding and assessment of the company's control environment and monitoring components. Some commenters suggested that, in addition to needing clarification of the auditor's responsibility, the auditor would have difficulty in evaluating all of the factors listed in the proposed standard, because the auditor's normal interaction with the audit committee would not provide sufficient basis to conclude on some of those factors.

E65. Issuers and some others were opposed to the auditor evaluating the effectiveness of the audit committee on the fundamental grounds that such an evaluation would represent an unacceptable conflict of interest. Several commenters shared the view that this provision would reverse an important improvement in governance and audit quality. Whereas the auditor was formerly retained and compensated by management, the Act made clear that these responsibilities should now be those of the audit committee. In this way, commenters saw a conflict of interest being remedied. Requiring the auditor to evaluate the effectiveness of the audit committee led commenters to conclude that the same kind of conflict of interest was being reestablished. These commenters also believed that the auditor would not have a sufficient basis on which to evaluate the effectiveness of the audit committee because the auditor does not have complete and free access to the audit committee, does not have appropriate expertise to evaluate audit committee members (who frequently are more experienced businesspeople than the auditor), does not have the legal expertise to make determinations about some of the specific factors listed in the proposed standard, and other shortcomings. These commenters also emphasized that the board of directors' evaluation of the audit committee is important and that the proposed standard could be read to supplant this important evaluation with that of the auditor's.

E66. The Board concluded that this provision should be retained but decided that clarification was needed to emphasize that the auditor's evaluation of the audit committee was not a separate evaluation but, rather, was made as part of the auditor's evaluation of the control environment and monitoring components of internal control over financial reporting. The Board reasoned that clarifying both this context and limitation on the auditor's evaluation of the audit committee would also address, to some degree, the conflict-of-interest concerns raised by other commenters. The Board also observed, however, that conflict is, to some extent, inherent in the duties that society expects of auditors. Just as auditors were expected in the past to challenge management when the auditor believed a material misstatement of the financial statements or material weakness in internal control over financial reporting existed, the auditor similarly is expected to speak up when he or she believes the audit committee is ineffective in its oversight.

E67. The Board decided that when the auditor is evaluating the control environment and monitoring components, if the auditor concludes that the audit committee's oversight of the company's external financial reporting and internal control over financial reporting is ineffective, the auditor should be strongly encouraged to consider that situation a material weakness and, at a minimum, a significant deficiency. The objective of the evaluation is not to grade the effectiveness of the audit committee along a scale. Rather, in the course of performing procedures related to evaluating the effectiveness of the control environment and monitoring components, including evaluating factors related to the effectiveness of the audit committee's oversight, if the auditor concludes that the audit committee's oversight of the external financial reporting and internal control over financial reporting is ineffective, then the auditor should consider that a strong indicator of a material weakness.

E68. The Board concluded that several refinements should be made to this provision. As part of emphasizing that the auditor's evaluation of the audit committee is to be made as part of evaluating the control environment and not as a separate evaluation, the Board determined that the evaluation factors should be modified. The factors that addressed compliance with listing standards and sections of the Act were deleted, because those factors were specifically criticized in comment letters as being either outside the scope of the auditor's expertise or outside the scope of internal control over financial reporting. The Board also believed that those factors were not significant to the type of evaluation the auditor was expected to make of the audit committee. The Board decided to add the following factors, which are based closely on factors described in COSO, as relevant to evaluating those who govern, including the audit committee:

- Extent of direct and independent interaction with key members of financial management, including the chief financial officer and chief accounting officer.

- Degree to which difficult questions are raised and pursued with management and the auditor, including questions that indicate an understanding of the critical accounting policies and judgmental accounting estimates.

- Level of responsiveness to issues raised by the auditor, including those required to be communicated by the auditor to the audit committee.

E69. The Board also concluded that the standard should explicitly acknowledge that the board of directors is responsible for evaluating the effectiveness of the audit committee and that the auditor's evaluation of the control environment is not intended to supplant those evaluations. In addition, the Board concluded that, in the event the auditor determines that the audit committee's oversight is ineffective, the auditor should communicate that finding to the full board of directors. This communication should occur regardless of whether the auditor concludes that the condition represents a significant deficiency or a material weakness, and the communication should take place in addition to the normal communication requirements that attach to those deficiencies.

Definitions of Significant Deficiency and Material Weakness

E70. As part of developing the proposed standard, the Board evaluated the existing definitions of significant deficiency (which the SEC defined as being the same as a reportable condition) and material weakness to determine whether they would permit the most effective implementation of the internal control reporting requirements of the Act.

E71. AU sec. 325, *Communication of Internal Control Related Matters Noted in an Audit*, defined a material weakness as follows:

> A *material weakness* in internal control is a reportable condition in which the design or operation of one or more of the internal control components does not reduce to a *relatively low level* the risk that misstatements caused by error or fraud in amounts that would be material in relation to the financial statements being audited may occur and not be detected within a timely period by employees in the normal course of performing their assigned functions.

E72. The framework that defined a material weakness focused on likelihood of and magnitude for evaluating a weakness. The Board decided that this framework would facilitate effective implementation of the Act's internal control reporting requirements; therefore, the Board's proposed definitions focused on likelihood and magnitude. However, as part of these deliberations, the Board decided that likelihood and magnitude needed to be defined in terms that would encourage more consistent application.

E73. Within the existing definition of material weakness, the magnitude of "material in relation to the financial statements" was well supported by the professional standards, SEC rules and guidance, and other literature. However, the Board decided that the definition of likelihood would be improved if it used "more than remote" instead of "relatively low level." FASB Statement No. 5, *Accounting for Contingencies* (FAS No. 5) defines "remote." The Board decided that, because auditors were familiar with the application of the likelihood definitions in FAS No. 5, using "more than remote" in the definition of material weakness would infuse the evaluation of whether a control deficiency was a material weakness with the additional consistency that the Board wanted to encourage.

E74. AU sec. 325 defined *reportable conditions* as follows:

> …matters coming to the auditor's attention that, in his judgment, should be communicated to the audit committee because they represent significant deficiencies in the design or operation of internal control, which could adversely affect the organization's ability to initiate, record, process, and report financial data consistent with the assertions of management in the financial statements.

E75. The Board observed that this definition makes the determination of whether a condition is reportable solely a matter of the auditor's judgment. The Board believed that this definition was insufficient for purposes of the Act because management also needs a definition to determine whether a deficiency is significant and that the definition should be the same as the definition used by the auditor. Furthermore, using this existing definition, the auditor's judgment could never be questioned.

E76. The Board decided that the same framework that represented an appropriate framework for defining a material weakness also should be used for defining a significant deficiency. Although auditor judgment is integral and essential to the audit process (including in determining the severity of control weaknesses), auditors, nonetheless, must be accountable for their judgments. Increasing the accountability of auditors for their judgments about whether a condition represents a significant deficiency and increasing the consistency with which those judgments are made are interrelated. Hence, the same framework of likelihood and magnitude were applied in the Board's proposed definition of significant deficiency.

E77. In applying the likelihood and magnitude framework to defining a significant deficiency, the Board decided that the "more than remote" likelihood of occurrence used in the definition of material weakness was the best benchmark. In terms of magnitude, the Board decided that "more than inconsequential" should be the threshold for a significant deficiency.

E78. A number of commenters were supportive of the definitions in the proposed standard. These commenters believed the definitions were an improvement over the previous definitions, used terms familiar to auditors, and would promote increased consistency in evaluations.

E79. Most commenters, however, objected to these definitions. The primary, over-arching objection was that these definitions set too low a threshold for the reporting of significant deficiencies. Some commenters focused on "more than remote" likelihood as the driver of an unreasonably low threshold, while others believed "more than inconsequential" in the definition of significant deficiency was the main culprit. While some commenters understood "more than inconsequential" well enough, others indicated significant concerns that this represented a new term of art that needed to be accompanied by a clear definition of "inconsequential" as well as supporting examples. Several commenters suggested retaining the likelihood and magnitude approach to a definition but suggested alternatives for likelihood (such as reasonably likely, reasonably possible, more likely than not, probable) and magnitude (such as material, significant, insignificant).

E80. Some commenters suggested that the auditing standard retain the existing definitions of material weakness and significant deficiency, consistent with the SEC's final rules implementing Section 404. In their final rules, the SEC tied management's assessment to the existing definitions of material weakness and significant deficiency (through the existing definition of a reportable condition) in AU sec. 325. These commenters suggested that, if the auditing standard used a different definition, a dangerous disconnect would result, whereby management would be using one set of definitions under the SEC's rules and auditors would be using another set under the Board's auditing standards. They further suggested that, absent rulemaking by the SEC to change its definitions, the Board should simply defer to the existing definitions.

E81. A number of other commenters questioned the reference to "a misstatement of the annual or interim financial statements" in the definitions, with the emphasis on why "interim" financial statements were included in the definition, since Section 404 required only an annual assessment of internal control over financial reporting effectiveness, made as of year-end. They questioned whether this definition implied that the auditor was required to identify deficiencies that could result in a misstatement in interim financial statements; they did not believe that the auditor should be required to plan his or her audit of internal control over financial reporting at a materiality level of the interim financial statements.

E82. The Board ultimately concluded that focusing the definitions of material weakness and significant deficiency on likelihood of misstatement and magnitude of misstatement provides the best framework for evaluating deficiencies. Defaulting to the existing definitions would not best serve the public interest nor facilitate meaningful and effective implementation of the auditing standard.

E83. The Board observed that the SEC's final rules requiring management to report on internal control over financial reporting define material weakness, for the purposes of the final rules, as having "the same meaning as the definition under GAAS and attestation standards." Those rules state:

> The term "significant deficiency" has the same meaning as the term "reportable condition" as used in AU §325 and AT§501. The terms "material weakness" and "significant deficiency" both represent

deficiencies in the design or operation of internal control that could adversely affect a company's ability to record, process, summarize and report financial data consistent with the assertions of management in the company's financial statements, with a "material weakness" constituting a greater deficiency than a "significant deficiency." Because of this relationship, it is our judgment that an aggregation of significant deficiencies could constitute a material weakness in a company's internal control over financial reporting.[42/]

E84. The Board considered the SEC's choice to cross-reference to generally accepted auditing standards (GAAS) and the attestation standards as the means of defining these terms, rather than defining them outright within the final rules, noteworthy as it relates to the question of whether any disconnect could result between auditors' and managements' evaluations if the Board changed the definitions in its standards. Because the standard changes the definition of these terms within the interim standards, the Board believes the definitions are, therefore, changed for both auditors' and managements' purposes.

E85. The Board noted that commenters who were concerned that the definitions in the proposed standard set too low of a threshold for significant deficiencies and material weaknesses believed that the proposed standard required that each control deficiency be evaluated in isolation. The intent of the proposed standard was that control deficiencies should first be evaluated individually; the determination as to whether they are significant deficiencies or material weaknesses should be made considering the effects of compensating controls. The effect of compensating controls should be taken into account when assessing the likelihood of a misstatement occurring and not being prevented or detected. The proposed standard illustrated this type of evaluation, including the effect of compensating controls when assessing likelihood, in the examples in Appendix D. Based on the comments received, however, the Board determined that additional clarification within the standard was necessary to emphasize the importance of considering compensating controls when evaluating the likelihood of a misstatement occurring. As a result, the note to paragraph 10 was added.

E86. The Board concluded that considering the effect of compensating controls on the likelihood of a misstatement occurring and not being prevented or detected sufficiently addressed the concerns that the definitions set too low a threshold. For example, several issuer commenters cited concerns that the proposed definitions precluded a rational cost-benefit analysis of whether to correct a deficiency. These issuers believed they would be compelled to correct deficiencies (because the deficiencies would be considered to be at least significant deficiencies) in situations in which management had made a previous

[42/] See footnote 73 to *Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports,* Securities and Exchange Commission Release No. 33-8238 (June 5, 2003) [68 FR 36636].

conscious decision that the costs of correcting the deficiency outweighed the benefits. The Board observed that, in cases in which management has determined not to correct a known deficiency based on a cost-benefit analysis, effective compensating controls usually lie at the heart of management's decision. The standard's use of "likelihood" in the definition of a significant deficiency or material weakness accommodates such a consideration of compensating controls. If a deficiency is effectively mitigated by compensating controls, then the likelihood of a misstatement occurring and not being prevented or detected may very well be remote.

E87. The Board disagreed with comments that "more than inconsequential" was too low a threshold; however, the Board decided the term "inconsequential" needed additional clarity. The Board considered the term "inconsequential" in relation to the SEC's guidance on audit requirements and materiality. Section 10A(b)(1)(B)[43/] describes the auditor's communication requirements when the auditor detects or otherwise becomes aware of information indicating that an illegal act has or may have occurred, "unless the illegal act is clearly inconsequential." Staff Accounting Bulletin (SAB) No. 99, *Materiality*, provides the most recent and definitive guidance on the concept of materiality as it relates to the financial reporting of a public company. SAB No. 99 uses the term "inconsequential" in several places to draw a distinction between amounts that are not material. SAB No. 99 provides the following guidance to assess the significance of a misstatement:

> Though the staff does not believe that registrants need to make finely calibrated determinations of significance with respect to immaterial items, plainly it is "reasonable" to treat misstatements whose effects are clearly inconsequential differently than more significant ones.

E88. The discussion in the previous paragraphs provided the Board's context for using "material" and "more than inconsequential" for the magnitude thresholds in the standard's definitions. "More than inconsequential" indicates an amount that is less than material yet has significance.

E89. The Board also considered the existing guidance in the Board's interim standards for evaluating materiality and accumulating audit differences in a financial statement audit. Paragraph .41 of AU sec. 312, *Audit Risk and Materiality in Conducting an Audit,* states:

> In aggregating likely misstatements that the entity has not corrected, pursuant to paragraphs .34 and .35, the auditor may designate an amount below which misstatements need not be accumulated. This amount should be set so that any such misstatements, either individually or when aggregated with other such misstatements, would not be material to the

[43/] See Section 10A of the Securities Exchange Act of 1934, 15 U.S.C., 78j-1.

financial statements, after the possibility of further undetected misstatements is considered.

E90. The Board considered the discussion in AU sec. 312 that spoke specifically to evaluating differences individually *and in the aggregate*, as well as to considering the possibility of additional undetected misstatements, important distinguishing factors that should be carried through to the evaluation of whether a control deficiency represents a significant deficiency because the magnitude of the potential misstatement is more than inconsequential.

E91. The Board combined its understanding of the salient concepts in AU sec. 312 and the SEC guidance on materiality to develop the following definition of inconsequential:

> A misstatement is *inconsequential* if a reasonable person would conclude, after considering the possibility of further undetected misstatements, that the misstatement, either individually or when aggregated with other misstatements, would clearly be immaterial to the financial statements. If a reasonable person could not reach such a conclusion regarding a particular misstatement, that misstatement is *more than inconsequential.*

E92. Finally, the inclusion of *annual or interim financial statements* in the definitions rather than just "annual financial statements" was intentional and, in the Board's opinion, closely aligned with the spirit of what Section 404 seeks to accomplish. However, the Board decided that this choice needed clarification within the auditing standard. The Board did not intend the inclusion of the interim financial statements in the definition to require the auditor to perform *an audit of internal control over financial reporting* at each interim date. Rather, the Board believed that the SEC's definition of internal control over financial reporting included all financial reporting that a public company makes publicly available. In other words, internal control over financial reporting includes controls over the preparation of annual and quarterly financial statements. Thus, an evaluation of internal control over financial reporting as of year-end encompasses controls over the annual financial reporting and quarterly financial reporting as such controls exist at that point in time.

E93. Paragraphs 76 and 77 of the standard clarify this interpretation, as part of the discussion of the period-end financial reporting process. The period-end financial reporting process includes procedures to prepare both annual and quarterly financial statements.

Strong Indicators of Material Weaknesses and DeFacto Significant Deficiencies

E94. The proposed standard identified a number of circumstances that, because of their likely significant negative effect on internal control over financial reporting, are significant deficiencies as well as strong indicators that a material weakness exists. The Board developed this list to promote increased rigor and consistency in auditors' evaluations of weaknesses. For the implementation of Section 404 of the Act to achieve its objectives, the public must have confidence that all material weaknesses that exist as of the company's year-end will be publicly reported. Historically, relatively few material weaknesses have been reported by the auditor to management and the audit committee. That condition is partly due to the nature of a financial statement audit. In an audit of only the financial statements, the auditor does not have a detection responsibility for material weaknesses in internal control; such a detection responsibility is being newly introduced for all public companies through Sections 103 and 404 of the Act. However, the Board was concerned about instances in which auditors had identified a condition that should have been, but was not, communicated as a material weakness. The intention of including the list of strong indicators of material weaknesses in the proposed standard was to bring further clarity to conditions that were likely to be material weaknesses in internal control and to create more consistency in auditors' evaluations.

E95. Most commenters were generally supportive of a list of significant deficiencies and strong indicators of the existence of material weaknesses. They believed such a list provided instructive guidance to both management and the auditor. Some commenters, however, disagreed with the proposed approach of providing such a list. They believed that the determination of the significance of a deficiency should be left entirely to auditor judgment. A few commenters requested clarification of the term "strong indicator" and specific guidance on how and when a "strong indicator" could be overcome. A number of commenters expressed various concerns with individual circumstances included in the list.

- *Restatement of previously issued financial statements to reflect the correction of a misstatement*. Some commenters expressed concern about the kinds of restatements that would trigger this provision. A few mentioned the specific instance in which the restatement reflected the SEC's subsequent view of an accounting matter when the auditor, upon reevaluation, continued to believe that management had reasonable support for its original position. They believed this specific circumstance would not necessarily indicate a significant deficiency in internal control over financial reporting. Others commented that a restatement of previously issued financial statements would indicate a significant deficiency and strong indicator of a material weakness *in the prior period* but not necessarily in the current period.

- *Identification by the auditor of a material misstatement in financial statements in the current period that was not initially identified by the company's internal control over financial reporting (even if management subsequently corrects the misstatement)*. Several commenters, issuers and auditors alike, expressed concern about including this circumstance on the list. They explained that, frequently, management is completing the preparation of the financial statements at the same time that the auditor is completing his or her auditing procedures. In the face of this "strong indicator" provision, a lively debate of "who found it first" would ensue whenever the auditor identifies a misstatement that management subsequently corrects. Another argument is that the company's controls would have detected a misstatement identified by the auditor if the controls had an opportunity to operate (that is, the auditor performed his or her testing before the company's controls had an opportunity to operate). Several issuers indicated that they would prevent this latter situation by delaying the auditor's work until the issuers had clearly completed their entire period-end financial reporting process – a delay they viewed as detrimental.

- *For larger, more complex entities, the internal audit function or the risk assessment function is ineffective*. Several commenters asked for specific factors the auditor was expected to use to assess the effectiveness of these functions.

- *For complex entities in highly regulated industries, an ineffective regulatory compliance function.* Several commenters, particularly issuers in highly regulated industries, objected to the inclusion of this circumstance because they believed this to be outside the scope of internal control over financial reporting. (They agreed that this would be an internal control-related matter, but one that falls into operating effectiveness and compliance with laws and regulations, not financial reporting.) Many of these commenters suggested that this circumstance be deleted from the list altogether. Fewer commenters suggested that this problem could be addressed by simply clarifying that this circumstance is limited to situations in which the ineffective regulatory function relates solely to those aspects for which related violations of laws and regulations could have a direct and material effect on the financial statements.

- *Identification of fraud of any magnitude on the part of senior management*. Several commenters expressed concern that the inclusion of this circumstance created a detection responsibility for the auditor such that the auditor would have to plan and perform procedures to detect fraud *of any magnitude* on the part of senior management. Others expressed concern that identification of fraud on the part of senior management by the company's system of internal control over financial reporting might indicate that controls were operating effectively rather than indicating a significant deficiency or material weakness. Still others requested clarification on how to determine who constituted "senior management."

E96. A couple of commenters also suggested that an ineffective control environment should be added to the list.

E97. The Board concluded that the list of significant deficiencies and strong indicators of material weakness should be retained. Such a list will promote consistency in auditors' and managements' evaluations of deficiencies consistent with the definitions of significant deficiency and material weakness. The Board also decided to retain the existing structure of the list. Although the standard leaves auditor judgment to determine whether those deficiencies are material weaknesses, the existence of one of the listed deficiencies is by definition a significant deficiency. Furthermore, the "strong indicator" construct allows the auditor to factor extenuating or unique circumstances into the evaluation and possibly to conclude that the situation does not represent a material weakness, rather, only a significant deficiency.

E98. The Board decided that further clarification was not necessary within the standard itself addressing specifically how and when a "strong indicator" can be overcome. The term "strong indicator" was selected as opposed to the stronger "presumption" or other such term precisely because the Board did not intend to provide detailed instruction on how to overcome such a presumption. It is, nevertheless, the Board's view that auditors should be biased toward considering the listed circumstances as material weaknesses.

E99. The Board decided to clarify several circumstances included in the list:

- *Restatement of previously issued financial statements to reflect the correction of a misstatement*. The Board observed that the circumstance in which a restatement reflected the SEC's subsequent view of an accounting matter, when the auditor concluded that management had reasonable support for its original position, might present a good example of only a significant deficiency and not a material weakness. However, the Board concluded that requiring this situation to, nonetheless, be considered by definition a significant deficiency is appropriate, especially considering that the primary result of the circumstance being considered a significant deficiency is the communication of the matter to the audit committee. Although the audit committee might already be well aware of the circumstances of any restatement, a restatement to reflect the SEC's view on an accounting matter at least has implications for the quality of the company's accounting principles, which is already a required communication to the audit committee.

  With regard to a restatement being a strong indicator of a material weakness in the prior period but not necessarily the current period, the Board disagreed with these comments. By virtue of the restatement occurring during the current period, the Board views it as appropriate to consider that circumstance a strong indicator that a material weakness existed during the current period. Depending on the circumstances of the restatement, however, the material weakness may also have been corrected during the current period. The construct of the standard does not preclude management and the auditor from determining that the circumstance was corrected prior to year-end and, therefore, that a material weakness did not exist at year-end. The emphasis here is that the circumstance is a strong indicator that a material weakness exists; management and the auditor will separately need to determine whether it has been corrected. The Board decided that no further clarification was needed in this regard.

- *Identification by the auditor of a material misstatement in financial statements in the current period that was not initially identified by the company's internal control over financial reporting (even if management subsequently corrects the misstatement)*. Regarding the "who-found-it-first" dilemma, the Board recognizes that this circumstance will present certain implementation challenges. However, the Board decided that none of those challenges were so significant as to require eliminating this circumstance from the list.

  When the Board developed the list of strong indicators, the Board observed that it is not uncommon for the financial statement auditor to identify material misstatements in the course of the audit that are corrected by management prior to the issuance of the company's financial statements. In some cases, management has relied on the auditor to identify misstatements in certain financial statement items and to propose corrections in amount, classification, or disclosure. With the introduction of the requirement for management and the auditor to report on the effectiveness of internal control over financial reporting, it becomes obvious that this situation is unacceptable, unless management is willing to accept other than an unqualified report on the internal control effectiveness. (This situation also raises the question as to the extent management may rely on the annual audit to produce accurate and fair financial statements without impairing the auditor's independence.) This situation is included on the list of strong indicators because the Board believes it will encourage management and auditors to evaluate this situation with intellectual honesty and to recognize, first, that the company's internal control should provide reasonable assurance that the company's financial statements are presented fairly in accordance with generally accepted accounting principles.

  Timing might be a concern for some issuers. However, to the extent that management takes additional steps to ensure that the financial information is correct prior to providing it to their auditors, this may, at times, result in an improved control environment. When companies and auditors work almost simultaneously on completing the preparation of the annual financial statements and the audit, respectively, the role of the auditor can blur with the responsibility of management. In the year-end rush to complete the annual report, some companies might have come to rely on their auditors as a "control" to further ensure no misstatements are accidentally reflected in the financial statements. The principal burden seems to be for management's work schedule and administration of their financial reporting deadlines to allow the auditor sufficient time to complete his or her procedures.

Further, if the auditor initially identified a material misstatement in the financial statements but, given the circumstances, determined that management ultimately would have found the misstatement, the auditor could determine that the circumstance was a significant deficiency but not a material weakness. The Board decided to retain the provision that this circumstance is at least a significant deficiency because reporting such a circumstance to the audit committee would always be appropriate.

- *For larger, more complex entities, the internal audit function or the risk assessment function is ineffective*. Relatively few commenters requested clarification on how to evaluate these functions. The Board expects that most auditors will not have trouble making this evaluation. Similar to the audit committee evaluation, this evaluation is not a separate evaluation of the internal audit or risk assessment functions but, rather, is a way of requiring the auditor to speak up if either of these functions is obviously ineffective at an entity that needs them to have an effective monitoring or risk assessment component. Unlike the audit committee discussion, most commenters seemed to have understood that this was the context for the internal audit and risk assessment function evaluation. Nonetheless, the Board decided to add a clarifying note to this circumstance emphasizing the context.

- *For complex entities in highly regulated industries, an ineffective regulatory compliance function*. The Board decided that this circumstance, as described in the proposed standard, would encompass aspects that are outside internal control over financial reporting (which would, of course, be inappropriate for purposes of this standard given its definition of internal control over financial reporting). The Board concluded that this circumstance should be retained, though clarified, to only apply to those aspects of an ineffective regulatory compliance function that could have a material effect on the financial statements.

- *Identification of fraud of any magnitude on the part of senior management.* The Board did not intend to create any additional detection responsibility for the auditor; rather, it intended that this circumstance apply to fraud on the part of senior management that came to the auditor's attention, regardless of amount. The Board decided to clarify the standard to make this clear. The Board noted that identification of fraud by the company's system of internal control over financial reporting might indicate that controls were operating effectively, except when that fraud involves senior management. Because of the critical role of tone-at-the-top in the overall effectiveness of the control environment and due to the significant negative evidence that fraud of any magnitude on the part of senior management reflects on the control environment, the Board decided that it is appropriate to include this circumstance in the list, regardless of whether the company's controls detected the fraud. The Board also decided to clarify who is included in "senior management" for this purpose.

E100. The Board agreed that an ineffective control environment was a significant deficiency and a strong indicator that a material weakness exists and decided to add it to the list.

Independence

E101. The proposed standard explicitly prohibited the auditor from accepting an engagement to provide an internal control-related service to an audit client that has not been specifically pre-approved by the audit committee. In other words, the audit committee would not be able to pre-approve internal control-related services as a category. The Board did not propose any specific guidance on permissible internal control-related services in the proposed standard but, rather, indicated its intent to conduct an in-depth evaluation of independence requirements in the future and highlighted its ability to amend the independence information included in the standard pending the outcome of that analysis.

E102. Comments were evenly split among investors, auditors, and issuers who believed the existing guidance was sufficient versus those who believed the Board should provide additional guidance. Commenters who believed existing guidance was sufficient indicated that the SEC's latest guidance on independence needed to be given more time to take effect given its recency and because existing guidance was clear enough. Commenters who believed more guidance was necessary suggested various additions, from more specificity about permitted and prohibited services to a sweeping ban on any internal control-related work for an audit client. Other issuers commented about auditors participating in the Section 404 implementation process at their audit clients in a manner that could be perceived as affecting their independence.

E103. Some commenters suggested that the SEC should change the pre-approval requirements on internal control-related services to specific pre-approval. Another commenter suggested that specific pre-approval of all internal control-related services would pose an unreasonable burden on the audit committee and suggested reverting to pre-approval by category.

E104. The Board clearly has the authority to set independence standards as it may deem necessary or appropriate in the public interest or for the protection of investors. Given ongoing concerns about the appropriateness of auditors providing these types of services to audit clients, the fact-specific nature of each engagement, and the critical importance of ongoing audit committee oversight of these types of services, the Board continues to believe that specific pre-approval of internal control-related services is a logical step that should not pose a burden on the audit committee beyond that which effective oversight of financial reporting already entails. Therefore, the standard retains this provision unchanged.

Requirement for Adverse Opinion When a Material Weakness Exists

E105. The existing attestation standard (AT sec. 501) provides that, when the auditor has identified a material weakness in internal control over financial reporting, depending on the significance of the material weakness and its effect on the achievement of the objectives of the control criteria, the auditor may qualify his or her opinion ("except for the effect of the material weakness, internal control over financial reporting was effective") or express an adverse opinion ("internal control over financial reporting was not effective").

E106. The SEC's final rules implementing Section 404 state that, "Management is not permitted to conclude that the registrant's internal control over financial reporting is effective if there are one or more material weaknesses in the registrant's internal control over financial reporting." In other words, in such a case, management must conclude that internal control over financial reporting is not effective (that is, a qualified or "except-for" conclusion is not acceptable).

E107. The Board initially decided that the reporting model for the auditor should follow the required reporting model for management. Therefore, because management is required to express an "adverse" conclusion in the event a material weakness exists, the auditor's opinion also must be adverse. The proposed standard did not permit a qualified audit opinion in the event of a material weakness.

E108. Comments received on requiring an adverse opinion when a material weakness exists were split. A large number affirmed that this seemed to be the only logical approach, based on a philosophical belief that if a material weakness exists, then internal control over financial reporting is ineffective. These commenters suggested that permitting a qualified opinion would be akin to creating another category of control deficiency—material weaknesses that were really material (resulting in an adverse opinion) and material weaknesses that weren't so material (resulting in a qualified opinion).

E109. A number of commenters agreed that the auditor's report must follow the same model as management' reporting, but they believe strongly that the SEC's guidance for management accommodated either a qualified or adverse opinion when a material weakness existed.

E110. These commenters cited Section II.B.3.c of the SEC Final Rule and related footnote no. 72:

> The final rules therefore preclude management from determining that a company's internal control over financial reporting is effective if it identifies one or more material weaknesses in the company's

> internal control over financial reporting. This is consistent with interim attestation standards. See AT sec. 501.

E111. They believe this reference to the interim attestation standard in the SEC Final Rule is referring to paragraph .37 of AT sec. 501, which states, in part,

> Therefore, the presence of a material weakness will preclude the practitioner from concluding that the entity has effective internal control. However, depending on the significance of the material weakness and its effect on the achievement of the objectives of the control criteria, the practitioner may qualify his or her opinion (that is, express an opinion that internal control is effective "except for" the material weakness noted) or may express an adverse opinion.

E112. Their reading of the SEC Final Rule and the interim attestation standard led them to conclude that it would be appropriate for the auditor to express either an adverse opinion or a qualified "except-for" opinion about the effectiveness of the company's internal control over financial reporting depending on the circumstances.

E113. Some commenters responded that they thought a qualified opinion would be appropriate in certain cases, such as an acquisition close to year-end (too close to be able to assess controls at the acquiree).

E114. After additional consultation with the SEC staff about this issue, the Board decided to retain the proposed reporting model in the standard. The primary reason for that decision was the Board's continued understanding that the SEC staff would expect only an adverse conclusion from management (not a qualified conclusion) in the event a material weakness existed as of the date of management's report.

E115. The commenters who suggested that a qualified opinion should be permitted in certain circumstances, such as an acquisition close to year-end, were essentially describing scope limitations. The standard permits a qualified opinion, a disclaimer of opinion, or withdrawal from the engagement if there are restrictions on the scope of the engagement. As it relates specifically to acquisitions near year-end, this is another case in which the auditor's model needs to follow the model that the SEC sets for management. The standard added a new paragraph to Appendix B permitting the auditor to limit the scope of his or her work (without referring to a scope limitation in the auditor's report) in the same manner that the SEC permits management to limit its assessment. In other words, if the SEC permits management to exclude an entity acquired late in the year from a company's assessment of internal control over financial reporting, then the auditor could do the same.

Rotating Tests of Controls

E116. The proposed standard directed the auditor to perform tests of controls on "relevant assertions" rather than on "significant controls." To comply with those requirements, the auditor would be required to apply tests to those controls that are important to presenting each relevant assertion in the financial statements. The proposed standard emphasized controls that affect relevant assertions because those are the points at which misstatements could occur. However, it is neither necessary to test all controls nor to test redundant controls (unless redundancy is itself a control objective, as in the case of certain computer controls). Thus, the proposed standard encouraged the auditor to identify and test controls that addressed the primary areas in which misstatements could occur, yet limited the auditor's work to only the necessary controls.

E117. Expressing the extent of testing in this manner also simplified other issues involving extent of testing decisions from year to year (the so-called "rotating tests of controls" issue). The proposed standard stated that the auditor should vary testing from year to year, both to introduce unpredictability into the testing and to respond to changes at the company. However, the proposed standard maintained that each year's audit must stand on its own. Therefore, the auditor must obtain evidence of the effectiveness of controls over all relevant assertions related to all significant accounts and disclosures every year.

E118. Auditors and investors expressed support for these provisions as described in the proposed standard. In fact, some commenters compared the notion of rotating tests of control in an audit of internal control over financial reporting to an auditor testing accounts receivable only once every few years in a financial statement audit. Permitting so-called rotation of testing would compromise the auditor's ability to obtain reasonable assurance that his or her opinion was correct.

E119. Others, especially issuers concerned with limiting costs, strongly advocated some form of rotating tests of controls. Some commenters suggested that the auditor should have broad latitude to perform some cursory procedures to determine whether any changes had occurred in controls and, if not, to curtail any further testing in that area. Some suggested that testing as described in the proposed standard should be required in the first year of the audit (the "baseline" year) and that in subsequent years the auditor should be able to reduce the required testing. Others suggested progressively less aggressive strategies for reducing the amount of work the auditor should be required to perform. In fact, several commenters (primarily internal auditors) described "baselining" controls as an important strategy to retain. They argued, for example, that IT application controls, once tested, could be relied upon (without additional testing) in subsequent years as long as general controls over program changes and access controls were effective and continued to be tested.

E120. The Board concluded that each year's audit must stand on its own. Cumulative audit knowledge is not to be ignored; some natural efficiencies will emerge as the auditor repeats the audit process. For example, the auditor will frequently spend less time to obtain the requisite understanding of the company's internal control over financial reporting in subsequent years compared with the time necessary in the first year's audit of internal control over financial reporting. Also, to the extent that the auditor has previous knowledge of control weaknesses, his or her audit strategy should, of course, reflect that knowledge. For example, a pattern of mistakes in prior periods is usually a good indicator of the areas in which misstatements are likely to occur. However, the absence of fraud in prior periods is not a reasonable indicator of the likelihood of misstatement due to fraud.

E121. However, the auditor needs to test controls every year, regardless of whether controls have obviously changed. Even if nothing else changed about the company – no changes in the business model, employees, organization, etc. – controls that were effective last year may not be effective this year due to error, complacency, distraction, and other human conditions that result in the inherent limitations in internal control over financial reporting.

E122. What several commenters referred to as "baselining" (especially as it relates to IT controls) is more commonly referred to by auditors as "benchmarking." This type of testing strategy for application controls is not precluded by the standard. However, the Board believes that providing a description of this approach is beyond the scope of this standard. For these reasons, the standard does not address it.

Mandatory Integration with the Audit of the Financial Statements

E123. Section 404(b) of the Act provides that the auditor's attestation of management's assessment of internal control shall not be the subject of a separate engagement. Because the objectives of and work involved in performing both an attestation of management's assessment of internal control over financial reporting and an audit of the financial statements are closely interrelated, the proposed auditing standard introduced an integrated audit of internal control over financial reporting and audit of financial statements.

E124. However, the proposed standard went even further. Because of the potential significance of the information obtained during the audit of the financial statements to the auditor's conclusions about the effectiveness of internal control over financial reporting, the proposed standard stated that the auditor could not audit internal control over financial reporting without also auditing the financial statements. (However, the proposed standard retained the auditor's ability to audit *only* the financial statements, which might be necessary in the case of certain initial public offerings.)

E125. Although the Board solicited specific comment on whether the auditor should be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements, few commenters focused on the significance of the potentially negative evidence that would be obtained during the audit of the financial statements or the implications of this prohibition. Most commenters focused on the wording of Section 404(b), which indicates that the auditor's attestation of management's assessment of internal control over financial reporting shall not be the subject of a separate engagement. Based on this information, most commenters saw the prohibition in the proposed standard as superfluous and benign.

E126. Several commenters recognized the importance of the potentially negative evidence that might be obtained as part of the audit of the financial statements and expressed strong support for requiring that an audit of financial statements be performed to audit internal control over financial reporting.

E127. Others recognized the implications of this prohibition and expressed concern: What if a company wanted or needed an opinion on the effectiveness of internal control over financial reporting as of an interim date? For the most part, these commenters (primarily issuers) objected to the implication that an auditor would have to audit a company's financial statements as of an interim date to enable him or her to audit and report on its internal control over financial reporting as of that same interim date. Other issuers expressed objections related to their desires to engage one auditor to provide an opinion on the effectiveness of internal control over financial reporting and another to audit the financial statements. Others requested clarification about which guidance would apply when other forms of internal control work were requested by companies.

E128. The Board concluded that an auditor should perform an audit of internal control over financial reporting only when he or she has also audited company's financial statements. The auditor *must* audit the financial statements to have a high level of assurance that his or her conclusion on the effectiveness of internal control over financial reporting is correct. Inherent in the reasonable assurance provided by the auditor's opinion on internal control over financial reporting is a responsibility for the auditor to plan and perform his or her work to obtain reasonable assurance that material weaknesses, if they exist, are detected. As previously discussed, this standard states that the identification by the auditor of a *material misstatement* in the financial statements that was not initially identified by the company's internal control over financial reporting, is a strong indicator of a material weakness. Without performing a financial statement audit, the auditor would not have reasonable assurance that he or she had detected all material misstatements. The Board believes that allowing the auditor to audit internal control over financial reporting without also auditing the financial statements would not provide the auditor with a high level of assurance and would mislead investors in terms of the level of assurance obtained.

E129. In response to other concerns, the Board noted that an auditor can report on the effectiveness of internal control over financial reporting using existing AT sec. 501 for purposes other than satisfying the requirements of Section 404. This standard supersedes AT sec. 501 only as it relates to complying with Section 404 of the Act.

E130. Although reporting under the remaining provisions of AT sec. 501 is currently permissible, the Board believes reports issued for public companies under the remaining provisions of AT sec. 501 will be infrequent. In any event, additional rulemaking might be necessary to prevent confusion that might arise from reporting on internal control engagements under two different standards. For example, explanatory language could be added to reports issued under AT sec. 501 to clarify that an audit of financial statements was not performed in conjunction with the attestation on internal control over financial reporting and that such a report is not the report resulting from an audit of internal control over financial reporting performed in conjunction with an audit of the financial statements under this standard. This report modification would alert report readers, particularly if such a report were to appear in an SEC filing or otherwise be made publicly available, that the assurance obtained by the auditor in that engagement is different from the assurance that would have been obtained by the auditor for Section 404 purposes. Another example of the type of change that might be necessary in separate rulemaking to AT sec. 501 would be to supplement the performance directions to be comparable to those in this standard. Auditors should remain alert for additional rulemaking by the Board that affects AT sec. 501.

EXHIBIT 1

SECURITIES AND EXCHANGE COMMISSION
(Release No. 34-   ; File No. PCAOB-2004-03)

[Date]

Public Company Accounting Oversight Board; Notice of Filing of Proposed Rule on Auditing Standard No. 2, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements*

Pursuant to Section 107(b) of the Sarbanes-Oxley Act of 2002 (the "Act"), notice is hereby given that on March 18, 2004, the Public Company Accounting Oversight Board (the "Board" or the "PCAOB") filed with the Securities and Exchange Commission (the "Commission") the proposed rule described in Items I, II, and III below, which items have been prepared by the Board. The Commission is publishing this notice to solicit comments on the proposed rule from interested persons.

I. Board's Statement of the Terms of Substance of the Proposed Rule

On March 9, 2004, the Board adopted a rule, Auditing Standard No. 2, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements* (“the proposed rule”). The proposed rule text is set out below.

II. Board's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule

In its filing with the Commission, the Board included statements concerning the purpose of, and basis for, the proposed rule and discussed any comments it received on the proposed rule. The text of these statements may be examined at the places specified in Item IV below. The Board has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Board's Statement of the Purpose Of, and Statutory Basis for, the Proposed Rule

(a) Purpose

Section 103(a)(1) of the Act authorized the PCAOB to establish, by rule, auditing standards to be used by registered public accounting firms in the preparation and issuance of audit reports, as required by the Act. PCAOB Rule 3100, "Compliance with Auditing and Related Professional Practice Standards," requires auditors to comply with all applicable auditing and related professional practice standards established by the PCAOB. The text of the proposed rule, including an appendix of illustrative auditor's reports, is set out below.

Auditing Standard No. 2 – *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements*

Table of Contents

Applicability of Standard

1. This standard establishes requirements and provides directions that apply when an auditor is engaged to audit both a company's financial statements and management's assessment of the effectiveness of internal control over financial reporting.

> Note: The term *auditor* includes both public accounting firms registered with the Public Company Accounting Oversight Board ("PCAOB" or the "Board") and associated persons thereof.

2. A company subject to the reporting requirements of the Securities Exchange Act of 1934 (an "issuer") is required to include in its annual report a report of management on the company's internal control over financial reporting. Registered investment companies, issuers of asset-backed securities, and nonpublic companies are not subject to the reporting requirements mandated by Section 404 of the Sarbanes-Oxley Act of 2002 (the "Act") (PL 107-204). The report of management is required to contain management's assessment of the effectiveness of the company's internal control over financial reporting as of the end of the company's most recent fiscal year, including a statement as to whether the company's internal control over financial reporting is effective. The auditor that audits the company's financial statements included in the annual report is required to attest to and report on management's assessment. The company is required to file the auditor's attestation report as part of the annual report.

> Note: The term issuer means an issuer (as defined in Section 3 of the Securities Exchange Act of 1934), the securities of which are registered under Section 12 of that Act, or that is required to file reports under Section 15(d) of that Act, or that files or has filed a registration statement with the Securities and Exchange Commission ("SEC" or "Commission") that has not yet become effective under the Securities Act of 1933, and that it has not withdrawn.

> Note: Various parts of this standard summarize legal requirements imposed on issuers by the SEC, as well as legal requirements imposed on auditors by regulatory authorities other than the PCAOB. These parts of

the standard are intended to provide context and to promote the auditor's understanding of the relationship between his or her obligations under this standard and his or her other legal responsibilities. The standard does not incorporate these legal requirements by reference and is not an interpretation of those other requirements and should not be so construed. (This Note does not apply to references in the standard to the existing professional standards and the Board's interim auditing and related professional practice standards.)

3. This standard is the standard on attestation engagements referred to in Section 404(b) of the Act. This standard is also the standard referred to in Section 103(a)(2)(A)(iii) of the Act. Throughout this standard, the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting required by Section 404(b) of the Act is referred to as the *audit of internal control over financial reporting*.

Note: The two terms *audit of internal control over financial reporting* and *attestation of management's assessment of the effectiveness of internal control over financial reporting* refer to the same professional service. The first refers to the process, and the second refers to the result of that process.

Auditor's Objective in an Audit of Internal Control Over Financial Reporting

4. The auditor's objective in an audit of internal control over financial reporting is to express an opinion on management's assessment of the effectiveness of the company's internal control over financial reporting. To form a basis for expressing such an opinion, the auditor must plan and perform the audit to obtain reasonable assurance about whether the company maintained, in all material respects, effective internal control over financial reporting as of the date specified in management's assessment. The auditor also must audit the company's financial statements as of the date specified in management's assessment because the information the auditor obtains during a financial statement audit is relevant to the auditor's conclusion about the effectiveness of the company's internal control over financial reporting. Maintaining effective internal control over financial reporting means that no material weaknesses exist; therefore, the objective of the audit of internal control over financial reporting is to obtain reasonable assurance that no material weaknesses exist as of the date specified in management's assessment.

5. To obtain reasonable assurance, the auditor evaluates the assessment performed by management and obtains and evaluates evidence about whether the internal control over financial reporting was designed and operated effectively. The auditor obtains this evidence from a number of sources,

including using the work performed by others and performing auditing procedures himself or herself.

6. The auditor should be aware that persons who rely on the information concerning internal control over financial reporting include investors, creditors, the board of directors and audit committee, and regulators in specialized industries, such as banking or insurance. The auditor should be aware that external users of financial statements are interested in information on internal control over financial reporting because it enhances the quality of financial reporting and increases their confidence in financial information, including financial information issued between annual reports, such as quarterly information. Information on internal control over financial reporting is also intended to provide an early warning to those inside and outside the company who are in a position to insist on improvements in internal control over financial reporting, such as the audit committee and regulators in specialized industries. Additionally, Section 302 of the Act and Securities Exchange Act Rule 13a-14(a) or 15d-14(a),[1/] whichever applies, require management, with the participation of the principal executive and financial officers, to make quarterly and annual certifications with respect to the company's internal control over financial reporting.

Definitions Related to Internal Control Over Financial Reporting

7. For purposes of management's assessment and the audit of internal control over financial reporting in this standard, *internal control over financial reporting* is defined as follows:

> A process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:
>
> (1) Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company;
>
> (2) Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that

---

[1/] See 17 C.F.R. 240.13a-14(a) or 17 C.F.R. 240.15d-14(a), whichever applies.

receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and

(3) Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

Note: This definition is the same one used by the SEC in its rules requiring management to report on internal control over financial reporting, except the word "registrant" has been changed to "company" to conform to the wording in this standard. (See Securities Exchange Act Rules 13a-15(f) and 15d-15(f).[2/])

Note: Throughout this standard, *internal control over financial reporting* (singular) refers to the process described in this paragraph. Individual controls or subsets of controls are referred to as *controls* or *controls over financial reporting*.

8. A *control deficiency* exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis.

- A deficiency in *design* exists when (a) a control necessary to meet the control objective is missing or (b) an existing control is not properly designed so that, even if the control operates as designed, the control objective is not always met.

- A deficiency in *operation* exists when a properly designed control does not operate as designed, or when the person performing the control does not possess the necessary authority or qualifications to perform the control effectively.

9. A *significant deficiency* is a control deficiency, or combination of control deficiencies, that adversely affects the company's ability to initiate, authorize, record, process, or report external financial data reliably in accordance with generally accepted accounting principles such that there is more than a remote likelihood that a misstatement of the company's annual or interim financial statements that is more than inconsequential will not be prevented or detected.

Note: The term "remote likelihood" as used in the definitions of *significant deficiency* and *material weakness* (paragraph 10) has the same meaning as the term "remote" as used in Financial Accounting Standards Board

---

[2/] See 17 C.F.R. 240, 13a-15(f) and 15d-15(f).

Statement No. 5, *Accounting for Contingencies* ("FAS No. 5"). Paragraph 3 of FAS No. 5 states:

> When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to remote. This Statement uses the terms *probable*, *reasonably possible*, and *remote* to identify three areas within that range, as follows:
>
> a. *Probable*. The future event or events are likely to occur.
> b. *Reasonably possible*. The chance of the future event or events occurring is more than remote but less than likely.
> c. *Remote*. The chance of the future events or events occurring is slight.

Therefore, the likelihood of an event is "more than remote" when it is either reasonably possible or probable.

Note: A misstatement is *inconsequential* if a reasonable person would conclude, after considering the possibility of further undetected misstatements, that the misstatement, either individually or when aggregated with other misstatements, would clearly be immaterial to the financial statements. If a reasonable person could not reach such a conclusion regarding a particular misstatement, that misstatement is *more than inconsequential*.

10. A *material weakness* is a significant deficiency, or combination of significant deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected.

Note: In evaluating whether a control deficiency exists and whether control deficiencies, either individually or in combination with other control deficiencies, are significant deficiencies or material weaknesses, the auditor should consider the definitions in paragraphs 8, 9 and 10, and the directions in paragraphs 130 through 137. As explained in paragraph 23, the evaluation of the materiality of the control deficiency should include both quantitative and qualitative considerations. Qualitative factors that might be important in this evaluation include the nature of the financial statement accounts and assertions involved and the reasonably possible future consequences of the deficiency. Furthermore, in determining whether a control deficiency or combination of deficiencies is a significant deficiency or a material weakness, the auditor should evaluate the effect of compensating controls and whether such compensating controls are effective.

11. Controls over financial reporting may be *preventive controls* or *detective controls*.

- Preventive controls have the objective of preventing errors or fraud from occurring in the first place that could result in a misstatement of the financial statements.

- Detective controls have the objective of detecting errors or fraud that have already occurred that could result in a misstatement of the financial statements.

12. Even well-designed controls that are operating as designed might not prevent a misstatement from occurring. However, this possibility may be countered by overlapping preventive controls or partially countered by detective controls. Therefore, effective internal control over financial reporting often includes a combination of preventive and detective controls to achieve a specific control objective. The auditor's procedures as part of either the audit of internal control over financial reporting or the audit of the financial statements are not part of a company's internal control over financial reporting.

Framework Used by Management to Conduct Its Assessment

13. Management is required to base its assessment of the effectiveness of the company's internal control over financial reporting on a suitable, recognized control framework established by a body of experts that followed due-process procedures, including the broad distribution of the framework for public comment. In addition to being available to users of management's reports, a framework is suitable only when it:

- Is free from bias;

- Permits reasonably consistent qualitative and quantitative measurements of a company's internal control over financial reporting;

- Is sufficiently complete so that those relevant factors that would alter a conclusion about the effectiveness of a company's internal control over financial reporting are not omitted; and

- Is relevant to an evaluation of internal control over financial reporting.

Committee of Sponsoring Organizations Framework

14. In the United States, the Committee of Sponsoring Organizations ("COSO") of the Treadway Commission has published *Internal Control – Integrated Framework*. Known as the COSO report, it provides a suitable and available framework for purposes of management's assessment. For that reason, the performance and reporting directions in this standard are based on the COSO framework. Other suitable frameworks have been published in other countries and may be developed in the future. Such other suitable frameworks may be used in an audit of internal control over financial reporting. Although different frameworks may not contain exactly the same elements as COSO, they should have elements that encompass, in general, all the themes in COSO. Therefore, the auditor should be able to apply the concepts and guidance in this standard in a reasonable manner.

15. The COSO framework identifies three primary objectives of internal control: efficiency and effectiveness of operations, financial reporting, and compliance with laws and regulations. The COSO perspective on internal control over financial reporting does not ordinarily include the other two objectives of internal control, which are the effectiveness and efficiency of operations and compliance with laws and regulations. However, the controls that management designs and implements may achieve more than one objective. Also, operations and compliance with laws and regulations directly related to the presentation of and required disclosures in financial statements are encompassed in internal control over financial reporting. Additionally, not all controls relevant to financial reporting are accounting controls. Accordingly, all controls that could materially affect financial reporting, including controls that focus primarily on the effectiveness and efficiency of operations or compliance with laws and regulations and also have a material effect on the reliability of financial reporting, are a part of internal control over financial reporting. More information about the COSO framework is included in the COSO report and in AU sec. 319, Consideration of Internal Control in a Financial Statement Audit.[3/] The COSO report also discusses special considerations for internal control over financial reporting for small and medium-sized companies.

Inherent Limitations in Internal Control Over Financial Reporting

16. Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations.

[3/] The Board adopted the generally accepted auditing standards, as described in the AICPA Auditing Standards Board's ("ASB") Statement on Auditing Standards No. 95, *Generally Accepted Auditing Standards*, as in existence on April 16, 2003, on an initial, transitional basis. The Statements on Auditing Standards promulgated by the ASB have been codified into the AICPA *Professional Standards*, Volume 1, as AU sections 100 through 900. References in this standard to AU sections refer to those generally accepted auditing standards, as adopted on an interim basis in PCAOB Rule 3200T.

Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper management override. Because of such limitations, there is a risk that material misstatements may not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process. Therefore, it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

The Concept of Reasonable Assurance

17. Management's assessment of the effectiveness of internal control over financial reporting is expressed at the level of *reasonable assurance*. The concept of reasonable assurance is built into the definition of internal control over financial reporting and also is integral to the auditor's opinion.[4/] Reasonable assurance includes the understanding that there is a remote likelihood that material misstatements will not be prevented or detected on a timely basis. Although not absolute assurance, reasonable assurance is, nevertheless, a high level of assurance.

18. Just as there are inherent limitations on the assurance that effective internal control over financial reporting can provide, as discussed in paragraph 16, there are limitations on the amount of assurance the auditor can obtain as a result of performing his or her audit of internal control over financial reporting. Limitations arise because an audit is conducted on a test basis and requires the exercise of professional judgment. Nevertheless, the audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, testing and evaluating the design and operating effectiveness of internal control over financial reporting, and performing such other procedures as the auditor considers necessary to obtain reasonable assurance about whether internal control over financial reporting is effective.

19. There is no difference in the level of work performed or assurance obtained by the auditor when expressing an opinion on management's assessment of effectiveness or when expressing an opinion directly on the effectiveness of internal control over financial reporting. In either case, the auditor must obtain sufficient evidence to provide a reasonable basis for his or her opinion and the use and evaluation of management's assessment is inherent in expressing either opinion.

[4/] See *Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports*, Securities and Exchange Commission Release No. 33-8238 (June 5, 2003) [68 FR 36636] for further discussion of reasonable assurance.

Note: The auditor's report on internal control over financial reporting does not relieve management of its responsibility for assuring users of its financial reports about the effectiveness of internal control over financial reporting.

Management's Responsibilities in an Audit of Internal Control Over Financial Reporting

20. For the auditor to satisfactorily complete an audit of internal control over financial reporting, management must do the following:[5/]

a. Accept responsibility for the effectiveness of the company's internal control over financial reporting;

b. Evaluate the effectiveness of the company's internal control over financial reporting using suitable control criteria;

c. Support its evaluation with sufficient evidence, including documentation; and

d. Present a written assessment of the effectiveness of the company's internal control over financial reporting as of the end of the company's most recent fiscal year.

21. If the auditor concludes that management has not fulfilled the responsibilities enumerated in the preceding paragraph, the auditor should communicate, in writing, to management and the audit committee that the audit of internal control over financial reporting cannot be satisfactorily completed and that he or she is required to disclaim an opinion. Paragraphs 40 through 46 provide information for the auditor about evaluating management's process for assessing internal control over financial reporting.

Materiality Considerations in an Audit of Internal Control Over Financial Reporting

22. The auditor should apply the concept of materiality in an audit of internal control over financial reporting at both the financial-statement level and at the individual account-balance level. The auditor uses materiality at the financial-statement level in evaluating whether a deficiency, or combination of deficiencies, in controls is a significant deficiency or a material weakness. Materiality at both the financial-statement level and the individual account-balance level is relevant to planning the audit and designing procedures.

[5/] Management is required to fulfill these responsibilities. See Items 308(a) and (c) of Regulation S-B and S-K, 17 C.F.R. 228.308 (a) and (c) and 229.308 (a) and (c), respectively.

Materiality at the account-balance level is necessarily lower than materiality at the financial-statement level.

23. The same conceptual definition of materiality that applies to financial reporting applies to information on internal control over financial reporting, including the relevance of both quantitative and qualitative considerations.[6/]

- The quantitative considerations are essentially the same as in an audit of financial statements and relate to whether misstatements that would not be prevented or detected by internal control over financial reporting, individually or collectively, have a quantitatively material effect on the financial statements.

- The qualitative considerations apply to evaluating materiality with respect to the financial statements and to additional factors that relate to the perceived needs of reasonable persons who will rely on the information. Paragraph 6 describes some qualitative considerations.

Fraud Considerations in an Audit of Internal Control Over Financial Reporting

24. The auditor should evaluate all controls specifically intended to address the risks of fraud that have at least a reasonably possible likelihood of having a material effect on the company's financial statements. These controls may be a part of any of the five components of internal control over financial reporting, as discussed in paragraph 49. Controls related to the prevention and detection of fraud often have a pervasive effect on the risk of fraud. Such controls include, but are not limited to, the:

- Controls restraining misappropriation of company assets that could result in a material misstatement of the financial statements;

- Company's risk assessment processes;

- Code of ethics/conduct provisions, especially those related to conflicts of interest, related party transactions, illegal acts, and the monitoring of the code by management and the audit committee or board;

- Adequacy of the internal audit activity and whether the internal audit function reports directly to the audit committee, as well as the

---

[6/] AU sec. 312, *Audit Risk and Materiality in Conducting an Audit*, provides additional explanation of materiality.

extent of the audit committee's involvement and interaction with internal audit; and

- Adequacy of the company's procedures for handling complaints and for accepting confidential submissions of concerns about questionable accounting or auditing matters.

25. Part of management's responsibility when designing a company's internal control over financial reporting is to design and implement programs and controls to prevent, deter, and detect fraud. Management, along with those who have responsibility for oversight of the financial reporting process (such as the audit committee), should set the proper tone; create and maintain a culture of honesty and high ethical standards; and establish appropriate controls to prevent, deter, and detect fraud. When management and those responsible for the oversight of the financial reporting process fulfill those responsibilities, the opportunities to commit fraud can be reduced significantly.

26. In an audit of internal control over financial reporting, the auditor's evaluation of controls is interrelated with the auditor's evaluation of controls in a financial statement audit, as required by AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*. Often, controls identified and evaluated by the auditor during the audit of internal control over financial reporting also address or mitigate fraud risks, which the auditor is required to consider in a financial statement audit. If the auditor identifies deficiencies in controls designed to prevent and detect fraud during the audit of internal control over financial reporting, the auditor should alter the nature, timing, or extent of procedures to be performed during the financial statement audit to be responsive to such deficiencies, as provided in paragraphs .44 and .45 of AU sec. 316.

Performing an Audit of Internal Control Over Financial Reporting

27. In an audit of internal control over financial reporting, the auditor must obtain sufficient competent evidence about the design and operating effectiveness of controls over all relevant financial statement assertions related to all significant accounts and disclosures in the financial statements. The auditor must plan and perform the audit to obtain reasonable assurance that deficiencies that, individually or in the aggregate, would represent material weaknesses are identified. Thus, the audit is not designed to detect deficiencies in internal control over financial reporting that, individually or in the aggregate, are less severe than a material weakness. Because of the potential significance of the information obtained during the audit of the financial statements to the auditor's conclusions about the effectiveness of internal control over financial reporting, the auditor cannot audit internal control over financial reporting without also auditing the financial statements.

Note: However, the auditor may audit the financial statements without also auditing internal control over financial reporting, for example, in the case of certain initial public offerings by a company. See the discussion beginning at paragraph 145 for more information about the importance of auditing both internal control over financial reporting as well as the financial statements when the auditor is engaged to audit internal control over financial reporting.

28. The auditor must adhere to the general standards (See paragraphs 30 through 36) and fieldwork and reporting standards (See paragraph 37) in performing an audit of a company's internal control over financial reporting. This involves the following:

a. Planning the engagement;

b. Evaluating management's assessment process;

c. Obtaining an understanding of internal control over financial reporting;

d. Testing and evaluating design effectiveness of internal control over financial reporting;

e. Testing and evaluating operating effectiveness of internal control over financial reporting; and

f. Forming an opinion on the effectiveness of internal control over financial reporting.

29. Even though some requirements of this standard are set forth in a manner that suggests a sequential process, auditing internal control over financial reporting involves a process of gathering, updating, and analyzing information. Accordingly, the auditor may perform some of the procedures and evaluations described in this section on "Performing an Audit of Internal Control Over Financial Reporting" concurrently.

Applying General, Fieldwork, and Reporting Standards

30. The general standards (See AU sec. 150, *Generally Accepted Auditing Standards*) are applicable to an audit of internal control over financial reporting. These standards require technical training and proficiency as an auditor, independence in fact and appearance, and the exercise of due professional care, including professional skepticism.

31. *Technical Training and Proficiency*. To perform an audit of internal control over financial reporting, the auditor should have competence in the subject matter of internal control over financial reporting.

32. *Independence*. The applicable requirements of independence are largely predicated on four basic principles: (1) an auditor must not act as management or as an employee of the audit client, (2) an auditor must not audit his or her own work, (3) an auditor must not serve in a position of being an advocate for his or her client, and (4) an auditor must not have mutual or conflicting interests with his or her audit client.[7/] If the auditor were to design or implement controls, that situation would place the auditor in a management role and result in the auditor auditing his or her own work. These requirements, however, do not preclude the auditor from making substantive recommendations as to how management may improve the design or operation of the company's internal controls as a by-product of an audit.

33. The auditor must not accept an engagement to provide internal control-related services to an issuer for which the auditor also audits the financial statements unless that engagement has been specifically pre-approved by the audit committee. For any internal control services the auditor provides, management must be actively involved and cannot delegate responsibility for these matters to the auditor. Management's involvement must be substantive and extensive. Management's acceptance of responsibility for documentation and testing performed by the auditor does not by itself satisfy the independence requirements.

34. Maintaining independence, in fact and appearance, requires careful attention, as is the case with all independence issues when work concerning internal control over financial reporting is performed. Unless the auditor and the audit committee are diligent in evaluating the nature and extent of services provided, the services might violate basic principles of independence and cause an impairment of independence in fact or appearance.

35. The independent auditor and the audit committee have significant and distinct responsibilities for evaluating whether the auditor's services impair independence in fact or appearance. The test for independence in fact is whether the activities would impede the ability of anyone on the engagement team or in a position to influence the engagement team from exercising objective judgment in the audits of the financial statements or internal control over financial reporting. The test for independence in appearance is whether a reasonable investor, knowing all relevant facts and circumstances, would perceive an auditor as having interests which could jeopardize the exercise of objective and impartial judgments on all issues encompassed within the auditor's engagement.

[7/] See the Preliminary Note of Rule 2-01 of Regulation S-X, 17 C.F.R. 210.2-01.

36. *Due Professional Care*. The auditor must exercise due professional care in an audit of internal control over financial reporting. One important tenet of due professional care is exercising professional skepticism. In an audit of internal control over financial reporting, exercising professional skepticism involves essentially the same considerations as in an audit of financial statements, that is, it includes a critical assessment of the work that management has performed in evaluating and testing controls.

37. *Fieldwork and Reporting Standards*. This standard establishes the fieldwork and reporting standards applicable to an audit of internal control over financial reporting.

38. The concept of materiality, as discussed in paragraphs 22 and 23, underlies the application of the general and fieldwork standards.

Planning the Engagement

39. The audit of internal control over financial reporting should be properly planned and assistants, if any, are to be properly supervised. When planning the audit of internal control over financial reporting, the auditor should evaluate how the following matters will affect the auditor's procedures:

- Knowledge of the company's internal control over financial reporting obtained during other engagements.
- Matters affecting the industry in which the company operates, such as financial reporting practices, economic conditions, laws and regulations, and technological changes.
- Matters relating to the company's business, including its organization, operating characteristics, capital structure, and distribution methods.
- The extent of recent changes, if any, in the company, its operations, or its internal control over financial reporting.
- Management's process for assessing the effectiveness of the company's internal control over financial reporting based upon control criteria.
- Preliminary judgments about materiality, risk, and other factors relating to the determination of material weaknesses.
- Control deficiencies previously communicated to the audit committee or management.

- Legal or regulatory matters of which the company is aware.

- The type and extent of available evidence related to the effectiveness of the company's internal control over financial reporting.

- Preliminary judgments about the effectiveness of internal control over financial reporting.

- The number of significant business locations or units, including management's documentation and monitoring of controls over such locations or business units. (Appendix B, paragraphs B1 through B17, discusses factors the auditor should evaluate to determine the locations at which to perform auditing procedures.)

Evaluating Management's Assessment Process

40. The auditor must obtain an understanding of, and evaluate, management's process for assessing the effectiveness of the company's internal control over financial reporting. When obtaining the understanding, the auditor should determine whether management has addressed the following elements:

- Determining which controls should be tested, including controls over all relevant assertions related to all significant accounts and disclosures in the financial statements. Generally, such controls include:

  – Controls over initiating, authorizing, recording, processing, and reporting significant accounts and disclosures and related assertions embodied in the financial statements.

  – Controls over the selection and application of accounting policies that are in conformity with generally accepted accounting principles.

  – Antifraud programs and controls.

  – Controls, including information technology general controls, on which other controls are dependent.

  – Controls over significant nonroutine and nonsystematic transactions, such as accounts involving judgments and estimates.

- – Company level controls (as described in paragraph 53), including:

  - – The control environment and

  - – Controls over the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; to initiate, authorize, record, and process journal entries in the general ledger; and to record recurring and nonrecurring adjustments to the financial statements (for example, consolidating adjustments, report combinations, and reclassifications).

    Note: References to the period-end financial reporting process in this standard refer to the preparation of both annual and quarterly financial statements.

- Evaluating the likelihood that failure of the control could result in a misstatement, the magnitude of such a misstatement, and the degree to which other controls, if effective, achieve the same control objectives.

- Determining the locations or business units to include in the evaluation for a company with multiple locations or business units (See paragraphs B1 through B17).

- Evaluating the design effectiveness of controls.

- Evaluating the operating effectiveness of controls based on procedures sufficient to assess their operating effectiveness. Examples of such procedures include testing of the controls by internal audit, testing of controls by others under the direction of management, using a service organization's reports (See paragraphs B18 through B29), inspection of evidence of the application of controls, or testing by means of a self-assessment process, some of which might occur as part of management's ongoing monitoring activities. Inquiry alone is not adequate to complete this evaluation. To evaluate the effectiveness of the company's internal control over financial reporting, management must have evaluated controls over all relevant assertions related to all significant accounts and disclosures.

- Determining the deficiencies in internal control over financial reporting that are of such a magnitude and likelihood of occurrence that they constitute significant deficiencies or material weaknesses.

- Communicating findings to the auditor and to others, if applicable.

- Evaluating whether findings are reasonable and support management's assessment.

41. As part of the understanding and evaluation of management's process, the auditor should obtain an understanding of the results of procedures performed by others. Others include internal audit and third parties working under the direction of management, including other auditors and accounting professionals engaged to perform procedures as a basis for management's assessment. Inquiry of management and others is the beginning point for obtaining an understanding of internal control over financial reporting, but inquiry alone is not adequate for reaching a conclusion on any aspect of internal control over financial reporting effectiveness.

Note: Management cannot use the auditor's procedures as part of the basis for its assessment of the effectiveness of internal control over financial reporting.

42. *Management's Documentation*. When determining whether management's documentation provides reasonable support for its assessment, the auditor should evaluate whether such documentation includes the following:

- The design of controls over all relevant assertions related to all significant accounts and disclosures in the financial statements. The documentation should include the five components of internal control over financial reporting as discussed in paragraph 49, including the control environment and company-level controls as described in paragraph 53;

- Information about how significant transactions are initiated, authorized, recorded, processed and reported;

- Sufficient information about the flow of transactions to identify the points at which material misstatements due to error or fraud could occur;

- Controls designed to prevent or detect fraud, including who performs the controls and the related segregation of duties;

- Controls over the period-end financial reporting process;

- Controls over safeguarding of assets (See paragraphs C1 through C6); and

- The results of management's testing and evaluation.

43. Documentation might take many forms, such as paper, electronic files, or other media, and can include a variety of information, including policy manuals, process models, flowcharts, job descriptions, documents, and forms. The form and extent of documentation will vary depending on the size, nature, and complexity of the company.

44. Documentation of the design of controls over relevant assertions related to significant accounts and disclosures is evidence that controls related to management's assessment of the effectiveness of internal control over financial reporting, including changes to those controls, have been identified, are capable of being communicated to those responsible for their performance, and are capable of being monitored by the company. Such documentation also provides the foundation for appropriate communication concerning responsibilities for performing controls and for the company's evaluation of and monitoring of the effective operation of controls.

45. Inadequate documentation of the design of controls over relevant assertions related to significant accounts and disclosures is a deficiency in the company's internal control over financial reporting. As discussed in paragraph 138, the auditor should evaluate this documentation deficiency. The auditor might conclude that the deficiency is only a deficiency, or that the deficiency represents a significant deficiency or a material weakness. In evaluating the deficiency as to its significance, the auditor should determine whether management can demonstrate the monitoring component of internal control over financial reporting.

46. Inadequate documentation also could cause the auditor to conclude that there is a limitation on the scope of the engagement.

Obtaining an Understanding of Internal Control Over Financial Reporting

47. The auditor should obtain an understanding of the design of specific controls by applying procedures that include:

- Making inquiries of appropriate management, supervisory, and staff personnel;

- Inspecting company documents;

- Observing the application of specific controls; and

- Tracing transactions through the information system relevant to financial reporting.

48. The auditor could also apply additional procedures to obtain an understanding of the design of specific controls.

49. The auditor must obtain an understanding of the design of controls related to each component of internal control over financial reporting, as discussed below.

- *Control Environment*. Because of the pervasive effect of the control environment on the reliability of financial reporting, the auditor's preliminary judgment about its effectiveness often influences the nature, timing, and extent of the tests of operating effectiveness considered necessary. Weaknesses in the control environment should cause the auditor to alter the nature, timing, or extent of tests of operating effectiveness that otherwise should have been performed in the absence of the weaknesses.

- *Risk Assessment*. When obtaining an understanding of the company's risk assessment process, the auditor should evaluate whether management has identified the risks of material misstatement in the significant accounts and disclosures and related assertions of the financial statements and has implemented controls to prevent or detect errors or fraud that could result in material misstatements. For example, the risk assessment process should address how management considers the possibility of unrecorded transactions or identifies and analyzes significant estimates recorded in the financial statements. Risks relevant to reliable financial reporting also relate to specific events or transactions.

- *Control Activities*. The auditor's understanding of control activities relates to the controls that management has implemented to prevent or detect errors or fraud that could result in material misstatement in the accounts and disclosures and related assertions of the financial statements. For the purposes of evaluating the effectiveness of internal control over financial reporting, the auditor's understanding of control activities encompasses a broader range of accounts and disclosures than what is normally obtained for the financial statement audit.

- *Information and Communication*. The auditor's understanding of management's information and communication involves understanding the same systems and processes that he or she addresses in an audit of financial statements. In addition, this understanding includes a greater emphasis on comprehending the safeguarding controls and the processes for authorization of transactions and the maintenance of records, as well as the period-end financial reporting process (discussed further beginning at paragraph 76).

- *Monitoring*. The auditor's understanding of management's monitoring of controls extends to and includes its monitoring of all controls, including control activities, which management has identified and designed to prevent or detect material misstatement in the accounts and disclosures and related assertions of the financial statements.

50. Some controls (such as company-level controls, described in paragraph 53) might have a pervasive effect on the achievement of many overall objectives of the control criteria. For example, information technology general controls over program development, program changes, computer operations, and access to programs and data help ensure that specific controls over the processing of transactions are operating effectively. In contrast, other controls are designed to achieve specific objectives of the control criteria. For example, management generally establishes specific controls, such as accounting for all shipping documents, to ensure that all valid sales are recorded.

51. The auditor should focus on combinations of controls, in addition to specific controls in isolation, in assessing whether the objectives of the control criteria have been achieved. The absence or inadequacy of a specific control designed to achieve the objectives of a specific criterion might not be a deficiency if other controls specifically address the same criterion. Further, when one or more controls achieve the objectives of a specific criterion, the auditor might not need to evaluate other controls designed to achieve those same objectives.

52. *Identifying Company-Level Controls*. Controls that exist at the company-level often have a pervasive impact on controls at the process, transaction, or application level. For that reason, as a practical consideration, it may be appropriate for the auditor to test and evaluate the design effectiveness of company-level controls first, because the results of that work might affect the way the auditor evaluates the other aspects of internal control over financial reporting.

53. Company-level controls are controls such as the following:

- Controls within the control environment, including tone at the top, the assignment of authority and responsibility, consistent policies and procedures, and company-wide programs, such as codes of conduct and fraud prevention, that apply to all locations and business units (See paragraphs 113 through 115 for further discussion);

- Management's risk assessment process;
- Centralized processing and controls, including shared service environments;
- Controls to monitor results of operations;
- Controls to monitor other controls, including activities of the internal audit function, the audit committee, and self-assessment programs;
- The period-end financial reporting process; and
- Board-approved policies that address significant business control and risk management practices.

Note: The controls listed above are not intended to be a complete list of company-level controls nor is a company required to have all the controls in the list to support its assessment of effective company-level controls. However, ineffective company-level controls are a deficiency that will affect the scope of work performed, particularly when a company has multiple locations or business units, as described in Appendix B.

54. Testing company-level controls alone is not sufficient for the purpose of expressing an opinion on the effectiveness of a company's internal control over financial reporting.

55. *Evaluating the Effectiveness of the Audit Committee's Oversight of the Company's External Financial Reporting and Internal Control Over Financial Reporting*. The company's audit committee plays an important role within the control environment and monitoring components of internal control over financial reporting. Within the control environment, the existence of an effective audit committee helps to set a positive tone at the top. Within the monitoring component, an effective audit committee challenges the company's activities in the financial arena.

Note: Although the audit committee plays an important role within the control environment and monitoring components of internal control over financial reporting, management is responsible for maintaining effective internal control over financial reporting. This standard does not suggest that this responsibility has been transferred to the audit committee.

Note: If no such committee exists with respect to the company, all references to the audit committee in this standard apply to the entire board of directors of the company.[8/] The auditor should be aware that companies whose securities are not listed on a national securities exchange or an automated inter-dealer quotation system of a national securities association (such as the New York Stock Exchange, American Stock Exchange, or NASDAQ) may not be required to have independent directors for their audit committees. In this case, the auditor should not consider the lack of independent directors at these companies indicative, by itself, of a control deficiency. Likewise, the independence requirements of Securities Exchange Act Rule 10A-3[9/] are not applicable to the listing of non-equity securities of a consolidated or at least 50 percent beneficially owned subsidiary of a listed issuer that is subject to the requirements of Securities Exchange Act Rule 10A-3(c)(2).[10/] Therefore, the auditor should interpret references to the audit committee in this standard, as applied to a subsidiary registrant, as being consistent with the provisions of Securities Exchange Act Rule 10A-3(c)(2).[11/] Furthermore, for subsidiary registrants, communications required by this standard to be directed to the audit committee should be made to the same committee or equivalent body that pre-approves the retention of the auditor by or on behalf of the subsidiary registrant pursuant to Rule 2-01(c)(7) of Regulation S-X[12/] (which might be, for example, the audit committee of the subsidiary registrant, the full board of the subsidiary registrant, or the audit committee of the subsidiary registrant's parent). In all cases, the auditor should interpret the terms "board of directors" and "audit committee" in this standard as being consistent with provisions for the use of those terms as defined in relevant SEC rules.

56. The company's board of directors is responsible for evaluating the performance and effectiveness of the audit committee; this standard does not suggest that the auditor is responsible for performing a separate and distinct evaluation of the audit committee. However, because of the role of the audit committee within the control environment and monitoring components of internal control over financial reporting, the auditor should assess the effectiveness of the audit committee as part of understanding and evaluating those components.

57. The aspects of the audit committee's effectiveness that are important may vary considerably with the circumstances. The auditor focuses on factors related

---

9/ See 17 C.F.R. 240.10A-3.

10/ See 17 C.F.R. 240.10A-3(c)(2).

11/ See 17 C.F.R. 240.10A-3(c)(2).

12/ See 17 C.F.R. 210.2-01(c)(7).

to the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting, such as the independence of the audit committee members from management and the clarity with which the audit committee's responsibilities are articulated (for example, in the audit committee's charter) and how well the audit committee and management understand those responsibilities. The auditor might also consider the audit committee's involvement and interaction with the independent auditor and with internal auditors, as well as interaction with key members of financial management, including the chief financial officer and chief accounting officer.

58. The auditor might also evaluate whether the right questions are raised and pursued with management and the auditor, including questions that indicate an understanding of the critical accounting policies and judgmental accounting estimates, and the responsiveness to issues raised by the auditor.

59. Ineffective oversight by the audit committee of the company's external financial reporting and internal control over financial reporting should be regarded as at least a significant deficiency and is a strong indicator that a material weakness in internal control over financial reporting exists.

60. *Identifying Significant Accounts*. The auditor should identify significant accounts and disclosures, first at the financial-statement level and then at the account or disclosure-component level. Determining specific controls to test begins by identifying significant accounts and disclosures within the financial statements. When identifying significant accounts, the auditor should evaluate both quantitative and qualitative factors.

61. An account is significant if there is more than a remote likelihood that the account could contain misstatements that individually, or when aggregated with others, could have a material effect on the financial statements, considering the risks of both overstatement and understatement. Other accounts may be significant on a qualitative basis based on the expectations of a reasonable user. For example, investors might be interested in a particular financial statement account even though it is not quantitatively large because it represents an important performance measure.

> Note: For purposes of determining significant accounts, the assessment as to likelihood should be made without giving any consideration to the effectiveness of internal control over financial reporting.

62. Components of an account balance subject to differing risks (inherent and control) or different controls should be considered separately as potential significant accounts. For instance, inventory accounts often consist of raw materials (purchasing process), work in process (manufacturing process), finished goods (distribution process), and an allowance for obsolescence.

63. In some cases, separate components of an account might be a significant account because of the company's organizational structure. For example, for a company that has a number of separate business units, each with different management and accounting processes, the accounts at each separate business unit are considered individually as potential significant accounts.

64. An account also may be considered significant because of the exposure to unrecognized obligations represented by the account. For example, loss reserves related to a self-insurance program or unrecorded contractual obligations at a construction contracting subsidiary may have historically been insignificant in amount, yet might represent a more than remote likelihood of material misstatement due to the existence of material unrecorded claims.

65. When deciding whether an account is significant, it is important for the auditor to evaluate both quantitative and qualitative factors, including the:

- Size and composition of the account;
- Susceptibility of loss due to errors or fraud;
- Volume of activity, complexity, and homogeneity of the individual transactions processed through the account;
- Nature of the account (for example, suspense accounts generally warrant greater attention);
- Accounting and reporting complexities associated with the account;
- Exposure to losses represented by the account (for example, loss accruals related to a consolidated construction contracting subsidiary);
- Likelihood (or possibility) of significant contingent liabilities arising from the activities represented by the account;
- Existence of related party transactions in the account; and
- Changes from the prior period in account characteristics (for example, new complexities or subjectivity or new types of transactions).

66. For example, in a financial statement audit, the auditor might not consider the fixed asset accounts significant when there is a low volume of transactions and when inherent risk is assessed as low, even though the balances are material to the financial statements. Accordingly, he or she might decide to perform only substantive procedures on such balances. In an audit of internal

control over financial reporting, however, such accounts are significant accounts because of their materiality to the financial statements.

67. As another example, the auditor of the financial statements of a financial institution might not consider trust accounts significant to the institution's financial statements because such accounts are not included in the institution's balance sheet and the associated fee income generated by trust activities is not material. However, in determining whether trust accounts are a significant account for purposes of the audit of internal control over financial reporting, the auditor should assess whether the activities of the trust department are significant to the institution's financial reporting, which also would include considering the contingent liabilities that could arise if a trust department failed to fulfill its fiduciary responsibilities (for example, if investments were made that were not in accordance with stated investment policies). When assessing the significance of possible contingent liabilities, consideration of the amount of assets under the trust department's control may be useful. For this reason, an auditor who has not considered trust accounts significant accounts for purposes of the financial statement audit might determine that they are significant for purposes of the audit of internal control over financial reporting.

68. Identifying Relevant Financial Statement Assertions. For each significant account, the auditor should determine the relevance of each of these financial statement assertions:[13/]

- Existence or occurrence;
- Completeness;
- Valuation or allocation;
- Rights and obligations; and
- Presentation and disclosure.

69. To identify relevant assertions, the auditor should determine the source of likely potential misstatements in each significant account. In determining whether a particular assertion is relevant to a significant account balance or disclosure, the auditor should evaluate:

- The nature of the assertion;
- The volume of transactions or data related to the assertion; and

---

13/ See AU sec. 326, *Evidential Matter*, which provides additional information on financial statement assertions.

- The nature and complexity of the systems, including the use of information technology by which the company processes and controls information supporting the assertion.

70. *Relevant assertions* are assertions that have a meaningful bearing on whether the account is fairly stated. For example, valuation may not be relevant to the cash account unless currency translation is involved; however, existence and completeness are always relevant. Similarly, valuation may not be relevant to the gross amount of the accounts receivable balance, but is relevant to the related allowance accounts. Additionally, the auditor might, in some circumstances, focus on the presentation and disclosure assertion separately in connection with the period-end financial reporting process.

71. *Identifying Significant Processes and Major Classes of Transactions*. The auditor should identify each significant process over each major class of transactions affecting significant accounts or groups of accounts. Major classes of transactions are those classes of transactions that are significant to the company's financial statements. For example, at a company whose sales may be initiated by customers through personal contact in a retail store or electronically through use of the internet, these types of sales would be two major classes of transactions within the sales process if they were both significant to the company's financial statements. As another example, at a company for which fixed assets is a significant account, recording depreciation expense would be a major class of transactions.

72. Different types of major classes of transactions have different levels of inherent risk associated with them and require different levels of management supervision and involvement. For this reason, the auditor might further categorize the identified major classes of transactions by transaction type: routine, nonroutine, and estimation.

- Routine transactions are recurring financial activities reflected in the accounting records in the normal course of business (for example, sales, purchases, cash receipts, cash disbursements, payroll).

- Nonroutine transactions are activities that occur only periodically (for example, taking physical inventory, calculating depreciation expense, adjusting for foreign currencies). A distinguishing feature of nonroutine transactions is that data involved are generally not part of the routine flow of transactions.

- Estimation transactions are activities that involve management judgments or assumptions in formulating account balances in the absence of a precise means of measurement (for example, determining the allowance for doubtful accounts, establishing warranty reserves, assessing assets for impairment).

73. Most processes involve a series of tasks such as capturing input data, sorting and merging data, making calculations, updating transactions and master files, generating transactions, and summarizing and displaying or reporting data. The processing procedures relevant for the auditor to understand the flow of transactions generally are those activities required to initiate, authorize, record, process and report transactions. Such activities include, for example, initially recording sales orders, preparing shipping documents and invoices, and updating the accounts receivable master file. The relevant processing procedures also include procedures for correcting and reprocessing previously rejected transactions and for correcting erroneous transactions through adjusting journal entries.

74. For each significant process, the auditor should:

- Understand the flow of transactions, including how transactions are initiated, authorized, recorded, processed, and reported.

- Identify the points within the process at which a misstatement – including a misstatement due to fraud – related to each relevant financial statement assertion could arise.

- Identify the controls that management has implemented to address these potential misstatements.

- Identify the controls that management has implemented over the prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets.

Note: The auditor frequently obtains the understanding and identifies the controls described above as part of his or her performance of walkthroughs (as described beginning in paragraph 79).

75. The nature and characteristics of a company's use of information technology in its information system affect the company's internal control over financial reporting. AU sec. 319, *Consideration of Internal Control in a Financial Statement Audit*, paragraphs .16 through .20, .30 through .32, and .77 through .79, discuss the effect of information technology on internal control over financial reporting.

76. *Understanding the Period-end Financial Reporting Process*. The period-end financial reporting process includes the following:

- The procedures used to enter transaction totals into the general ledger;

- The procedures used to initiate, authorize, record, and process journal entries in the general ledger;

- Other procedures used to record recurring and nonrecurring adjustments to the annual and quarterly financial statements, such as consolidating adjustments, report combinations, and classifications; and

- Procedures for drafting annual and quarterly financial statements and related disclosures.

77. As part of understanding and evaluating the period-end financial reporting process, the auditor should evaluate:

- The inputs, procedures performed, and outputs of the processes the company uses to produce its annual and quarterly financial statements;

- The extent of information technology involvement in each period-end financial reporting process element;

- Who participates from management;

- The number of locations involved;

- Types of adjusting entries (for example, standard, nonstandard, eliminating, and consolidating); and

- The nature and extent of the oversight of the process by appropriate parties, including management, the board of directors, and the audit committee.

78. The period-end financial reporting process is always a significant process because of its importance to financial reporting and to the auditor's opinions on internal control over financial reporting and the financial statements. The auditor's understanding of the company's period-end financial reporting process and how it interrelates with the company's other significant processes assists the auditor in identifying and testing controls that are the most relevant to financial statement risks.

79. *Performing Walkthroughs*. The auditor should perform at least one walkthrough for each major class of transactions (as identified in paragraph 71). In a walkthrough, the auditor traces a transaction from origination through the

company's information systems until it is reflected in the company's financial reports. Walkthroughs provide the auditor with evidence to:

- Confirm the auditor's understanding of the process flow of transactions;

- Confirm the auditor's understanding of the design of controls identified for all five components of internal control over financial reporting, including those related to the prevention or detection of fraud;

- Confirm that the auditor's understanding of the process is complete by determining whether all points in the process at which misstatements related to each relevant financial statement assertion that could occur have been identified;

- Evaluate the effectiveness of the design of controls; and

- Confirm whether controls have been placed in operation.

Note: The auditor can often gain an understanding of the transaction flow, identify and understand controls, and conduct the walkthrough simultaneously.

80. The auditor's walkthroughs should encompass the entire process of initiating, authorizing, recording, processing, and reporting individual transactions and controls for each of the significant processes identified, including controls intended to address the risk of fraud. During the walkthrough, at each point at which important processing procedures or controls occur, the auditor should question the company's personnel about their understanding of what is required by the company's prescribed procedures and controls and determine whether the processing procedures are performed as originally understood and on a timely basis. (Controls might not be performed regularly but still be timely.) During the walkthrough, the auditor should be alert for exceptions to the company's prescribed procedures and controls.

81. While performing a walkthrough, the auditor should evaluate the quality of the evidence obtained and perform walkthrough procedures that produce a level of evidence consistent with the objectives listed in paragraph 79. Rather than reviewing copies of documents and making inquiries of a single person at the company, the auditor should follow the process flow of actual transactions using the same documents and information technology that company personnel use and make inquiries of relevant personnel involved in significant aspects of the process or controls. To corroborate information at various points in the walkthrough, the auditor might ask personnel to describe their understanding of the previous and succeeding processing or control activities and to demonstrate

what they do. In addition, inquiries should include follow-up questions that could help identify the abuse of controls or indicators of fraud. Examples of follow-up inquiries include asking personnel:

- What they do when they find an error or what they are looking for to determine if there is an error (rather than simply asking them if they perform listed procedures and controls); what kind of errors they have found; what happened as a result of finding the errors, and how the errors were resolved. If the person being interviewed has never found an error, the auditor should evaluate whether that situation is due to good preventive controls or whether the individual performing the control lacks the necessary skills.

- Whether they have ever been asked to override the process or controls, and if so, to describe the situation, why it occurred, and what happened.

82. During the period under audit, when there have been significant changes in the process flow of transactions, including the supporting computer applications, the auditor should evaluate the nature of the change(s) and the effect on related accounts to determine whether to walk through transactions that were processed both before and after the change.

> Note: Unless significant changes in the process flow of transactions, including the supporting computer applications, make it more efficient for the auditor to prepare new documentation of a walkthrough, the auditor may carry his or her documentation forward each year, after updating it for any changes that have taken place.

83. *Identifying Controls to Test*. The auditor should obtain evidence about the effectiveness of controls (either by performing tests of controls himself or herself, or by using the work of others)[14/] for all relevant assertions related to all significant accounts and disclosures in the financial statements. After identifying significant accounts, relevant assertions, and significant processes, the auditor should evaluate the following to identify the controls to be tested:

- Points at which errors or fraud could occur;

- The nature of the controls implemented by management;

- The significance of each control in achieving the objectives of the control criteria and whether more than one control achieves a

---

14/ See paragraphs 108 through 126 for additional direction on using the work of others.

particular objective or whether more than one control is necessary to achieve a particular objective; and

- The risk that the controls might not be operating effectively. Factors that affect whether the control might not be operating effectively include the following:

  – Whether there have been changes in the volume or nature of transactions that might adversely affect control design or operating effectiveness;

  – Whether there have been changes in the design of controls;

  – The degree to which the control relies on the effectiveness of other controls (for example, the control environment or information technology general controls);

  – Whether there have been changes in key personnel who perform the control or monitor its performance;

  – Whether the control relies on performance by an individual or is automated; and

  – The complexity of the control.

84. The auditor should clearly link individual controls with the significant accounts and assertions to which they relate.

85. The auditor should evaluate whether to test preventive controls, detective controls, or a combination of both for individual relevant assertions related to individual significant accounts. For instance, when performing tests of preventive and detective controls, the auditor might conclude that a deficient preventive control could be compensated for by an effective detective control and, therefore, not result in a significant deficiency or material weakness. For example, a monthly reconciliation control procedure, which is a detective control, might detect an out-of-balance situation resulting from an unauthorized transaction being initiated due to an ineffective authorization procedure, which is a preventive control. When determining whether the detective control is effective, the auditor should evaluate whether the detective control is sufficient to achieve the control objective to which the preventive control relates.

> Note: Because effective internal control over financial reporting often includes a combination of preventive and detective controls, the auditor ordinarily will test a combination of both.

86. The auditor should apply tests of controls to those controls that are important to achieving each control objective. It is neither necessary to test all controls nor is it necessary to test redundant controls (that is, controls that duplicate other controls that achieve the same objective and already have been tested), unless redundancy is itself a control objective, as in the case of certain computer controls.

87. Appendix B, paragraphs B1 through B17, provide additional direction to the auditor in determining which controls to test when a company has multiple locations or business units. In these circumstances, the auditor should determine significant accounts and their relevant assertions, significant processes, and major classes of transactions based on those that are relevant and significant to the consolidated financial statements. Having made those determinations in relation to the consolidated financial statements, the auditor should then apply the directions in Appendix B.

Testing and Evaluating Design Effectiveness

88. Internal control over financial reporting is effectively designed when the controls complied with would be expected to prevent or detect errors or fraud that could result in material misstatements in the financial statements. The auditor should determine whether the company has controls to meet the objectives of the control criteria by:

- Identifying the company's control objectives in each area;
- Identifying the controls that satisfy each objective; and
- Determining whether the controls, if operating properly, can effectively prevent or detect errors or fraud that could result in material misstatements in the financial statements.

89. Procedures the auditor performs to test and evaluate design effectiveness include inquiry, observation, walkthroughs, inspection of relevant documentation, and a specific evaluation of whether the controls are likely to prevent or detect errors or fraud that could result in misstatements if they are operated as prescribed by appropriately qualified persons.

90. The procedures that the auditor performs in evaluating management's assessment process and obtaining an understanding of internal control over financial reporting also provide the auditor with evidence about the design effectiveness of internal control over financial reporting.

91. The procedures the auditor performs to test and evaluate design effectiveness also might provide evidence about operating effectiveness.

Testing and Evaluating Operating Effectiveness

92. An auditor should evaluate the operating effectiveness of a control by determining whether the control is operating as designed and whether the person performing the control possesses the necessary authority and qualifications to perform the control effectively.

93. *Nature of Tests of Controls*. Tests of controls over operating effectiveness should include a mix of inquiries of appropriate personnel, inspection of relevant documentation, observation of the company's operations, and reperformance of the application of the control. For example, the auditor might observe the procedures for opening the mail and processing cash receipts to test the operating effectiveness of controls over cash receipts. Because an observation is pertinent only at the point in time at which it is made, the auditor should supplement the observation with inquiries of company personnel and inspection of documentation about the operation of such controls at other times. These inquiries might be made concurrently with performing walkthroughs.

94. Inquiry is a procedure that consists of seeking information, both financial and nonfinancial, of knowledgeable persons throughout the company. Inquiry is used extensively throughout the audit and often is complementary to performing other procedures. Inquiries may range from formal written inquiries to informal oral inquiries.

95. Evaluating responses to inquiries is an integral part of the inquiry procedure. Examples of information that inquiries might provide include the skill and competency of those performing the control, the relative sensitivity of the control to prevent or detect errors or fraud, and the frequency with which the control operates to prevent or detect errors or fraud. Responses to inquiries might provide the auditor with information not previously possessed or with corroborative evidence. Alternatively, responses might provide information that differs significantly from other information the auditor obtains (for example, information regarding the possibility of management override of controls). In some cases, responses to inquiries provide a basis for the auditor to modify or perform additional procedures.

96. Because inquiry alone does not provide sufficient evidence to support the operating effectiveness of a control, the auditor should perform additional tests of controls. For example, if the company implements a control activity whereby its sales manager reviews and investigates a report of invoices with unusually high or low gross margins, inquiry of the sales manager as to whether he or she investigates discrepancies would be inadequate. To obtain sufficient evidence about the operating effectiveness of the control, the auditor should corroborate the sales manager's responses by performing other procedures, such as inspecting reports or other documentation used in or generated by the

performance of the control, and evaluate whether appropriate actions were taken regarding discrepancies.

97. The nature of the control also influences the nature of the tests of controls the auditor can perform. For example, the auditor might examine documents regarding controls for which documentary evidence exists. However, documentary evidence regarding some aspects of the control environment, such as management's philosophy and operating style, might not exist. In circumstances in which documentary evidence of controls or the performance of controls does not exist and is not expected to exist, the auditor's tests of controls would consist of inquiries of appropriate personnel and observation of company activities. As another example, a signature on a voucher package to indicate that the signer approved it does not necessarily mean that the person carefully reviewed the package before signing. The package may have been signed based on only a cursory review (or without any review). As a result, the quality of the evidence regarding the effective operation of the control might not be sufficiently persuasive. If that is the case, the auditor should reperform the control (for example, checking prices, extensions, and additions) as part of the test of the control. In addition, the auditor might inquire of the person responsible for approving voucher packages what he or she looks for when approving packages and how many errors have been found within voucher packages. The auditor also might inquire of supervisors whether they have any knowledge of errors that the person responsible for approving the voucher packages failed to detect.

98. *Timing of Tests of Controls*. The auditor must perform tests of controls over a period of time that is adequate to determine whether, as of the date specified in management's report, the controls necessary for achieving the objectives of the control criteria are operating effectively. The period of time over which the auditor performs tests of controls varies with the nature of the controls being tested and with the frequency with which specific controls operate and specific policies are applied. Some controls operate continuously (for example, controls over sales), while others operate only at certain times (for example, controls over the preparation of monthly or quarterly financial statements and controls over physical inventory counts).

99. The auditor's testing of the operating effectiveness of such controls should occur at the time the controls are operating. Controls "as of" a specific date encompass controls that are relevant to the company's internal control over financial reporting "as of" that specific date, even though such controls might not operate until after that specific date. For example, some controls over the period-end financial reporting process normally operate only after the "as of" date. Therefore, if controls over the December 31, 20X4 period-end financial reporting process operate in January 20X5, the auditor should test the control operating in January 20X5 to have sufficient evidence of operating effectiveness "as of" December 31, 20X4.

100. When the auditor reports on the effectiveness of controls "as of" a specific date and obtains evidence about the operating effectiveness of controls at an interim date, he or she should determine what additional evidence to obtain concerning the operation of the control for the remaining period. In making that determination, the auditor should evaluate:

- The specific controls tested prior to the "as of" date and the results of those tests;
- The degree to which evidence about the operating effectiveness of those controls was obtained;
- The length of the remaining period; and
- The possibility that there have been any significant changes in internal control over financial reporting subsequent to the interim date.

101. For controls over significant nonroutine transactions, controls over accounts or processes with a high degree of subjectivity or judgment in measurement, or controls over the recording of period-end adjustments, the auditor should perform tests of controls closer to or at the "as of" date rather than at an interim date. However, the auditor should balance performing the tests of controls closer to the "as of" date with the need to obtain sufficient evidence of operating effectiveness.

102. Prior to the date specified in management's report, management might implement changes to the company's controls to make them more effective or efficient or to address control deficiencies. In that case, the auditor might not need to evaluate controls that have been superseded. For example, if the auditor determines that the new controls achieve the related objectives of the control criteria and have been in effect for a sufficient period to permit the auditor to assess their design and operating effectiveness by performing tests of controls,[15/] he or she will not need to evaluate the design and operating effectiveness of the superseded controls for purposes of expressing an opinion on internal control over financial reporting.

103. As discussed in paragraph 207, however, the auditor must communicate all identified significant deficiencies and material weaknesses in controls to the audit committee in writing. In addition, the auditor should evaluate how the

---

[15/] Paragraph 179 provides reporting directions in these circumstances when the auditor has not been able to obtain evidence that the new controls were appropriately designed or have been operating effectively for a sufficient period of time.

design and operating effectiveness of the superseded controls relates to the auditor's reliance on controls for financial statement audit purposes.

104. *Extent of Tests of Controls*. Each year the auditor must obtain sufficient evidence about whether the company's internal control over financial reporting, including the controls for all internal control components, is operating effectively. This means that each year the auditor must obtain evidence about the effectiveness of controls for all relevant assertions related to all significant accounts and disclosures in the financial statements. The auditor also should vary from year to year the nature, timing, and extent of testing of controls to introduce unpredictability into the testing and respond to changes in circumstances. For example, each year the auditor might test the controls at a different interim period; increase or reduce the number and types of tests performed; or change the combination of procedures used.

105. In determining the extent of procedures to perform, the auditor should design the procedures to provide a high level of assurance that the control being tested is operating effectively. In making this determination, the auditor should assess the following factors:

- *Nature of the control*. The auditor should subject manual controls to more extensive testing than automated controls. In some circumstances, testing a single operation of an automated control may be sufficient to obtain a high level of assurance that the control operated effectively, provided that information technology general controls also are operating effectively. For manual controls, sufficient evidence about the operating effectiveness of the controls is obtained by evaluating multiple operations of the control and the results of each operation. The auditor also should assess the complexity of the controls, the significance of the judgments that must be made in connection with their operation, and the level of competence of the person performing the controls that is necessary for the control to operate effectively. As the complexity and level of judgment increase or the level of competence of the person performing the control decreases, the extent of the auditor's testing should increase.

- *Frequency of operation*. Generally, the more frequently a manual control operates, the more operations of the control the auditor should test. For example, for a manual control that operates in connection with each transaction, the auditor should test multiple operations of the control over a sufficient period of time to obtain a high level of assurance that the control operated effectively. For controls that operate less frequently, such as monthly account reconciliations and controls over the period-end financial reporting process, the auditor may test significantly fewer operations of the control. However, the auditor's evaluation of each operation of controls operating less frequently is likely to be more extensive. For example, when evaluating the operation of a monthly exception report, the auditor should evaluate whether the judgments made with regard to the disposition of the exceptions were appropriate and adequately supported.

Note: When sampling is appropriate and the population of controls to be tested is large, increasing the population size does not proportionately increase the required sample size.

- *Importance of the control*. Controls that are relatively more important should be tested more extensively. For example, some controls may address multiple financial statement assertions, and certain period-end detective controls might be considered more important than related preventive controls. The auditor should test more operations of such controls or, if such controls operate infrequently, the auditor should evaluate each operation of the control more extensively.

106. *Use of Professional Skepticism when Evaluating the Results of Testing*. The auditor must conduct the audit of internal control over financial reporting and the audit of the financial statements with professional skepticism, which is an attitude that includes a questioning mind and a critical assessment of audit evidence. For example, even though a control is performed by the same employee whom the auditor believes performed the control effectively in prior periods, the control may not be operating effectively during the current period because the employee could have become complacent, distracted, or otherwise not be effectively carrying out his or her responsibilities. Also, regardless of any past experience with the entity or the auditor's beliefs about management's honesty and integrity, the auditor should recognize the possibility that a material misstatement due to fraud could be present. Furthermore, professional skepticism requires the auditor to consider whether evidence obtained suggests that a material misstatement due to fraud has occurred. In exercising professional skepticism in gathering and evaluating evidence, the auditor must not be satisfied with less-than-persuasive evidence because of a belief that management is honest.

107. When the auditor identifies exceptions to the company's prescribed control procedures, he or she should determine, using professional skepticism, the effect of the exception on the nature and extent of additional testing that may be appropriate or necessary and on the operating effectiveness of the control being tested. A conclusion that an identified exception does not represent a control deficiency is appropriate only if evidence beyond what the auditor had initially planned and beyond inquiry supports that conclusion.

Using the Work of Others

108. In all audits of internal control over financial reporting, the auditor must perform enough of the testing himself or herself so that the auditor's own work provides the principal evidence for the auditor's opinion. The auditor may, however, use the work of others to alter the nature, timing, or extent of the work he or she otherwise would have performed. For these purposes, the work of others includes relevant work performed by internal auditors, company personnel (in addition to internal auditors), and third parties working under the direction of management or the audit committee that provides information about the effectiveness of internal control over financial reporting.

> Note: Because the amount of work related to obtaining sufficient evidence to support an opinion about the effectiveness of controls is not susceptible to precise measurement, the auditor's judgment about whether he or she has obtained the principal evidence for the opinion will be qualitative as well as quantitative. For example, the auditor might give more weight to work he or she performed on pervasive controls and in areas such as the control environment than on other controls, such as controls over low-risk, routine transactions.

109. The auditor should evaluate whether to use the work performed by others in the audit of internal control over financial reporting. To determine the extent to which the auditor may use the work of others to alter the nature, timing, or extent of the work the auditor would have otherwise performed, in addition to obtaining the principal evidence for his or her opinion, the auditor should:

a. Evaluate the nature of the controls subjected to the work of others (See paragraphs 112 through 116);

b. Evaluate the competence and objectivity of the individuals who performed the work (See paragraphs 117 through 122); and

c. Test some of the work performed by others to evaluate the quality and effectiveness of their work (See paragraphs 123 through 125).

> Note: AU sec. 322, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements*, applies to using the work of internal auditors in an audit of the financial statements. The auditor may apply the relevant concepts described in that section to using the work of others in the audit of internal control over financial reporting.

110. The auditor must obtain sufficient evidence to support his or her opinion. Judgments about the sufficiency of evidence obtained and other factors affecting the auditor's opinion, such as the significance of identified control deficiencies, should be those of the auditor. Evidence obtained through the auditor's direct

personal knowledge, observation, reperformance, and inspection is generally more persuasive than information obtained indirectly from others, such as from internal auditors, other company personnel, or third parties working under the direction of management.

111. The requirement that the auditor's own work must provide the principal evidence for the auditor's opinion is one of the boundaries within which the auditor determines the work he or she must perform himself or herself in the audit of internal control over financial reporting. Paragraphs 112 through 125 provide more specific and definitive direction on how the auditor makes this determination, but the directions allow the auditor significant flexibility to use his or her judgment to determine the work necessary to obtain the principal evidence and to determine when the auditor can use the work of others rather than perform the work himself or herself. Regardless of the auditor's determination of the work that he or she must perform himself or herself, the auditor's responsibility to report on the effectiveness of internal control over financial reporting rests solely with the auditor; this responsibility cannot be shared with the other individuals whose work the auditor uses. Therefore, when the auditor uses the work of others, the auditor is responsible for the results of their work.

112. *Evaluating the Nature of the Controls Subjected to the Work of Others*. The auditor should evaluate the following factors when evaluating the nature of the controls subjected to the work of others. As these factors increase in significance, the need for the auditor to perform his or her own work on those controls increases. As these factors decrease in significance, the need for the auditor to perform his or her own work on those controls decreases.

- The materiality of the accounts and disclosures that the control addresses and the risk of material misstatement.

- The degree of judgment required to evaluate the operating effectiveness of the control (that is, the degree to which the evaluation of the effectiveness of the control requires evaluation of subjective factors rather than objective testing).

- The pervasiveness of the control.

- The level of judgment or estimation required in the account or disclosure.

- The potential for management override of the control.

113. Because of the nature of the controls in the control environment, the auditor should not use the work of others to reduce the amount of work he or she performs on controls in the control environment. The auditor should, however,

consider the results of work performed in this area by others because it might indicate the need for the auditor to increase his or her work.

114. The control environment encompasses the following factors:[16/]

- Integrity and ethical values;
- Commitment to competence;
- Board of directors or audit committee participation;
- Management's philosophy and operating style;
- Organizational structure;
- Assignment of authority and responsibility; and
- Human resource policies and procedures.

115. Controls that are part of the control environment include, but are not limited to, controls specifically established to prevent and detect fraud that is at least reasonably possible to result in material misstatement of the financial statements.

Note: The term "reasonably possible" has the same meaning as in FAS No. 5. See the first note to paragraph 9 for further discussion.

116. The auditor should perform the walkthroughs (as discussed beginning at paragraph 79) himself or herself because of the degree of judgment required in performing this work. However, to provide additional evidence, the auditor may also review the work of others who have performed and documented walkthroughs. In evaluating whether his or her own evidence provides the principal evidence, the auditor's work on the control environment and in performing walkthroughs constitutes an important part of the auditor's own work.

117. *Evaluating the Competence and Objectivity of Others*. The extent to which the auditor may use the work of others depends on the degree of competence and objectivity of the individuals performing the work. The higher the degree of competence and objectivity, the greater use the auditor may make of the work; conversely, the lower the degree of competence and objectivity, the less use the auditor may make of the work. Further, the auditor should not use the work of individuals who have a low degree of objectivity, regardless of their

---

[16/] See the COSO report and paragraph .110 of AU sec. 319, *Internal Control in a Financial Statement Audit*, for additional information about the factors included in the control environment.

level of competence. Likewise, the auditor should not use the work of individuals who have a low level of competence regardless of their degree of objectivity.

118. When evaluating the competence and objectivity of the individuals performing the tests of controls, the auditor should obtain, or update information from prior years, about the factors indicated in the following paragraph. The auditor should determine whether to test the existence and quality of those factors and, if so, the extent to which to test the existence and quality of those factors, based on the intended effect of the work of others on the audit of internal control over financial reporting.

119. Factors concerning the competence of the individuals performing the tests of controls include:

- Their educational level and professional experience.
- Their professional certification and continuing education.
- Practices regarding the assignment of individuals to work areas.
- Supervision and review of their activities.
- Quality of the documentation of their work, including any reports or recommendations issued.
- Evaluation of their performance.

120. Factors concerning the objectivity of the individuals performing the tests of controls include:

- The organizational status of the individuals responsible for the work of others ("testing authority") in testing controls, including—

    a. Whether the testing authority reports to an officer of sufficient status to ensure sufficient testing coverage and adequate consideration of, and action on, the findings and recommendations of the individuals performing the testing.

    b. Whether the testing authority has direct access and reports regularly to the board of directors or the audit committee.

    c. Whether the board of directors or the audit committee oversees employment decisions related to the testing authority.

- Policies to maintain the individuals' objectivity about the areas being tested, including—

  a. Policies prohibiting individuals from testing controls in areas in which relatives are employed in important or internal control-sensitive positions.

  b. Policies prohibiting individuals from testing controls in areas to which they were recently assigned or are scheduled to be assigned upon completion of their controls testing responsibilities.

121. Internal auditors normally are expected to have greater competence with regard to internal control over financial reporting and objectivity than other company personnel. Therefore, the auditor may be able to use their work to a greater extent than the work of other company personnel. This is particularly true in the case of internal auditors who follow the *International Standards for the Professional Practice of Internal Auditing* issued by the Institute of Internal Auditors. If internal auditors have performed an extensive amount of relevant work and the auditor determines they possess a high degree of competence and objectivity, the auditor could use their work to the greatest extent an auditor could use the work of others. On the other hand, if the internal audit function reports solely to management, which would reduce internal auditors' objectivity, or if limited resources allocated to the internal audit function result in very limited testing procedures on its part or reduced competency of the internal auditors, the auditor should use their work to a much lesser extent and perform more of the testing himself or herself.

122. When determining how the work of others will alter the nature, timing, or extent of the auditor's work, the auditor should assess the interrelationship of the nature of the controls, as discussed in paragraph 112, and the competence and objectivity of those who performed the work, as discussed in paragraphs 117 through 121. As the significance of the factors listed in paragraph 112 increases, the ability of the auditor to use the work of others decreases at the same time that the necessary level of competence and objectivity of those who perform the work increases. For example, for some pervasive controls, the auditor may determine that using the work of internal auditors to a limited degree would be appropriate and that using the work of other company personnel would not be appropriate because other company personnel do not have a high enough degree of objectivity as it relates to the nature of the controls.

123. *Testing the Work of Others*. The auditor should test some of the work of others to evaluate the quality and effectiveness of the work. The auditor's tests of the work of others may be accomplished by either (a) testing some of the controls that others tested or (b) testing similar controls not actually tested by others.

124. The nature and extent of these tests depend on the effect of the work of others on the auditor's procedures but should be sufficient to enable the auditor to make an evaluation of the overall quality and effectiveness of the work the auditor is considering. The auditor also should assess whether this evaluation has an effect on his or her conclusions about the competence and objectivity of the individuals performing the work.

125. In evaluating the quality and effectiveness of the work of others, the auditor should evaluate such factors as to whether the:

- Scope of work is appropriate to meet the objectives.
- Work programs are adequate.
- Work performed is adequately documented, including evidence of supervision and review.
- Conclusions are appropriate in the circumstances.
- Reports are consistent with the results of the work performed.

126. The following examples illustrate how to apply the directions discussed in this section:

- *Controls over the period-end financial reporting process*. Many of the controls over the period-end financial reporting process address significant risks of misstatement of the accounts and disclosures in the annual and quarterly financial statements, may require significant judgment to evaluate their operating effectiveness, may have a higher potential for management override, and may affect accounts that require a high level of judgment or estimation. Therefore, the auditor could determine that, based on the nature of controls over the period-end financial reporting process, he or she would need to perform more of the tests of those controls himself or herself. Further, because of the nature of the controls, the auditor should use the work of others only if the degree of competence and objectivity of the individuals performing the work is high; therefore, the auditor might use the work of internal auditors to some extent but not the work of others within the company.

- *Information technology general controls*. Information technology general controls are part of the control activities component of internal control; therefore, the nature of the controls might permit the auditor to use the work of others. For example, program change controls over routine maintenance changes may have a highly pervasive effect, yet involve a low degree of judgment in evaluating their operating effectiveness, can be subjected to objective testing, and have a low potential for management override. Therefore, the auditor could determine that, based on the nature of these program change controls, the auditor could use the work of others to a moderate extent so long as the degree of competence and objectivity of the individuals performing the test is at an appropriate level. On the other hand, controls to detect attempts to override controls that prevent unauthorized journal entries from being posted may have a highly pervasive effect, may involve a high degree of judgment in evaluating their operating effectiveness, may involve a subjective evaluation, and may have a reasonable possibility for management override. Therefore, the auditor could determine that, based on the nature of these controls over systems access, he or she would need to perform more of the tests of those controls himself or herself. Further, because of the nature of the controls, the auditor should use the work of others only if the degree of competence and objectivity of the individuals performing the tests is high.

- *Management self-assessment of controls*. As described in paragraph 40, management may test the operating effectiveness of controls using a self-assessment process. Because such an assessment is made by the same personnel who are responsible for performing the control, the individuals performing the self-assessment do not have sufficient objectivity as it relates to the subject matter. Therefore, the auditor should not use their work.

- *Controls over the calculation of depreciation of fixed assets*. Controls over the calculation of depreciation of fixed assets are usually not pervasive, involve a low degree of judgment in evaluating their operating effectiveness, and can be subjected to objective testing. If these conditions describe the controls over the calculation of depreciation of fixed assets and if there is a low potential for management override, the auditor could determine that, based on the nature of these controls, the auditor could use the work of others to a large extent (perhaps entirely) so long as the degree of competence and objectivity of the individuals performing the test is at an appropriate level.

- *Alternating tests of controls*. Many of the controls over accounts payable, including controls over cash disbursements, are usually not pervasive, involve a low degree of judgment in evaluating their operating effectiveness, can be subjected to objective testing, and have a low potential for management override. When these conditions describe the controls over accounts payable, the auditor could determine that, based on the nature of these controls, he or she could use the work of others to a large extent (perhaps entirely) so long as the degree of competence and objectivity of the individuals performing the test is at an appropriate level. However, if the company recently implemented a major information technology change that significantly affected controls over cash disbursements, the auditor might decide to use the work of others to a lesser extent in the audit immediately following the information technology change and then return, in subsequent years, to using the work of others to a large extent in this area. As another example, the auditor might use the work of others for testing controls over the depreciation of fixed assets (as described in the point above) for several years' audits but decide one year to perform some extent of the work himself or herself to gain an understanding of these controls beyond that provided by performing a walkthrough.

Forming an Opinion on the Effectiveness of Internal Control Over Financial Reporting

127. When forming an opinion on internal control over financial reporting, the auditor should evaluate all evidence obtained from all sources, including:

- The adequacy of the assessment performed by management and the results of the auditor's evaluation of the design and tests of operating effectiveness of controls;

- The negative results of substantive procedures performed during the financial statement audit (for example, recorded and unrecorded adjustments identified as a result of the performance of the auditing procedures); and

- Any identified control deficiencies.

128. As part of this evaluation, the auditor should review all reports issued during the year by internal audit (or similar functions, such as loan review in a financial institution) that address controls related to internal control over financial reporting and evaluate any control deficiencies identified in those reports. This review should include reports issued by internal audit as a result of operational audits or specific reviews of key processes if those reports address controls related to internal control over financial reporting.

129. *Issuing an Unqualified Opinion*. The auditor may issue an unqualified opinion only when there are no identified material weaknesses and when there have been no restrictions on the scope of the auditor's work. The existence of a material weakness requires the auditor to express an adverse opinion on the

effectiveness of internal control over financial reporting (See paragraph 175), while a scope limitation requires the auditor to express a qualified opinion or a disclaimer of opinion, depending on the significance of the limitation in scope (See paragraph 178).

130. *Evaluating Deficiencies in Internal Control Over Financial Reporting*. The auditor must evaluate identified control deficiencies and determine whether the deficiencies, individually or in combination, are significant deficiencies or material weaknesses. The evaluation of the significance of a deficiency should include both quantitative and qualitative factors.

131. The auditor should evaluate the significance of a deficiency in internal control over financial reporting initially by determining the following:

- The likelihood that a deficiency, or a combination of deficiencies, could result in a misstatement of an account balance or disclosure; and

- The magnitude of the potential misstatement resulting from the deficiency or deficiencies.

132. The significance of a deficiency in internal control over financial reporting depends on the *potential* for a misstatement, not on whether a misstatement actually has occurred.

133. Several factors affect the *likelihood* that a deficiency, or a combination of deficiencies, could result in a misstatement of an account balance or disclosure. The factors include, but are not limited to, the following:

- The nature of the financial statement accounts, disclosures, and assertions involved; for example, suspense accounts and related party transactions involve greater risk.

- The susceptibility of the related assets or liability to loss or fraud; that is, greater susceptibility increases risk.

- The subjectivity, complexity, or extent of judgment required to determine the amount involved; that is, greater subjectivity, complexity, or judgment, like that related to an accounting estimate, increases risk.

- The cause and frequency of known or detected exceptions for the operating effectiveness of a control; for example, a control with an observed non-negligible deviation rate is a deficiency.

- The interaction or relationship of the control with other controls; that is, the interdependence or redundancy of the control.

- The interaction of the deficiencies; for example, when evaluating a combination of two or more deficiencies, whether the deficiencies could affect the same financial statement accounts and assertions.

- The possible future consequences of the deficiency.

134. When evaluating the likelihood that a deficiency or combination of deficiencies could result in a misstatement, the auditor should evaluate how the controls interact with other controls. There are controls, such as information technology general controls, on which other controls depend. Some controls function together as a group of controls. Other controls overlap, in the sense that these other controls achieve the same objective.

135. Several factors affect the magnitude of the misstatement that could result from a deficiency or deficiencies in controls. The factors include, but are not limited to, the following:

- The financial statement amounts or total of transactions exposed to the deficiency.

- The volume of activity in the account balance or class of transactions exposed to the deficiency that has occurred in the current period or that is expected in future periods.

136. In evaluating the magnitude of the potential misstatement, the auditor should recognize that the maximum amount that an account balance or total of transactions can be overstated is generally the recorded amount. However, the recorded amount is not a limitation on the amount of potential understatement. The auditor also should recognize that the risk of misstatement might be different for the maximum possible misstatement than for lesser possible amounts.

137. When evaluating the significance of a deficiency in internal control over financial reporting, the auditor also should determine the level of detail and degree of assurance that would satisfy prudent officials in the conduct of their own affairs that they have reasonable assurance that transactions are recorded as necessary to permit the preparation of financial statements in conformity with generally accepted accounting principles. If the auditor determines that the deficiency would prevent prudent officials in the conduct of their own affairs from concluding that they have reasonable assurance,[17/] then the auditor should deem

---

[17/] See SEC Staff Accounting Bulletin Topic 1M2, *Immaterial Misstatements That Are Intentional*, for further discussion about the level of detail and degree of assurance that would satisfy prudent officials in the conduct of their own affairs.

the deficiency to be at least a significant deficiency. Having determined in this manner that a deficiency represents a significant deficiency, the auditor must further evaluate the deficiency to determine whether individually, or in combination with other deficiencies, the deficiency is a material weakness.

Note: Paragraphs 9 and 10 provide the definitions of significant deficiency and material weakness, respectively.

138. Inadequate documentation of the design of controls and the absence of sufficient documented evidence to support management's assessment of the operating effectiveness of internal control over financial reporting are control deficiencies. As with other control deficiencies, the auditor should evaluate these deficiencies as to their significance.

139. The interaction of qualitative considerations that affect internal control over financial reporting with quantitative considerations ordinarily results in deficiencies in the following areas being at least significant deficiencies in internal control over financial reporting:

- Controls over the selection and application of accounting policies that are in conformity with generally accepted accounting principles;
- Antifraud programs and controls;
- Controls over non-routine and non-systematic transactions; and
- Controls over the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; initiate, authorize, record, and process journal entries into the general ledger; and record recurring and nonrecurring adjustments to the financial statements

140. Each of the following circumstances should be regarded as at least a significant deficiency and as a strong indicator that a material weakness in internal control over financial reporting exists:

- Restatement of previously issued financial statements to reflect the correction of a misstatement.

  Note: The correction of a misstatement includes misstatements due to error or fraud; it does not include restatements to reflect a change in accounting principle to comply with a new accounting principle or a voluntary change from one generally accepted accounting principle to another generally accepted accounting principle.

- Identification by the auditor of a material misstatement in financial statements in the current period that was not initially identified by the company's internal control over financial reporting. (This is a strong indicator of a material weakness even if management subsequently corrects the misstatement.)

- Oversight of the company's external financial reporting and internal control over financial reporting by the company's audit committee is ineffective. (Paragraphs 55 through 59 present factors to evaluate when determining whether the audit committee is ineffective.)

- The internal audit function or the risk assessment function is ineffective at a company for which such a function needs to be effective for the company to have an effective monitoring or risk assessment component, such as for very large or highly complex companies.

  Note: The evaluation of the internal audit or risk assessment functions is similar to the evaluation of the audit committee, as described in paragraphs 55 through 59, that is, the evaluation is made within the context of the monitoring and risk assessment components. The auditor is not required to make a separate evaluation of the effectiveness and performance of these functions. Instead, the auditor should base his or her evaluation on evidence obtained as part of evaluating the monitoring and risk assessment components of internal control over financial reporting.

- For complex entities in highly regulated industries, an ineffective regulatory compliance function. This relates solely to those aspects of the ineffective regulatory compliance function in which associated violations of laws and regulations could have a material effect on the reliability of financial reporting.

- Identification of fraud of any magnitude on the part of senior management.

  Note: The auditor is required to plan and perform procedures to obtain reasonable assurance that material misstatement caused by fraud is detected by the auditor. However, for the purposes of evaluating and reporting deficiencies in internal control over financial reporting, the auditor should evaluate fraud of any magnitude (including fraud resulting in immaterial misstatements) on the part of senior management of which he or she is aware. Furthermore, for the purposes of this circumstance, "senior management" includes the principal executive and financial officers signing the company's certifications as required under Section 302 of the Act as well as any other member of management who play a significant role in the company's financial reporting process.

- Significant deficiencies that have been communicated to management and the audit committee remain uncorrected after some reasonable period of time.

- An ineffective control environment.

141. Appendix D provides examples of significant deficiencies and material weaknesses.

Requirement for Written Representations

142. In an audit of internal control over financial reporting, the auditor should obtain written representations from management:

a. Acknowledging management's responsibility for establishing and maintaining effective internal control over financial reporting;

b. Stating that management has performed an assessment of the effectiveness of the company's internal control over financial reporting and specifying the control criteria;

c. Stating that management did not use the auditor's procedures performed during the audits of internal control over financial reporting or the financial statements as part of the basis for management's assessment of the effectiveness of internal control over financial reporting;

d. Stating management's conclusion about the effectiveness of the company's internal control over financial reporting based on the control criteria as of a specified date;

e. Stating that management has disclosed to the auditor all deficiencies in the design or operation of internal control over financial reporting identified as part of management's assessment, including separately disclosing to the auditor all such deficiencies that it believes to be significant deficiencies or material weaknesses in internal control over financial reporting;

f. Describing any material fraud and any other fraud that, although not material, involves senior management or management or other employees who have a significant role in the company's internal control over financial reporting;

g. Stating whether control deficiencies identified and communicated to the audit committee during previous engagements pursuant to paragraph 207 have been resolved, and specifically identifying any that have not; and

h. Stating whether there were, subsequent to the date being reported on, any changes in internal control over financial reporting or other factors that might significantly affect internal control over financial reporting, including any corrective actions taken by management with regard to significant deficiencies and material weaknesses.

143. The failure to obtain written representations from management, including management's refusal to furnish them, constitutes a limitation on the scope of the audit sufficient to preclude an unqualified opinion. As discussed further in paragraph 178, when management limits the scope of the audit, the auditor should either withdraw from the engagement or disclaim an opinion. Further, the auditor should evaluate the effects of management's refusal on his or her ability to rely on other representations, including, if applicable, representations obtained in an audit of the company's financial statements.

144. AU sec. 333, *Management Representations*, explains matters such as who should sign the letter, the period to be covered by the letter, and when to obtain an updating letter.

Relationship of an Audit of Internal Control over Financial Reporting to an Audit of Financial Statements

145. The audit of internal control over financial reporting should be integrated with the audit of the financial statements. The objectives of the procedures for the audits are not identical, however, and the auditor must plan and perform the work to achieve the objectives of both audits.

146. The understanding of internal control over financial reporting the auditor obtains and the procedures the auditor performs for purposes of expressing an opinion on management's assessment are interrelated with the internal control over financial reporting understanding the auditor obtains and procedures the auditor performs to assess control risk for purposes of expressing an opinion on the financial statements. As a result, it is efficient for the auditor to coordinate obtaining the understanding and performing the procedures.

Tests of Controls in an Audit of Internal Control Over Financial Reporting

147. The objective of the tests of controls in an audit of internal control over financial reporting is to obtain evidence about the effectiveness of controls to support the auditor's opinion on whether management's assessment of the effectiveness of the company's internal control over financial reporting is fairly

stated. The auditor's opinion relates to the effectiveness of the company's internal control over financial reporting as of a *point in time* and *taken as a whole*.

148. To express an opinion on internal control over financial reporting effectiveness as of a *point in time*, the auditor should obtain evidence that internal control over financial reporting has operated effectively for a sufficient period of time, which may be less than the entire period (ordinarily one year) covered by the company's financial statements. To express an opinion on internal control over financial reporting effectiveness *taken as a whole*, the auditor must obtain evidence about the effectiveness of controls over all relevant assertions related to all significant accounts and disclosures in the financial statements. This requires that the auditor test the design and operating effectiveness of controls he or she ordinarily would not test if expressing an opinion only on the financial statements.

149. When concluding on the effectiveness of internal control over financial reporting for purposes of expressing an opinion on management's assessment, the auditor should incorporate the results of any additional tests of controls performed to achieve the objective related to expressing an opinion on the financial statements, as discussed in the following section.

Tests of Controls in an Audit of Financial Statements

150. To express an opinion on the financial statements, the auditor ordinarily performs tests of controls and substantive procedures. The objective of the tests of controls the auditor performs for this purpose is to assess control risk. To assess control risk for specific financial statement assertions at less than the maximum, the auditor is required to obtain evidence that the relevant controls operated effectively during the *entire period* upon which the auditor plans to place reliance on those controls. However, the auditor is not required to assess control risk at less than the maximum for *all* relevant assertions and, for a variety of reasons, the auditor may choose not to do so.[18/]

151. When concluding on the effectiveness of controls for the purpose of assessing control risk, the auditor also should evaluate the results of any additional tests of controls performed to achieve the objective related to expressing an opinion on management's assessment, as discussed in paragraphs 147 through 149. Consideration of these results may require the auditor to alter the nature, timing, and extent of substantive procedures and to plan and perform further tests of controls, particularly in response to identified control deficiencies.

[18/] See paragraph 160 for additional documentation requirements when the auditor assesses control risk as other than low.

Effect of Tests of Controls on Substantive Procedures

152. Regardless of the assessed level of control risk or the assessed risk of material misstatement in connection with the audit of the financial statements, the auditor should perform substantive procedures for all relevant assertions related to all significant accounts and disclosures. Performing procedures to express an opinion on internal control over financial reporting does not diminish this requirement.

153. The substantive procedures that the auditor should perform consist of tests of details of transactions and balances and analytical procedures. Before using the results obtained from substantive analytical procedures, the auditor should either test the design and operating effectiveness of controls over financial information used in the substantive analytical procedures or perform other procedures to support the completeness and accuracy of the underlying information. For significant risks of material misstatement, it is unlikely that audit evidence obtained from substantive analytical procedures alone will be sufficient.

154. When designing substantive analytical procedures, the auditor also should evaluate the risk of management override of controls. As part of this process, the auditor should evaluate whether such an override might have allowed adjustments outside of the normal period-end financial reporting process to have been made to the financial statements. Such adjustments might have resulted in artificial changes to the financial statement relationships being analyzed, causing the auditor to draw erroneous conclusions. For this reason, substantive analytical procedures alone are not well suited to detecting fraud.

155. The auditor's substantive procedures must include reconciling the financial statements to the accounting records. The auditor's substantive procedures also should include examining material adjustments made during the course of preparing the financial statements. Also, other auditing standards require auditors to perform specific tests of details in the financial statement audit. For instance, AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*, requires the auditor to perform certain tests of details to further address the risk of management override, whether or not a specific risk of fraud has been identified. Paragraph .34 of AU Sec. 330, *The Confirmation Process*, states that there is a presumption that the auditor will request the confirmation of accounts receivable. Similarly, paragraph .01 of AU Sec. 331, *Inventories*, states that observation of inventories is a generally accepted auditing procedure and that the auditor who issues an opinion without this procedure "has the burden of justifying the opinion expressed."

156. If, during the audit of internal control over financial reporting, the auditor identifies a control deficiency, he or she should determine the effect on the nature, timing, and extent of substantive procedures to be performed to reduce

the risk of material misstatement of the financial statements to an appropriately low level.

Effect of Substantive Procedures on the Auditor's Conclusions About the Operating Effectiveness of Controls

157. In an audit of internal control over financial reporting, the auditor should evaluate the effect of the findings of all substantive auditing procedures performed in the audit of financial statements on the effectiveness of internal control over financial reporting. This evaluation should include, but not be limited to:

- The auditor's risk evaluations in connection with the selection and application of substantive procedures, especially those related to fraud (See paragraph 26);
- Findings with respect to illegal acts and related party transactions;
- Indications of management bias in making accounting estimates and in selecting accounting principles; and
- Misstatements detected by substantive procedures. The extent of such misstatements might alter the auditor's judgment about the effectiveness of controls.

158. However, the absence of misstatements detected by substantive procedures does not provide evidence that controls related to the assertion being tested are effective.

Documentation Requirements

159. In addition to the documentation requirements in AU sec. 339, *Audit Documentation*, the auditor should document:

- The understanding obtained and the evaluation of the design of each of the five components of the company's internal control over financial reporting;
- The process used to determine significant accounts and disclosures and major classes of transactions, including the determination of the locations or business units at which to perform testing;
- The identification of the points at which misstatements related to relevant financial statement assertions could occur within significant accounts and disclosures and major classes of transactions;

- The extent to which the auditor relied upon work performed by others as well as the auditor's assessment of their competence and objectivity;

- The evaluation of any deficiencies noted as a result of the auditor's testing; and

- Other findings that could result in a modification to the auditor's report.

160. For a company that has effective internal control over financial reporting, the auditor ordinarily will be able to perform sufficient testing of controls to be able to assess control risk for all relevant assertions related to significant accounts and disclosures at a low level. If, however, the auditor assesses control risk as other than low for certain assertions or significant accounts, the auditor should document the reasons for that conclusion. Examples of when it is appropriate to assess control risk as other than low include:

- When a control over a relevant assertion related to a significant account or disclosure was superseded late in the year and only the new control was tested for operating effectiveness.

- When a material weakness existed during the period under audit and was corrected by the end of the period.

161. The auditor also should document the effect of a conclusion that control risk is other than low for any relevant assertions related to any significant accounts in connection with the audit of the financial statements on his or her opinion on the audit of internal control over financial reporting.

Reporting on Internal Control Over Financial Reporting

Management's Report

162. Management is required to include in its annual report its assessment of the effectiveness of the company's internal control over financial reporting in addition to its audited financial statements as of the end of the most recent fiscal year. Management's report on internal control over financial reporting is required to include the following:[19/]

[19/] See Item 308(a) of Regulation S-B and S-K, 17 C.F.R. 228.308(a) and 17 C.F.R. 229.308(a), respectively.

- A statement of management's responsibility for establishing and maintaining adequate internal control over financial reporting for the company;

- A statement identifying the framework used by management to conduct the required assessment of the effectiveness of the company's internal control over financial reporting;

- An assessment of the effectiveness of the company's internal control over financial reporting as of the end of the company's most recent fiscal year, including an explicit statement as to whether that internal control over financial reporting is effective; and

- A statement that the registered public accounting firm that audited the financial statements included in the annual report has issued an attestation report on management's assessment of the company's internal control over financial reporting.

163. Management should provide, both in its report on internal control over financial reporting and in its representation letter to the auditor, a written conclusion about the effectiveness of the company's internal control over financial reporting. The conclusion about the effectiveness of a company's internal control over financial reporting can take many forms; however, management is required to state a direct conclusion about whether the company's internal control over financial reporting is effective. This standard, for example, includes the phrase "management's assessment that W Company maintained effective internal control over financial reporting as of [*date*]" to illustrate such a conclusion. Other phrases, such as "management's assessment that W Company's internal control over financial reporting as of [*date*] is sufficient to meet the stated objectives," also might be used. However, the conclusion should not be so subjective (for example, "very effective internal control") that people having competence in and using the same or similar criteria would not ordinarily be able to arrive at similar conclusions.

164. Management is precluded from concluding that the company's internal control over financial reporting is effective if there are one or more material weaknesses.[20/] In addition, management is required to disclose all material weaknesses that exist as of the end of the most recent fiscal year.

165. Management might be able to accurately represent that internal control over financial reporting, as of the end of the company's most recent fiscal year, is effective even if one or more material weaknesses existed during the period. To

---

[20] See Item 308(a)(3) of Regulation S-B and S-K, 17 C.F.R. 228.308(a) and 17 C.F.R. 229.308(a), respectively.

make this representation, management must have changed the internal control over financial reporting to eliminate the material weaknesses sufficiently in advance of the "as of" date and have satisfactorily tested the effectiveness over a period of time that is adequate for it to determine whether, as of the end of the fiscal year, the design and operation of internal control over financial reporting is effective.[21/]

Auditor's Evaluation of Management's Report

166. With respect to management's report on its assessment, the auditor should evaluate the following matters:

a. Whether management has properly stated its responsibility for establishing and maintaining adequate internal control over financial reporting.

b. Whether the framework used by management to conduct the evaluation is suitable. (As discussed in paragraph 14, the framework described in COSO constitutes a suitable and available framework.)

c. Whether management's assessment of the effectiveness of internal control over financial reporting, as of the end of the company's most recent fiscal year, is free of material misstatement.

d. Whether management has expressed its assessment in an acceptable form.

- Management is required to state whether the company's internal control over financial reporting is effective.
- A negative assurance statement indicating that, "Nothing has come to management's attention to suggest that the company's internal control over financial reporting is not effective," is not acceptable.
- Management is not permitted to conclude that the company's internal control over financial reporting is effective if there

---

[21] However, when the reason for a change in internal control over financial reporting is the correction of a material weakness, management and the auditor should evaluate whether the reason for the change and the circumstances surrounding the change are material information necessary to make the disclosure about the change not misleading in a filing subject to certification under Securities Exchange Act Rule 13a-14(a) or 15d-14(a), 17 C.F.R. 240.13a-14(a) or 17 C.F.R. 240.15d-14(a). See discussion beginning at paragraph 200 for further direction.

are one or more material weaknesses in the company's internal control over financial reporting.

e. Whether material weaknesses identified in the company's internal control over financial reporting, if any, have been properly disclosed, including material weaknesses corrected during the period.[22/]

Auditor's Report on Management's Assessment of Internal Control Over Financial Reporting

167. The auditor's report on management's assessment of the effectiveness of internal control over financial reporting must include the following elements:

a. A title that includes the word *independent*;

b. An identification of management's conclusion about the effectiveness of the company's internal control over financial reporting as of a specified date based on the control criteria [for example, criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)];

c. An identification of the title of the management report that includes management's assessment (the auditor should use the same description of the company's internal control over financial reporting as management uses in its report);

d. A statement that the assessment is the responsibility of management;

e. A statement that the auditor's responsibility is to express an opinion on the assessment and an opinion on the company's internal control over financial reporting based on his or her audit;

f. A definition of internal control over financial reporting as stated in paragraph 7;

[22/] See paragraph 206 for direction when a material weakness was corrected during the fourth quarter and the auditor believes that modification to the disclosures about changes in internal control over financial reporting are necessary for the annual certifications to be accurate and to comply with the requirements of Section 302 of the Act.

g. A statement that the audit was conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States);

h. A statement that the standards of the Public Company Accounting Oversight Board require that the auditor plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects;

i. A statement that an audit includes obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as the auditor considered necessary in the circumstances;

j. A statement that the auditor believes the audit provides a reasonable basis for his or her opinions;

k. A paragraph stating that, because of inherent limitations, internal control over financial reporting may not prevent or detect misstatements and that projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate;

l. The auditor's opinion on whether management's assessment of the effectiveness of the company's internal control over financial reporting as of the specified date is fairly stated, in all material respects, based on the control criteria (See discussion beginning at paragraph 162);

m. The auditor's opinion on whether the company maintained, in all material respects, effective internal control over financial reporting as of the specified date, based on the control criteria;

n. The manual or printed signature of the auditor's firm;

o. The city and state (or city and country, in the case of non-U.S. auditors) from which the auditor's report has been issued; and

p. The date of the audit report.

168. Example A-1 in Appendix A is an illustrative auditor's report for an unqualified opinion on management's assessment of the effectiveness of the company's internal control over financial reporting and an unqualified opinion on the effectiveness of the company's internal control over financial reporting.

169. *Separate or Combined Reports*. The auditor may choose to issue a combined report (that is, one report containing both an opinion on the financial statements and the opinions on internal control over financial reporting) or separate reports on the company's financial statements and on internal control over financial reporting. Example A-7 in Appendix A is an illustrative combined audit report on internal control over financial reporting. Appendix A also includes examples of separate reports on internal control over financial reporting.

170. If the auditor chooses to issue a separate report on internal control over financial reporting, he or she should add the following paragraph to the auditor's report on the financial statements:

> We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of W Company's internal control over financial reporting as of December 31, 20X3, based on [*identify control criteria*] and our report dated [*date of report, which should be the same as the date of the report on the financial statements*] expressed [*include nature of opinions*].

and add the following paragraph to the report on internal control over financial reporting:

> We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [*identify financial statements*] of W Company and our report dated [*date of report, which should be the same as the date of the report on the effectiveness of internal control over financial reporting*] expressed [*include nature of opinion*].

171. *Report Date*. As stated previously, the auditor cannot audit internal control over financial reporting without also auditing the financial statements. Therefore, the reports should be dated the same.

172. When the auditor elects to issue a combined report on the audit of the financial statements and the audit of internal control over financial reporting, the audit opinion will address multiple reporting periods for the financial statements presented but only the end of the most recent fiscal year for the effectiveness of internal control over financial reporting and management's assessment of the effectiveness of internal control over financial reporting. See a combined report in Example A-7 in Appendix A.

173. *Report Modifications*. The auditor should modify the standard report if any of the following conditions exist.

a. Management's assessment is inadequate or management's report is inappropriate. (See paragraph 174.)

b. There is a material weakness in the company's internal control over financial reporting. (See paragraphs 175 through 177.)

c. There is a restriction on the scope of the engagement. (See paragraphs 178 through 181.)

d. The auditor decides to refer to the report of other auditors as the basis, in part, for the auditor's own report. (See paragraphs 182 through 185.)

e. A significant subsequent event has occurred since the date being reported on. (See paragraphs 186 through 189.)

f. There is other information contained in management's report on internal control over financial reporting. (See paragraphs 190 through 192.)

174. *Management's Assessment Inadequate or Report Inappropriate*. If the auditor determines that management's process for assessing internal control over financial reporting is inadequate, the auditor should modify his or her opinion for a scope limitation (discussed further beginning at paragraph 178). If the auditor determines that management's report is inappropriate, the auditor should modify his or her report to include, at a minimum, an explanatory paragraph describing the reasons for this conclusion.

175. *Material Weaknesses*. Paragraphs 130 through 141 describe significant deficiencies and material weaknesses. If there are significant deficiencies that, individually or in combination, result in one or more material weaknesses, management is precluded from concluding that internal control over financial reporting is effective. In these circumstances, the auditor must express an adverse opinion on the company's internal control over financial reporting.

176. When expressing an adverse opinion on the effectiveness of internal control over financial reporting because of a material weakness, the auditor's report must include:

- The definition of a material weakness, as provided in paragraph 10.

- A statement that a material weakness has been identified and included in management's assessment. (If the material weakness has not been included in management's assessment, this sentence should be modified to state that the material weakness has been identified but not included in management's assessment. In this case, the auditor also is required to communicate in writing to the audit committee that the material weakness was not disclosed or identified as a material weakness in management's report.)

- A description of any material weaknesses identified in a company's internal control over financial reporting. This description should provide the users of the audit report with specific information about the nature of any material weakness, and its actual and potential effect on the presentation of the company's financial statements issued during the existence of the weakness. This description also should address requirements described in paragraph 194.

177. Depending on the circumstances, the auditor may express both an unqualified opinion and an other-than-unqualified opinion within the same report on internal control over financial reporting. For example, if management makes an adverse assessment because a material weakness has been identified and not corrected ("…internal control over financial reporting is not effective…"), the auditor would express an unqualified opinion on management's assessment ("…management's assessment that internal control over financial reporting is not effective is fairly stated, in all material respects…"). At the same time, the auditor would express an adverse opinion about the effectiveness of internal control over financial reporting ("In our opinion, because of the effect of the material weakness described…, the company's internal control over financial reporting is not effective."). Example A-2 in Appendix A illustrates the form of the report that is appropriate in this situation. Example A-6 in Appendix A illustrates a report that reflects disagreement between management and the auditor that a material weakness exists.

178. *Scope Limitations*. The auditor can express an unqualified opinion on management's assessment of internal control over financial reporting and an unqualified opinion on the effectiveness of internal control over financial reporting only if the auditor has been able to apply all the procedures necessary in the circumstances. If there are restrictions on the scope of the engagement imposed by the circumstances, the auditor should withdraw from the engagement, disclaim an opinion, or express a qualified opinion. The auditor's decision depends on his or her assessment of the importance of the omitted procedure(s) to his or her ability to form an opinion on management's assessment of internal control over financial reporting and an opinion on the effectiveness of the company's internal control over financial reporting. However, when the restrictions are imposed by management, the auditor should withdraw from the engagement or disclaim an opinion on management's assessment of internal control over financial reporting and the effectiveness of internal control over financial reporting.

179. For example, management might have identified a material weakness in its internal control over financial reporting prior to the date specified in its report and implemented controls to correct it. If management believes that the new controls have been operating for a sufficient period of time to determine that they are both effectively designed and operating, management would be able to include in its assessment its conclusion that internal control over financial reporting is effective as of the date specified. However, if the auditor disagrees with the sufficiency of the time period, he or she would be unable to obtain sufficient evidence that the new controls have been operating effectively for a sufficient period. In that case, the auditor should modify the opinion on the effectiveness of internal control over financial reporting and the opinion on management's assessment of internal control over financial reporting because of a scope limitation.

180. When the auditor plans to disclaim an opinion and the limited procedures performed by the auditor caused the auditor to conclude that a material weakness exists, the auditor's report should include:

- The definition of a material weakness, as provided in paragraph 10.

- A description of any material weaknesses identified in the company's internal control over financial reporting. This description should provide the users of the audit report with specific information about the nature of any material weakness, and its actual and potential effect on the presentation of the company's financial statements issued during the existence of the weakness. This description also should address the requirements in paragraph 194.

181. Example A-3 in Appendix A illustrates the form of report when there is a limitation on the scope of the audit causing the auditor to issue qualified opinions. Example A-4 illustrates the form of report when restrictions on the scope of the audit cause the auditor to disclaim opinions.

182. *Opinions Based, in Part, on the Report of Another Auditor*. When another auditor has audited the financial statements and internal control over financial reporting of one or more subsidiaries, divisions, branches, or components of the company, the auditor should determine whether he or she may serve as the principal auditor and use the work and reports of another auditor as a basis, in part, for his or her opinions. AU sec. 543, *Part of Audit Performed by Other Independent Auditors*, provides direction on the auditor's decision of whether to serve as the principal auditor of the financial statements. If the auditor decides it is appropriate to serve as the principal auditor of the financial statements, then that auditor also should be the principal auditor of the company's internal control over financial reporting. This relationship results from the requirement that an audit of the financial statements must be performed to audit internal control over

financial reporting; only the principal auditor of the financial statements can be the principal auditor of internal control over financial reporting. In this circumstance, the principal auditor of the financial statements needs to participate sufficiently in the audit of internal control over financial reporting to provide a basis for serving as the principal auditor of internal control over financial reporting.

183. When serving as the principal auditor of internal control over financial reporting, the auditor should decide whether to make reference in the report on internal control over financial reporting to the audit of internal control over financial reporting performed by the other auditor. In these circumstances, the auditor's decision is based on factors similar to those of the independent auditor who uses the work and reports of other independent auditors when reporting on a company's financial statements as described in AU sec. 543.

184. The decision about whether to make reference to another auditor in the report on the audit of internal control over financial reporting might differ from the corresponding decision as it relates to the audit of the financial statements. For example, the audit report on the financial statements may make reference to the audit of a significant equity investment performed by another independent auditor, but the report on internal control over financial reporting might not make a similar reference because management's evaluation of internal control over financial reporting ordinarily would not extend to controls at the equity method investee.[23/]

185. When the auditor decides to make reference to the report of the other auditor as a basis, in part, for his or her opinions, the auditor should refer to the report of the other auditor when describing the scope of the audit and when expressing the opinions.

186. *Subsequent Events*. Changes in internal control over financial reporting or other factors that might significantly affect internal control over financial reporting might occur subsequent to the date as of which internal control over financial reporting is being audited but before the date of the auditor's report. The auditor should inquire of management whether there were any such changes or factors. As described in paragraph 142, the auditor should obtain written representations from management relating to such matters. Additionally, to obtain information about whether changes have occurred that might affect the effectiveness of the company's internal control over financial reporting and, therefore, the auditor's report, the auditor should inquire about and examine, for this subsequent period, the following:

[23/] See Appendix B, paragraph B15, for further discussion of the evaluation of the controls over financial reporting for an equity method investment.

- Relevant internal audit reports (or similar functions, such as loan review in a financial institution) issued during the subsequent period;

- Independent auditor reports (if other than the auditor's) of significant deficiencies or material weaknesses;

- Regulatory agency reports on the company's internal control over financial reporting; and

- Information about the effectiveness of the company's internal control over financial reporting obtained through other engagements.

187. The auditor could inquire about and examine other documents for the subsequent period. Paragraphs .01 through .09 of AU sec. 560, *Subsequent Events*, provides direction on subsequent events for a financial statement audit that also may be helpful to the auditor performing an audit of internal control over financial reporting.

188. If the auditor obtains knowledge about subsequent events that materially and adversely affect the effectiveness of the company's internal control over financial reporting as of the date specified in the assessment, the auditor should issue an adverse opinion on the effectiveness of internal control over financial reporting (and issue an adverse opinion on management's assessment of internal control over financial reporting if management's report does not appropriately assess the affect of the subsequent event). If the auditor is unable to determine the effect of the subsequent event on the effectiveness of the company's internal control over financial reporting, the auditor should disclaim opinions. As described in paragraph 190, the auditor should disclaim an opinion on management's disclosures about corrective actions taken by the company after the date of management's assessment, if any.

189. The auditor may obtain knowledge about subsequent events with respect to conditions that did not exist at the date specified in the assessment but arose subsequent to that date. If a subsequent event of this type has a material effect on the company, the auditor should include in his or her report an explanatory paragraph describing the event and its effects or directing the reader's attention to the event and its effects as disclosed in management's report. Management's consideration of such events to be disclosed in its report should be limited to a change that has materially affected, or is reasonably likely to materially affect, the company's internal control over financial reporting.

190. *Management's Report Containing Additional Information*. Management's report on internal control over financial reporting may contain information in

addition to management's assessment of the effectiveness of its internal control over financial reporting. Such information might include, for example:

- Disclosures about corrective actions taken by the company after the date of management's assessment;
- The company's plans to implement new controls; and
- A statement that management believes the cost of correcting a material weakness would exceed the benefits to be derived from implementing new controls.

191. If management's assessment includes such additional information, the auditor should disclaim an opinion on the information. For example, the auditor should use the following language as the last paragraph of the report to disclaim an opinion on management's cost-benefit statement:

> We do not express an opinion or any other form of assurance on management's statement referring to the costs and related benefits of implementing new controls.

192. If the auditor believes that management's additional information contains a material misstatement of fact, he or she should discuss the matter with management. If the auditor concludes that there is a valid basis for concern, he or she should propose that management consult with some other party whose advice might be useful, such as the company's legal counsel. If, after discussing the matter with management and those management has consulted, the auditor concludes that a material misstatement of fact remains, the auditor should notify management and the audit committee, in writing, of the auditor's views concerning the information. The auditor also should consider consulting the auditor's legal counsel about further actions to be taken, including the auditor's responsibility under Section 10A of the Securities Exchange Act of 1934.[24/]

> Note: If management makes the types of disclosures described in paragraph 190 outside its report on internal control over financial reporting and includes them elsewhere within its annual report on the company's financial statements, the auditor would not need to disclaim an opinion, as described in paragraph 191. However, in that situation, the auditor's responsibilities are the same as those described in paragraph 192 if the auditor believes that the additional information contains a material misstatement of fact.

193. *Effect of Auditor's Adverse Opinion on Internal Control Over Financial Reporting on the Opinion on Financial Statements*. In some cases, the auditor's

---

[24/] See Section 10A of the Securities Exchange Act of 1934, 15 U.S.C. 78j-1.

report on internal control over financial reporting might describe a material weakness that resulted in an adverse opinion on the effectiveness of internal control over financial reporting while the audit report on the financial statements remains unqualified. Consequently, during the audit of the financial statements, the auditor did not rely on that control. However, he or she performed additional substantive procedures to determine whether there was a material misstatement in the account related to the control. If, as a result of these procedures, the auditor determines that there was not a material misstatement in the account, he or she would be able to express an unqualified opinion on the financial statements.

194. When the auditor's opinion on the financial statements is unaffected by the adverse opinion on the effectiveness of internal control over financial reporting, the report on internal control over financial reporting (or the combined report, if a combined report is issued) should include the following or similar language in the paragraph that describes the material weakness:

> This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 20X3 financial statements, and this report does not affect our report dated [*date of report*] on those financial statements. [*Revise this wording appropriately for use in a combined report*.]

195. Such disclosure is important to ensure that users of the auditor's report on the financial statements understand why the auditor issued an unqualified opinion on those statements.

196. Disclosure is also important when the auditor's opinion on the financial statements is affected by the adverse opinion on the effectiveness of internal control over financial reporting. In that circumstance, the report on internal control over financial reporting (or the combined report, if a combined report is issued) should include the following or similar language in the paragraph that describes the material weakness:

> This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 20X3 financial statements.

197. *Subsequent Discovery of Information Existing at the Date of the Auditor's Report on Internal Control Over Financial Reporting*. After the issuance of the report on internal control over financial reporting, the auditor may become aware of conditions that existed at the report date that might have affected the auditor's opinions had he or she been aware of them. The auditor's evaluation of such subsequent information is similar to the auditor's evaluation of information discovered subsequent to the date of the report on an audit of financial statements, as described in AU sec. 561, *Subsequent Discovery of Facts*

Existing at the Date of the Auditor's Report. That standard requires the auditor to determine whether the information is reliable and whether the facts existed at the date of his or her report. If so, the auditor should determine (1) whether the facts would have changed the report if he or she had been aware of them and (2) whether there are persons currently relying on or likely to rely on the auditor's report. For instance, if previously issued financial statements and the auditor's report have been recalled and reissued to reflect the correction of a misstatement, the auditor should presume that his or her report on the company's internal control over financial reporting as of same specified date also should be recalled and reissued to reflect the material weakness that existed at that date. Based on these considerations, paragraph .06 of AU sec. 561 provides detailed requirements for the auditor.

198. *Filings Under Federal Securities Statutes*. AU sec. 711, *Filings Under Federal Securities Statutes*, describes the auditor's responsibilities when an auditor's report is included in registration statements, proxy statements, or periodic reports filed under the federal securities statutes. The auditor should also apply AU sec. 711 with respect to the auditor's report on management's assessment of the effectiveness of internal control over financial reporting included in such filings. In addition, the direction in paragraph .10 of AU sec. 711 to inquire of and obtain written representations from officers and other executives responsible for financial and accounting matters about whether any events have occurred that have a material effect on the audited financial statements should be extended to matters that could have a material effect on management's assessment of internal control over financial reporting.

199. When the auditor has fulfilled these responsibilities and intends to consent to the inclusion of his or her report on management's assessment of the effectiveness of internal control over financial reporting in the securities filing, the auditor's consent should clearly indicate that both the audit report on financial statements and the audit report on management's assessment of the effectiveness of internal control over financial reporting (or both opinions if a combined report is issued) are included in his or her consent.

Auditor's Responsibilities for Evaluating Management's Certification Disclosures About Internal Control Over Financial Reporting

Required Management Certifications

200. Section 302 of the Act, and Securities Exchange Act Rule 13a-14(a) or 15d-14(a), whichever applies,[25/] requires a company's management, with the participation of the principal executive and financial officers (the certifying

---

[25/] See 17 C.F.R., 240.13a-14a or 15d-14a, whichever applies.

officers), to make the following quarterly and annual certifications with respect to the company's internal control over financial reporting:

- A statement that the certifying officers are responsible for establishing and maintaining internal control over financial reporting;

- A statement that the certifying officers have designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under their supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles; and

- A statement that the report discloses any changes in the company's internal control over financial reporting that occurred during the most recent fiscal quarter (the company's fourth fiscal quarter in the case of an annual report) that have materially affected, or are reasonably likely to materially affect, the company's internal control over financial reporting.

201. When the reason for a change in internal control over financial reporting is the correction of a material weakness, management has a responsibility to determine and the auditor should evaluate whether the reason for the change and the circumstances surrounding that change are material information necessary to make the disclosure about the change not misleading.[26/]

Auditor Evaluation Responsibilities

202. The auditor's responsibility as it relates to management's quarterly certifications on internal control over financial reporting is different from the auditor's responsibility as it relates to management's annual assessment of internal control over financial reporting. The auditor should perform limited procedures quarterly to provide a basis for determining whether he or she has become aware of any material modifications that, in the auditor's judgment, should be made to the disclosures about changes in internal control over financial reporting in order for the certifications to be accurate and to comply with the requirements of Section 302 of the Act.

203. To fulfill this responsibility, the auditor should perform, on a quarterly basis, the following procedures:

26/ See Securities Exchange Act Rule 12b-20, 17 C.F.R. 240.12b-20.

- Inquire of management about significant changes in the design or operation of internal control over financial reporting as it relates to the preparation of annual as well as interim financial information that could have occurred subsequent to the preceding annual audit or prior review of interim financial information;

- Evaluate the implications of misstatements identified by the auditor as part of the auditor's required review of interim financial information (See AU sec. 722, *Interim Financial Information*) as it relates to effective internal control over financial reporting; and

- Determine, through a combination of observation and inquiry, whether any change in internal control over financial reporting has materially affected, or is reasonably likely to materially affect, the company's internal control over financial reporting.

Note: Foreign private issuers filing Forms 20-F and 40-F are not subject to quarterly reporting requirements, therefore, the auditor's responsibilities would extend only to the certifications in the annual report of these companies.

204. When matters come to auditor's attention that lead him or her to believe that modification to the disclosures about changes in internal control over financial reporting is necessary for the certifications to be accurate and to comply with the requirements of Section 302 of the Act and Securities Exchange Act Rule 13a-14(a) or 15d-14(a), whichever applies,[27/] the auditor should communicate the matter(s) to the appropriate level of management as soon as practicable.

205. If, in the auditor's judgment, management does not respond appropriately to the auditor's communication within a reasonable period of time, the auditor should inform the audit committee. If, in the auditor's judgment, the audit committee does not respond appropriately to the auditor's communication within a reasonable period of time, the auditor should evaluate whether to resign from the engagement. The auditor should evaluate whether to consult with his or her attorney when making these evaluations. In these circumstances, the auditor also has responsibilities under AU sec. 317, *Illegal Acts by Clients*, and Section 10A of the Securities Exchange Act of 1934.[28/] The auditor's responsibilities for evaluating the disclosures about changes in internal control over financial reporting do not diminish in any way management's responsibility for ensuring

---

[27/] See 17 C.F.R. 240.13a-14(a) or 17 C.F.R. 240.15d-14(a), whichever applies.

[28/] See 15 U.S.C. 78j-1.

that its certifications comply with the requirements of Section 302 of the Act and Securities Exchange Act Rule 13a-14(a) or 15d-14(a), whichever applies.[29/]

206. If matters come to the auditor's attention as a result of the audit of internal control over financial reporting that lead him or her to believe that modifications to the disclosures about changes in internal control over financial reporting (addressing changes in internal control over financial reporting occurring during the fourth quarter) are necessary for the annual certifications to be accurate and to comply with the requirements of Section 302 of the Act and Securities Exchange Act Rule 13a-14(a) or 15d-14(a), whichever applies,[30/] the auditor should follow the same communication responsibilities as described in paragraphs 204 and 205. However, if management and the audit committee do not respond appropriately, in addition to the responsibilities described in the preceding two paragraphs, the auditor should modify his or her report on the audit of internal control over financial reporting to include an explanatory paragraph describing the reasons the auditor believes management's disclosures should be modified.

Required Communications in An Audit of Internal Control Over Financial Reporting

207. The auditor must communicate in writing to management and the audit committee all significant deficiencies and material weaknesses identified during the audit. The written communication should be made prior to the issuance of the auditor's report on internal control over financial reporting. The auditor's communication should distinguish clearly between those matters considered to be significant deficiencies and those considered to be material weaknesses, as defined in paragraphs 9 and 10, respectively.

208. If a significant deficiency or material weakness exists because the oversight of the company's external financial reporting and internal control over financial reporting by the company's audit committee is ineffective, the auditor must communicate that specific significant deficiency or material weakness in writing to the board of directors.

209. In addition, the auditor should communicate to management, in writing, all deficiencies in internal control over financial reporting (that is, those deficiencies in internal control over financial reporting that are of a lesser magnitude than significant deficiencies) identified during the audit and inform the audit committee when such a communication has been made. When making this communication,

---

[29/] See 17 C.F.R. 240.13a-14(a) or 17 C.F.R. 240.15d-14(a), whichever applies.

[30/] See 17 C.F.R. 240.13a-14(a) or 17 C.F.R. 240.15d-14(a), whichever applies.

it is not necessary for the auditor to repeat information about such deficiencies that have been included in previously issued written communications, whether those communications were made by the auditor, internal auditors, or others within the organization. Furthermore, the auditor is not required to perform procedures sufficient to identify all control deficiencies; rather, the auditor should communicate deficiencies in internal control over financial reporting of which he or she is aware.

> Note: As part of his or her evaluation of the effectiveness of internal control over financial reporting, the auditor should determine whether control deficiencies identified by internal auditors and others within the company, for example, through ongoing monitoring activities and the annual assessment of internal control over financial reporting, are reported to appropriate levels of management in a timely manner. The lack of an internal process to report deficiencies in internal control to management on a timely basis represents a control deficiency that the auditor should evaluate as to severity.

210. These written communications should state that the communication is intended solely for the information and use of the board of directors, audit committee, management, and others within the organization. When there are requirements established by governmental authorities to furnish such reports, specific reference to such regulatory agencies may be made.

211. These written communications also should include the definitions of control deficiencies, significant deficiencies, and material weaknesses and should clearly distinguish to which category the deficiencies being communicated relate.

212. Because of the potential for misinterpretation of the limited degree of assurance associated with the auditor issuing a written report representing that no significant deficiencies were noted during an audit of internal control over financial reporting, the auditor should not issue such representations.

213. When auditing internal control over financial reporting, the auditor may become aware of fraud or possible illegal acts. If the matter involves fraud, it must be brought to the attention of the appropriate level of management. If the fraud involves senior management, the auditor must communicate the matter directly to the audit committee as described in AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*. If the matter involves possible illegal acts, the auditor must assure himself or herself that the audit committee is adequately informed, unless the matter is clearly inconsequential, in accordance with AU sec. 317, *Illegal Acts by Clients*. The auditor also must determine his or her responsibilities under Section 10A of the Securities Exchange Act of 1934.[31/]

[31/] See 15 U.S.C. 78j-1.

214. When timely communication is important, the auditor should communicate the preceding matters during the course of the audit rather than at the end of the engagement. The decision about whether to issue an interim communication should be determined based on the relative significance of the matters noted and the urgency of corrective follow-up action required.

Effective Date

215. Companies considered *accelerated filers* under Securities Exchange Act Rule 12b-2[32/] are required to comply with the internal control reporting and disclosure requirements of Section 404 of the Act *for fiscal years ending on or after November 15, 2004*. (Other companies have until fiscal years ending on or after July 15, 2005, to comply with these internal control reporting and disclosure requirements.) Accordingly, independent auditors engaged to audit the financial statements of accelerated filers for fiscal years ending on or after November 15, 2004, also are required to audit and report on the company's internal control over financial reporting as of the end of such fiscal year. This standard is required to be complied with for such engagements, except as it relates to the auditor's responsibilities for evaluating management's certification disclosures about internal control over financial reporting. The auditor's responsibilities for evaluating management's certification disclosures about internal control over financial reporting described in paragraphs 202 through 206 take effect beginning with the first quarter after the auditor's first audit report on the company's internal control over financial reporting.

216. Early compliance with this standard is permitted.

<u>APPENDIX A</u>

Illustrative Reports on Internal Control Over Financial Reporting

A1. Paragraphs 167 through 199 of this standard provide direction on the auditor's report on management's assessment of internal control over financial reporting. The following examples illustrate how to apply that direction in several different situations.

[32/] See 17 C.F.R. 240.12b-2.

ILLUSTRATIVE REPORT
PAGE

Example A-1

ILLUSTRATIVE REPORT EXPRESSING AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND AN UNQUALIFIED OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING (SEPARATE REPORT)[33/]

Report of Independent Registered Public Accounting Firm

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit.

[*Scope paragraph*]

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and

---

[33/] If the auditor issues separate reports on the audit of internal control over financial reporting and the audit of the financial statements, both reports should include a statement that the audit was conducted in accordance with standards of the Public Company Accounting Oversight Board (United States).

the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Also in our opinion, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria,* f*or example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[*Explanatory paragraph*]

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [*identify financial statements*] of W Company and our report dated [*date of report, which should be the same as the date of the report on the effectiveness of internal control over financial reporting*] expressed [*include nature of opinion*].

[*Signature*]

[*City and State or Country*]

[*Date*]

Example A-2

ILLUSTRATIVE REPORT EXPRESSING AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND AN ADVERSE OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF THE EXISTENCE OF A MATERIAL WEAKNESS

<u>Report of Independent Registered Public Accounting Firm</u>

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company did not maintain effective internal control over financial reporting as of December 31, 20X3, because of the effect of [*material weakness identified in management's assessment*], based on [*Identify criteria,* f*or example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit.

[*Scope paragraph*]

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Explanatory paragraph*]

A material weakness is a control deficiency, or combination of control deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. The following material weakness has been identified and included in management's assessment. [*Include a description of the material weakness and its effect on the achievement of the objectives of the control criteria.*] This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 20X3 financial statements, and this report does not affect our report dated [*date of report, which should be the same as the date of this report on internal control*] on those financial statements.[34/]

[*Opinion paragraph*]

In our opinion, management's assessment that W Company did not maintain effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Also, in our opinion, because of the effect of the material weakness described above on the achievement of the objectives of the control criteria, W Company has not maintained effective internal control over financial reporting as

---

[34/] Modify this sentence when the auditor's opinion on the financial statements is affected by the adverse opinion on the effectiveness of internal control over financial reporting, as described in paragraph 196.

of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[*Signature*]

[*City and State or Country*]

[*Date*]

Example A-3

ILLUSTRATIVE REPORT EXPRESSING A QUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND A QUALIFIED OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF A LIMITATION ON THE SCOPE OF THE AUDIT

Report of Independent Registered Public Accounting Firm

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria,* f*or example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit.

[*Scope paragraph*]

Except as described below, we conducted our audit in accordance the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Explanatory paragraph that describes scope limitation*]

A material weakness is a control deficiency, or combination of control deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. The following material weakness has been identified and included in management's assessment.[35/] Prior to December 20, 20X3, W Company had an inadequate system for recording cash receipts, which could have prevented the Company from recording cash receipts on accounts receivable completely and properly. Therefore, cash received could have been diverted for unauthorized use, lost, or otherwise not properly recorded to accounts receivable. We believe this condition was a material weakness in the design or operation of the internal control of W Company in effect prior to December 20, 20X3. Although the Company implemented a new cash receipts system on December 20, 20X3, the system has not been in operation for a sufficient period of time to enable us to obtain sufficient evidence about its operating effectiveness.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[35/] If the auditor has identified a material weakness that is not included in management's assessment, add the following wording to the report: "In addition, we have identified the following material weakness that has not been identified as a material weakness in management's assessment."

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, except for the effect of matters we might have discovered had we been able to examine evidence about the effectiveness of the new cash receipts system, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Also, in our opinion, except for the effect of matters we might have discovered had we been able to examine evidence about the effectiveness of the new cash receipts system, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[*Explanatory paragraph*]

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [*identify financial statements*] of W Company and our report dated [*date of report, which should be the same as the date of the report on the effectiveness of internal control over financial reporting*] expressed [*include nature of opinion*].

ILLUSTRATIVE REPORT DISCLAIMING AN OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND DISCLAIMING AN OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF A LIMITATION ON THE SCOPE OF THE AUDIT

Report of Independent Registered Public Accounting Firm

[*Introductory paragraph*]

We were engaged to audit management's assessment included in the accompanying [*title of management's report*] that W Company maintained effective internal control over financial reporting as of December 31, 20X3 based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting.

[*Omit scope paragraph*]

[*Explanatory paragraph that describes scope limitation*][36/]

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become

---

36/ If, through the limited procedures performed, the auditor concludes that a material weakness exists, the auditor should add the definition of material weakness (as provided in paragraph 10) to the explanatory paragraph. In addition, the auditor should include a description of the material weakness and its effect on the achievement of the objectives of the control criteria.

inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

Since management [*describe scope restrictions*] and we were unable to apply other procedures to satisfy ourselves as to the effectiveness of the company's internal control over financial reporting, the scope of our work was not sufficient to enable us to express, and we do not express, an opinion either on management's assessment or on the effectiveness of the company's internal control over financial reporting.

[*Explanatory paragraph*]

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [*identify financial statements*] of W Company and our report dated [*date of report, which should be the same as the date of the report on the effectiveness of internal control over financial reporting*] expressed [*include nature of opinion*].

Example A-5

ILLUSTRATIVE REPORT EXPRESSING AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING THAT REFERS TO THE REPORT OF OTHER AUDITORS AS A BASIS, IN PART, FOR THE AUDITOR'S OPINION AND AN UNQUALIFIED OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING

<u>Report of Independent Registered Public Accounting Firm</u>

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit. We did not examine the effectiveness of internal control over financial reporting of B Company, a wholly owned subsidiary, whose financial statements reflect total assets and revenues constituting 20 and 30 percent, respectively, of the related consolidated financial statement amounts as of and for the year ended December 31, 20X3. The effectiveness of B Company's internal control over financial reporting was audited by other auditors whose report has been furnished to us, and our opinion, insofar as it relates to the effectiveness of B Company's internal control over financial reporting, is based solely on the report of the other auditors.

[*Scope paragraph*]

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit and the report of the other auditors provide a reasonable basis for our opinion.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, based on our audit and the report of the other auditors, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Also, in our opinion, based on our audit and the report of the other auditors, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[*Explanatory paragraph*]

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [*identify financial statements*] of W Company and our report dated [*date of report, which should be the same as the date of the report on the effectiveness of internal control over financial reporting*] expressed [*include nature of opinion*].

Example A-6

ILLUSTRATIVE REPORT EXPRESSING AN ADVERSE OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND AN ADVERSE OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF THE EXISTENCE OF A MATERIAL WEAKNESS

<u>Report of Independent Registered Public Accounting Firm</u>

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria,* fo*r example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment and an opinion on the effectiveness of the company's internal control over financial reporting based on our audit.

[*Scope paragraph*]

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Explanatory paragraph*]

A material weakness is a control deficiency, or combination of control deficiencies, that results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected. We have identified the following material weakness that has not been identified as a material weakness in management's assessment [*Include a description of the material weakness and its effect on the achievement of the objectives of the control criteria.*] This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 20X3 financial statements, and this report does not affect our report dated [*date of report, which should be the same as the date of this report on internal control*] on those financial statements.[37/]

[*Opinion paragraph*]

In our opinion, because of the effect of the material weakness described above on the achievement of the objectives of the control criteria, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is not fairly stated, in all material respects, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Also, in our opinion, because of the effect of the material weakness described above on the achievement of the objectives of the control criteria, W Company has not maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

Example A-7

ILLUSTRATIVE COMBINED REPORT EXPRESSING AN UNQUALIFIED OPINION ON FINANCIAL STATEMENTS, AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING AND AN UNQUALIFIED OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING

<u>Report of Independent Registered Public Accounting Firm</u>

[*Introductory paragraph*]

We have audited the accompanying balance sheets of W Company as of December 31, 20X3 and 20X2, and the related statements of income, stockholders' equity and comprehensive income, and cash flows for each of the years in the three-year period ended December 31, 20X3. We also have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on these financial statements, an opinion on management's assessment, and an opinion on the effectiveness of the company's internal control over financial reporting based on our audits.

[*Scope paragraph*]

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audit of financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, evaluating management's assessment, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of W Company as of December 31, 20X3 and 20X2, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 20X3 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify control criteria,* f*or example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. Furthermore, in our opinion, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify control criteria,* f*or example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

APPENDIX B

Additional Performance Requirements and Directions; Extent-of-Testing Examples

Tests to be Performed When a Company Has Multiple Locations or Business Units

B1. To determine the locations or business units for performing audit procedures, the auditor should evaluate their relative financial significance and the risk of material misstatement arising from them. In making this evaluation, the auditor should identify the locations or business units that are individually important, evaluate their documentation of controls, and test controls over significant accounts and disclosures. For locations or business units that contain specific risks that, by themselves, could create a material misstatement, the auditor should evaluate their documentation of controls and test controls over the specific risks.

B2. The auditor should determine the other locations or business units that, when aggregated, represent a group with a level of financial significance that could create a material misstatement in the financial statements. For that group, the auditor should determine whether there are company-level controls in place. If so, the auditor should evaluate the documentation and test such company-level controls. If not, the auditor should perform tests of controls at some of the locations or business units.

B3. No further work is necessary on the remaining locations or businesses, provided that they are not able to create, either individually or in the aggregate, a material misstatement in the financial statements.

Locations or Business Units That Are Financially Significant

B4. Because of the importance of financially significant locations or business units, the auditor should evaluate management's documentation of and perform tests of controls over all relevant assertions related to significant accounts and disclosures at each financially significant location or business unit, as discussed in paragraphs 83 through 105. Generally, a relatively small number of locations or business units will encompass a large portion of a company's operations and financial position, making them financially significant.

B5. In determining the nature, timing, and extent of testing at the individual locations or business units, the auditor should evaluate each entity's involvement, if any, with a central processing or shared service environment.

Locations or Business Units That Involve Specific Risks

B6. Although a location or business unit might not be individually financially significant, it might present specific risks that, by themselves, could create a material misstatement in the company's financial statements. The auditor should test the controls over the specific risks that could create a material misstatement in the company's financial statements. The auditor need not test controls over all relevant assertions related to all significant accounts at these locations or business units. For example, a business unit responsible for foreign exchange trading could expose the company to the risk of material misstatement, even though the relative financial significance of such transactions is low.

Locations or Business Units That Are Significant Only When Aggregated with Other Locations and Business Units

B7. In determining the nature, timing, and extent of testing, the auditor should determine whether management has documented and placed in operation company-level controls (See paragraph 53) over individually unimportant locations and business units that, when aggregated with other locations or business units, might have a high level of financial significance. A high level of financial significance could create a greater than remote risk of material misstatement of the financial statements.

B8. For the purposes of this evaluation, company-level controls are controls management has in place to provide assurance that appropriate controls exist throughout the organization, including at individual locations or business units.

B9. The auditor should perform tests of company-level controls to determine whether such controls are operating effectively. The auditor might conclude that he or she cannot evaluate the operating effectiveness of such controls without visiting some or all of the locations or business units.

B10. If management does not have company-level controls operating at these locations and business units, the auditor should determine the nature, timing, and extent of procedures to be performed at each location, business unit, or combination of locations and business units. When determining the locations or business units to visit and the controls to test, the auditor should evaluate the following factors:

- The relative financial significance of each location or business unit.

- The risk of material misstatement arising from each location or business unit.

- The similarity of business operations and internal control over financial reporting at the various locations or business units.

- The degree of centralization of processes and financial reporting applications.

- The effectiveness of the control environment, particularly management's direct control over the exercise of authority delegated to others and its ability to effectively supervise activities at the various locations or business units. An ineffective control environment over the locations or business units might constitute a material weakness.

- The nature and amount of transactions executed and related assets at the various locations or business units.

- The potential for material unrecognized obligations to exist at a location or business unit and the degree to which the location or business unit could create an obligation on the part of the company.

- Management's risk assessment process and analysis for excluding a location or business unit from its assessment of internal control over financial reporting.

B11. Testing company-level controls is not a substitute for the auditor's testing of controls over a large portion of the company's operations or financial position. If the auditor cannot test a large portion of the company's operations and financial position by selecting a relatively small number of locations or business units, he or she should expand the number of locations or business units selected to evaluate internal control over financial reporting.

> Note: The evaluation of whether controls over a large portion of the company's operations or financial position have been tested should be made at the overall level, not at the individual significant account level.

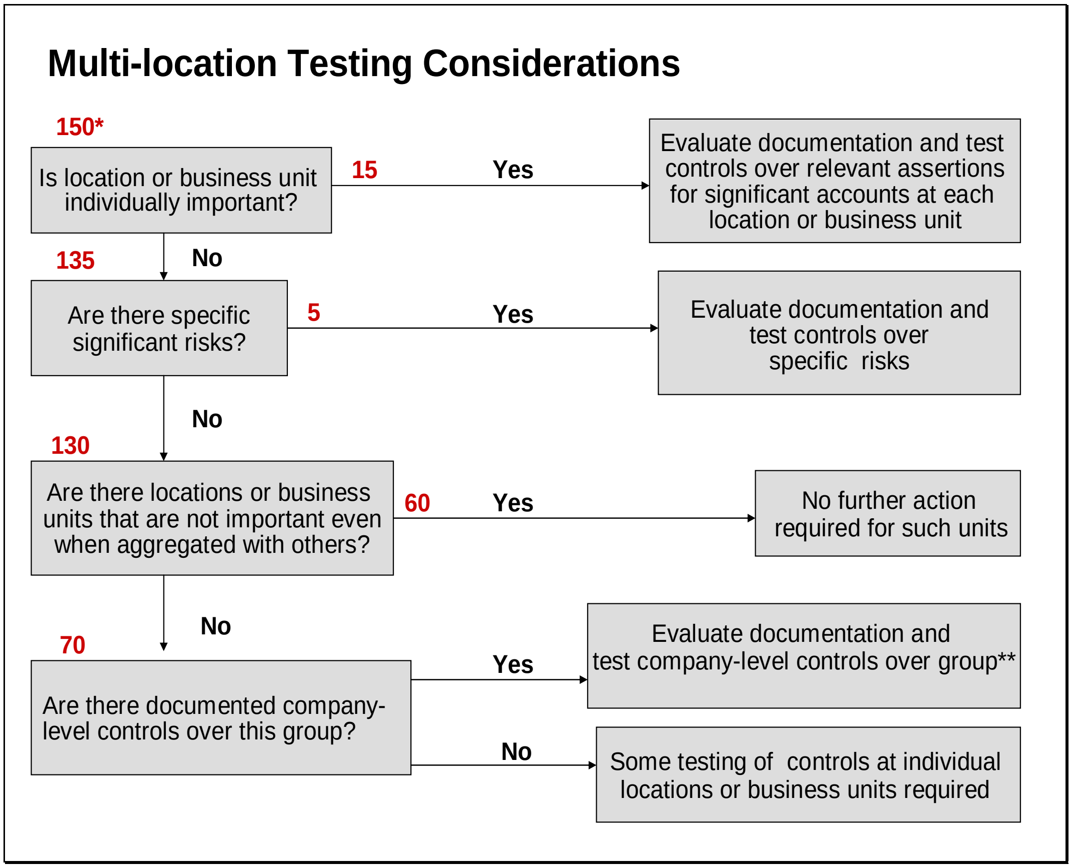
Locations and Business Units That Do Not Require Testing

B12. No testing is required for locations or business units that individually, and when aggregated with others, could not result in a material misstatement to the financial statements.

Multi-Location Testing Considerations Flowchart

B13. Illustration B-1 depicts how to apply the directions in this section to a hypothetical company with 150 locations or business units, along with the auditor's testing considerations for those locations or business units.

Illustration B-1



* Numbers represent number of locations affected.
** See paragraph B7.

Special Situations

B14. The scope of the evaluation of the company's internal control over financial reporting should include entities that are acquired on or before the date of management's assessment and operations that are accounted for as discontinued operations on the date of management's assessment. The auditor should consider this multiple locations discussion in determining whether it will be necessary to test controls at these entities or operations.

B15. For equity method investments, the evaluation of the company's internal control over financial reporting should include controls over the reporting in accordance with generally accepted accounting principles, in the company's financial statements, of the company's portion of the investees' income or loss, the investment balance, adjustments to the income or loss and investment balance, and related disclosures. The evaluation ordinarily would not extend to controls at the equity method investee.

B16. In situations in which the SEC allows management to limit its assessment of internal control over financial reporting by excluding certain entities, the auditor may limit the audit in the same manner and report without reference to the limitation in scope. However, the auditor should evaluate the reasonableness of management's conclusion that the situation meets the criteria of the SEC's allowed exclusion and the appropriateness of any required disclosure related to such a limitation. If the auditor believes that management's disclosure about the limitation requires modification, the auditor should follow the same communication responsibilities as described in paragraphs 204 and 205. If management and the audit committee do not respond appropriately, in addition to fulfilling those responsibilities, the auditor should modify his or her report on the audit of internal control over financial reporting to include an explanatory paragraph describing the reasons why the auditor believes management's disclosure should be modified.

B17. For example, for entities that are consolidated or proportionately consolidated, the evaluation of the company's internal control over financial reporting should include controls over significant accounts and processes that exist at the consolidated or proportionately consolidated entity. In some instances, however, such as for some variable interest entities as defined in Financial Accounting Standards Board Interpretation No. 46, *Consolidation of Variable Interest Entities,* management might not be able to obtain the information necessary to make an assessment because it does not have the ability to control the entity. If management is allowed to limit its assessment by excluding such entities,[38/] the auditor may limit the audit in the same manner and report without reference to the limitation in scope. In this case, the evaluation of the company's internal control over financial reporting should include evaluation of controls over the reporting in accordance with generally accepted accounting principles, in the company's financial statements, of the company's portion of the entity's income or loss, the investment balance, adjustments to the income or loss and investment balances, and related disclosures. However, the auditor should evaluate the reasonableness of management's conclusion that it does not have the ability to obtain the necessary information as well as the appropriateness of any required disclosure related to such a limitation.

[38/] It is our understanding that the SEC Staff may conclude that management can limit the scope of its assessment if it does not have the authority to affect, and therefore cannot assess, the controls in place over certain amounts. This would relate to entities that are consolidated or proportionately consolidated when the issuer does not have sufficient control over the entity to assess and affect controls. If management's report on its assessment of the effectiveness of internal control over financial reporting is limited in that manner, the SEC staff may permit the company to disclose this fact as well as information about the magnitude of the amounts included in the financial statements from entities whose controls cannot be assessed. This disclosure would be required in each filing, but outside of management's report on its assessment of the effectiveness of internal control over financial reporting.

Use of Service Organizations

B18. AU sec. 324, *Service Organizations,* applies to the audit of financial statements of a company that obtains services from another organization that are part of its information system. The auditor may apply the relevant concepts described in AU sec. 324 to the audit of internal control over financial reporting. Further, although AU sec. 324 was designed to address auditor-to-auditor communications as part of the audit of financial statements, it also is appropriate for management to apply the relevant concepts described in that standard to its assessment of internal control over financial reporting.

B19. Paragraph .03 of AU sec. 324 describes the situation in which a service organization's services are part of a company's information system. If the service organization's services are part of a company's information system, as described therein, then they are part of the information and communication component of the company's internal control over financial reporting. When the service organization's services are part of the company's internal control over financial reporting, management should consider the activities of the service organization in making its assessment of internal control over financial reporting, and the auditor should consider the activities of the service organization in determining the evidence required to support his or her opinion.

> Note: The use of a service organization does not reduce management's responsibility to maintain effective internal control over financial reporting.

B20. Paragraphs .07 through .16 in AU sec. 324 describe the procedures that management and the auditor should perform with respect to the activities performed by the service organization. The procedures include:

a. Obtaining an understanding of the controls at the service organization that are relevant to the entity's internal control and the controls at the user organization over the activities of the service organization, and

b. Obtaining evidence that the controls that are relevant to management's assessment and the auditor's opinion are operating effectively.

B21. Evidence that the controls that are relevant to management's assessment and the auditor's opinion are operating effectively may be obtained by following the procedures described in paragraph .12 of AU sec. 324. These procedures include:

a. Performing tests of the user organization's controls over the activities of the service organization (for example, testing the user organization's independent reperformance of selected items processed by the service organization or testing the user organization's reconciliation of output reports with source documents).

b. Performing tests of controls at the service organization.

c. Obtaining a service auditor's report on controls placed in operation and tests of operating effectiveness, or a report on the application of agreed-upon procedures that describes relevant tests of controls.

   Note: The service auditor's report referred to above means a report with the service auditor's opinion on the service organization's description of the design of its controls, the tests of controls, and results of those tests performed by the service auditor, and the service auditor's opinion on whether the controls tested were operating effectively during the specified period (in other words, "reports on controls placed in operation and tests of operating effectiveness" described in paragraph .24b of AU sec. 324). A service auditor's report that does not include tests of controls, results of the tests, and the service auditor's opinion on operating effectiveness (in other words, "reports on controls placed in operation" described in paragraph .24a of AU sec. 324) does not provide evidence of operating effectiveness. Furthermore, if the evidence regarding operating effectiveness of controls comes from an agreed-upon procedures report rather than a service auditor's report issued pursuant to AU sec. 324, management and the auditor should evaluate whether the agreed-upon procedures report provides sufficient evidence in the same manner described in the following paragraph.

B22. If a service auditor's report on controls placed in operation and tests of operating effectiveness is available, management and the auditor may evaluate whether this report provides sufficient evidence to support the assessment and opinion, respectively. In evaluating whether such a service auditor's report provides sufficient evidence, management and the auditor should consider the following factors:

- The time period covered by the tests of controls and its relation to the date of management's assessment,

- The scope of the examination and applications covered, the controls tested, and the way in which tested controls relate to the company's controls,

- The results of those tests of controls and the service auditor's opinion on the operating effectiveness of the controls.

Note: These factors are similar to factors the auditor would consider in determining whether the report provides sufficient evidence to support the auditor's assessed level of control risk in an audit of the financial statements as described in paragraph .16 of AU sec. 324.

B23. If the service auditor's report on controls placed in operation and tests of operating effectiveness contains a qualification that the stated control objectives might be achieved only if the company applies controls contemplated in the design of the system by the service organization, the auditor should evaluate whether the company is applying the necessary procedures. For example, completeness of processing payroll transactions might depend on the company's validation that all payroll records sent to the service organization were processed by checking a control total.

B24. In determining whether the service auditor's report provides sufficient evidence to support management's assessment and the auditor's opinion, management and the auditor should make inquiries concerning the service auditor's reputation, competence, and independence. Appropriate sources of information concerning the professional reputation of the service auditor are discussed in paragraph .10a of AU sec. 543, *Part of Audit Performed by Other Independent Auditors.*

B25. When a significant period of time has elapsed between the time period covered by the tests of controls in the service auditor's report and the date of management's assessment, additional procedures should be performed. The auditor should inquire of management to determine whether management has identified any changes in the service organization's controls subsequent to the period covered by the service auditor's report (such as changes communicated to management from the service organization, changes in personnel at the service organization with whom management interacts, changes in reports or other data received from the service organization, changes in contracts or service level agreements with the service organization, or errors identified in the service organization's processing). If management has identified such changes, the auditor should determine whether management has performed procedures to evaluate the effect of such changes on the effectiveness of the company's internal control over financial reporting. The auditor also should consider whether the results of other procedures he or she performed indicate that there have been changes in the controls at the service organization that management has not identified.

B26. The auditor should determine whether to obtain additional evidence about the operating effectiveness of controls at the service organization based on the procedures performed by management or the auditor and the results of those procedures and on an evaluation of the following factors. As these factors increase in significance, the need for the auditor to obtain additional evidence increases.

- The elapsed time between the time period covered by the tests of controls in the service auditor's report and the date of management's assessment,

- The significance of the activities of the service organization,

- Whether there are errors that have been identified in the service organization's processing, and

- The nature and significance of any changes in the service organization's controls identified by management or the auditor.

B27. If the auditor concludes that additional evidence about the operating effectiveness of controls at the service organization is required, the auditor's additional procedures may include:

- Evaluating the procedures performed by management and the results of those procedures.

- Contacting the service organization, through the user organization, to obtain specific information.

- Requesting that a service auditor be engaged to perform procedures that will supply the necessary information.

- Visiting the service organization and performing such procedures.

B28. Based on the evidence obtained, management and the auditor should determine whether they have obtained sufficient evidence to obtain the reasonable assurance necessary for their assessment and opinion, respectively.

B29. The auditor should not refer to the service auditor's report when expressing an opinion on internal control over financial reporting.

Examples of Extent-of-Testing Decisions

B30. As discussed throughout this standard, determining the effectiveness of a company's internal control over financial reporting includes evaluating the design and operating effectiveness of controls over all relevant assertions related to all significant accounts and disclosures in the financial statements. Paragraphs 88 through 107 provide the auditor with directions about the nature, timing, and extent of testing of the design and operating effectiveness of internal control over financial reporting.

B31. Examples B-1 through B-4 illustrate how to apply this information in various situations. These examples are for illustrative purposes only.

Example B-1 – ***Daily Programmed Application Control and Daily Information Technology-Dependent Manual Control***

The auditor has determined that cash and accounts receivable are significant accounts to the audit of XYZ Company's internal control over financial reporting. Based on discussions with company personnel and review of company documentation, the auditor learned that the company had the following procedures in place to account for cash received in the lockbox:

a. The company receives a download of cash receipts from the banks.

b. The information technology system applies cash received in the lockbox to individual customer accounts.

c. Any cash received in the lockbox and not applied to a customer's account is listed on an exception report (Unapplied Cash Exception Report).

- Therefore, the application of cash to a customer's account is a programmed application control, while the review and follow-up of unapplied cash from the exception report is a manual control.

To determine whether misstatements in cash (existence assertion) and accounts receivable (existence, valuation, and completeness) would be prevented or detected on a timely basis, the auditor decided to test the controls provided by the system in the daily reconciliation of lock box receipts to customer accounts, as well as the control over reviewing and resolving unapplied cash in the Unapplied Cash Exception Report.

Nature, Timing, and Extent of Procedures. To test the programmed application control, the auditor:

- Identified, through discussion with company personnel, the software used to receive the download from the banks and to process the transactions and determined that the banks supply the download software.

  -- The company uses accounting software acquired from a third-party supplier. The software consists of a number of modules. The client modifies the software only for upgrades supplied by the supplier.

- Determined, through further discussion with company personnel, that the cash module operates the lockbox functionality and the posting of cash to the general ledger. The accounts receivable module posts the cash to individual customer accounts and produces the Unapplied Cash Exception Report, a standard report supplied with the package. The auditor agreed this information to the supplier's documentation.

- Identified, through discussions with company personnel and review of the supplier's documentation, the names, file sizes (in bytes), and locations of the executable files (programs) that operate the functionality under review. The auditor then identified the compilation dates of these programs and agreed them to the original installation date of the application.

- Identified the objectives of the programs to be tested. The auditor wanted to determine whether only appropriate cash items are posted to customers' accounts and matched to customer number, invoice number, amount, etc., and that there is a listing of inappropriate cash items (that is, any of the above items not matching) on the exception report.

In addition, the auditor had evaluated and tested general computer controls, including program changes (for example, confirmation that no unauthorized changes are undertaken) and logical access (for example, data file access to the file downloaded from the banks and user access to the cash and accounts receivable modules) and concluded that they were operating effectively.

To determine whether such programmed controls were operating effectively, the auditor performed a walkthrough in the month of July. The computer controls operate in a systematic manner, therefore, the auditor concluded that it was sufficient to perform a walkthrough for only the one item. During the walkthrough, the auditor performed and documented the following items:

a. Selected one customer and agreed the amount billed to the customer to the cash received in the lockbox.

b. Agreed the total of the lockbox report to the posting of cash receipts in the general ledger.

c. Agreed the total of the cash receipt download from the bank to the lockbox report and supporting documentation.

d. Selected one customer's remittance and agreed amount posted to the customer's account in the accounts receivable subsidiary ledger.

To test the detective control of review and follow up on the Daily Unapplied Cash Exception Report, the auditor:

a. Made inquiries of company personnel. To understand the procedures in place to ensure that all unapplied items are resolved, the time frame in which such resolution takes place, and whether unapplied items are handled properly within the system, the auditor discussed these matters with the employee responsible for reviewing and resolving the Daily Unapplied Cash Exception Reports. The auditor learned that, when items appear on the Daily-Unapplied Cash Exception Report, the employee must manually enter the correction into the system. The employee typically performs the resolution procedures the next business day. Items that typically appear on the Daily Unapplied Cash Exception Report relate to payments made by a customer without reference to an invoice number/purchase order number or to underpayments of an invoice due to quantity or pricing discrepancies.

b. Observed personnel performing the control**.** The auditor then observed the employee reviewing and resolving a Daily Unapplied Cash Exception Report. The day selected contained four exceptions – three related to payments made by a customer without an invoice number, and one related to an underpayment due to a pricing discrepancy.

- For the pricing discrepancy, the employee determined, through discussions with a sales person, that the customer had been billed an incorrect price; a price break that the sales person had granted to the customer was not reflected on the customer's invoice. The employee resolved the pricing discrepancy, determined which invoices were being paid, and entered a correction into the system to properly apply cash to the customer's account and reduce accounts receivable and sales accounts for the amount of the price break.

c. Reperformed the control. Finally, the auditor selected 25 Daily Unapplied Cash Exception Reports from the period January to September. For the reports selected, the auditor reperformed the follow-up procedures that the employee performed. For instance, the auditor inspected the documents and sources of information used in the follow-up and determined that the transaction was properly corrected in the system. The auditor also scanned other Daily Unapplied Cash Exception Reports to determine that the control was performed throughout the period of intended reliance.

Because the tests of controls were performed at an interim date, the auditor had to determine whether there were any significant changes in the controls from interim to year-end. Therefore, the auditor asked company personnel about the procedures in place at year-end. Such procedures had not changed from the interim period, therefore, the auditor observed that the controls were still in place by scanning Daily Unapplied Cash Exception Reports to determine the control was performed on a timely basis during the period from September to year-end.

Based on the auditor's procedures, the auditor concluded that the employee was clearing exceptions in a timely manner and that the control was operating effectively as of year-end.

Example B-2 – ***Monthly Manual Reconciliation***

The auditor determined that accounts receivable is a significant account to the audit of XYZ Company's internal control over financial reporting. Through discussions with company personnel and review of company documentation, the auditor learned that company personnel reconcile the accounts receivable subsidiary ledger to the general ledger on a monthly basis. To determine whether misstatements in accounts receivable (existence, valuation, and completeness) would be detected on a timely basis, the auditor decided to test the control provided by the monthly reconciliation process.

Nature, Timing, and Extent of Procedures. The auditor tested the company's reconciliation control by selecting a sample of reconciliations based upon the number of accounts, the dollar value of the accounts, and the volume of transactions affecting the account. Because the auditor considered all other receivable accounts immaterial, and because such accounts had only minimal transactions flowing through them, the auditor decided to test only the reconciliation for the trade accounts receivable account. The auditor elected to perform the tests of controls over the reconciliation process in conjunction with the auditor's substantive procedures over the accounts receivable confirmation procedures, which were performed in July.

To test the reconciliation process, the auditor:

a. Made inquiries of personnel performing the control. The auditor asked the employee performing the reconciliation a number of questions, including the following:

   - What documentation describes the account reconciliation process?
   - How long have you been performing the reconciliation work?
   - What is the reconciliation process for resolving reconciling items?
   - How often are the reconciliations formally reviewed and signed off?
   - If significant issues or reconciliation problems are noticed, to whose attention do you bring them?
   - On average, how many reconciling items are there?
   - How are old reconciling items treated?
   - If need be, how is the system corrected for reconciling items?
   - What is the general nature of these reconciling items?

b. Observed the employee performing the control**.** The auditor observed the employee performing the reconciliation procedures. For nonrecurring reconciling items, the auditor observed whether each item included a clear explanation as to its nature, the action that had been taken to resolve it, and whether it had been resolved on a timely basis.

c. Reperformed the control**.** Finally, the auditor inspected the reconciliations and reperfomed the reconciliation procedures. For the May and July reconciliations, the auditor traced the reconciling amounts to the source documents on a test basis. The only reconciling item that appeared on these reconciliations was cash received in the lockbox the previous day that had not been applied yet to the customer's account. The auditor pursued the items in each month's reconciliation to determine that the reconciling item cleared the following business day. The auditor also scanned through the file of all reconciliations prepared during the year and noted that they had been performed on a timely basis. To determine that the company had not made significant changes in its reconciliation control procedures from interim to year-end, the auditor made inquiries of company personnel and determined that such procedures had not changed from interim to year-end. Therefore, the auditor verified that controls were still in place by scanning the monthly account reconciliations to determine that the control was performed on a timely basis during the interim to year-end period.

Based on the auditor's procedures, the auditor concluded that the reconciliation control was operating effectively as of year-end.

Example B-3 – ***Daily Manual Preventive Control***

The auditor determined that cash and accounts payable were significant accounts to the audit of the company's internal control over financial reporting. Through discussions with company personnel, the auditor learned that company personnel make a cash disbursement only after they have matched the vendor invoice to the receiver and purchase order. To determine whether misstatements in cash (existence) and accounts payable (existence, valuation, and completeness) would be prevented on a timely basis, the auditor tested the control over making a cash disbursement only after matching the invoice with the receiver and purchase.

Nature, Timing, and Extent of Procedures. On a haphazard basis, the auditor selected 25 disbursements from the cash disbursement registers from January through September. In this example, the auditor deemed a test of 25 cash disbursement transactions an appropriate sample size because the auditor was testing a manual control performed as part of the routine processing of cash disbursement transactions through the system. Furthermore, the auditor expected no errors based on the results of company-level tests performed earlier. [If, however, the auditor had encountered a control exception, the auditor would have attempted to identify the root cause of the exception and tested an additional number of items. If another control exception had been noted, the auditor would have decided that this control was not effective. As a result, the auditor would have decided to increase the extent of substantive procedures to be performed in connection with the financial statement audit of the cash and accounts payable accounts.]

a. After obtaining the related voucher package, the auditor examined the invoice to see if it included the signature or initials of the accounts payable clerk, evidencing the clerk's performance of the matching control. However, a signature on a voucher package to indicate signor approval does not necessarily mean that the person carefully reviewed it before signing. The voucher package may have been signed based on only a cursory review, or without any review.

b. The auditor decided that the quality of the evidence regarding the effective operation of the control evidenced by a signature or initials was not sufficiently persuasive to ensure that the control operated effectively during the test period. In order to obtain additional evidence, the auditor reperformed the matching control corresponding to the signature, which included examining the invoice to determine that (a) its items matched to the receiver and purchase order and (b) it was mathematically accurate.

Because the auditor performed the tests of controls at an interim date, the auditor updated the testing through the end of the year (initial tests are through September to December) by asking the accounts payable clerk whether the control was still in place and operating effectively. The auditor confirmed that understanding by performing a walkthrough of one transaction in December.

Based on the auditor's procedures, the auditor concluded that the control over making a cash disbursement only after matching the invoice with the receiver and purchase was operating effectively as of year-end.

Example B-4 – ***Programmed Prevent Control and Weekly Information Technology-Dependent Manual Detective Control***

The auditor determined that cash, accounts payable, and inventory were significant accounts to the audit of the company's internal control over financial reporting. Through discussions with company personnel, the auditor learned that the company's computer system performs a three-way match of the receiver, purchase order, and invoice. If there are any exceptions, the system produces a list of unmatched items that employees review and follow up on weekly.

In this case, the computer match is a programmed application control, and the review and follow-up of the unmatched items report is a detective control. To determine whether misstatements in cash (existence) and accounts payable/inventory (existence, valuation, and completeness) would be prevented or detected on a timely basis, the auditor decided to test the programmed application control of matching the receiver, purchase order, and invoice as well as the review and follow-up control over unmatched items.

Nature, Timing, and Extent of Procedures. To test the programmed application control, the auditor:

a. Identified, through discussion with company personnel, the software used to process receipts and purchase invoices. The software used was a third-party package consisting of a number of modules.

b. Determined, through further discussion with company personnel, that they do not modify the core functionality of the software, but sometimes make personalized changes to reports to meet the changing needs of the business. From previous experience with the company's information technology environment, the auditor believes that such changes are infrequent and that information technology process controls are well established.

c. Established, through further discussion, that the inventory module operated the receiving functionality, including the matching of receipts to open purchase orders. Purchase invoices were processed in the accounts payable module, which matched them to an approved purchase order against which a valid receipt has been made. That module also produced the Unmatched Items Report, a standard report supplied with the package to which the company has not made any modifications. That information was agreed to the supplier's documentation and to documentation within the information technology department.

d. Identified, through discussions with the client and review of the supplier's documentation, the names, file sizes (in bytes), and locations of the executable files (programs) that operate the functionality under review. The auditor then identified the compilation dates of the programs and agreed them to the original installation date of the application. The compilation date of the report code was agreed to documentation held within the information technology department relating to the last change made to that report (a change in formatting).

e. Identified the objectives of the programs to be tested. The auditor wanted to determine whether appropriate items are received (for example, match a valid purchase order), appropriate purchase invoices are posted (for example, match a valid receipt and purchase order, non-duplicate reference numbers) and unmatched items (for example, receipts, orders or invoices) are listed on the exception report. The auditor then reperformed all those variations in the packages on a test-of-one basis to determine that the programs operated as described.

In addition, the auditor had evaluated and tested general computer controls, including program changes (for example, confirmation that no unauthorized changes are undertaken to the functionality and that changes to reports are appropriately authorized, tested, and approved before being applied) and logical access (for example, user access to the inventory and accounts payable modules and access to the area on the system where report code is maintained), and concluded that they were operating effectively. (Since the computer is deemed to operate in a systematic manner, the auditor concluded that it was sufficient to perform a walkthrough for only the one item.)

To determine whether the programmed control was operating effectively, the auditor performed a walkthrough in the month of July. As a result of the walkthrough, the auditor performed and documented the following items:

a. Receiving cannot record the receipt of goods without matching the receipt to a purchase order on the system. The auditor tested that control by attempting to record the receipt of goods into the system without a purchase order. However, the system did not allow the auditor to do that. Rather, the system produced an error message stating that the goods could not be recorded as received without an active purchase order.

b. An invoice will not be paid unless the system can match the receipt and vendor invoice to an approved purchase order. The auditor tested that control by attempting to approve an invoice for payment in the system. The system did not allow the auditor to do that. Rather, it produced an error message indicating that invoices could not be paid without an active purchase order and receiver.

c. The system disallows the processing of invoices with identical vendor and identical invoice numbers. In addition, the system will not allow two invoices to be processed against the same purchase order unless the sum of the invoices is less than the amount approved on the purchase order. The auditor tested that control by attempting to process duplicate invoices. However, the system produced an error message indicating that the invoice had already been processed.

d. The system compares the invoice amounts to the purchase order. If there are differences in quantity/extended price, and such differences fall outside a pre-approved tolerance, the system does not allow the invoice to be processed. The auditor tested that control by attempting to process an invoice that had quantity/price differences outside the tolerance level of 10 pieces, or $1,000. The system produced an error message indicating that the invoice could not be processed because of such differences.

e. The system processes payments only for vendors established in the vendor master file. The auditor tested that control by attempting to process an invoice for a vendor that was not established in the vendor master file. However, the system did not allow the payment to be processed.

f. The auditor tested user access to the vendor file and whether such users can make modifications to such file by attempting to access and make changes to the vendor tables. However, the system did not allow the auditor to perform that function and produced an error message stating that the user was not authorized to perform that function.

g. The auditor verified the completeness and accuracy of the Unmatched Items Report by verifying that one unmatched item was on the report and one matched item was not on the report.

Note: It is inadvisable for the auditor to have uncontrolled access to the company's systems in his or her attempts described above to record the receipt of goods without a purchase order, approve an invoice for payment, process duplicate invoices, etc. These procedures ordinarily are performed in the presence of appropriate company personnel so that they can be notified immediately of any breach to their systems.

To test the detect control of review and follow up on the Unmatched Items Report, the auditor performed the following procedures in the month of July for the period January to July:

a. Made inquiries of company personnel. To gain an understanding of the procedures in place to ensure that all unmatched items are followed-up properly and that corrections are made on a timely basis, the auditor made inquiries of the employee who follows up on the weekly-unmatched items reports. On a weekly basis, the control required the employee to review the Unmatched Items Report to determine why items appear on it. The employee's review includes proper follow-up on items, including determining whether:

   - All open purchase orders are either closed or voided within an acceptable amount of time.
   - The requesting party is notified periodically of the status of the purchase order and the reason for its current status.
   - The reason the purchase order remains open is due to incomplete shipment of goods and, if so, whether the vendor has been notified.
   - There are quantity problems that should be discussed with purchasing.

b. Observed the performance of the control**.** The auditor observed the employee performing the control for the Unmatched Items Reports generated during the first week in July.

c. Reperformed the control**.** The auditor selected five weekly Unmatched Items Reports, selected several items from each, and reperformed the procedures that the employee performed. The auditor also scanned other Unmatched Items Reports to determine that the control was performed throughout the period of intended reliance.

To determine that the company had not made significant changes in their controls from interim to year-end, the auditor discussed with company personnel the procedures in place for making such changes. Since the procedures had not changed from interim to year-end, the auditor observed that the controls were still in place by scanning the weekly Unmatched Items Reports to determine that the control was performed on a timely basis during the interim to year-end period.

Based on the auditor's procedures, the auditor concluded that the employee was clearing exceptions in a timely manner and that the control was operating effectively as of year-end.

APPENDIX C

Safeguarding of Assets

C1. *Safeguarding of assets* is defined in paragraph 7 as those policies and procedures that "provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements." This definition is consistent with the definition provided in the Committee of Sponsoring Organizations (COSO) of the Treadway Commission's Addendum, *Reporting to External Parties*, which provides the following definition of internal control over safeguarding of assets:

> Internal control over safeguarding of assets against unauthorized acquisition, use or disposition is a process, effected by an entity's board of directors, management and other personnel, designed to provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the entity's assets that could have a material effect on the financial statements. Such internal control can be judged effective if the board of directors and management have reasonable assurance that unauthorized acquisition, use or disposition of the entity's assets that could have a material effect on the financial statements is being prevented or detected on a timely basis.

C2. For example, a company has safeguarding controls over inventory tags (preventive controls) and also performs periodic physical inventory counts (detective control) timely in relation to its quarterly and annual financial reporting dates. Although the physical inventory count does not safeguard the inventory from theft or loss, it prevents a material misstatement to the financial statements if performed effectively and timely.

C3. Therefore, given that the definitions of material weakness and significant deficiency relate to the likelihood of misstatement of the financial statements, the failure of a preventive control such as inventory tags will not result in a significant deficiency or material weakness if the detective control (physical inventory) prevents a misstatement of the financial statements. The COSO Addendum also indicates that to the extent that such losses might occur, controls over financial reporting are effective if they provide reasonable assurance that those losses are properly reflected in the financial statements, thereby alerting financial statement users to consider the need for action.

Note: *Properly reflected* in the financial statements includes both correctly recording the loss and adequately disclosing the loss.

C4. Material weaknesses relating to controls over the safeguarding of assets would only exist when the company does not have effective controls (considering both safeguarding and other controls) to prevent or detect a material misstatement of the financial statements.

C5. Furthermore, management's plans that could potentially affect financial reporting in future periods are not controls. For example, a company's business continuity or contingency planning has no effect on the company's current abilities to initiate, authorize, record, process, or report financial data. Therefore, a company's business continuity or contingency planning is not part of internal control over financial reporting.

C6. The COSO Addendum provides further information about safeguarding of assets as it relates to internal control over financial reporting.

APPENDIX D

Examples of Significant Deficiencies and Material Weaknesses

D1. Paragraph 8 of this standard defines a control deficiency. Paragraphs 9 and 10 go on to define a significant deficiency and a material weakness, respectively.

D2. Paragraphs 22 through 23 of this standard discuss materiality in an audit of internal control over financial reporting, and paragraphs 130 through 140 provide additional direction on evaluating deficiencies in internal control over financial reporting.

D3. The following examples illustrate how to evaluate the significance of internal control deficiencies in various situations. These examples are for illustrative purposes only.

Example D-1**— *Reconciliations of Intercompany Accounts Are Not Performed on a Timely Basis***

Scenario A – Significant Deficiency. The company processes a significant number of routine intercompany transactions on a monthly basis. Individual intercompany transactions are not material and primarily relate to balance sheet activity, for example, cash transfers between business units to finance normal operations.

A formal management policy requires monthly reconciliation of intercompany accounts and confirmation of balances between business units. However, there is not a process in place to ensure performance of these procedures. As a result, detailed reconciliations of intercompany accounts are not performed on a timely basis. Management does perform monthly procedures to investigate selected large-dollar intercompany account differences. In addition, management prepares a detailed monthly variance analysis of operating expenses to assess their reasonableness.

Based only on these facts, the auditor should determine that this deficiency represents a significant deficiency for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be more than inconsequential, but less than material, because individual intercompany transactions are not material, and the compensating controls operating monthly should detect a material misstatement. Furthermore, the transactions are primarily restricted to balance sheet accounts. However, the compensating detective controls are designed only to detect material misstatements. The controls do not address the detection of misstatements that are more than inconsequential but less than material. Therefore, the likelihood that a misstatement that was more than inconsequential, but less than material, could occur is more than remote.

Scenario B - Material Weakness. The company processes a significant number of intercompany transactions on a monthly basis. Intercompany transactions relate to a wide range of activities, including transfers of inventory with intercompany profit between business units, allocation of research and development costs to business units and corporate charges. Individual intercompany transactions are frequently material.

A formal management policy requires monthly reconciliation of intercompany accounts and confirmation of balances between business units. However, there is not a process in place to ensure that these procedures are performed on a consistent basis. As a result, reconciliations of intercompany accounts are not performed on a timely basis, and differences in intercompany accounts are frequent and significant. Management does not perform any alternative controls to investigate significant intercompany account differences.

Based only on these facts, the auditor should determine that this deficiency represents a material weakness for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be material, because individual intercompany transactions are frequently material and relate to a wide range of activities. Additionally, actual unreconciled differences in intercompany accounts have been, and are, material. The likelihood of such a misstatement is more than remote because such misstatements have frequently occurred and compensating controls are not effective, either because they are not properly designed or not operating effectively. Taken together, the magnitude and likelihood of misstatement of the financial statements resulting from this internal control deficiency meet the definition of a material weakness.

Example D-2—***Modifications to Standard Sales Contract Terms Not Reviewed To Evaluate Impact on Timing and Amount of Revenue Recognition***

Scenario A – Significant Deficiency. The company uses a standard sales contract for most transactions. Individual sales transactions are not material to the entity. Sales personnel are allowed to modify sales contract terms. The company's accounting function reviews significant or unusual modifications to the sales contract terms, but does not review changes in the standard shipping terms. The changes in the standard shipping terms could require a delay in the timing of revenue recognition. Management reviews gross margins on a monthly basis and investigates any significant or unusual relationships. In addition, management reviews the reasonableness of inventory levels at the end of each accounting period. The entity has experienced limited situations in which revenue has been inappropriately recorded in advance of shipment, but amounts have not been material.

Based only on these facts, the auditor should determine that this deficiency represents a significant deficiency for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be more than inconsequential, but less than material, because individual sales transactions are not material and the compensating detective controls operating monthly and at the end of each financial reporting period should reduce the likelihood of a material misstatement going undetected. Furthermore, the risk of material misstatement is limited to revenue recognition errors related to shipping terms as opposed to broader sources of error in revenue recognition. However, the compensating detective controls are only designed to detect material misstatements. The controls do not effectively address the detection of misstatements that are more than inconsequential but less than material, as evidenced by situations in which transactions that were not material were improperly recorded. Therefore, there is a more than remote likelihood that a misstatement that is more than inconsequential but less than material could occur.

Scenario B - Material Weakness. The company has a standard sales contract, but sales personnel frequently modify the terms of the contract. The nature of the modifications can affect the timing and amount of revenue recognized. Individual sales transactions are frequently material to the entity, and the gross margin can vary significantly for each transaction.

The company does not have procedures in place for the accounting function to regularly review modifications to sales contract terms. Although management reviews gross margins on a monthly basis, the significant differences in gross margins on individual transactions make it difficult for management to identify potential misstatements. Improper revenue recognition has occurred, and the amounts have been material.

Based only on these facts, the auditor should determine that this deficiency represents a material weakness for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be material, because individual sales transactions are frequently material, and gross margin can vary significantly with each transaction (which would make compensating detective controls based on a reasonableness review ineffective). Additionally, improper revenue recognition has occurred, and the amounts have been material. Therefore, the likelihood of material misstatements occurring is more than remote. Taken together, the magnitude and likelihood of misstatement of the financial statements resulting from this internal control deficiency meet the definition of a material weakness.

Scenario C – Material Weakness. The company has a standard sales contract, but sales personnel frequently modify the terms of the contract. Sales personnel frequently grant unauthorized and unrecorded sales discounts to customers without the knowledge of the accounting department. These amounts are deducted by customers in paying their invoices and are recorded as outstanding balances on the accounts receivable aging. Although these amounts are individually insignificant, they are material in the aggregate and have occurred consistently over the past few years.

Based on only these facts, the auditor should determine that this deficiency represents a material weakness for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be material, because the frequency of occurrence allows insignificant amounts to become material in the aggregate. The likelihood of material misstatement of the financial statements resulting from this internal control deficiency is more than remote (even assuming that the amounts were fully reserved for in the company's allowance for uncollectible accounts) due to the likelihood of material misstatement of the gross accounts receivable balance. Therefore, this internal control deficiency meets the definition of a material weakness.

Example D-3—***Identification of Several Deficiencies***

Scenario A – Material Weakness. During its assessment of internal control over financial reporting, management identified the following deficiencies. Based on the context in which the deficiencies occur, management and the auditor agree that these deficiencies individually represent significant deficiencies:

- Inadequate segregation of duties over certain information system access controls.

- Several instances of transactions that were not properly recorded in subsidiary ledgers; transactions were not material, either individually or in the aggregate.

- A lack of timely reconciliations of the account balances affected by the improperly recorded transactions.

Based only on these facts, the auditor should determine that the combination of these significant deficiencies represents a material weakness for the following reasons: Individually, these deficiencies were evaluated as representing a more than remote likelihood that a misstatement that is more than inconsequential, but less than material, could occur. However, each of these significant deficiencies affects the same set of accounts. Taken together, these significant deficiencies represent a more than remote likelihood that a material misstatement could occur and not be prevented or detected. Therefore, in combination, these significant deficiencies represent a material weakness.

Scenario B – Material Weakness. During its assessment of internal control over financial reporting, management of a financial institution identifies deficiencies in: the design of controls over the estimation of credit losses (a critical accounting estimate); the operating effectiveness of controls for initiating, processing, and reviewing adjustments to the allowance for credit losses; and the operating effectiveness of controls designed to prevent and detect the improper recognition of interest income. Management and the auditor agree that, in their overall context, each of these deficiencies individually represent a significant deficiency.

In addition, during the past year, the company experienced a significant level of growth in the loan balances that were subjected to the controls governing credit loss estimation and revenue recognition, and further growth is expected in the upcoming year.

Based only on these facts, the auditor should determine that the combination of these significant deficiencies represents a material weakness for the following reasons:

- The balances of the loan accounts affected by these significant deficiencies have increased over the past year and are expected to increase in the future.

- This growth in loan balances, coupled with the combined effect of the significant deficiencies described, results in a more than remote likelihood that a material misstatement of the allowance for credit losses or interest income could occur.

Therefore, in combination, these deficiencies meet the definition of a material weakness.

APPENDIX E

BACKGROUND AND BASIS FOR CONCLUSIONS

Table of Contents — ***Paragraph***

Introduction

E1. This appendix summarizes factors that the Public Company Accounting Oversight Board (the "Board") deemed significant in reaching the conclusions in the standard. This appendix includes reasons for accepting certain views and rejecting others.

Background

E2. Section 404(a) of the Sarbanes-Oxley Act of 2002 (the "Act"), and the Securities and Exchange Commission's (SEC) related implementing rules, require the management of a public company to assess the effectiveness of the company's internal control over financial reporting, as of the end of the company's most recent fiscal year. Section 404(a) of the Act also requires management to include in the company's annual report to shareholders management's conclusion as a result of that assessment of whether the company's internal control over financial reporting is effective.

E3. Sections 103(a)(2)(A) and 404(b) of the Act direct the Board to establish professional standards governing the independent auditor's attestation and reporting on management's assessment of the effectiveness of internal control over financial reporting.

E4. The backdrop for the development of the Board's first major auditing standard was, of course, the spectacular audit failures and corporate malfeasance that led to the passage of the Act. Although all of the various components of the Act work together to help restore investor confidence and help prevent the types of financial reporting breakdowns that lead to the loss of investor confidence, Section 404 of the Act is certainly one of the most visible and tangible changes required by the Act.

E5. The Board believes that effective controls provide the foundation for reliable financial reporting. Congress believed this too, which is why the new reporting by management and the auditor on the effectiveness of internal control over financial reporting received such prominent attention in the Act. Internal control over financial reporting enhances a company's ability to produce fair and complete financial reports. Without reliable financial reports, making good judgments and decisions about a company becomes very difficult for anyone, including the board of directors, management, employees, investors, lenders, customers, and regulators. The auditor's reporting on management's assessment of the effectiveness of internal control over financial reporting provides users of that report with important assurance about the reliability of the company's financial reporting.

E6. The Board's efforts to develop this standard were an outward expression of the Board's mission, "to protect the interests of investors and further the public interest in the preparation of informative, fair, and independent audit reports." As part of fulfilling that mission as it relates to this standard, the Board considered the advice that respected groups had offered to other auditing standards setters in the past. For example, the Public Oversight Board's Panel on Audit Effectiveness recommended that "auditing standards need to provide clear, concise and definitive imperatives for auditors to follow."[39/] As another example, the International Organization of Securities Commissioners advised the International Auditing and Assurance Standards Board "that the IAASB must take care to avoid language that could inadvertently encourage inappropriate shortcuts in audits, at a time when rigorous audits are needed more than ever to restore investor confidence."[40/]

E7. The Board understood that, to effectively fulfill its mission and for this standard to achieve its ultimate goal of restoring investor confidence by increasing the reliability of public company financial reporting, the Board's standard must contain clear directions to the auditor consistent with investor's expectations that the reliability of financial reporting be significantly improved. Just as important, the Board recognized that this standard must appropriately balance the costs to implement the standard's directions with the benefits of achieving these important goals. As a result, all of the Board's decisions about this standard were guided by the additional objective of creating a rational relationship between costs and benefits.

E8. When the Board adopted its interim attestation standards in Rule 3300T on an initial, transitional basis, the Board adopted a pre-existing standard governing an auditor's attestation on internal control over financial reporting.[41/] As part of the Board's process of evaluating that pre-existing standard, the Board convened a public roundtable discussion on July 29, 2003 to discuss issues and hear views related to reporting on internal control over financial reporting. The

39/ Panel on Audit Effectiveness, *Report and Recommendations,* sec. 2.228 (August 31, 2000).

40/ April 8, 2003 comment letter from the International Organization of Securities Commissions to the International Auditing and Assurance Standards Board regarding the proposed international standards on audit risk (Amendment to ISA 200, "Objective and Principles Governing an Audit of Financial Statements;" proposed ISAs, "Understanding the Entity and Its Environment and Assessing the Risks of Material Misstatement;" "Auditor's Procedures in Response to Assessed Risks;" and "Audit Evidence").

41/ The pre-existing standard is Chapter 5, "*Reporting on an Entity's Internal Control Over Financial Reporting*" of Statement on Standards for Attestation Engagements (SSAE) No. 10, *Attestation Standards: Revision and Recodification* (AICPA, *Professional Standards,* Vol. 1, AT sec. 501). SSAE No. 10 has been codified into AICPA *Professional Standards,* Volume 1, as AT sections 101 through 701.

participants at the roundtable included representatives from public companies, accounting firms, investor groups, and regulatory organizations. Based on comments made at the roundtable, advice from the Board's staff, and other input the Board received, the Board determined that the pre-existing standard governing an auditor's attestation on internal control over financial reporting was insufficient for effectively implementing the requirements of Section 404 of the Act and for the Board to appropriately discharge its standard-setting obligations under Section 103(a) of the Act. In response, the Board developed and issued, on October 7, 2003, a proposed auditing standard titled, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with An Audit of Financial Statements.*

E9. The Board received 189 comment letters on a broad array of topics from a variety of commenters, including auditors, investors, internal auditors, issuers, regulators, and others. Those comments led to changes in the standard, intended to make the requirements of the standard clearer and more operational. This appendix summarizes significant views expressed in those comment letters and the Board's responses.

Fundamental Scope of the Auditor's Work in an Audit of Internal Control over Financial Reporting

E10. The proposed standard stated that the auditor's objective in an audit of internal control over financial reporting was to express an opinion on management's assessment of the effectiveness of the company's internal control over financial reporting. To render such an opinion, the proposed standard required the auditor to obtain reasonable assurance about whether the company maintained, in all material respects, effective internal control over financial reporting as of the date specified in management's report. To obtain reasonable assurance, the auditor was required to evaluate both management's process for making its assessment and the effectiveness of internal control over financial reporting.

E11. Virtually all investors and auditors who submitted comment letters expressed support for this approach. Other commenters, primarily issuers, expressed concerns that this approach was contrary to the intent of Congress and, therefore, beyond what was specifically required by Section 404 of the Act. Further, issuers stated their views that this approach would lead to unnecessary and excessive costs. Some commenters in this group suggested the auditor's work should be limited to evaluating management's assessment process and the testing performed by management and internal audit. Others acknowledged that the auditor would need to test at least some controls directly in addition to evaluating and testing management's assessment process. However, these commenters described various ways in which the auditor's own testing could be significantly reduced from the scope expressed in the proposed standard. For instance, they proposed that the auditor could be permitted to use the work of management and others to a much greater degree; that the auditor could use a "risk analysis" to identify only a few controls to be tested; and a variety of other methods to curtail the extent of the auditor's work. Of those opposed to the scope, most cited their belief that the scope of work embodied in the standard would lead to a duplication of effort between management and the auditor which would needlessly increase costs without adding significant value.

E12. After considering the comments, the Board retained the approach described in the proposed standard. The Board concluded that the approach taken in the standard is consistent with the intent of Congress. Also, to provide the type of report, at the level of assurance called for in Sections 103 and 404, the Board concluded that the auditor must evaluate both management's assessment process and the effectiveness of internal control over financial reporting. Finally, the Board noted the majority of the cost to be borne by companies (and ultimately investors) results directly from the work the company will have to perform to maintain effective internal control over financial reporting and to comply with Section 404(a) of the Act. The cost of the auditor's work as described in this standard ultimately will represent a smaller portion of the total cost to companies of implementing Section 404.

E13. The Board noted that large, federally insured financial institutions have had a similar internal control reporting requirement for over ten years. The Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) has required, since 1993, managements of large financial institutions to make an assessment of internal control over financial reporting effectiveness and the institution's independent auditor to issue an attestation report on management's assessment.

E14. The attestation standards under which FDICIA engagements are currently performed are clear that, when performing an examination of management's assertion on the effectiveness of internal control over financial reporting (management's report on the assessment required by Section 404(a) of the Act must include a statement as to whether the company's internal control over financial reporting is effective), the auditor may express an opinion either on management's assertion (that is, whether management's assessment about the effectiveness of the internal control over financial reporting is fairly stated) or directly on the subject matter (that is, whether the internal control over financial reporting is effective) because the level of work that must be performed is the same in either case.

E15. The Board observed that Congress indicated an intent to require an examination level of work in Section 103(a) of the Act, which states, in part, that each registered public accounting firm shall:

> describe in each audit report the scope of the auditor's testing of the internal control structure and procedures of the issuer, required by Section 404(b), and present (in such report or in a separate report)—

(I) the findings of the auditor from such testing;

(II) an evaluation of whether such internal control structure and procedures—

(aa) include maintenance of records that in reasonable detail accurately reflect the transactions and dispositions of the assets of the issuer;

(bb) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the issuer are being made only in accordance with authorizations of management and directors of the issuer; and

(III) a description, at a minimum, of material weaknesses in such internal controls, and of any material noncompliance found on the basis of such testing. [emphasis added].

E16. The Board concluded that the auditor must test internal control over financial reporting directly, in the manner and extent described in the standard, to make the evaluation described in Section 103. The Board also interpreted Section 103 to provide further support that the intent of Congress was to require an opinion on the effectiveness of internal control over financial reporting.

E17. The Board concluded that the auditor must obtain a high level of assurance that the conclusion expressed in management's assessment is correct to provide an opinion on management's assessment. An auditing process restricted to evaluating what management has done would not provide the auditor with a sufficiently high level of assurance that management's conclusion is correct. Instead, it is necessary for the auditor to evaluate management's assessment process to be satisfied that management has an appropriate basis for its statement, or assertion, about the effectiveness of the company's internal control over financial reporting. It also is necessary for the auditor to directly test the effectiveness of internal control over financial reporting to be satisfied that management's conclusion is correct, and that management's assertion is fairly stated.

E18. This testing takes on added importance with the public nature of the internal control reporting. Because of the auditor's association with a statement by management that internal control over financial reporting is effective, it is reasonable for a user of the auditor's report to expect that the auditor tested the effectiveness of internal control over financial reporting. For the auditor to do otherwise would create an expectation gap, in which the assurance that the auditor obtained is less than what users reasonably expect.

E19. Auditors, investors, and the Federal bank regulators reaffirmed in their comment letters on the proposed auditing standard that the fundamental approach taken by the Board was appropriate and necessary. Investors were explicit in their expectation that the auditor must test the effectiveness of controls directly in addition to evaluating management's assessment process. Investors further recognized that this kind of assurance would come at a price and expressed their belief that the cost of the anticipated benefits was reasonable. The federal banking regulators, based on their experience examining financial institutions' internal control assessments and independent auditors' attestation reports under FDICIA, commented that the proposed auditing standard was a significant improvement over the existing attestation standard.

Reference to Audit vs. Attestation

E20. The proposed standard referred to the attestation required by Section 404(b) of the Act as the *audit* of internal control over financial reporting instead of an *attestation* of management's assessment. The proposed standard took that approach both because the auditor's objective is to express an opinion on management's assessment of the effectiveness of internal control over financial reporting, just as the auditor's objective in an audit of the financial statements is to express an opinion on the fair presentation of the financial statements, and because the level of assurance obtained by the auditor is the same in both cases. Furthermore, the proposed standard described an *integrated* audit of the financial statements and internal control over financial reporting and allowed the auditor to express his or her opinions on the financial statements and on the effectiveness of internal control in separate reports or in a single, combined report.

E21. Commenters' views on this matter frequently were related to their views on whether the proposed scope of the audit was appropriate. Those who agreed that the scope in the proposed standard was appropriate generally agreed that referring to the engagement as an *audit* was appropriate. On the other hand, commenters who objected to the scope of work described in the proposed standard often drew an important distinction between an *audit* and an *attestation.* Because Section 404 calls for an *attestation*, they believed it was inappropriate to call the engagement anything else (or to mandate a scope that called for a more extensive level of work).

E22. Based, in part, on the Board's decisions about the scope of the audit of internal control over financial reporting, the Board concluded that the engagement should continue to be referred to as an "audit." This term emphasizes the nature of the auditor's objective and communicates that objective most clearly to report users. Use of this term also is consistent with the integrated approach described in the standard and the requirement in Section 404 of the Act that this reporting not be subject to a separate engagement.

E23. Because the Board's standard on internal control is an auditing standard, it is preferable to use the term *audit* to describe the engagement rather than the term *examination*, which is used in the attestation standards to describe an engagement designed to provide a high level of assurance.

E24. Finally, the Board believes that using the term *audit* helps dispel the misconception that an audit of internal control over financial reporting is a different level of service than an attestation of management's assessment of internal control over financial reporting.

Form of the Auditor's Opinion

E25. The proposed auditing standard required that the auditor's opinion in his or her report state whether management's assessment of the effectiveness of the company's internal control over financial reporting as of the specified date is fairly stated, in all material respects, based on the control criteria. However, the proposed standard also stated that nothing precluded the auditor from auditing management's assessment and opining directly on the effectiveness of internal control over financial reporting. This is because the scope of the work, as defined by the proposed standard, was the same, regardless of whether the auditor reports on management's assessment or directly on the effectiveness of internal control over financial reporting. The form of the opinion was essentially interchangeable between the two.

E26. However, if the auditor planned to issue other than an unqualified opinion, the proposed standard required the auditor to report directly on the effectiveness of the company's internal control over financial reporting rather than on management's assessment. The Board initially concluded that expressing an opinion on management's assessment, in these circumstances, did not most effectively communicate the auditor's conclusion that internal control was not effective. For example, if management expresses an adverse assessment because a material weakness exists at the date of management's assessment ("…internal control over financial reporting is not effective…") and the auditor expresses his or her opinion on management's assessment ("…management's assessment that internal control over financial reporting is not effective is fairly stated, in all material respects…"), a reader might not be clear about the results of the auditor's testing and about the auditor's conclusions. The Board initially decided that reporting directly on the effectiveness of the company's internal control over financial reporting better communicates to report users the effect of such conditions, because direct reporting more clearly states the auditor's conclusions about the effectiveness of internal control over financial reporting ("In our opinion, because of the effect of the material weakness described…, the Company's internal control over financial reporting is not effective.").

E27. A number of commenters were supportive of the model described in the previous paragraph, as they agreed with the Board's reasoning. However, several commenters believed that report users would be confused as to why the form of the auditor's opinion would be different in various circumstances. These commenters thought that the auditor's opinion should be consistently expressed in all reports. Several auditors recommended that auditors always report directly on the effectiveness of the company's internal control over financial reporting. They reasoned that the scope of the audit—which always would require the auditor to obtain reasonable assurance about whether the internal control over financial reporting was effective—would be more clearly communicated, in all cases, by the auditor reporting directly on the effectiveness of internal control over financial reporting. Other commenters suggested that the auditor always should express two opinions: one on management's assessment and one directly on the effectiveness of internal control over financial reporting. They believed the Act called for two opinions: Section 404 calls for an opinion on management's assessment, while Section 103 calls for an opinion directly on the effectiveness of internal control over financial reporting.

E28. The Board believes that the reporting model in the proposed standard is appropriate. However, the Board concluded that the expression of two opinions—one on management's assessment and one on the effectiveness of internal control over financial reporting—in all reports is a superior approach that balances the concerns of many different interested parties. This approach is consistent with the scope of the audit, results in more consistent reporting in differing circumstances, and makes the reports more easily understood by report users. Therefore, the standard requires that the auditor express two opinions in all reports on internal control over financial reporting.

Use of the Work of Others

E29. After giving serious consideration to a rational relationship between costs and benefits, the Board decided to change the provisions in the proposed standard regarding using the work of others. The proposed standard required the auditor to evaluate whether to use the work of others, such as internal auditors and others working under the direction of management, and described an evaluation process focused on the competence and objectivity of the persons who performed the work that the auditor was required to use when determining the extent to which he or she could use the work of others.

E30. The proposed standard also described two principles that limited the auditor's ability to use of the work of others. First, the proposed standard defined three categories of controls and the extent to which the auditor could use the work of others in each of those categories:

- Controls for which the auditor should not rely on the work of others, such as controls in the control environment and controls specifically intended to prevent or detect fraud that is reasonably likely to have a material effect on the company's financial statements,

- Controls for which the auditor may rely on the work of others, but his or her reliance on the work of others should be limited, such as controls over nonroutine transactions that are considered high risk because they involve judgments and estimates, and

- Controls for which the auditor's reliance on the work of others is not specifically limited, such as controls over routine processing of significant accounts.

E31. Second, the proposed standard required that, on an overall basis, the auditor's own work must provide the principal evidence for the audit opinion (this is referred to as the *principal evidence provision*).

E32. In the proposed standard, these two principles provided the auditor with flexibility in using the work of others while preventing him or her from placing inappropriate over-reliance on the work of others. Although the proposed standard required the auditor to reperform some of the tests performed by others to use their work, it did not establish specific requirements for the extent of the reperformance. Rather, it allowed the auditor to use his or her judgment and the directions provided by the two principles discussed in the previous two paragraphs to determine the appropriate extent of reperformance.

E33. The Board received a number of comments that agreed with the proposed three categories of controls and the principal evidence provision. However, most commenters expressed some level of concern with the categories, the principal evidence provision, or both.

E34. Comments opposing or criticizing the categories of controls varied from general to very specific. In general terms, many commenters (particularly issuers) expressed concern that the categories described in the proposed standard were too restrictive. They believed the auditor should be able to use his or her judgment to determine in which areas and to what extent to rely on the work of others. Other commenters indicated that the proposed standard did not place enough emphasis on the work of internal auditors whose competence and objectivity, as well as adherence to professional standards of internal auditing, should clearly set their work apart from the work performed by others in the organization (such as management or third parties working under management's direction). Further, these commenters believed that the standard should clarify that the auditor should be able to use work performed by internal auditors extensively. In that case, their concerns about excessive cost also would be partially alleviated.

E35. Other commenters expressed their belief that the proposed standard repudiated the approach established in AU sec. 322, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements,* for the auditor's use of the work of internal auditors in a financial statement audit. Commenters also expressed very specific and pointed views on the three categories of controls. As defined in the proposed standard, the first category (in which the auditor should not use the work of others at all) included:

- Controls that are part of the control environment, including controls specifically established to prevent and detect fraud that is reasonably likely to result in material misstatement of the financial statements.

- Controls over the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; to initiate, record, and process journal entries in the general ledger; and to record recurring and nonrecurring adjustments to the financial statements (for example, consolidating adjustments, report combinations, and reclassifications).

- Controls that have a pervasive effect on the financial statements, such as certain information technology general controls on which the operating effectiveness of other controls depend.

- Walkthroughs.

E36. Commenters expressed concern that the prohibition on using the work of others in these areas would (a) drive unnecessary and excessive costs, (b) not give appropriate recognition to those instances in which the auditor evaluated internal audit as having a high degree of competence and objectivity, and (c) be impractical due to resource constraints at audit firms. Although each individual area was mentioned, the strongest and most frequent objections were to the restrictions imposed over the inclusion in the first category of walkthroughs, controls over the period-end financial reporting process, and information technology general controls. Some commenters suggested the Board should consider moving these areas from the first category to the second category (in which using the work of others would be limited, rather than prohibited); others suggested removing any limitation on using the work of others in these areas altogether.

E37. Commenters also expressed other concerns with respect to the three control categories. Several commenters asked for clarification on what constituted *limited* use of the work of others for areas included in the second category. Some commenters asked for clarification about the extent of reperformance necessary for the auditor to use the work of others. Other commenters questioned the meaning of the term *without specific limitation* in the third category by asking, did this mean that the auditor could use the work of others in these areas without performing *or* reperforming *any* work in those areas?

E38. Although most commenters suggested that the principal evidence threshold for the auditor's own work be retained, some commenters objected to the principal evidence provision. Although many commenters identified the broad array of areas identified in the first category (in which the auditor should not use the work of others at all) as the key driver of excessive costs, others identified the principal evidence provision as the real source of their excessive cost concerns. Even if the categories were redefined in such a way as to permit the auditor to use the work of others in more areas, any associated decrease in audit cost would be limited by the principal evidence provision which, if retained, would still require significant original work on the part of the auditor. On the other hand, both investors and auditors generally supported retaining the principal evidence provision as playing an important role in ensuring the independence of the auditor's opinion and preventing inappropriate overreliance on the work of internal auditors and others.

E39. Commenters who both supported and opposed the principal evidence provision indicated that implementing it would be problematic because the nature of the work in an audit of internal control over financial reporting does not lend itself to a purely quantitative measurement. Thus, auditors would be forced to use judgment when determining whether the principal evidence provision has been satisfied.

E40. In response to the comments, the Board decided that some changes to the guidance on using the work of others were necessary. The Board did not intend to reject the concepts in AU sec. 322 and replace them with a different model. Although AU sec. 322 is designed to apply to an audit of financial statements, the Board concluded that the concepts contained in AU sec. 322 are sound and should be used in an audit of internal control over financial reporting, with appropriate modification to take into account the differences in the nature of the evidence necessary to support an opinion on financial statements and the evidence necessary to support an opinion on internal control effectiveness. The Board also wanted to make clear that the concepts in AU sec. 322 also may be applied, with appropriate auditor judgment, to the relevant work of others.

E41. The Board remained concerned, however, with the possibility that auditors might overrely on the work of internal auditors and others. Inappropriate overreliance can occur in a variety of ways. For example, an auditor might rely on the work of a highly competent and objective internal audit function for proportionately too much of the evidence that provided the basis for the auditor's opinion. Inappropriate overreliance also occurs when the auditor incorrectly concludes that internal auditors have a high degree of competence and objectivity when they do not, perhaps because the auditor did not exercise professional skepticism or due professional care when making his or her evaluation. In either case, the result is the same: unacceptable risk that the auditor's conclusion that internal control over financial reporting is effective is incorrect. For example, federal bank regulators commented that, in their experience with FDICIA, auditors have a tendency to rely too heavily on the work of management and others, further noting that this situation diminishes the independence of the auditor's opinion on control effectiveness.

E42. The Board decided to revise the categories of controls by focusing on the nature of the controls being tested, evaluating the competence and objectivity of the individuals performing the work, and testing the work of others. This allows the auditor to exercise substantial judgment based on the outcome of this work as to the extent to which he or she can make use of the work of internal auditors or others who are suitably qualified.

E43. This standard emphasizes the direct relationship between the assessed level of competence and objectivity and the extent to which the auditor may use the work of others. The Board included this clarification to highlight the special status that a highly competent and objective internal auditor has in the auditor's work as well as to caution against inappropriate overreliance on the work of management and others who would be expected to have lower degrees of competence and objectivity in assessing controls. Indeed, the Board noted that, with regard to internal control over financial reporting, internal auditors would normally be assessed as having a higher degree of competence and objectivity than management or others and that an auditor will be able to rely to a greater extent on the work of a highly competent and objective internal auditor than on work performed by others within the company.

E44. The Board concluded that the principal evidence provision is critical to preventing overreliance on the work of others in an audit of internal control over financial reporting. The requirement for the auditor to perform enough of the control testing himself or herself so that the auditor's own work provides the principal evidence for the auditor's opinion is of paramount importance to the auditor's assurance providing the level of reliability that investors expect. However, the Board also decided that the final standard should articulate clearly that the auditor's judgment about whether he or she has obtained the principal evidence required is qualitative as well as quantitative. Therefore, the standard now states, "Because the amount of work related to obtaining sufficient evidence to support an opinion about the effectiveness of controls is not susceptible to precise measurement, the auditor's judgment about whether he or she has obtained the principal evidence for the opinion will be qualitative as well as quantitative. For example, the auditor might give more weight to work performed on pervasive controls and in areas such as the control environment than on other controls, such as controls over low-risk, routine transactions."

E45. The Board also concluded that a better balance could be achieved in the standard by instructing the auditor to factor into the determination of the extent to which to use the work of others an evaluation of the nature of the controls on which others performed their procedures.

E46. Paragraph 112 of the standard provides the following factors the auditor should consider when evaluating the nature of the controls subjected to the work of others:

- The materiality of the accounts and disclosures that the control addresses and the risk of material misstatement.

- The degree of judgment required to evaluate the operating effectiveness of the control (that is, the degree to which the evaluation of the effectiveness of the control requires evaluation of subjective factors rather than objective testing).

- The pervasiveness of the control.

- The level of judgment or estimation required in the account or disclosure.

- The potential for management override of the control.

E47. As these factors increase in significance, the need for the auditor to perform his or her own work on those controls increases. As these factors decrease in significance, the auditor may rely more on the work of others. Because of the nature of controls in the control environment, however, the standard does not allow the auditor to use the work of others to reduce the amount of work he or she performs on such controls. In addition, the standard also does not allow the auditor to use the work of others in connection with the performance of walkthroughs of major classes of transactions because of the high degree of judgment required when performing them (See separate discussion in paragraphs E51 through E57).

E48. The Board decided that this approach was responsive to those who believed that the auditor should be able to use his or her judgment in determining the extent to which to use the work of others. The Board designed the requirement that the auditor's own work must provide the principal evidence for the auditor's opinion as one of the boundaries within which the auditor determines the work he or she must perform himself or herself in the audit of internal control over financial reporting. The other instructions about using the work of others provide more specific direction about how the auditor makes this determination, but allow the auditor significant flexibility to use his or her judgment to determine the work necessary to obtain the principal evidence, and to determine when the auditor can use the work of others rather than perform the work himself or herself. Although some of the directions are specific and definitive, such as the directions for the auditor to perform tests of controls in the control environment and walkthroughs himself or herself, the Board decided that these areas were of such audit importance that the auditor should always perform this testing as part of obtaining the principal evidence for his or her opinion. The Board concluded that this approach appropriately balances the use of auditor judgment and the risk of inappropriate overreliance.

E49. The Board was particularly concerned by comments that issuers might choose to reduce their internal audit staff or the extent of internal audit testing in the absence of a significant change in the proposed standard that would significantly increase the extent to which the auditor may use the work of internal auditors. The Board believes the standard makes clear that an effective internal audit function does permit the auditor to reduce the work that otherwise would be necessary.

E50. Finally, as part of clarifying the linkage between the degree of competence and objectivity of the others and the ability to use their work, the Board decided that additional clarification should be provided on the extent of testing that should be required of the work of others. The Board noted that the interaction of the auditor performing walkthroughs of every significant process and the retention of the principal evidence provision precluded the need for the auditor to test the work of others in every significant account. However, testing the work of others is an important part of an ongoing assessment of their competence and objectivity. Therefore, as part of the emphasis on the direct relationship between the assessed level of competence and objectivity to the extent of the use of the work of others, additional provisions were added discussing how the results of the testing of the work of others might affect the auditor's assessment of competence and objectivity. The Board also concluded that testing the work of others should be clearly linked to an evaluation of the quality and effectiveness of their work.

Walkthroughs

E51. The proposed standard included a requirement that the auditor perform walkthroughs, stating that the auditor should perform a walkthrough for all of the company's significant processes. In the walkthrough, the auditor was to trace all types of transactions and events, both recurring and unusual, from origination through the company's information systems until they were included in the company's financial reports. As stated in the proposed standard, walkthroughs provide the auditor with evidence to:

- Confirm the auditor's understanding of the process flow of transactions;
- Confirm the auditor's understanding of the design of controls identified for all five components of internal control over financial reporting, including those related to the prevention or detection of fraud;
- Confirm that the auditor's understanding of the process is complete by determining whether all points in the process at which misstatements related to each relevant financial statement assertion that could occur have been identified;
- Evaluate the effectiveness of the design of controls; and
- Confirm whether controls have been placed in operation.

E52. A number of commenters expressed strong support for the requirement for the auditor to perform walkthroughs as described in the proposed standard. They agreed that auditors who did not already perform the type of walkthrough described in the proposed standard should perform them as a matter of good practice. These commenters further recognized that the first-hand understanding an auditor obtains from performing these walkthroughs puts the auditor in a much better position to design an effective audit and to evaluate the quality and effectiveness of the work of others. They considered the walkthrough requirement part of "getting back to basics," which they viewed as a positive development.

E53. Some commenters expressed general support for walkthroughs as required procedures, but had concerns about the scope of the work. A number of commenters suggested that requiring walkthroughs of *all* significant processes and *all* types of transactions would result in an overwhelming and unreasonable number of walkthroughs required. Commenters made various suggestions for alleviating this problem, including permitting the auditor to determine, using broad auditor judgment, which classes of transactions to walk through or refining the scope of "all types of transactions" to include some kind of consideration of risk and materiality.

E54. Other commenters believed that required walkthroughs would result in excessive cost if the auditor were prohibited from using the work of others. These commenters suggested that the only way that required walkthroughs would be a reasonable procedure is to permit the auditor to use the work of others. Although commenters varied on whether the auditor's use of the work of others for walkthroughs should be liberal or limited, and whether it should include management or be limited to internal auditors, a large number of commenters suggested that limiting walkthroughs to only the auditor himself or herself was impractical.

E55. The Board concluded that the objectives of the walkthroughs cannot be achieved second-hand. For the objectives to be effectively achieved, the auditor must perform the walkthroughs himself or herself. Several commenters who objected to the prohibition on using the work of internal auditors for walkthroughs described situations in which internal auditors would be better able to effectively perform walkthroughs because internal auditors understood the company's business and controls better than the external auditor and because the external auditor would struggle in performing walkthroughs due to a lack of understanding. The Board observed that these commenters' perspectives support the importance of requiring the external auditor to perform walkthroughs. If auditors struggle to initially perform walkthroughs because their knowledge of the company and its controls is weak, then that situation would only emphasize the necessity for the auditor to increase his or her level of understanding. After considering the nature and extent of the procedures that would be required to achieve these objectives, the Board concluded that performing walkthroughs would be the most efficient means of doing so. The first-hand understanding the auditor will obtain of the company's processes and its controls through the walkthroughs will translate into increased effectiveness and quality throughout the rest of the audit, in a way that cannot be achieved otherwise.

E56. The Board also decided that the scope of the transactions that should be subjected to walkthroughs should be more narrowly defined. To achieve the objectives the Board intended for walkthroughs to accomplish, the auditor should not be forced to perform walkthroughs on what many commenters reasoned was an unreasonably large population. The Board decided that the auditor should be able to use judgment in considering risk and materiality to determine which transactions and events within a given significant process to walk through. As a result, the directions in the standard on determining significant processes and major classes of transactions were expanded, and the population of transactions for which auditors will be required to walk through narrowed by replacing "all types of transactions" with "major classes of transactions."

E57. Although judgments of risk and materiality are inherent in identifying major classes of transactions, the Board decided to also remove from the standard the statement, "walkthroughs are required procedures" as a means of further clarifying that auditor judgment plays an important role in determining the major classes of transactions for which to perform a walkthrough. The Board observed that leading off the discussion of walkthroughs in the standard with such a sentence could be read as setting a tone that diminished the role of judgment in selecting the transactions to walk through. As a result, the directions in the standard on performing walkthroughs begin with, "The auditor should perform at least one walkthrough for each major class of transactions…" The Board's decision to eliminate the statement "walkthroughs are required procedures" should not be viewed as an indication that performing walkthroughs are optional under the standard's directions. The Board believes the auditor might be able to achieve the objectives of a walkthrough by performing a combination of procedures, including inquiry, inspection, observation, and reperformance; however, performing a walkthrough represents the most efficient and effective means of doing so. The auditor's work on the control environment and walkthroughs is an important part of the principal evidence that the auditor must obtain himself or herself.

Small Business Issues

E58. Appendix E of the proposed standard discussed small and medium-sized company considerations. Comments were widely distributed on this topic. A number of commenters indicated that the proposed standard gave adequate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized companies. Other commenters, particularly smaller issuers and smaller audit firms, indicated that the proposed standard needed to provide much more detail on how internal control over financial reporting could be different at a small or medium-sized issuer and how the auditor's approach could differ. Some of these commenters indicated that the concepts articulated in the Board's proposing release concerning accommodations for small and medium-sized companies were not carried through to the proposed standard itself.

E59. On the other hand, other commenters, particularly large audit firms and investors, expressed views that the proposed standard went too far in creating too much of an accommodation for small and medium-sized issuers. In fact, many believed that the proposed standard permitted those issuers to have less effective internal control over financial reporting than larger issuers, while providing guidance to auditors permitting them to perform less extensive testing at those small and medium-sized issuers than they might have at larger issuers. These commenters stressed that effective internal control over financial reporting is equally important at small and medium-sized issuers. Some commenters also expressed concerns that the guidance in proposed Appendix E appeared to emphasize that the actions of senior management, if carried out with integrity, could offset deficiencies in internal control over financial reporting, such as the lack of written policies and procedures. Because the risk of management override of controls is higher in these types of environments, such commenters were concerned that the guidance in proposed Appendix E might result in an increased fraud risk at small and medium-sized issuers. At a minimum, they argued, the interpretation of Appendix E might result in a dangerous expectation gap for users of their internal control reports. Some commenters who were of this view suggested that Appendix E be deleted altogether or replaced with a reference to the report of the Committee of Sponsoring Organizations (COSO) of the Treadway Commission, *Internal Control—Integrated Framework*, which they felt contained sufficient guidance on small and medium-sized company considerations.

E60. Striking an appropriate balance regarding the needs of smaller issuers is particularly challenging. The Board considered cautionary views about the difficulty in expressing accommodations for small and medium-sized companies without creating an inappropriate second class of internal control effectiveness and audit assurance. Further, the Board noted that the COSO framework currently provides management and the auditor with more guidance and flexibility regarding small and medium-sized companies than the Board had provided in the proposed Appendix E. As a result, the Board eliminated proposed Appendix E and replaced the appendix with a reference to COSO in paragraph 15 of the standard. The Board believes providing internal control criteria for small and medium-sized companies within the internal control framework is more appropriately within the purview of COSO. Furthermore, the COSO report was already tailored for special small and medium-sized company considerations. The Board decided that emphasizing the existing guidance within COSO was the best way of recognizing the special considerations that can and should be given to small and medium-sized companies without inappropriately weakening the standard to which these smaller entities should, nonetheless, be held. If additional tailored guidance on the internal control framework for small and medium-sized companies is needed, the Board encourages COSO, or some other appropriate body, to develop this guidance.

Evaluation of the Effectiveness of the Audit Committee

E61. The proposed standard identified a number of circumstances that, because of their likely significant negative effect on internal control over financial reporting, are significant deficiencies as well as *strong indicators* that a material weakness exists. A particularly notable significant deficiency and strong indicator of a material weakness was the ineffective oversight by the audit committee of the company's external financial reporting and internal control over financial reporting. In addition, the proposed standard required the auditor to evaluate factors related to the effectiveness of the audit committee's oversight of the external financial reporting process and the internal control over financial reporting.

E62. This provision related to evaluating the effectiveness of the audit committee was included in the proposed standard for two primary reasons. First, the Board initially decided that, because of the significant role that the audit committee has in the control environment and monitoring components of internal control over financial reporting, an ineffective audit committee is a gravely serious control weakness that is strongly indicative of a material weakness. Most auditors should have already been reaching this conclusion when confronted with an obviously ineffective audit committee. Second, highlighting the adverse consequences of an ineffective audit committee would, perhaps, further encourage weak audit committees to improve.

E63. Investors supported this provision. They expressed an expectation that the auditor would evaluate the audit committee's effectiveness and speak up if the audit committee was determined to be ineffective. Investors drew a link among restoring their confidence, audit committees having new and enhanced responsibilities, and the need for assurance that audit committees are, in fact, meeting their responsibilities.

E64. Auditors also were generally supportive of such an evaluation. However, many requested that the proposed standard be refined to clearly indicate that the auditor's responsibility to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting is not a separate and distinct evaluation. Rather, the evaluation is one element of the auditor's overall understanding and assessment of the company's control environment and monitoring components. Some commenters suggested that, in addition to needing clarification of the auditor's responsibility, the auditor would have difficulty in evaluating all of the factors listed in the proposed standard, because the auditor's normal interaction with the audit committee would not provide sufficient basis to conclude on some of those factors.

E65. Issuers and some others were opposed to the auditor evaluating the effectiveness of the audit committee on the fundamental grounds that such an evaluation would represent an unacceptable conflict of interest. Several commenters shared the view that this provision would reverse an important improvement in governance and audit quality. Whereas the auditor was formerly retained and compensated by management, the Act made clear that these responsibilities should now be those of the audit committee. In this way, commenters saw a conflict of interest being remedied. Requiring the auditor to evaluate the effectiveness of the audit committee led commenters to conclude that the same kind of conflict of interest was being reestablished. These commenters also believed that the auditor would not have a sufficient basis on which to evaluate the effectiveness of the audit committee because the auditor does not have complete and free access to the audit committee, does not have appropriate expertise to evaluate audit committee members (who frequently are more experienced businesspeople than the auditor), does not have the legal expertise to make determinations about some of the specific factors listed in the proposed standard, and other shortcomings. These commenters also emphasized that the board of directors' evaluation of the audit committee is important and that the proposed standard could be read to supplant this important evaluation with that of the auditor's.

E66. The Board concluded that this provision should be retained but decided that clarification was needed to emphasize that the auditor's evaluation of the audit committee was not a separate evaluation but, rather, was made as part of the auditor's evaluation of the control environment and monitoring components of internal control over financial reporting. The Board reasoned that clarifying both this context and limitation on the auditor's evaluation of the audit committee would also address, to some degree, the conflict-of-interest concerns raised by other commenters. The Board also observed, however, that conflict is, to some extent, inherent in the duties that society expects of auditors. Just as auditors were expected in the past to challenge management when the auditor believed a material misstatement of the financial statements or material weakness in internal control over financial reporting existed, the auditor similarly is expected to speak up when he or she believes the audit committee is ineffective in its oversight.

E67. The Board decided that when the auditor is evaluating the control environment and monitoring components, if the auditor concludes that the audit committee's oversight of the company's external financial reporting and internal control over financial reporting is ineffective, the auditor should be strongly encouraged to consider that situation a material weakness and, at a minimum, a significant deficiency. The objective of the evaluation is not to grade the effectiveness of the audit committee along a scale. Rather, in the course of performing procedures related to evaluating the effectiveness of the control environment and monitoring components, including evaluating factors related to the effectiveness of the audit committee's oversight, if the auditor concludes that the audit committee's oversight of the external financial reporting and internal control over financial reporting is ineffective, then the auditor should consider that a strong indicator of a material weakness.

E68. The Board concluded that several refinements should be made to this provision. As part of emphasizing that the auditor's evaluation of the audit committee is to be made as part of evaluating the control environment and not as a separate evaluation, the Board determined that the evaluation factors should be modified. The factors that addressed compliance with listing standards and sections of the Act were deleted, because those factors were specifically criticized in comment letters as being either outside the scope of the auditor's expertise or outside the scope of internal control over financial reporting. The Board also believed that those factors were not significant to the type of evaluation the auditor was expected to make of the audit committee. The Board decided to add the following factors, which are based closely on factors described in COSO, as relevant to evaluating those who govern, including the audit committee:

- Extent of direct and independent interaction with key members of financial management, including the chief financial officer and chief accounting officer.

- Degree to which difficult questions are raised and pursued with management and the auditor, including questions that indicate an understanding of the critical accounting policies and judgmental accounting estimates.

- Level of responsiveness to issues raised by the auditor, including those required to be communicated by the auditor to the audit committee.

E69. The Board also concluded that the standard should explicitly acknowledge that the board of directors is responsible for evaluating the effectiveness of the audit committee and that the auditor's evaluation of the control environment is not intended to supplant those evaluations. In addition, the Board concluded that, in the event the auditor determines that the audit committee's oversight is ineffective, the auditor should communicate that finding to the full board of directors. This communication should occur regardless of whether the auditor concludes that the condition represents a significant deficiency or a material weakness, and the communication should take place in addition to the normal communication requirements that attach to those deficiencies.

Definitions of Significant Deficiency and Material Weakness

E70. As part of developing the proposed standard, the Board evaluated the existing definitions of significant deficiency (which the SEC defined as being the same as a reportable condition) and material weakness to determine whether they would permit the most effective implementation of the internal control reporting requirements of the Act.

E71. AU sec. 325, *Communication of Internal Control Related Matters Noted in an Audit*, defined a material weakness as follows:

> A *material weakness* in internal control is a reportable condition in which the design or operation of one or more of the internal control components does not reduce to a *relatively low level* the risk that misstatements caused by error or fraud in amounts that would be material in relation to the financial statements being audited may occur and not be detected within a timely period by employees in the normal course of performing their assigned functions.

E72. The framework that defined a material weakness focused on likelihood of and magnitude for evaluating a weakness. The Board decided that this framework would facilitate effective implementation of the Act's internal control reporting requirements; therefore, the Board's proposed definitions focused on likelihood and magnitude. However, as part of these deliberations, the Board decided that likelihood and magnitude needed to be defined in terms that would encourage more consistent application.

E73. Within the existing definition of material weakness, the magnitude of "material in relation to the financial statements" was well supported by the professional standards, SEC rules and guidance, and other literature. However, the Board decided that the definition of likelihood would be improved if it used "more than remote" instead of "relatively low level." FASB Statement No. 5, *Accounting for Contingencies* (FAS No. 5) defines "remote." The Board decided that, because auditors were familiar with the application of the likelihood definitions in FAS No. 5, using "more than remote" in the definition of material weakness would infuse the evaluation of whether a control deficiency was a material weakness with the additional consistency that the Board wanted to encourage.

E74. AU sec. 325 defined *reportable conditions* as follows:

> …matters coming to the auditor's attention that, in his judgment, should be communicated to the audit committee because they represent significant deficiencies in the design or operation of internal control, which could adversely affect the organization's ability to initiate, record, process, and report financial data consistent with the assertions of management in the financial statements.

E75. The Board observed that this definition makes the determination of whether a condition is reportable solely a matter of the auditor's judgment. The Board believed that this definition was insufficient for purposes of the Act because management also needs a definition to determine whether a deficiency is significant and that the definition should be the same as the definition used by the auditor. Furthermore, using this existing definition, the auditor's judgment could never be questioned.

E76. The Board decided that the same framework that represented an appropriate framework for defining a material weakness also should be used for defining a significant deficiency. Although auditor judgment is integral and essential to the audit process (including in determining the severity of control weaknesses), auditors, nonetheless, must be accountable for their judgments. Increasing the accountability of auditors for their judgments about whether a condition represents a significant deficiency and increasing the consistency with which those judgments are made are interrelated. Hence, the same framework of likelihood and magnitude were applied in the Board's proposed definition of significant deficiency.

E77. In applying the likelihood and magnitude framework to defining a significant deficiency, the Board decided that the "more than remote" likelihood of occurrence used in the definition of material weakness was the best benchmark. In terms of magnitude, the Board decided that "more than inconsequential" should be the threshold for a significant deficiency.

E78. A number of commenters were supportive of the definitions in the proposed standard. These commenters believed the definitions were an improvement over the previous definitions, used terms familiar to auditors, and would promote increased consistency in evaluations.

E79. Most commenters, however, objected to these definitions. The primary, over-arching objection was that these definitions set too low a threshold for the reporting of significant deficiencies. Some commenters focused on "more than remote" likelihood as the driver of an unreasonably low threshold, while others believed "more than inconsequential" in the definition of significant deficiency was the main culprit. While some commenters understood "more than inconsequential" well enough, others indicated significant concerns that this represented a new term of art that needed to be accompanied by a clear definition of "inconsequential" as well as supporting examples. Several commenters suggested retaining the likelihood and magnitude approach to a definition but suggested alternatives for likelihood (such as reasonably likely, reasonably possible, more likely than not, probable) and magnitude (such as material, significant, insignificant).

E80. Some commenters suggested that the auditing standard retain the existing definitions of material weakness and significant deficiency, consistent with the SEC's final rules implementing Section 404. In their final rules, the SEC tied management's assessment to the existing definitions of material weakness and significant deficiency (through the existing definition of a reportable condition) in AU sec. 325. These commenters suggested that, if the auditing standard used a different definition, a dangerous disconnect would result, whereby management would be using one set of definitions under the SEC's rules and auditors would be using another set under the Board's auditing standards. They further suggested that, absent rulemaking by the SEC to change its definitions, the Board should simply defer to the existing definitions.

E81. A number of other commenters questioned the reference to "a misstatement of the annual or interim financial statements" in the definitions, with the emphasis on why "interim" financial statements were included in the definition, since Section 404 required only an annual assessment of internal control over financial reporting effectiveness, made as of year-end. They questioned whether this definition implied that the auditor was required to identify deficiencies that could result in a misstatement in interim financial statements; they did not believe that the auditor should be required to plan his or her audit of internal control over financial reporting at a materiality level of the interim financial statements.

E82. The Board ultimately concluded that focusing the definitions of material weakness and significant deficiency on likelihood of misstatement and magnitude of misstatement provides the best framework for evaluating deficiencies. Defaulting to the existing definitions would not best serve the public interest nor facilitate meaningful and effective implementation of the auditing standard.

E83. The Board observed that the SEC's final rules requiring management to report on internal control over financial reporting define material weakness, for the purposes of the final rules, as having "the same meaning as the definition under GAAS and attestation standards." Those rules state:

> The term "significant deficiency" has the same meaning as the term "reportable condition" as used in AU §325 and AT§501. The terms "material weakness" and "significant deficiency" both represent deficiencies in the design or operation of internal control that could adversely affect a company's ability to record, process, summarize and report financial data consistent with the assertions of management in the company's financial statements, with a "material weakness" constituting a greater deficiency than a "significant deficiency." Because of this relationship, it is our judgment that an aggregation of significant deficiencies could constitute a material weakness in a company's internal control over financial reporting.[42/]

E84. The Board considered the SEC's choice to cross-reference to generally accepted auditing standards (GAAS) and the attestation standards as the means of defining these terms, rather than defining them outright within the final rules, noteworthy as it relates to the question of whether any disconnect could result between auditors' and managements' evaluations if the Board changed the definitions in its standards. Because the standard changes the definition of these terms within the interim standards, the Board believes the definitions are, therefore, changed for both auditors' and managements' purposes.

[42/] See footnote 73 to *Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports,* Securities and Exchange Commission Release No. 33-8238 (June 5, 2003) [68 FR 36636].

E85. The Board noted that commenters who were concerned that the definitions in the proposed standard set too low of a threshold for significant deficiencies and material weaknesses believed that the proposed standard required that each control deficiency be evaluated in isolation. The intent of the proposed standard was that control deficiencies should first be evaluated individually; the determination as to whether they are significant deficiencies or material weaknesses should be made considering the effects of compensating controls. The effect of compensating controls should be taken into account when assessing the likelihood of a misstatement occurring and not being prevented or detected. The proposed standard illustrated this type of evaluation, including the effect of compensating controls when assessing likelihood, in the examples in Appendix D. Based on the comments received, however, the Board determined that additional clarification within the standard was necessary to emphasize the importance of considering compensating controls when evaluating the likelihood of a misstatement occurring. As a result, the note to paragraph 10 was added.

E86. The Board concluded that considering the effect of compensating controls on the likelihood of a misstatement occurring and not being prevented or detected sufficiently addressed the concerns that the definitions set too low a threshold. For example, several issuer commenters cited concerns that the proposed definitions precluded a rational cost-benefit analysis of whether to correct a deficiency. These issuers believed they would be compelled to correct deficiencies (because the deficiencies would be considered to be at least significant deficiencies) in situations in which management had made a previous conscious decision that the costs of correcting the deficiency outweighed the benefits. The Board observed that, in cases in which management has determined not to correct a known deficiency based on a cost-benefit analysis, effective compensating controls usually lie at the heart of management's decision. The standard's use of "likelihood" in the definition of a significant deficiency or material weakness accommodates such a consideration of compensating controls. If a deficiency is effectively mitigated by compensating controls, then the likelihood of a misstatement occurring and not being prevented or detected may very well be remote.

E87. The Board disagreed with comments that "more than inconsequential" was too low a threshold; however, the Board decided the term "inconsequential" needed additional clarity. The Board considered the term "inconsequential" in relation to the SEC's guidance on audit requirements and materiality. Section 10A(b)(1)(B)[43/] describes the auditor's communication requirements when the auditor detects or otherwise becomes aware of information indicating that an illegal act has or may have occurred, "unless the illegal act is clearly inconsequential." Staff Accounting Bulletin (SAB) No. 99, *Materiality*, provides the most recent and definitive guidance on the concept of materiality as it relates to the financial reporting of a public company. SAB No. 99 uses the term "inconsequential" in several places to draw a distinction between amounts that

---

[43/] See Section 10A of the Securities Exchange Act of 1934, 15 U.S.C., 78j-1.

are not material. SAB No. 99 provides the following guidance to assess the significance of a misstatement:

> Though the staff does not believe that registrants need to make finely calibrated determinations of significance with respect to immaterial items, plainly it is "reasonable" to treat misstatements whose effects are clearly inconsequential differently than more significant ones.

E88. The discussion in the previous paragraphs provided the Board's context for using "material" and "more than inconsequential" for the magnitude thresholds in the standard's definitions. "More than inconsequential" indicates an amount that is less than material yet has significance.

E89. The Board also considered the existing guidance in the Board's interim standards for evaluating materiality and accumulating audit differences in a financial statement audit. Paragraph .41 of AU sec. 312, *Audit Risk and Materiality in Conducting an Audit,* states:

> In aggregating likely misstatements that the entity has not corrected, pursuant to paragraphs .34 and .35, the auditor may designate an amount below which misstatements need not be accumulated. This amount should be set so that any such misstatements, either individually or when aggregated with other such misstatements, would not be material to the financial statements, after the possibility of further undetected misstatements is considered.

E90. The Board considered the discussion in AU sec. 312 that spoke specifically to evaluating differences individually *and in the aggregate*, as well as to considering the possibility of additional undetected misstatements, important distinguishing factors that should be carried through to the evaluation of whether a control deficiency represents a significant deficiency because the magnitude of the potential misstatement is more than inconsequential.

E91. The Board combined its understanding of the salient concepts in AU sec. 312 and the SEC guidance on materiality to develop the following definition of inconsequential:

> A misstatement is *inconsequential* if a reasonable person would conclude, after considering the possibility of further undetected misstatements, that the misstatement, either individually or when aggregated with other misstatements, would clearly be immaterial to the financial statements. If a reasonable person could not reach such a conclusion regarding a particular misstatement, that misstatement is *more than inconsequential.*

E92. Finally, the inclusion of *annual or interim financial statements* in the definitions rather than just "annual financial statements" was intentional and, in the Board's opinion, closely aligned with the spirit of what Section 404 seeks to accomplish. However, the Board decided that this choice needed clarification within the auditing standard. The Board did not intend the inclusion of the interim financial statements in the definition to require the auditor to perform *an audit of internal control over financial reporting* at each interim date. Rather, the Board believed that the SEC's definition of internal control over financial reporting included all financial reporting that a public company makes publicly available. In other words, internal control over financial reporting includes controls over the preparation of annual and quarterly financial statements. Thus, an evaluation of internal control over financial reporting as of year-end encompasses controls over the annual financial reporting and quarterly financial reporting as such controls exist at that point in time.

E93. Paragraphs 76 and 77 of the standard clarify this interpretation, as part of the discussion of the period-end financial reporting process. The period-end financial reporting process includes procedures to prepare both annual and quarterly financial statements.

Strong Indicators of Material Weaknesses and DeFacto Significant Deficiencies

E94. The proposed standard identified a number of circumstances that, because of their likely significant negative effect on internal control over financial reporting, are significant deficiencies as well as strong indicators that a material weakness exists. The Board developed this list to promote increased rigor and consistency in auditors' evaluations of weaknesses. For the implementation of Section 404 of the Act to achieve its objectives, the public must have confidence that all material weaknesses that exist as of the company's year-end will be publicly reported. Historically, relatively few material weaknesses have been reported by the auditor to management and the audit committee. That condition is partly due to the nature of a financial statement audit. In an audit of only the financial statements, the auditor does not have a detection responsibility for material weaknesses in internal control; such a detection responsibility is being newly introduced for all public companies through Sections 103 and 404 of the Act. However, the Board was concerned about instances in which auditors had identified a condition that should have been, but was not, communicated as a material weakness. The intention of including the list of strong indicators of material weaknesses in the proposed standard was to bring further clarity to conditions that were likely to be material weaknesses in internal control and to create more consistency in auditors' evaluations.

E95. Most commenters were generally supportive of a list of significant deficiencies and strong indicators of the existence of material weaknesses. They believed such a list provided instructive guidance to both management and the auditor. Some commenters, however, disagreed with the proposed approach of providing such a list. They believed that the determination of the significance of a deficiency should be left entirely to auditor judgment. A few commenters requested clarification of the term "strong indicator" and specific guidance on how and when a "strong indicator" could be overcome. A number of commenters expressed various concerns with individual circumstances included in the list.

- *Restatement of previously issued financial statements to reflect the correction of a misstatement*. Some commenters expressed concern about the kinds of restatements that would trigger this provision. A few mentioned the specific instance in which the restatement reflected the SEC's subsequent view of an accounting matter when the auditor, upon reevaluation, continued to believe that management had reasonable support for its original position. They believed this specific circumstance would not necessarily indicate a significant deficiency in internal control over financial reporting. Others commented that a restatement of previously issued financial statements would indicate a significant deficiency and strong indicator of a material weakness *in the prior period* but not necessarily in the current period.

- *Identification by the auditor of a material misstatement in financial statements in the current period that was not initially identified by the company's internal control over financial reporting (even if management subsequently corrects the misstatement)*. Several commenters, issuers and auditors alike, expressed concern about including this circumstance on the list. They explained that, frequently, management is completing the preparation of the financial statements at the same time that the auditor is completing his or her auditing procedures. In the face of this "strong indicator" provision, a lively debate of "who found it first" would ensue whenever the auditor identifies a misstatement that management subsequently corrects. Another argument is that the company's controls would have detected a misstatement identified by the auditor if the controls had an opportunity to operate (that is, the auditor performed his or her testing before the company's controls had an opportunity to operate). Several issuers indicated that they would prevent this latter situation by delaying the auditor's work until the issuers had clearly completed their entire period-end financial reporting process – a delay they viewed as detrimental.

- *For larger, more complex entities, the internal audit function or the risk assessment function is ineffective*. Several commenters asked for specific factors the auditor was expected to use to assess the effectiveness of these functions.

- *For complex entities in highly regulated industries, an ineffective regulatory compliance function.* Several commenters, particularly issuers in highly regulated industries, objected to the inclusion of this circumstance because they believed this to be outside the scope of internal control over financial reporting. (They agreed that this would be an internal control-related matter, but one that falls into operating effectiveness and compliance with laws and regulations, not financial reporting.) Many of these commenters suggested that this circumstance be deleted from the list altogether. Fewer commenters suggested that this problem could be addressed by simply clarifying that this circumstance is limited to situations in which the ineffective regulatory function relates solely to those aspects for which related violations of laws and regulations could have a direct and material effect on the financial statements.

- *Identification of fraud of any magnitude on the part of senior management*. Several commenters expressed concern that the inclusion of this circumstance created a detection responsibility for the auditor such that the auditor would have to plan and perform procedures to detect fraud *of any magnitude* on the part of senior management. Others expressed concern that identification of fraud on the part of senior management by the company's system of internal control over financial reporting might indicate that controls were operating effectively rather than indicating a significant deficiency or material weakness. Still others requested clarification on how to determine who constituted "senior management."

E96. A couple of commenters also suggested that an ineffective control environment should be added to the list.

E97. The Board concluded that the list of significant deficiencies and strong indicators of material weakness should be retained. Such a list will promote consistency in auditors' and managements' evaluations of deficiencies consistent with the definitions of significant deficiency and material weakness. The Board also decided to retain the existing structure of the list. Although the standard leaves auditor judgment to determine whether those deficiencies are material weaknesses, the existence of one of the listed deficiencies is by definition a significant deficiency. Furthermore, the "strong indicator" construct allows the auditor to factor extenuating or unique circumstances into the evaluation and possibly to conclude that the situation does not represent a material weakness, rather, only a significant deficiency.

E98. The Board decided that further clarification was not necessary within the standard itself addressing specifically how and when a "strong indicator" can be overcome. The term "strong indicator" was selected as opposed to the stronger "presumption" or other such term precisely because the Board did not intend to provide detailed instruction on how to overcome such a presumption. It is, nevertheless, the Board's view that auditors should be biased toward considering the listed circumstances as material weaknesses.

E99. The Board decided to clarify several circumstances included in the list:

- *Restatement of previously issued financial statements to reflect the correction of a misstatement*. The Board observed that the circumstance in which a restatement reflected the SEC's subsequent view of an accounting matter, when the auditor concluded that management had reasonable support for its original position, might present a good example of only a significant deficiency and not a material weakness. However, the Board concluded that requiring this situation to, nonetheless, be considered by definition a significant deficiency is appropriate, especially considering that the primary result of the circumstance being considered a significant deficiency is the communication of the matter to the audit committee. Although the audit committee might already be well aware of the circumstances of any restatement, a restatement to reflect the SEC's view on an accounting matter at least has implications for the quality of the company's accounting principles, which is already a required communication to the audit committee.

With regard to a restatement being a strong indicator of a material weakness in the prior period but not necessarily the current period, the Board disagreed with these comments. By virtue of the restatement occurring during the current period, the Board views it as appropriate to consider that circumstance a strong indicator that a material weakness existed during the current period. Depending on the circumstances of the restatement, however, the material weakness may also have been corrected during the current period. The construct of the standard does not preclude management and the auditor from determining that the circumstance was corrected prior to year-end and, therefore, that a material weakness did not exist at year-end. The emphasis here is that the circumstance is a strong indicator that a material weakness exists; management and the auditor will separately need to determine whether it has been corrected. The Board decided that no further clarification was needed in this regard.

- *Identification by the auditor of a material misstatement in financial statements in the current period that was not initially identified by the company's internal control over financial reporting (even if management subsequently corrects the misstatement)*. Regarding the "who-found-it-first" dilemma, the Board recognizes that this circumstance will present certain implementation challenges. However, the Board decided that none of those challenges were so significant as to require eliminating this circumstance from the list.

  When the Board developed the list of strong indicators, the Board observed that it is not uncommon for the financial statement auditor to identify material misstatements in the course of the audit that are corrected by management prior to the issuance of the company's financial statements. In some cases, management has relied on the auditor to identify misstatements in certain financial statement items and to propose corrections in amount, classification, or disclosure. With the introduction of the requirement for management and the auditor to report on the effectiveness of internal control over financial reporting, it becomes obvious that this situation is unacceptable, unless management is willing to accept other than an unqualified report on the internal control effectiveness. (This situation also raises the question as to the extent management may rely on the annual audit to produce accurate and fair financial statements without impairing the auditor's independence.) This situation is included on the list of strong indicators because the Board believes it will encourage management and auditors to evaluate this situation with intellectual honesty and to recognize, first, that the company's internal control should provide reasonable assurance that the company's financial statements are presented fairly in accordance with generally accepted accounting principles.

Timing might be a concern for some issuers. However, to the extent that management takes additional steps to ensure that the financial information is correct prior to providing it to their auditors, this may, at times, result in an improved control environment. When companies and auditors work almost simultaneously on completing the preparation of the annual financial statements and the audit, respectively, the role of the auditor can blur with the responsibility of management. In the year-end rush to complete the annual report, some companies might have come to rely on their auditors as a "control" to further ensure no misstatements are accidentally reflected in the financial statements. The principal burden seems to be for management's work schedule and administration of their financial reporting deadlines to allow the auditor sufficient time to complete his or her procedures.

Further, if the auditor initially identified a material misstatement in the financial statements but, given the circumstances, determined that management ultimately would have found the misstatement, the auditor could determine that the circumstance was a significant deficiency but not a material weakness. The Board decided to retain the provision that this circumstance is at least a significant deficiency because reporting such a circumstance to the audit committee would always be appropriate.

- *For larger, more complex entities, the internal audit function or the risk assessment function is ineffective*. Relatively few commenters requested clarification on how to evaluate these functions. The Board expects that most auditors will not have trouble making this evaluation. Similar to the audit committee evaluation, this evaluation is not a separate evaluation of the internal audit or risk assessment functions but, rather, is a way of requiring the auditor to speak up if either of these functions is obviously ineffective at an entity that needs them to have an effective monitoring or risk assessment component. Unlike the audit committee discussion, most commenters seemed to have understood that this was the context for the internal audit and risk assessment function evaluation. Nonetheless, the Board decided to add a clarifying note to this circumstance emphasizing the context.

- *For complex entities in highly regulated industries, an ineffective regulatory compliance function*. The Board decided that this circumstance, as described in the proposed standard, would encompass aspects that are outside internal control over financial reporting (which would, of course, be inappropriate for purposes of this standard given its definition of internal control over financial reporting). The Board concluded that this circumstance should be retained, though clarified, to only apply to those aspects of an ineffective regulatory compliance function that could have a material effect on the financial statements.

- *Identification of fraud of any magnitude on the part of senior management.* The Board did not intend to create any additional detection responsibility for the auditor; rather, it intended that this circumstance apply to fraud on the part of senior management that came to the auditor's attention, regardless of amount. The Board decided to clarify the standard to make this clear. The Board noted that identification of fraud by the company's system of internal control over financial reporting might indicate that controls were operating effectively, except when that fraud involves senior management. Because of the critical role of tone-at-the-top in the overall effectiveness of the control environment and due to the significant negative evidence that fraud of any magnitude on the part of senior management reflects on the control environment, the Board decided that it is appropriate to include this circumstance in the list, regardless of whether the company's controls detected the fraud. The Board also decided to clarify who is included in "senior management" for this purpose.

E100. The Board agreed that an ineffective control environment was a significant deficiency and a strong indicator that a material weakness exists and decided to add it to the list.

Independence

E101. The proposed standard explicitly prohibited the auditor from accepting an engagement to provide an internal control-related service to an audit client that has not been specifically pre-approved by the audit committee. In other words, the audit committee would not be able to pre-approve internal control-related services as a category. The Board did not propose any specific guidance on permissible internal control-related services in the proposed standard but, rather, indicated its intent to conduct an in-depth evaluation of independence requirements in the future and highlighted its ability to amend the independence information included in the standard pending the outcome of that analysis.

E102. Comments were evenly split among investors, auditors, and issuers who believed the existing guidance was sufficient versus those who believed the Board should provide additional guidance. Commenters who believed existing guidance was sufficient indicated that the SEC's latest guidance on independence needed to be given more time to take effect given its recency and because existing guidance was clear enough. Commenters who believed more guidance was necessary suggested various additions, from more specificity about permitted and prohibited services to a sweeping ban on any internal control-related work for an audit client. Other issuers commented about auditors participating in the Section 404 implementation process at their audit clients in a manner that could be perceived as affecting their independence.

E103. Some commenters suggested that the SEC should change the pre-approval requirements on internal control-related services to specific pre-approval. Another commenter suggested that specific pre-approval of all internal control-related services would pose an unreasonable burden on the audit committee and suggested reverting to pre-approval by category.

E104. The Board clearly has the authority to set independence standards as it may deem necessary or appropriate in the public interest or for the protection of investors. Given ongoing concerns about the appropriateness of auditors providing these types of services to audit clients, the fact-specific nature of each engagement, and the critical importance of ongoing audit committee oversight of these types of services, the Board continues to believe that specific pre-approval of internal control-related services is a logical step that should not pose a burden on the audit committee beyond that which effective oversight of financial reporting already entails. Therefore, the standard retains this provision unchanged.

Requirement for Adverse Opinion When a Material Weakness Exists

E105. The existing attestation standard (AT sec. 501) provides that, when the auditor has identified a material weakness in internal control over financial reporting, depending on the significance of the material weakness and its effect on the achievement of the objectives of the control criteria, the auditor may qualify his or her opinion ("except for the effect of the material weakness, internal control over financial reporting was effective") or express an adverse opinion ("internal control over financial reporting was not effective").

E106. The SEC's final rules implementing Section 404 state that, "Management is not permitted to conclude that the registrant's internal control over financial reporting is effective if there are one or more material weaknesses in the registrant's internal control over financial reporting." In other words, in such a case, management must conclude that internal control over financial reporting is not effective (that is, a qualified or "except-for" conclusion is not acceptable).

E107. The Board initially decided that the reporting model for the auditor should follow the required reporting model for management. Therefore, because management is required to express an "adverse" conclusion in the event a material weakness exists, the auditor's opinion also must be adverse. The proposed standard did not permit a qualified audit opinion in the event of a material weakness.

E108. Comments received on requiring an adverse opinion when a material weakness exists were split. A large number affirmed that this seemed to be the only logical approach, based on a philosophical belief that if a material weakness exists, then internal control over financial reporting is ineffective. These commenters suggested that permitting a qualified opinion would be akin to creating another category of control deficiency—material weaknesses that were really material (resulting in an adverse opinion) and material weaknesses that weren't so material (resulting in a qualified opinion).

E109. A number of commenters agreed that the auditor's report must follow the same model as management' reporting, but they believe strongly that the SEC's guidance for management accommodated either a qualified or adverse opinion when a material weakness existed.

E110. These commenters cited Section II.B.3.c of the SEC Final Rule and related footnote no. 72:

> The final rules therefore preclude management from determining that a company's internal control over financial reporting is effective if it identifies one or more material weaknesses in the company's internal control over financial reporting. This is consistent with interim attestation standards. See AT sec. 501.

E111. They believe this reference to the interim attestation standard in the SEC Final Rule is referring to paragraph .37 of AT sec. 501, which states, in part,

> Therefore, the presence of a material weakness will preclude the practitioner from concluding that the entity has effective internal control. However, depending on the significance of the material weakness and its effect on the achievement of the objectives of the control criteria, the practitioner may qualify his or her opinion (that is, express an opinion that internal control is effective "except for" the material weakness noted) or may express an adverse opinion.

E112. Their reading of the SEC Final Rule and the interim attestation standard led them to conclude that it would be appropriate for the auditor to express either an adverse opinion or a qualified "except-for" opinion about the effectiveness of the company's internal control over financial reporting depending on the circumstances.

E113. Some commenters responded that they thought a qualified opinion would be appropriate in certain cases, such as an acquisition close to year-end (too close to be able to assess controls at the acquiree).

E114. After additional consultation with the SEC staff about this issue, the Board decided to retain the proposed reporting model in the standard. The primary reason for that decision was the Board's continued understanding that the SEC staff would expect only an adverse conclusion from management (not a qualified conclusion) in the event a material weakness existed as of the date of management's report.

E115. The commenters who suggested that a qualified opinion should be permitted in certain circumstances, such as an acquisition close to year-end, were essentially describing scope limitations. The standard permits a qualified opinion, a disclaimer of opinion, or withdrawal from the engagement if there are restrictions on the scope of the engagement. As it relates specifically to acquisitions near year-end, this is another case in which the auditor's model needs to follow the model that the SEC sets for management. The standard added a new paragraph to Appendix B permitting the auditor to limit the scope of his or her work (without referring to a scope limitation in the auditor's report) in the same manner that the SEC permits management to limit its assessment. In other words, if the SEC permits management to exclude an entity acquired late in the year from a company's assessment of internal control over financial reporting, then the auditor could do the same.

Rotating Tests of Controls

E116. The proposed standard directed the auditor to perform tests of controls on "relevant assertions" rather than on "significant controls." To comply with those requirements, the auditor would be required to apply tests to those controls that are important to presenting each relevant assertion in the financial statements. The proposed standard emphasized controls that affect relevant assertions because those are the points at which misstatements could occur. However, it is neither necessary to test all controls nor to test redundant controls (unless redundancy is itself a control objective, as in the case of certain computer controls). Thus, the proposed standard encouraged the auditor to identify and test controls that addressed the primary areas in which misstatements could occur, yet limited the auditor's work to only the necessary controls.

E117. Expressing the extent of testing in this manner also simplified other issues involving extent of testing decisions from year to year (the so-called "rotating tests of controls" issue). The proposed standard stated that the auditor should vary testing from year to year, both to introduce unpredictability into the testing and to respond to changes at the company. However, the proposed standard maintained that each year's audit must stand on its own. Therefore, the auditor must obtain evidence of the effectiveness of controls over all relevant assertions related to all significant accounts and disclosures every year.

E118. Auditors and investors expressed support for these provisions as described in the proposed standard. In fact, some commenters compared the notion of rotating tests of control in an audit of internal control over financial reporting to an auditor testing accounts receivable only once every few years in a financial statement audit. Permitting so-called rotation of testing would compromise the auditor's ability to obtain reasonable assurance that his or her opinion was correct.

E119. Others, especially issuers concerned with limiting costs, strongly advocated some form of rotating tests of controls. Some commenters suggested that the auditor should have broad latitude to perform some cursory procedures to determine whether any changes had occurred in controls and, if not, to curtail any further testing in that area. Some suggested that testing as described in the proposed standard should be required in the first year of the audit (the "baseline" year) and that in subsequent years the auditor should be able to reduce the required testing. Others suggested progressively less aggressive strategies for reducing the amount of work the auditor should be required to perform. In fact, several commenters (primarily internal auditors) described "baselining" controls as an important strategy to retain. They argued, for example, that IT application controls, once tested, could be relied upon (without additional testing) in subsequent years as long as general controls over program changes and access controls were effective and continued to be tested.

E120. The Board concluded that each year's audit must stand on its own. Cumulative audit knowledge is not to be ignored; some natural efficiencies will emerge as the auditor repeats the audit process. For example, the auditor will frequently spend less time to obtain the requisite understanding of the company's internal control over financial reporting in subsequent years compared with the time necessary in the first year's audit of internal control over financial reporting. Also, to the extent that the auditor has previous knowledge of control weaknesses, his or her audit strategy should, of course, reflect that knowledge. For example, a pattern of mistakes in prior periods is usually a good indicator of the areas in which misstatements are likely to occur. However, the absence of fraud in prior periods is not a reasonable indicator of the likelihood of misstatement due to fraud.

E121. However, the auditor needs to test controls every year, regardless of whether controls have obviously changed. Even if nothing else changed about the company – no changes in the business model, employees, organization, etc. – controls that were effective last year may not be effective this year due to error, complacency, distraction, and other human conditions that result in the inherent limitations in internal control over financial reporting.

E122. What several commenters referred to as "baselining" (especially as it relates to IT controls) is more commonly referred to by auditors as "benchmarking." This type of testing strategy for application controls is not precluded by the standard. However, the Board believes that providing a description of this approach is beyond the scope of this standard. For these reasons, the standard does not address it.

Mandatory Integration with the Audit of the Financial Statements

E123. Section 404(b) of the Act provides that the auditor's attestation of management's assessment of internal control shall not be the subject of a separate engagement. Because the objectives of and work involved in performing both an attestation of management's assessment of internal control over financial reporting and an audit of the financial statements are closely interrelated, the proposed auditing standard introduced an integrated audit of internal control over financial reporting and audit of financial statements.

E124. However, the proposed standard went even further. Because of the potential significance of the information obtained during the audit of the financial statements to the auditor's conclusions about the effectiveness of internal control over financial reporting, the proposed standard stated that the auditor could not audit internal control over financial reporting without also auditing the financial statements. (However, the proposed standard retained the auditor's ability to audit *only* the financial statements, which might be necessary in the case of certain initial public offerings.)

E125. Although the Board solicited specific comment on whether the auditor should be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements, few commenters focused on the significance of the potentially negative evidence that would be obtained during the audit of the financial statements or the implications of this prohibition. Most commenters focused on the wording of Section 404(b), which indicates that the auditor's attestation of management's assessment of internal control over financial reporting shall not be the subject of a separate engagement. Based on this information, most commenters saw the prohibition in the proposed standard as superfluous and benign.

E126. Several commenters recognized the importance of the potentially negative evidence that might be obtained as part of the audit of the financial statements and expressed strong support for requiring that an audit of financial statements be performed to audit internal control over financial reporting.

E127. Others recognized the implications of this prohibition and expressed concern: What if a company wanted or needed an opinion on the effectiveness of internal control over financial reporting as of an interim date? For the most part, these commenters (primarily issuers) objected to the implication that an auditor would have to audit a company's financial statements as of an interim date to enable him or her to audit and report on its internal control over financial reporting as of that same interim date. Other issuers expressed objections related to their desires to engage one auditor to provide an opinion on the effectiveness of internal control over financial reporting and another to audit the financial statements. Others requested clarification about which guidance would apply when other forms of internal control work were requested by companies.

E128. The Board concluded that an auditor should perform an audit of internal control over financial reporting only when he or she has also audited company's financial statements. The auditor *must* audit the financial statements to have a high level of assurance that his or her conclusion on the effectiveness of internal control over financial reporting is correct. Inherent in the reasonable assurance provided by the auditor's opinion on internal control over financial reporting is a responsibility for the auditor to plan and perform his or her work to obtain reasonable assurance that material weaknesses, if they exist, are detected. As previously discussed, this standard states that the identification by the auditor of a *material misstatement* in the financial statements that was not initially identified by the company's internal control over financial reporting, is a strong indicator of a material weakness. Without performing a financial statement audit, the auditor would not have reasonable assurance that he or she had detected all material misstatements. The Board believes that allowing the auditor to audit internal control over financial reporting without also auditing the financial statements would not provide the auditor with a high level of assurance and would mislead investors in terms of the level of assurance obtained.

E129. In response to other concerns, the Board noted that an auditor can report on the effectiveness of internal control over financial reporting using existing AT sec. 501 for purposes other than satisfying the requirements of Section 404. This standard supersedes AT sec. 501 only as it relates to complying with Section 404 of the Act.

E130. Although reporting under the remaining provisions of AT sec. 501 is currently permissible, the Board believes reports issued for public companies under the remaining provisions of AT sec. 501 will be infrequent. In any event, additional rulemaking might be necessary to prevent confusion that might arise from reporting on internal control engagements under two different standards. For example, explanatory language could be added to reports issued under AT sec. 501 to clarify that an audit of financial statements was not performed in conjunction with the attestation on internal control over financial reporting and that such a report is not the report resulting from an audit of internal control over financial reporting performed in conjunction with an audit of the financial statements under this standard. This report modification would alert report readers, particularly if such a report were to appear in an SEC filing or otherwise be made publicly available, that the assurance obtained by the auditor in that engagement is different from the assurance that would have been obtained by the auditor for Section 404 purposes. Another example of the type of change that might be necessary in separate rulemaking to AT sec. 501 would be to supplement the performance directions to be comparable to those in this standard. Auditors should remain alert for additional rulemaking by the Board that affects AT sec. 501.

(b) Statutory Basis

The statutory basis for the proposed rule is Title I of the Act.

B. Board's Statement on Burden on Competition

The Board does not believe that the proposed rule will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Pursuant to Sections 404 and 103 of the Act, each registered public accounting firm that prepares or issues the audit report for an issuer shall attest to, and report on, the assessment of internal control made by the management of the issuer. Although compliance with the proposed rule will impose costs, those costs are necessary in order to implement the requirements of Sections 103 and 404 of the Act and will be imposed in a way that does not disproportionately or unnecessarily burden competition.

C. Board's Statement on Comments on the Proposed Rule Received from Members, Participants or Others

The Board released the proposed rule for public comment in PCAOB Release No. 2003-017 (October 7, 2003). A copy of PCAOB Release No. 2003-017 and the comment letters received in response to the PCAOB's request for comment are available on the PCAOB's web site at www.pcaobus.org. The Board received 193 written comments. The Board has clarified and modified certain aspects of the proposed rule and the instructions to the related form in response to comments it received, as discussed in Appendix E, *Background and Basis for Conclusions,* to the proposed rule.

III. Date of Effectiveness of the Proposed Rule and Timing for Commission Action

Within 60 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to

90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Board consents the Commission will:

(a) by order approve such proposed rule; or

(b) institute proceedings to determine whether the proposed rule should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule is consistent with the requirements of Title I of the Act. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW, Washington, DC 20549-0609. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule that are filed with the Commission, and all written communications relating to the proposed rule between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the PCAOB. All submissions should refer to File No. PCAOB-2004-03 and should be submitted within [ ] days.

By the Commission.

PROPOSED AUDITING STANDARD – AN AUDIT OF INTERNAL CONTROL OVER FINANCIAL REPORTING PERFORMED IN CONJUNCTION WITH AN AUDIT OF FINANCIAL STATEMENTS	PCAOB Release No. 2003-017 October 7, 2003 PCAOB Rulemaking Docket Matter No. 008

Summary: The Public Company Accounting Oversight Board (the "Board" or "PCAOB") has proposed an Auditing Standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements.* If adopted, this standard would be the standard on attestation engagements referred to in Section 404(b) as well as Section 103(a)(2)(A) of the Sarbanes-Oxley Act of 2002.

Public Comment: Interested persons may submit written comments to the Board. Such comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, N.W., Washington, D.C. 20006-2803. Comments may also be submitted by e-mail to comments@pcaobus.org or through the Board's Web site at www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 008 in the subject or reference line and should be received by the Board no later than 5:00 PM (EST) on November 21, 2003.

Board Contacts: Thomas Ray, Deputy Chief Auditor (202/207-9112; rayt@pcaobus.org), Laura Phillips, Assistant Chief Auditor (202/207-9111; phillipsl@pcaobus.org).

Section 404(a) of the Sarbanes-Oxley Act of 2002 (the Act), and the Securities and Exchange Commission's ("SEC") related implementing rules,[1/] require the management of a public company to assess the effectiveness of the company's internal control over financial reporting, as of the end of the company's most recent fiscal year. Section 404(a) of the Act also requires management to include in the company's annual report to shareholders management's conclusion as a result of that assessment about whether the company's internal control is effective. Companies considered accelerated filers (seasoned U.S. companies with public float exceeding $75 million) are required to comply with the internal control reporting and disclosure requirements of Section 404(a) of the Act for fiscal years ending on or after June 15, 2004. Other companies (including smaller companies, foreign private issuers and companies with only registered debt securities) have until fiscal years ending on or after April 15, 2005, to comply with these internal control reporting and disclosure requirements.

Sections 103(a)(2)(A) and 404(b) of the Act direct the Board to establish professional standards governing the independent auditor's attestation and reporting on management's assessment of the effectiveness of internal control over financial reporting.

An attestation, in a general sense, is an expert's communication of a conclusion about the reliability of someone else's assertion. For example, a financial statement audit is a form of attestation. In a financial statement audit, the auditor attests to the fairness of a company's financial statements, which are assertions by management regarding the financial performance and financial condition of the company. To accomplish this task, the auditor evaluates the process management uses to prepare the company's financial statements and gathers evidence to support or refute the assertions. Similarly, the auditor's attestation on management's assessment of the effectiveness of the company's internal control over financial reporting involves evaluating management's assessment process and gathering evidence regarding the design and operating effectiveness of the company's internal control, determining whether that evidence supports or refutes management's assessment, and opining as to whether management's assessment is fair.

When the Board adopted its interim attestation standards in Rule 3300T on a transitional basis, the Board adopted a pre-existing standard governing an auditor's

---

[1/] See Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports, Securities and Exchange Commission Release No. 33-8238 (June 5, 2003) [68 FR 36636].

attestation on internal control. As part of the Board's process of evaluating that pre-existing standard, the Board convened a public roundtable discussion on July 29, 2003 to discuss issues and hear views related to reporting on internal control. The participants at the roundtable included representatives from public companies, accounting firms, investor groups and regulatory organizations. As a result of comments made at the roundtable, advice from the Board's staff, and other input the Board received, the Board determined that the pre-existing standard governing an auditor's attestation on internal control was insufficient for purposes of effectively implementing the requirements of Section 404 of the Act, and for the Board to appropriately discharge the Board's standard-setting obligations under Section 103(a) of the Act. In response, the Board developed this proposed auditing standard.

An Integrated Audit of the Financial Statements and Internal Control Over Financial Reporting

Section 404(b) of the Act provides that the auditor's attestation of management's assessment of internal control shall not be the subject of a separate engagement. Because the objectives of and work involved in performing both an attestation of management's assessment of internal control and an audit of the financial statements are closely interrelated, the proposed auditing standard introduces an integrated audit of internal control and financial statements. The proposed auditing standard is an integrated standard, addressing both the work that is required to audit internal control over financial reporting and the relationship of that audit to the audit of the financial statements. Nevertheless, the integrated audit results in two opinions: one on internal control over financial reporting and one on the financial statements, which may be expressed in a combined report or in separate reports. Throughout the proposed standard, the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting is referred to as the "audit of internal control over financial reporting."

To conduct and report on the results of an audit of internal control over financial reporting pursuant to the proposed standard, the auditor also would be required to audit the company's financial statements. That is because of the potential significance of the information that might be obtained during the audit of the financial statements to the auditor's conclusions about the effectiveness of internal control.

In evaluating the proposed standard, the Board seeks comments on 31 questions. The Board requests respondents to answer the questions and provide explanations as to why they agree or disagree with the positions the Board has taken in the proposed standard. The first three of these questions are presented below.

Questions regarding an integrated audit of the financial statements and internal control over financial reporting:

1. Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting?

2. Should the auditor be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements?

3. Rather than requiring the auditor to also complete an audit of the financial statements, would an appropriate alternative be to require the auditor to perform work with regard to the financial statements *comparable to* that required to complete the financial statement audit?

Internal Control Over Financial Reporting

Internal control is a process designed to provide reasonable assurance regarding the achievement of a company's objectives in the areas of financial reporting reliability, operating efficiency and effectiveness, and compliance with applicable laws and regulations. The SEC's rules implementing Section 404(a) of the Act, and the Board's proposed auditing standard, focus on those objectives exclusively related to the reliability of a company's external financial reporting. This subset of internal control is commonly referred to as *internal control over financial reporting*.

Internal control over financial reporting consists of company policies and procedures that are designed and operated to provide reasonable assurance – that is, a high but not absolute level of assurance – about the reliability of a company's financial reporting and its process for preparing and fairly presenting financial statements in accordance with generally accepted accounting principles. It includes policies and procedures that pertain to the maintenance of accounting records, the authorization of receipts and disbursements, and the safeguarding of assets.

Management is required to base its assessment of the effectiveness of the company's internal control over financial reporting on a suitable, recognized control framework established by a body of experts that followed due-process procedures to develop the framework. In the United States, the Committee of Sponsoring Organizations ("COSO") of the Treadway Commission has published *Internal Control – Integrated Framework*. Known as the "COSO Report," it provides a suitable framework for purposes of management's assessment. Because of the frequency with which management of public companies is expected to use COSO as the framework for the assessment, the directions in the proposed standard are based on the COSO framework. Other suitable frameworks have been published in other countries and likely will be published in the future. Although different frameworks may not contain exactly the same elements as COSO, they should have elements that encompass all of COSO's general themes. The auditor should therefore be able to apply the concepts and guidance in the proposed standard in a reasonable manner if management uses a framework other than COSO.

Regardless of how well any system of internal control over financial reporting is designed and operating, it cannot provide absolute assurance of achieving financial reporting objectives because of inherent limitations. These inherent limitations exist because internal control over financial reporting is a process that involves human diligence and compliance and, consequently, can be intentionally circumvented.

The Costs and Benefits of Internal Control

Effective internal control over financial reporting is essential for a company to effectively manage its affairs and to fulfill its obligation to its investors. A company's management and its owners – public investors – and others must be able to rely on the financial information reported by companies to make decisions.

Reliable financial reporting adds value and also can offset risks in a cost-beneficial manner. Evaluating a company's internal control over financial reporting is sometimes costly, but there also are many far-reaching benefits. Some of the benefits of a company developing, maintaining, and improving its system of internal control include identifying cost-ineffective procedures, reducing costs of processing accounting information, increasing productivity of the company's financial function, and simplifying financial control systems. It also may result in fewer financial statement restatements and less litigation. The primary benefit, however, is to provide the company, its management, its board and audit committee, and its owners and other stakeholders with a reasonable basis to rely on the company's financial reporting. The integrity of financial reporting represents the foundation upon which this country's public markets are built.

As companies develop processes to assist management in its internal control assessment under Section 404 and in its quarterly certification under Section 302, the annual assessment process should result in a continuous strengthening of internal controls while simultaneously reducing the future time and costs of compliance with these requirements. The Board anticipates that most companies will experience the highest cost of complying with Section 404 during the first year of implementation.

The Board is sensitive to the possible effects of the proposed standard on small and medium-sized companies. Internal control is not "one-size-fits-all," and the nature and extent of controls that are necessary depend, to a great extent, on the size and complexity of the company. Large, complex, multi-national companies, for example, are likely to need extensive and sophisticated internal control systems. In smaller companies, or in companies with less complex operations, the ethical behavior and core values of a senior management group that is directly involved in daily interactions with both internal and external parties might reduce the need for elaborate internal control systems. For a smaller, less complex company, the Board expects that the auditor will exercise reasonable professional judgment in determining the extent of the audit of internal control and perform only those tests that are necessary to ascertain the effectiveness of the company's internal control.

<u>Question regarding the costs and benefits of internal control</u>:

4. Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?

The Audit of Internal Control Over Financial Reporting

An audit of internal control over financial reporting is an extensive process involving several steps. It is integrated with the audit of the financial statements. Under the proposed auditing standard, these steps would include: planning the audit; evaluating the process management used to perform its assessment of internal control effectiveness; obtaining an understanding of the internal control; evaluating the effectiveness of both the design and operation of the internal control; and forming an opinion about whether internal control over financial reporting is effective.

The auditor's objective is to express an opinion about whether management's assessment, or conclusion, on the effectiveness of internal control over financial reporting is stated fairly, in all material respects. To support his or her opinion, the auditor must obtain evidence about whether internal control over financial reporting is effective. The auditor obtains this evidence in several ways, including evaluating and testing management's assessment process; evaluating and testing work on internal control performed by others, such as internal auditors; and testing the effectiveness of the controls himself or herself.

Question regarding the audit of internal control over financial reporting:

5. Should the Board, generally or in this proposed standard, specify the level of competence and training of the audit personnel that is necessary to perform specified auditing procedures effectively? For example, it would be inappropriate for a new, inexperienced auditor to have primary responsibility for conducting interviews of a company's senior management about possible fraud.

Evaluating Management's Assessment

A natural starting place for the audit of a company's internal control over financial reporting is an evaluation of management's assessment. This evaluation provides the auditor with confidence that management has a basis for expressing its opinion on the effectiveness of internal control, provides information that will help the auditor understand the company's internal control, helps the auditor plan the work necessary to complete the audit, and provides some of the evidence the auditor will use to support his or her opinion.

The objective of an audit of internal control over financial reporting is to form an opinion "as to whether management's assessment of the effectiveness of the registrant's internal control over financial reporting is fairly stated in all material respects."[2/] Further, Section 103(a)(2)(A)(iii) of the Act requires the auditor's report to present an evaluation of whether the internal control structure provides reasonable assurance that transactions are recorded as necessary, among other requirements. Importantly, the auditor's conclusion will pertain directly to whether the auditor can agree with management that internal control is effective, not just to the adequacy of management's process for determining whether internal control is effective. An auditing process restricted to evaluating what management has done would not provide the auditor with a sufficiently high level of assurance that management's conclusion is

[2/] See SEC Regulation S-X 2-02(f), 17 C.F.R. 210.2-02(f).

correct. The auditor needs to evaluate management's assessment process to be satisfied that management has an appropriate basis for its conclusion. The auditor, however, also needs to test the effectiveness of internal control to be satisfied that management's conclusion is correct and, therefore, fairly stated. Indeed, as the Board heard at the internal control roundtable, investors expect the independent auditor to test whether the company's internal control over financial reporting is effective, and the proposed auditing standard would require the auditor to do so.

Nevertheless, the work that management performs in connection with its assessment can have a significant effect on the nature, timing, and extent of the work the independent auditor will need to perform. The proposed auditing standard would allow the auditor to use, to a reasonable degree, the work performed by others, including management. Thus, the more extensive and reliable management's assessment is, the less extensive and costly the auditor's work will need to be.

As a part of evaluating management's assessment, the auditor must evaluate the adequacy of management's documentation of the design of the internal controls and their assessment of internal control effectiveness. The proposed standard would provide the auditor with criteria to use in evaluating the adequacy of management's documentation. Inadequate documentation would be considered an internal control deficiency, the severity of which the auditor would evaluate just as he or she would be required to evaluate the severity of other internal control deficiencies.

<u>Questions regarding evaluation of management's assessment</u>:

6. Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?

7. Is it appropriate that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation?

8. Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?

Planning the Audit

Planning the audit of internal control over financial reporting allows the auditor to develop an overall strategy for the audit. Many factors enter into audit planning, and the proposed auditing standard includes among them the auditor's knowledge of the company, matters affecting the company's industry, matters relating to the company's business, and the extent of recent changes in the company's operations or internal control over financial reporting. Armed with a good understanding of these types of factors, the auditor is in a position to effectively design the nature, timing, and scope of the audit.

Obtaining an Understanding of Internal Control Over Financial Reporting

The auditor should understand how internal control over financial reporting is designed and operates to evaluate and test its effectiveness. The auditor obtains a substantial amount of this understanding when evaluating management's assessment process.

The auditor also should be satisfied, however, that the controls *actually* have been implemented and are operating as they were designed to operate. Thus, while inquiry of company personnel and a review of management's assessment provide the auditor with an understanding of how the system of internal control is designed and operates, other procedures are necessary for the auditor to confirm his or her understanding.

The proposed auditing standard would have the auditor confirm his or her understanding by performing procedures that include making inquiries of and observing the personnel who actually perform the controls; reviewing documents that are used in, and that result from, the application of the controls; and comparing supporting documents (for example, sales invoices, contracts, and bills of lading) to the accounting records. The most effective means of accomplishing this objective is for the auditor to perform "walkthroughs" of the company's significant processes. For this reason, and because of the importance of several other objectives that walkthroughs accomplish, the proposed auditing standard would require the auditor to perform walkthroughs in each audit of internal control over financial reporting.

In a walkthrough, the auditor traces all types of company transactions and events – both those that are routine and recurring and those that are unusual – from origination, through the company's accounting and information systems and financial report preparation processes, to their being reported in the company's financial statements. Walkthroughs provide the auditor with audit evidence that supports or refutes his or her understanding of the process flow of transactions, the design of controls, and whether controls are in operation. Walkthroughs also help the auditor to determine whether his or her understanding is complete and provide information necessary for the auditor to evaluate the effectiveness of the design of the internal control over financial reporting.

Because of the judgment that a walkthrough requires and the significance of the objectives that walkthroughs allow the auditor to achieve, the proposed auditing standard would require the auditor to perform the walkthroughs himself or herself. In other words, the proposed auditing standard would not allow the auditor to use the work performed by management or others to satisfy the requirement to perform walkthroughs.

As a part of obtaining an understanding of internal control, the auditor also determines which controls should be tested, either by the auditor, management or others. The proposed standard would require that the auditor obtain evidence about the operating effectiveness of internal control over financial reporting for all relevant assertions for all significant accounts or disclosures. This requirement relies heavily on two concepts: significant account and relevant assertion.

The auditing standards implicitly recognize that some accounts are more significant than others. The proposed standard provides additional direction on how to determine significant accounts for purposes of the audit of internal control over financial reporting. In short, the auditor begins by performing a quantitative evaluation of accounts at the financial-statement caption or note-disclosure level. Then the auditor expands the evaluation to include qualitative factors, such as differing risks, company organization structure, and other factors, which would likely result in additional accounts being identified as significant.

Financial statement amounts and disclosures embody what are known as financial statement assertions. Does the asset exist, or did the transaction occur? Has the company included all loans outstanding in its loans payable account? Have marketable investments been properly valued? Does the company have the rights to the accounts receivable, and are the loans payable the proper obligation of the company? Are the amounts in the financial statements appropriately presented, and is there adequate disclosure about them? This process will allow the auditor to identify the relevant financial statement assertions for which the company should have controls.

Identifying "relevant" assertions is a familiar process for experienced auditors. Because of the importance relevant assertions play in the required extent of testing, the proposed standard provides additional direction.

Questions regarding obtaining an understanding of internal control over financial reporting:

9. Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?

10. Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors, or others?

Testing and Evaluating the Effectiveness of the Design of Controls

To be effective, internal controls must be designed properly and all the controls necessary to provide reasonable assurance about the fairness of a company's financial statements should be in place and performed by appropriately qualified people who have the authority to implement them. At some point during the internal control audit, the auditor will need to make a determination as to whether the controls would be effective if they were operated as designed, and whether all the necessary controls are in place. This is known as *design effectiveness*.

The procedures the auditor performs to test and evaluate design effectiveness include inquiries of company personnel, observation of internal controls, walkthroughs, and a specific evaluation of whether the controls are likely to prevent or detect financial statement misstatements if they operate as designed. The proposed auditing standard would adopt these methods of testing and evaluating design effectiveness. The last step is especially important because it calls for the auditor to apply professional judgment and knowledge of and experience with internal control over financial reporting to his or her understanding of the company's controls.

Testing Operating Effectiveness

The proposed standard would require the auditor to obtain evidence about the design and operating effectiveness of controls related to all relevant financial statement assertions for all significant accounts and disclosures in the financial statements.

For this reason, in addition to being satisfied as to the effectiveness of the design of the internal controls, the auditor performs tests of controls to obtain evidence about the operating effectiveness of the controls. These tests include a mix of inquiries of appropriate company personnel, inspection of relevant documentation, such as sales orders and invoices, observation of the controls in operation, and reperformance of the application of the control.

The proposed standard directs required tests of controls to "relevant assertions" rather than to "significant controls." To comply with the requirements of the proposed standard, the auditor would apply tests to those controls that are important to fairly presenting each relevant assertion in the financial statements. It is neither necessary to test all controls nor is it necessary to test redundant controls (unless redundancy is itself a control objective, as in the case of certain computer controls). However, the emphasis is better placed on addressing relevant assertions (because those are the points where misstatements could occur) rather than significant controls. This emphasis encourages the auditor to identify and test controls that address the primary areas where misstatements could occur yet limits the auditor's work to only the necessary controls.

Expressing the extent of testing in this manner also resolves the issue of the extent of testing from year to year (the so-called "rotating tests of controls" issue). The proposed standard states that the auditor should vary testing from year to year, both to introduce unpredictability into the testing and to respond to changes at the company. However, each year's audit must stand on its own. Therefore, the auditor must obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year.

The Act requires management's assessment and the auditor's opinion to address whether internal control was effective as of the end of the company's most recent fiscal year, in other words, as of a point-in-time. Performing all of the testing on December 31 is neither practical nor appropriate, however. To form a basis to express an opinion about whether internal control was effective as of a point in time requires the auditor to obtain evidence that the internal control operated effectively over an appropriate period of time. The proposed auditing standard recognizes this and allows the auditor to obtain evidence about operating effectiveness at different times throughout the year, provided that the auditor updates those tests or obtains other evidence that the controls still operated effectively at the end of the company's fiscal year.

Also at the Board's roundtable, public company representatives and auditors indicated that providing examples of extent of testing decisions would be helpful. In response, paragraph B41 of Appendix B of the proposed standard includes several examples.

<u>Question regarding testing operating effectiveness</u>:

11. Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?

Using the Work of Management and Others

The auditor also should consider other relevant and available information about internal control when evaluating internal control effectiveness. In this regard, the proposed standard would require the auditor to understand the results of procedures performed by management and others, for example, internal auditors and third parties working under the direction of management, on internal control over financial reporting. At a minimum, the auditor should consider the results of those tests in designing the audit approach and ultimately in forming an opinion on the effectiveness of internal control over financial reporting. To this end, the proposed standard would require the auditor to review all reports issued during the year by internal audit (or similar functions, such as loan review in a financial institution) that address internal controls over financial reporting and evaluate any internal control deficiencies identified in those reports.

Additionally, the auditor may use the results of testing by others to alter the nature, timing, and extent of his or her tests of controls. At the Board's roundtable, public company representatives indicated their concern that at some point, the Board's standard could require an excessive amount of retesting by the auditor in order to use the work of others, especially internal auditors. Public company representatives were particularly sensitive to this issue because of its direct bearing on their total cost to comply with Section 404. On the other hand, the federal bank regulator representative indicated that experience with the Federal Deposit Insurance Corporation Improvement Act of 1991, which requires internal control reporting similar to Section 404 of the Act, revealed instances where the auditor used the work of internal auditors to an inappropriately high degree, where the auditor himself or herself did not perform sufficient work to provide a reasonable basis for his or her opinion.

The proposed standard describes an evaluation process, focusing on the competence and objectivity of the persons who performed the work, that the auditor should use in determining the extent to which he or she may use the work of others. The proposed standard also describes two principles that limit the auditor's use of the work of others. First, the proposed standard defines three categories of controls and the extent to which the auditor may use the work of others for each of these categories: (1) controls for which the auditor should not rely on the work of others, such as controls in the control environment and controls specifically intended to prevent or detect fraud that is reasonably likely to have a material effect on the company's financial statements, (2) controls for which the auditor may rely on the work of others but his or her reliance on the work of others should be limited, such as controls over nonroutine transactions that are considered high risk because they involve judgments and estimates, and (3) controls for which the auditor's reliance on the work of others is not specifically limited, such as controls over routine processing of significant accounts. Second, the proposed standard requires that, on an overall basis, the auditor's own work must provide the principal evidence for the audit opinion.

These two principles interact to provide the auditor with flexibility in using the work of others and also prevent inappropriate over-reliance on the work of others. Although the proposed standard requires that the auditor reperform some of the tests performed by others in order to use their work, it does not set any specific requirement on the extent of the reperformance. For example, the standard does not require that the auditor reperform tests of controls over all significant accounts for which the auditor uses the work of others. Rather, the proposed standard relies on the auditor's judgment and the interaction of the two principles discussed above to determine the appropriate extent of reperformance.

<u>Questions regarding using the work of management and others</u>:

12. To what extent should the auditor be permitted or required to use the work of management and others?

13. Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?

14. Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

15. Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?

16. Is the requirement for the auditor to obtain the principle evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?

Evaluating the Results

Both management and the auditor may identify deficiencies in internal control over financial reporting. An *internal control deficiency* exists when the design or operation of a control does not allow the company's management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis.

The proposed auditing standard would require the auditor to evaluate the severity of all identified internal control deficiencies because such deficiencies can have an effect on the auditor's overall conclusion about whether internal control is effective. The auditor also has a responsibility to make sure that certain parties, such as the audit committee, are aware of internal control deficiencies that rise to a certain level of severity.

Under the proposed auditing standard, an internal control deficiency (or a combination of internal control deficiencies) should be classified as a *significant deficiency* if, by itself or in combination with other internal control deficiencies, it results in more than a remote likelihood of a misstatement of the company's annual or interim financial statements that is more than inconsequential in amount will not be prevented or detected. A significant deficiency should be classified as a *material weakness* if, by itself or in combination with other internal control deficiencies, it results in more than a remote likelihood that a material misstatement in the company's annual or interim financial statements will not be prevented or detected.

At the Board's roundtable, issuers, investors and auditors all suggested that while the existing definitions of internal control deficiencies are familiar and not fundamentally flawed, additional guidance that provides additional specificity would be very helpful. However, the participants acknowledged that articulating such guidance is very difficult, particularly because the process of evaluating deficiencies and whether they constitute significant deficiencies or material weaknesses will necessarily always involve judgment. The Roundtable participants suggested that the Board provide additional guidance in the form of examples.

The proposed auditing standard's definitions of significant deficiency and material weakness focus on likelihood and magnitude as the framework for evaluating deficiencies. The Board anticipates that this framework will bring increased consistency to these evaluations yet preserve an appropriate degree of judgment. Additionally, the proposed standard includes examples in Appendix D of how these definitions would be applied in several different scenarios.

The proposed auditing standard requires the auditor to communicate in writing to the company's audit committee all significant deficiencies and material weaknesses of which the auditor is aware. The auditor also is required to communicate to the company's management, in writing, all internal control deficiencies of which he or she is aware and to notify the audit committee that such communication has been made.

The proposed standard identifies a number of circumstances that, because of their likely significant negative effect on internal control over financial reporting, are significant deficiencies as well as *strong indicators* that a material weakness exists, including –

- *Ineffective oversight of the company's external financial reporting and internal control over financial reporting by the company's audit committee.* Effective oversight by the company's board of directors, including its audit committee, is essential to the company's achievement of its objectives and is an integral part of a company's monitoring of internal control. In addition to requiring the audit committee to oversee the company's external financial reporting and internal control over financial reporting, the Act makes the audit committee directly responsible for the appointment, compensation, and oversight of the work of the auditor. Thus, an ineffective audit committee can have detrimental effects on the company and its internal control over financial reporting, as well as on the independent audit. The proposed auditing standard requires the auditor to evaluate factors related to the effectiveness of the audit committee's oversight of the external financial reporting process and internal control over financial reporting, including whether audit committee members act independently from management.

- *Material misstatement in the financial statements not initially identified by the company's internal controls.* The audit of internal control over financial reporting and the audit of the company's financial statements are an integrated activity and are required by the Act to be a single engagement. The results of the work performed in a financial statement audit provide evidence to support the auditor's conclusions on the effectiveness of internal control, and vice-versa. Therefore, if the auditor discovers a material misstatement in the financial statements as a part of the audit of the financial statements, the auditor should consider whether internal control over financial reporting is effective. That the company's internal controls did not first detect the misstatement is a strong indicator that the company's internal control over financial reporting is not effective.

- *Significant deficiencies that have been communicated to management and the audit committee, but that remain uncorrected after some reasonable period of time.* Significant deficiencies in internal control that are not also determined to be material weaknesses, as defined in the proposed auditing standard, are not so severe as to require the auditor to conclude that internal control is ineffective. However, these deficiencies are, nonetheless, significant, and the auditor should expect the company to correct them. If management fails to correct significant deficiencies within a reasonable period of time, that situation reflects poorly on tone-at-the-top as well as the control environment. Additionally, the significance of the deficiency can change over time (for example, increases in sales volume or added complexity in sales transaction structures would increase the severity of a significant deficiency affecting sales).

Questions regarding evaluating results:

17. Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?

18. Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?

19. Is it necessary for the auditor to evaluate the severity of all identified internal control deficiencies?

20. Is it appropriate to require the auditor to communicate all internal control deficiencies (not just material weaknesses and significant deficiencies) to management in writing?

21. Are the matters that the Board has classified as strong indicators that a material weakness in internal control exists appropriately classified as such?

22. Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?

23. Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?

24. If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the audit engagement?

Forming an Opinion and Reporting

If the auditor has identified no material weaknesses in internal control after having performed all of the procedures that the auditor considers necessary in the circumstances, then the proposed standard would permit the auditor to express an unqualified opinion that management's assessment of the effectiveness of internal control over financial reporting is fairly stated in all material respects. In the event that the auditor could not perform all of the procedures that the auditor considers necessary in the circumstances, then the proposed standard would permit the auditor to either qualify or disclaim an opinion. If an overall opinion cannot be expressed, the proposed auditing standard would require the auditor to explain why.[3/]

No Disclosure of Significant Deficiencies

The auditor's report must follow the same disclosure model as management's assessment. The SEC's final rules implementing Section 404 only require management's assessment to disclose material weaknesses, not significant deficiencies. Therefore, because management's assessment will disclose only material weaknesses, the auditor's report should disclose only material weaknesses.[4/]

Material Weaknesses Result in Adverse Opinion

The existing attestation standard provides that when the auditor has identified a material weakness in internal control, depending on the significance of the material weakness and its effect on the achievement of the objectives of the control criteria, the auditor may qualify his or her opinion ("except for the effect of the material weakness,

---

[3/] See also SEC Regulation S-X 2-02(f), 17 C.F. R. § 212.2-02(f) ("The attestation report on management's assessment of internal control over financial reporting shall be dated, signed manually, identify the period covered by the report and clearly state the opinion of the accountant as to whether management's assessment of the effectiveness of the registrant's internal control over financial reporting is fairly stated in all material respects, or must include an opinion to the effect that an overall opinion cannot be expressed. If an overall opinion cannot be expressed, explain why.").

[4/] It should be noted, however, that the final rules indicated that an aggregation of significant deficiencies may constitute a material weakness in a company's internal control over financial reporting, in which case disclosure would be required. See Final Rule: Management's Reports in Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports, Securities and Exchange Commission Release No. 33-8238, (June 5, 2003) [68 FR 36636].

internal control was effective") or may express an adverse opinion ("internal control over financial reporting was not effective").

The SEC's final rules implementing Section 404 state that "Management is not permitted to conclude that the registrant's internal control over financial reporting is effective if there are one or more material weaknesses in the registrant's internal control over financial reporting." In other words, in such a case, management must conclude that internal control is not effective (i.e., a qualified or "except for" conclusion is not acceptable).

Similar to the reporting of significant deficiencies, the reporting model for the auditor must follow the required reporting model for management. Therefore, because management is required to express an "adverse" conclusion in the event a material weakness exists, the auditor's opinion must also be adverse; the proposed standard does not permit a qualified audit opinion in the event of a material weakness.

Questions regarding forming an opinion and reporting:

25. Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management?

26. Are there circumstances where a qualified "except for" conclusion would be appropriate?

27. Do you agree with the position that when the auditor issues a non-standard opinion, such as an adverse opinion, that the auditor's opinion should speak directly to the effectiveness of the internal control over financial reporting rather than to whether management's assessment is fairly stated?

Fraud Considerations in an Audit of Internal Control Over Financial Reporting

Strong internal controls provide better opportunities to detect and deter fraud. For example, many frauds resulting in financial statement restatement relied upon the ability of management to exploit weaknesses in internal control. To the extent that the internal control reporting required by Section 404 can help restore investor confidence by improving the effectiveness of internal controls (and reducing the incidence of fraud), the auditing standard on performing the audit of internal control over financial reporting should emphasize controls that prevent or detect errors as well as fraud. For this reason, the proposed standard specifically addresses and emphasizes the importance of controls over possible fraud and requires the auditor to test controls specifically intended to prevent or detect fraud that is reasonably likely to result in material misstatement of the financial statements.

Auditor Independence

The Act, and the SEC rules implementing Section 404 of the Act, require the auditor to be independent to perform an audit of internal control over financial reporting. Under the SEC's Rule 2-01 on auditor independence, an auditor impairs his or her independence if the auditor audits his or her own work, including any work on designing or implementing an audit client's internal control system. The proposed standard explicitly prohibits the auditor from accepting an engagement to provide an internal control-related non-audit service to an audit client that has not been specifically pre-approved by the audit committee. In other words, the audit committee would not be able to pre-approve internal control-related non-audit services as a category. Rather, each specific engagement would be required to be specifically pre-approved.

While the Board has not proposed to provide specific guidance on permissible internal control-related non-audit services in the proposed standard on the audit of internal control, the Board intends to conduct an in-depth evaluation of independence requirements in the future. The Board may, as a result of its evaluation, amend the independence information included in the proposed auditing standard.

Questions regarding auditor independence:

28. Should the Board provide specific guidance on independence and internal control-related non-audit services in the context of this proposed standard?

29. Are there any specific internal control-related non-audit services the auditor should be prohibited from providing to an audit client?

Auditor's Responsibilities With Regard to Management's Certifications

The proposed standard also outlines the auditor's work related to management's quarterly and annual certifications required by Section 302 of the Act.

PCAOB Public Company Accounting Oversight Board

A company's principal executive and financial officers are responsible for internal control over financial reporting. Section 302 of the Act emphasizes this responsibility by requiring these parties to certify, quarterly and annually, their responsibility, among others, for establishing and maintaining internal control over financial reporting and for disclosing changes in the company's internal control over financial reporting that occurred during the most recent quarter (or the fourth quarter, for the annual certification) that have materially affected, or are likely to affect materially, the company's internal control over financial reporting.

The Board believes that the auditor's responsibility for management's disclosure of a material weakness corrected by the end of one of the first three quarters should be similar to the auditor's responsibility regarding material misstatements of interim financial statements. Under AU sec. 722, *Interim Financial Information*,[5/] the auditor performs limited procedures on the interim financial information which are substantially less than an audit; however, if the auditor became aware that the financial statements are materially misstated, the auditor would be required to communicate the matter to management. If management fails to respond appropriately, the auditor would be required to communicate the matter to the audit committee. If the audit committee did not respond appropriately, the auditor would be required to evaluate whether or not to resign from the engagement. The auditor also has responsibilities under AU sec. 317, *Illegal Acts by Clients*, and Section 10A of the Securities Exchange Act of 1934. If the auditor became aware that a material weakness in internal control had been identified and corrected yet management had not appropriately disclosed the correction in its report as indicated in the quarterly certification, that situation would be closely analogous to the auditor's knowledge of a material financial statement misstatement. Therefore, the responsibilities should run a similar path.

The auditor has a different level of responsibility as it relates to changes in internal control made in the fourth quarter. While the auditor is not required to issue a

---

[5/] The Board adopted the generally accepted auditing standards, as described in the American Institute of Certified Public Accountants' ("AICPA") Auditing Standards Board's ("ASB") Statement on Auditing Standards No. 95, *Generally Accepted Auditing Standards*, as in existence on April 16, 2003, on an initial, transitional basis. The Statements on Auditing Standards promulgated by the ASB have been codified into the AICPA *Professional Standards*, Volume 1, as AU sections 100 through 900. References in this Release to AU sections refer to those generally accepted auditing standards, as adopted on an interim basis in PCAOB Rule 3200T.

report on his or her quarterly review procedures, the auditor is required to report on management's annual assessment based on his or her audit of internal control. If, as a result of the auditor's audit procedures, the auditor becomes aware that management's annual report fails to appropriately disclose a material weakness that was corrected during the fourth quarter, the auditor has the responsibility to modify his or her audit report on internal control. Assume, for example, that management identified and corrected a material weakness during the fourth quarter and that the material weakness was corrected in time for both management and the auditor to have a sufficient period of time to test the operating effectiveness of the correction. Management makes the conclusion in its report on its assessment of internal control over financial reporting that internal control over financial reporting is effective; the auditor's opinion is unqualified, stating that management's assessment is stated fairly. However, if the company's annual report fails to also disclose the material weakness that was identified and corrected in the fourth quarter, and the auditor concludes that the disclosure is material information, the auditor would have to include an explanatory paragraph in his or her report describing the material weakness that was identified and corrected in the fourth quarter and note it was omitted from the company's annual report.

Questions regarding auditor's responsibilities with regard to management's certifications:

30. Are the auditor's differing levels of responsibility as they relate to management's quarterly certifications versus the annual (fourth quarter) certification, appropriate?

31. Is the scope of the auditor's responsibility for quarterly disclosures about the internal control over financial reporting appropriate?

Effective Date of the Proposed Standard

Companies considered accelerated filers (seasoned U.S. companies with public float exceeding $75 million) are required to comply with the internal control reporting and disclosure requirements of Section 404 of the Act for fiscal years ending on or after June 15, 2004. Accordingly, auditors engaged to audit the financial statements of such companies for fiscal years ending on or after June 15, 2004, also are required to audit and report on the company's internal control over financial reporting as of the end of such fiscal year. Other companies (including smaller companies, foreign private issuers and companies with only registered debt securities) have until fiscal years ending on or after April 15, 2005, to comply with these internal control reporting and disclosure requirements and the requirement for audit reporting on internal control is similarly delayed. The proposed standard would be effective at the same time as these requirements. Early implementation of the proposed standard would be permitted.

Opportunity for Public Comment

The Board will seek comment on the proposed standard for a 45-day period. Interested persons are encouraged to submit their views to the Board. Written comments should be sent to Office of the Secretary, PCAOB, 1666 K Street, N.W., Washington, D.C. 20006-2803. Comments may also be submitted by e-mail to comments@pcaobus.org or through the Board's Web site at www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 008 in the subject or reference line and should be received by the Board no later than 5:00 PM (EST) on November 21, 2003.

The Board will carefully consider all comments received. Following the close of the comment period, the Board will determine whether to adopt a final standard, with or without amendments. Any final standard adopted will be submitted to the Securities and Exchange Commission for approval. Pursuant to Section 107 of the Act, proposed rules of the Board do not take effect unless approved by the Commission. Standards are deemed to be rules under the Act.

*   *   *

On the 7th day of October, in the year 2003, the foregoing was, in accordance with the bylaws of the Public Company Accounting Oversight Board,

ADOPTED BY THE BOARD.

/s/ J. Gordon Seymour

J. Gordon Seymour
Acting Secretary

October 7, 2003

APPENDIX –

Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with An Audit of Financial Statements

PCAOB
Public Company Accounting Oversight Board

Appendix – Proposed Auditing Standard

AUDITING AND RELATED PROFESSIONAL PRACTICE STANDARDS

Proposed Auditing Standard –

AN AUDIT OF INTERNAL CONTROL OVER FINANCIAL REPORTING PERFORMED IN CONJUNCTION WITH AN AUDIT OF FINANCIAL STATEMENTS

PCAOB
Public Company Accounting Oversight Board

STATEMENT OF AUTHORITY

The Public Company Accounting Oversight Board (the "Board") is a private-sector, non-profit corporation, created by the Sarbanes-Oxley Act of 2002 (the "Act") to oversee the audits of public companies in order to protect the interests of investors and further the public interest in the preparation of informative, fair, and independent audit reports.

The Board has adopted Rule 3100 to require all registered public accounting firms to adhere to the Board's auditing and related professional practice standards (including interim professional standards) in the audits of public companies. Any registered public accounting firm that fails to adhere to the Board's standards is subject to disciplinary proceedings in accordance with Section 105 of the Act and the Board's rules.

Reference in the Board's standards to "the auditor" means a registered public accounting firm or an associated person of such a firm as defined in the Act and the Board's rules, unless specifically stated otherwise.

Reference in the Board's standards to the AICPA Professional Standards refers to those professional standards as they existed on April 16, 2003, the date the Board adopted them as interim standards.

The Board has proposed Rule 3101 regarding the use of certain terms in the Board's standards.[*] The Board's standards use the words "must," "shall," or "is required" to indicate unconditional obligations. The auditor's performance of these obligations is necessary to the accomplishment of the audit. The standards use the word "should" to indicate obligations that are presumptively mandatory. The auditor must comply with the requirements of this nature specified in the Board's standards unless the auditor can demonstrate, by verifiable objective and documented evidence, that alternative actions he or she followed in the circumstances were sufficient to achieve the objectives of the standard and serve adequately to protect the interests of investors and further the preparation of informative, fair, and independent audit reports. The Board uses the words "may," "might," "could," or other terms and phrases to describe actions and procedures that the auditor has a professional obligation to consider. Matters described in this fashion require the auditor's attention and understanding; how and whether they are implemented in the audit will depend on the exercise of professional judgment in the circumstances. Additionally, appendices to the Board's standards are an integral part of the standard and carry the same authoritative weight as the body of the standard.

This Statement of Authority is an integral part of the Board's auditing and related professional practice standards.

---

Appendix C – Safeguarding of Assets

Appendix D – Examples of Material Weaknesses and Significant Deficiencies

Appendix E – Special Internal Control Over Financial Reporting Considerations for Small and Mid-Sized Companies

1. This standard establishes requirements that apply when an auditor is engaged to audit both a company's financial statements and management's assessment of the effectiveness of internal control over financial reporting.[1]

2. A company subject to the reporting requirements of the Securities Exchange Act of 1934 is required to include in its annual report a report of management on the company's internal control over financial reporting**.** Registered investment companies, issuers of asset-backed securities, and nonpublic companies are not subject to the reporting requirements mandated by Section 404 of the Sarbanes-Oxley Act (the Act) of 2002 (PL 107-204). The report of management is required to contain management's assessment of the effectiveness of the company's internal control over financial reporting as of the end of the company's most recent fiscal year, including a statement as to whether the company's internal control over financial reporting is effective. The auditor that audits the company's financial statements included in the annual report is required to attest to and report on management's assessment. The company is required to file the auditor's attestation report as part of the annual report.

3. This standard is the standard on attestation engagements referred to in Section 404(b) of the Act.[2] Throughout this standard, the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting required by

---

[1] This standard supersedes Chapter 5, "Reporting on an Entity's Internal Control Over Financial Reporting" of *Statement on Standards for Attestation Engagements No. 10, Attestation Standards: Revision and Recodification* (AICPA*, Professional Standards,* Vol. 1, AT sec. 501), as it relates to performing an audit (referred to in AT sec. 501 as an "examination") of the design and operating effectiveness of internal control over financial reporting. This standard also supersedes *Statement on Auditing Standards No. 60*, *Communication of Internal Control Related Matters Noted in an Audit* (AICPA, *Professional Standards,* Vol. 1, AU sec. 325). This standard requires that, for public companies, the auditor cannot audit internal control over financial reporting without also auditing the financial statements. However, the auditor may audit the financial statements without also auditing internal control over financial reporting. When an auditor is engaged to audit only the financial statements of a public company, this standard does not apply. However, in that situation, the auditor should follow this standard as it relates to the definition of a deficiency in internal control over financial reporting, a significant deficiency, and a material weakness, as well as the required communications of these matters described herein.

[2] This standard is also the standard referred to in Section 103(a)(2)(A)(iii).

Section 404(b) of the Act is referred to as the *audit of internal control over financial reporting*.[3]

Auditor's Objective in an Audit of Internal Control Over Financial Reporting

4. The auditor's objective in an audit of internal control over financial reporting is to express an opinion on management's assessment of the effectiveness of the company's internal control over financial reporting. To form a basis for expressing such an opinion, the auditor must plan and perform the audit to obtain reasonable assurance about whether the company maintained, in all material respects, effective internal control over financial reporting as of the date specified in management's assessment.

5. To obtain reasonable assurance, the auditor evaluates the assessment performed by management and obtains and evaluates evidence about whether the internal control over financial reporting is designed and operated effectively. The auditor obtains this evidence from a number of sources, including using the work performed by management in making its assessment, internal auditors and others under the direction of management, and performing auditing procedures himself or herself.

Definitions Related to Internal Control Over Financial Reporting

6. For purposes of management's assessment and the audit of internal control over financial reporting in this standard, *internal control over financial reporting* is defined as follows:[4]

> A process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar

---

[3] The two terms "audit of internal control over financial reporting" and "attestation of management's assessment of the effectiveness of internal control over financial reporting" refer to the same professional service. The first refers to the process, and the second refers to the result of that process.

[4] This definition is the same one used by the SEC in its rules requiring management to report on internal control over financial reporting, except the word "registrant" has been changed to "company" to conform to the wording in this standard. (See Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports, Securities and Exchange Commission Release No. 33-8238 (June 5, 2003) [68 FR 36636].)

functions, and effected by the company's board of directors, management, and other personnel, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles and includes those policies and procedures that:

(1) Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company;

(2) Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and

(3) Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the company's assets that could have a material effect on the financial statements.

7. An *internal control deficiency* exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis.

- A deficiency in *design* exists when (a) a control necessary to meet the control objective is missing or (b) an existing control is not properly designed so that even if the control operates as designed, the control objective is not always met.

- A deficiency in *operation* exists when a properly designed control does not operate as designed, or when the person performing the control does not possess the necessary authority or qualifications to perform the control effectively.

8. A *significant deficiency* is an internal control deficiency that adversely affects the company's ability to initiate, record, process, or report external financial data reliably in accordance with generally accepted accounting principles. A significant deficiency could be a single deficiency, or a combination of deficiencies, that results in more than a remote likelihood[5] that a misstatement of the annual or interim financial statements that is more than inconsequential in amount will not be prevented or detected.

---

[5] The term "remote likelihood" as used in the definition of *significant deficiency* and *material weakness* has the same meaning as the term "remote" as used

9. A *material weakness* is a significant deficiency that, by itself, or in combination with other significant deficiencies, results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected.

10. Internal controls over financial reporting may be *preventive controls* or *detective controls*.

- Preventive controls have the objective of preventing a misstatement from occurring in the first place.
- Detective controls have the objective of detecting a misstatement that has already occurred.

11. Even well-designed internal controls might not prevent a misstatement from occurring. However, this possibility is countered by detective controls. Therefore, effective internal control over financial reporting often includes a combination of preventive and detective controls to achieve a specific control objective. The auditor's procedures as part of either the audit of internal control over financial reporting or the audit of the financial statements are not part of a company's internal controls over financial reporting.

Framework Used by Management to Conduct Its Assessment

12. Management is required to base its assessment of the effectiveness of the company's internal control over financial reporting on a suitable, recognized control framework established by a body of experts that followed due-process procedures,

---

in Financial Accounting Standards Board Statement No. 5, *Accounting for Contingencies* (FAS No. 5). Paragraph 3 of FAS No. 5 states:

> When a loss contingency exists, the likelihood that the future event or events will confirm the loss or impairment of an asset or the incurrence of a liability can range from probable to remote. This Statement uses the terms *probable, reasonably possible*, and *remote* to identify three areas within that range, as follows:
>
> a. *Probable*. The future event or events are likely to occur.
> b. *Reasonably possible*. The chance of the future event or events occurring is more than remote but less than likely.
> c. *Remote*. The chance of the future events or events occurring is slight.

including the broad distribution of the framework for public comment. In addition to being available to users of management's reports, a framework is suitable only when it:

- Is free from bias;

- Permits reasonably consistent qualitative and quantitative measurements of a company's internal control over financial reporting;

- Is sufficiently complete so that those relevant factors that would alter a conclusion about the effectiveness of a company's internal controls over financial reporting are not omitted; and

- Is relevant to an evaluation of internal control over financial reporting.

Committee of Sponsoring Organizations Framework

13. In the United States, the Committee of Sponsoring Organizations (COSO) of the Treadway Commission has published *Internal Control – Integrated Framework*. Known as the COSO report, it provides a suitable and available framework for purposes of management's assessment. For that reason, the performance and reporting directions in this standard are based on the COSO framework. Other suitable frameworks have been published in other countries and may be developed in the future. Such other suitable frameworks may be used in an audit of internal control over financial reporting. Although different frameworks may not contain exactly the same elements as COSO, they should have elements that encompass, in general, all the themes in COSO. The auditor should therefore be able to apply the concepts and guidance in this standard in a reasonable manner.

14. The COSO perspective on internal control over financial reporting does not ordinarily encompass elements related to the effectiveness and efficiency of operations or compliance with laws and regulations. However, operations and compliance with laws and regulations directly related to the presentation of and required disclosures in financial statements are encompassed in internal control over financial reporting. Additionally, not all controls relevant to financial reporting are accounting controls. The auditor should identify all controls that could materially affect financial reporting, including controls that focus primarily on the effectiveness and efficiency of operations or compliance with laws and regulations and which also have a material effect on the reliability of financial reporting. More information about the COSO framework is included in AU sec. 319, *Consideration of Internal Control in a Financial Statement Audit.*[6]

[6] The Board adopted the generally accepted auditing standards, as described in the AICPA Auditing Standards Board's (ASB) Statement on Auditing

Appendix E discusses special internal control over financial reporting considerations for small and medium-sized companies.

Inherent Limitations in Internal Control Over Financial Reporting

15. Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper management override. Because of such limitations, there is a risk that material misstatements may not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process. Therefore, it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

Reasonable Assurance

16. Management's assessment of the effectiveness of internal control over financial reporting is expressed at the level of *reasonable assurance*. The concept of reasonable assurance is built into the definition of internal control over financial reporting and also is integral to the auditor's opinion.[7] Reasonable assurance includes the understanding that there is a relatively low risk that material misstatements will not be prevented or detected on a timely basis. Although not absolute assurance, reasonable assurance is, nevertheless, a high level of assurance.

17. Just as there are inherent limitations on the assurance that can be provided by effective internal control over financial reporting, as discussed in paragraph 15, there are limitations on the amount of assurance the auditor can obtain as a result of performing his or her audit of internal control over financial reporting. Limitations arise

---

Standards No. 95, *Generally Accepted Auditing Standards,* as in existence on April 16, 2003, on an initial, transitional basis. The Statements on Auditing Standards promulgated by the ASB have been codified into the AICPA *Professional Standards*, Volume 1, as AU sections 100 through 900. References in this standard to AU sections refer to those generally accepted auditing standards, as adopted on an interim basis in PCAOB Rule 3200T.

[7] See Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports, Securities and Exchange Commission Release No. 33-8238 (June 5, 2003) [68 FR 36636] for further discussion of reasonable assurance.

because an audit is conducted on a test basis and requires the exercise of professional judgment. Nevertheless, the audit of internal control over financial reporting includes obtaining an understanding of internal control over financial reporting, testing and evaluating the design and operating effectiveness of internal control over financial reporting, and performing such other procedures as the auditor considers necessary to obtain reasonable assurance about whether internal control over financial reporting is effective.

18. Users of the reports from management and the auditor are entitled to receive the same level of assurance from both management and the auditor. This means that users should expect reasonable assurance that internal control over financial reporting is effective. There is no difference in the level of work or assurance given by the auditor when expressing an opinion on management's assessment of effectiveness or when expressing an opinion directly on the effectiveness of internal control over financial reporting. In either case, the auditor must obtain sufficient evidence in order to provide a reasonable basis for his or her opinion and the use and evaluation of management's assessment is inherent in expressing either opinion. The auditor provides the same level of assurance, though not the same assurance, as management. However, the auditor's assurance does not relieve management of its responsibility for assuring users of its financial reports about the effectiveness of internal control over financial reporting.

Management's Responsibilities in an Audit of Internal Control Over Financial Reporting

19. For the auditor to satisfactorily complete an audit of internal control over financial reporting, management must do the following:[8]

a. Accept responsibility for the effectiveness of the company's internal control over financial reporting,

b. Evaluate the effectiveness of the company's internal control over financial reporting using suitable control criteria,

c. Support its evaluation with sufficient evidence, including documentation, and

---

[8] Management is required to fulfill these responsibilities. See Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports, Securities and Exchange Commission Release No. 33-8238 (June 5, 2003) [68 FR 36636].

d. Present a written assessment about the effectiveness of the company's internal control over financial reporting as of the end of the company's most recent fiscal year.

20. If the auditor concludes that management has not fulfilled the responsibilities enumerated in the preceding paragraph, the auditor should communicate, in writing, to management and the audit committee that the audit of internal control over financial reporting cannot be satisfactorily completed and that he or she is required to disclaim an opinion. Paragraphs 41 through 47 provide information for the auditor on understanding management's process for evaluating and reporting on internal control over financial reporting.

Materiality Considerations in an Audit of Internal Control Over Financial Reporting

21. The auditor should apply the concept of materiality in an audit of internal control over financial reporting at both the financial-statements level and at the individual account-balance level. The auditor uses materiality at the financial-statements level in deciding whether a significant deficiency, or combination of significant deficiencies, in controls is a material weakness. Materiality at the individual account-balance level is relevant to deciding whether a deficiency represents a significant deficiency; accordingly, it is lower than materiality at the financial-statements level.

22. The same conceptual definition of materiality that applies to financial reporting applies to information on internal control over financial reporting, including the relevance of both quantitative and qualitative considerations.[9]

- The quantitative considerations are essentially the same as in an audit of financial statements, and relate to whether misstatements that would not be prevented or detected by internal control over financial reporting, individually or collectively, have a quantitatively material effect on the financial statements.

- The qualitative considerations apply to evaluating materiality with respect to the financial statements and to additional factors that relate to the perceived needs of reasonable persons who will rely on the information.

23. The auditor should be aware that persons who rely on the information concerning internal control over financial reporting include investors, creditors, the board of directors and audit committee, and regulators in specialized industries, such as banking

[9] AU sec. 312, *Audit Risk and Materiality in Conducting an Audit,* provides additional explanation of materiality.

or insurance. Information on internal control over financial reporting is intended to provide an early warning to those inside and outside the company who are in a position to insist on improvements in internal control over financial reporting, such as the audit committee and regulators in specialized industries. The auditor should also be aware that external users are also interested in information on internal control over financial reporting because it enhances the quality of financial reporting and increases their confidence in financial information, particularly financial information issued between annual reports, such as quarterly information.

Fraud Considerations in an Audit of Internal Control Over Financial Reporting

24. The auditor should evaluate all controls specifically intended to address the risks of fraud that are reasonably likely to have a material effect on the company's financial statements, which may be a part of any of the five components of internal control over financial reporting, as discussed in paragraph 50. However, the auditor should place a special emphasis on the evaluation of such controls in the control environment. Controls related to the prevention, identification, and detection of fraud in the control environment often have a pervasive effect on the risk of fraud. Such controls include, but are not limited to, the:

- Controls restraining the inappropriate use of company assets,
- Company's risk assessment processes,
- Code of ethics/conduct provisions, especially those related to conflicts of interest, related party transactions, illegal acts, and the monitoring of the code by management and the audit committee or board,
- Adequacy of the internal audit activity and whether it reports functionally to the audit committee, and
- Adequacy of the company's procedures for handling complaints and for accepting confidential submissions of concerns about questionable accounting or auditing matters.

25. Part of management's responsibility when designing a company's internal control over financial reporting is to design and implement programs and controls to prevent, deter, and detect fraud. Management, along with those who have responsibility for oversight of the financial reporting process (such as the audit committee), should set the proper tone; create and maintain a culture of honesty and high ethical standards; and establish appropriate controls to prevent, deter, and detect fraud. When management

and those responsible for the oversight of the financial reporting process fulfill those responsibilities, the opportunities to commit fraud can be reduced significantly.

26. In an audit of internal control over financial reporting, the auditor's evaluation of controls is interrelated with the auditor's evaluation of controls in a financial statement audit, as required by AU sec. 316, *Consideration of Fraud in a Financial Statement Audit.* Often, controls identified and evaluated by the auditor during the audit of internal control over financial reporting also address or mitigate fraud risks, which the auditor is required to consider in a financial statement audit. If an auditor identifies deficiencies in controls related to the prevention, identification, and detection of fraud during the audit of internal control over financial reporting, the auditor should alter the nature, timing and extent of procedures to be performed during the financial statement audit to be responsive to such deficiencies, as provided in AU sec. 316.

Performing an Audit of Internal Control Over Financial Reporting

27. In an audit of internal control over financial reporting, the auditor must obtain sufficient competent evidence about the design and operating effectiveness of controls related to all relevant financial statement assertions for all significant accounts and disclosures in the financial statements. Because of the potential significance of the information obtained during the audit of the financial statements to the auditor's conclusions about the effectiveness of internal control over financial reporting, the auditor cannot audit internal control over financial reporting without also auditing the financial statements.[10]

28. The auditor must adhere to the general and applicable fieldwork and reporting standards in performing an audit of a company's internal control over financial reporting. This involves the following:

a. Planning the engagement,

b. Evaluating management's assessment process,

c. Obtaining an understanding of internal control over financial reporting,

---

[10] However, the auditor may audit the financial statements without also auditing internal control over financial reporting, as might be necessary, for example, in the case of certain initial public offerings by a company. See the discussion beginning at paragraph 131 for more information about the importance of auditing both internal control over financial reporting as well as the financial statements when the auditor is engaged to audit internal control over financial reporting.

d. Testing and evaluating design effectiveness of internal control over financial reporting,

e. Testing and evaluating operating effectiveness of internal control over financial reporting, and

f. Forming an opinion on the effectiveness of internal control over financial reporting.

29. Even though some requirements of this standard are set forth in a manner that suggests a sequential process, auditing internal control over financial reporting involves a process of gathering, updating, and analyzing information. Accordingly, the auditor may perform some of the procedures and evaluations described in this section on "Performing an Audit of Internal Control Over Financial Reporting" concurrently.

General and Applicable Fieldwork and Reporting Standards

30. The general standards (see AU sec. 150, *Generally Accepted Auditing Standards*) are applicable to an audit of internal control over financial reporting. These standards require technical training and proficiency as an auditor, independence in fact and appearance, and the exercise of due professional care, including professional skepticism.

31. *Technical Training and Proficiency.* To perform an audit of internal control over financial reporting, the auditor should have competence in the subject matter of internal control over financial reporting.

32. *Independence.* The applicable basic principles of independence are that, to remain independent, the auditor must not function in the role of management and must not audit his or her own work. If the auditor were to design or implement controls, that situation would place the auditor in a management role and result in auditing the auditor's own work. This does not necessarily preclude the auditor from making substantive recommendations as to how management may improve the design or operation of the company's internal controls.

33. For any internal control services the auditor provides, management must be actively involved and cannot delegate responsibility for these matters to the auditor. Management's involvement must be substantive and extensive. Management's acceptance of responsibility for documentation and testing performed by the auditor is not enough to satisfy the independence requirements. Additionally, the auditor must not accept an engagement to provide internal control-related services to an issuer audit client that has not been specifically pre-approved by the audit committee.

34. Maintaining independence, in fact and appearance, requires more than ordinary attention in an audit of internal control over financial reporting due to its complexity. Unless the auditor and the audit committee are diligent in evaluating the nature and extent of services provided, the services might violate basic principles of independence and cause an impairment of independence in fact or appearance.

35. The independent auditor and the audit committee have significant and distinct responsibilities for evaluating whether the auditor's services impair independence in fact or appearance. The test for independence in fact is whether the activities would impede the ability of anyone on the engagement team or in a position to influence the engagement team from exercising objective judgment in the audits of the financial statements or internal control over financial reporting. The test for independence in appearance is whether a reasonable investor, knowing all relevant facts and circumstances, would perceive an auditor as having interests which could jeopardize the exercise of objective and impartial judgments on all issues brought to the auditor's attention.

36. *Due Professional Care.* The auditor must exercise due professional care in an audit of internal control over financial reporting. One important tenet of due professional care is exercising professional skepticism. In an audit of internal control over financial reporting, exercising professional skepticism involves essentially the same considerations as in an audit of financial statements. It includes a critical assessment of the work that management has performed in evaluating and testing controls. Inquiry of management and employees is the beginning point for obtaining an understanding of internal control over financial reporting, but inquiry alone is not adequate for reaching a conclusion on any aspect of internal control over financial reporting effectiveness.

37. *Fieldwork and Reporting Standards.* This standard establishes the fieldwork and reporting standards applicable to an audit of internal control over financial reporting.

38. The concept of materiality, as discussed in paragraphs 21 through 23, underlies the application of the general and fieldwork standards.

Planning the Engagement

39. The audit of internal control over financial reporting should be properly planned and assistants, if any, are to be properly supervised. When planning the audit of internal control over financial reporting, the auditor should evaluate how the following matters will affect the auditor's procedures:

- Knowledge of the company's internal control over financial reporting obtained during other engagements.

- Matters affecting the industry in which the company operates, such as financial reporting practices, economic conditions, laws and regulations, and technological changes.

- Matters relating to the company's business, including its organization, operating characteristics, capital structure, and distribution methods.

- The extent of recent changes, if any, in the company, its operations, or its internal control over financial reporting.

- Management's process for assessing the effectiveness of the company's internal control over financial reporting based upon control criteria.

- Preliminary judgments about materiality, risk, and other factors relating to the determination of material weaknesses.

- Internal control deficiencies previously communicated to the audit committee or management.

- Legal or regulatory matters of which the company is aware.

- The type and extent of available evidence related to the effectiveness of the company's internal control over financial reporting.

- Preliminary judgments about the effectiveness of internal control over financial reporting.

- The number of significant business locations or units, including management's documentation and monitoring of controls over such locations or business units. (Appendix B, paragraphs B1 through B16, discusses factors the auditor should evaluate to determine the locations at which to perform auditing procedures.)

40. The auditor could also evaluate additional relevant factors when planning the audit of internal control over financial reporting.

Evaluating Management's Assessment Process

41. The auditor must obtain an understanding of, and evaluate, management's process for assessing the effectiveness of the company's internal control over financial reporting. When obtaining the understanding, the auditor should determine whether management has addressed the following elements:

- Determining which controls should be tested, including controls over relevant assertions related to all significant accounts and disclosures in the financial statements. Generally, such controls include:

  – Controls over initiating, recording, processing, and reporting significant accounts and disclosures and related assertions embodied in the financial statements.

  – Controls over the selection and application of accounting policies that are in conformity with generally accepted accounting principles.

  – Antifraud programs and controls.

  – Controls, including information technology general controls, on which other controls are dependent.

  – Controls over significant nonroutine and nonsystematic transactions, such as accounts involving judgments and estimates.

  – Controls over the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; to initiate, record, and process journal entries in the general ledger; and to record recurring and nonrecurring adjustments to the financial statements (for example, consolidating adjustments, report combinations, and reclassifications).

- Evaluating the likelihood that failure of the control could result in a misstatement and the degree to which other controls, if effective, achieve the same control objectives.

- Determining the locations or business units to include in the evaluation for a company with multiple locations or business units (see paragraphs B1 through B16).

- Evaluating the design effectiveness of controls.

- Evaluating the operating effectiveness of controls based on procedures sufficient to assess their operating effectiveness. Examples of such procedures include testing of the controls by internal audit, testing of controls by others under the direction of management, using a service organization's reports (see paragraphs B24 through B39), or testing by means of a self-assessment process. Inquiry alone is not adequate to complete this evaluation. To evaluate the effectiveness of the company's internal control over financial reporting, management must have evaluated controls over all relevant assertions related to all significant accounts and disclosures.

- Determining the deficiencies in internal control over financial reporting that are of such a magnitude and likelihood of occurrence that they constitute significant deficiencies or material weaknesses.
- Communicating findings to the auditor and to others, if applicable.
- Evaluating whether findings are reasonable and support management's assessment.

42. As part of the understanding and evaluation of management's process, the auditor should obtain an understanding of the results of procedures performed by others. Others include internal audit and third parties working under the direction of management, including other auditors and accounting professionals engaged to perform procedures as a basis for management's assessment.

43. *Documentation.* When determining whether management's documentation provides reasonable support for its assessment, the auditor should evaluate whether such documentation includes the following:

- The design of controls over relevant assertions related to all significant accounts and disclosures in the financial statements. The documentation should include the five components of internal control over financial reporting as discussed in paragraph 50,
- Information about how significant transactions are initiated, recorded, processed and reported,
- Enough information about the flow of transactions to identify where material misstatements due to error or fraud could occur,
- Controls designed to prevent or detect fraud, including who performs the controls and the related segregation of duties,
- Controls over the period-end financial reporting process,
- Controls over safeguarding of assets (see paragraphs C1 through C3), and
- The results of management's testing and evaluation.

44. Documentation might take many forms of presentation and can include a variety of information, including policy manuals, process models, flowcharts, job descriptions, documents, and forms. No one form of documentation is required, and the extent of documentation will vary depending on the size, nature, and complexity of the company.

45. Documentation of the design of controls over relevant assertions related to significant accounts and disclosures is evidence that controls related to management's assessment about the effectiveness of internal control over financial reporting, including changes to those controls, have been identified, are capable of being communicated to those responsible for their performance, and are capable of being monitored by the company. Such documentation also provides the foundation for appropriate communication concerning responsibilities for performing controls and for the company's evaluation of and monitoring of the effective operation of controls.

46. Inadequate documentation of the design of controls over relevant assertions related to significant accounts and disclosures is a deficiency in the company's internal control over financial reporting. As discussed in paragraph 125, the auditor should evaluate this documentation deficiency. The auditor might conclude that the deficiency is only a deficiency, or that the deficiency represents a significant deficiency or a material weakness. In evaluating the deficiency as to its significance, the auditor should determine whether management can demonstrate the monitoring component of internal control over financial reporting in the absence of documentation.

47. Inadequate documentation also could cause the auditor to conclude that there is a limitation on the scope of the engagement.

Obtaining an Understanding of Internal Control Over Financial Reporting[11]

48. The auditor should obtain an understanding of the *design* of specific controls by applying procedures that include:

- Making inquiries of appropriate management, supervisory, and staff personnel,
- Inspecting company documents,
- Observing the application of specific controls, and
- Tracing transactions through the information system relevant to financial reporting.

---

[11] For additional information with regard to special internal control considerations for small and medium-sized companies, see Appendix E.

49. The auditor could also apply additional procedures to obtain an understanding of the design of specific controls.

50. The auditor must obtain an understanding of the design of controls related to each component of internal control over financial reporting, as discussed below.

- *Control Environment.* Because of the pervasive effect of the control environment on the reliability of financial reporting, the auditor's preliminary judgment about its effectiveness often influences the nature, timing, and extent of the tests of operating effectiveness considered necessary. Weaknesses in the control environment should cause the auditor to alter the nature, timing, or extent of tests of operating effectiveness that otherwise would have been performed.

- *Risk Assessment.* When obtaining an understanding of the company's risk assessment process, the auditor should evaluate whether management has identified the risks of material misstatement in the significant accounts and disclosures and related assertions of the financial statements and has implemented controls to prevent or detect material misstatements. For example, the risk assessment process should address how management considers the possibility of unrecorded transactions or identifies and analyzes significant estimates recorded in the financial statements. Risks relevant to reliable financial reporting also relate to specific events or transactions.

- *Control Activities*. The auditor's understanding of control activities relates to the controls that management has implemented to prevent or detect material misstatement in the accounts and disclosures and related assertions of the financial statements. For the purposes of evaluating the effectiveness of internal control over financial reporting, the auditor's understanding of control activities encompasses a broader range of accounts and disclosures than what is normally obtained for the financial statement audit.

- *Information and Communication*. The auditor's understanding of management's information and communication involves understanding the same systems and processes that he or she addresses in an audit of financial statements. In addition, this understanding includes a greater emphasis on comprehending the safeguarding controls and the processes for authorization of transactions and the maintenance of records, as well as the period-end financial reporting process (discussed further beginning at paragraph 71).

- *Monitoring***.** The auditor's understanding of management's monitoring of controls extends to and includes its monitoring of all controls, including control activities, which management has identified and designed to prevent or detect material misstatement in the accounts and disclosures and related assertions of the financial statements.

51. Some controls (such as company-level controls, described in paragraph 53) might have a pervasive effect on achieving many overall objectives of the control criteria. For example, information technology general controls over program development, program changes, computer operations, and access to programs and data help ensure that specific controls over the processing of transactions are operating effectively. In contrast, other controls are designed to achieve specific objectives of the control criteria. For example, management generally establishes specific controls, such as accounting for all shipping documents, to ensure that all valid sales are recorded.

52. The auditor should focus on combinations of controls, in addition to specific controls in isolation, in assessing whether the objectives of the control criteria have been achieved. The absence or inadequacy of a specific control designed to achieve the objectives of a specific criterion might not be a deficiency if other controls specifically address the same criterion. Further, when one or more controls achieve the objectives of a specific criterion, the auditor might not have to evaluate other controls designed to achieve those same objectives.

53. *Identifying Company-Level Controls.* Company-level controls are controls such as the following:

- Control environment, including tone at the top, the assignment of authority and responsibility, consistent policies and procedures, and company-wide programs, such as codes of conduct and fraud prevention, that apply to all locations and business units,
- Management's risk assessment process,
- Centralized processing and controls, including shared service environments,
- Monitoring results of operations,
- Monitoring of controls, including activities of the internal audit function, the audit committee, and self-assessment programs,
- The period-end financial reporting process, and
- Board-approved policies that address significant business control and risk management practices.

54. Controls that exist at the company-level often have a pervasive impact on controls at the process, transaction, or application level. For that reason, as a practical consideration, it may be appropriate for the auditor to test and evaluate the design effectiveness of company-level controls first, because the results of that work might affect the way the auditor evaluates the other aspects of internal control over financial reporting.

55. Testing company-level controls alone is not sufficient for the purpose of expressing an opinion on the effectiveness of a company's internal control over financial reporting.

56. *Evaluating the Effectiveness of the Audit Committee's Oversight of the Company's External Financial Reporting and Internal Control Over Financial Reporting.*[12] The company's audit committee plays an important role within the control environment and monitoring components of internal control over financial reporting. Within the control environment, the existence of an effective audit committee is essential to setting a positive tone at the top. Within the monitoring component, an effective audit committee is crucial to challenging the company's activities in the financial arena.

57. The auditor should evaluate factors related to the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting, including:

- Independence of the audit committee members from management (see paragraph 58),
- Clarity with which the audit committee's responsibilities are articulated and how well the audit committee and management understand those responsibilities,
- Level of involvement and interaction with the independent auditor, including the committee's role in the appointment, retention, and compensation of the independent auditor,
- Level of involvement and interaction with internal audit, including the committee's line of authority and role in appointing and compensating employees in the internal audit function,
- Committee's compliance with applicable listing standards adopted pursuant to Section 301 of the Act,

12 If no such committee exists with respect to the company, all references to the audit committee in this standard apply to the entire board of directors of the company.

- Whether the committee includes one or more financial experts as described in Section 407 of the Act, and

- Amount of time that the audit committee devotes to control issues, as well as the amount of time that audit committee members are able to devote to committee activity.

58. As part of evaluating the independence of committee members, the auditor should evaluate how audit committee members are nominated and selected and whether they act independently from management.[13] Generally, the more independence that is built into the process of nominating members of the audit committee to the board, the more the auditor can be assured of committee independence. For example, are qualified candidates identified by outsiders, such as an outside search firm or a nominating committee composed of outside directors, or does management pick "friends?" Are board candidates for the audit committee selected based upon desired skill sets?

59. Ineffective oversight by the audit committee of the company's external financial reporting and internal control over financial reporting should be regarded as at least a significant deficiency and is a strong indicator that a material weakness in internal control over financial reporting exists.

60. *Identifying Significant Accounts.* The auditor should identify significant accounts and disclosures, first at the financial statement level and then at the account or disclosure component level. Determining specific controls to test begins by identifying significant accounts and disclosures within the financial statements. When identifying significant accounts, the auditor should evaluate both quantitative and qualitative factors.

61. An account is significant if there is more than a remote likelihood that the account could contain misstatements that individually or when aggregated with others could have a material effect on the financial statements. Other accounts may be significant on a qualitative basis based on the expectations of a reasonable user. For example, investors might be interested in a particular financial statement account even though it is not quantitatively large because it represents an important performance measure in a specialized industry.

62. Components of an account balance subject to differing risks (inherent and control) or different controls should be considered separately as potential significant accounts.

[13] The auditor should be aware that elections to the board of directors may be governed by state law, SRO listing standards, and the SEC's Regulation 14A.

For instance, inventory accounts often consist of raw materials (purchasing process), work in process (manufacturing process), finished goods (distribution process), and an allowance for obsolescence.

63. In some cases, separate components of an account may also need to be considered a significant account because of the company's organizational structure. For example, for a company that has a number of separate business units, each with unique management and accounting processes, the accounts at each separate business unit are considered individually as potential significant accounts.

64. An account may also be considered significant because of the exposure to unrecognized obligations represented by the account. For example, loss reserves related to a captive insurance entity or self-insurance program may have historically been insignificant in amount yet might represent a more than remote likelihood of material misstatement due to the existence of material unrecorded claims.

65. Appendix B, paragraphs B17 through B19, contains additional requirements about determining which accounts and disclosures are significant.

66. *Identifying Relevant Financial Statement Assertions.* For each significant account, the auditor should determine the relevance of each of these financial statement assertions:[14]

- Existence or occurrence,
- Completeness,
- Valuation or allocation,
- Rights and obligations, and
- Presentation and disclosure.

67. To identify relevant assertions, the auditor should determine the source of likely potential misstatements in each significant account. In determining whether a particular assertion is relevant to a significant account balance or disclosure, the auditor should evaluate:

- The nature of the assertion,

---

[14] See AU sec. 326, *Evidential Matter*, which provides additional information on financial statement assertions.

- The volume of transactions or data related to the assertion, and

- The nature and complexity of the systems, including the use of information technology by which the company processes and controls information supporting the assertion.

68. *Relevant assertions* are assertions that have a meaningful bearing on whether the account is fairly stated. For example, valuation may not be relevant to the cash account unless currency translation is involved; however, existence and completeness are always relevant. Similarly, valuation may not be relevant to the gross amount of the accounts receivable balance, but is relevant to the related allowance accounts. Additionally, the auditor may focus on the *presentation and disclosure* assertion separately in connection with the period-end financial reporting process.

69. *Identifying Significant Processes.* The auditor should identify each significant process over each major class of transactions affecting significant accounts or groups of accounts. For each significant process, the auditor should:

- Understand the flow of transactions, including how transactions are initiated, recorded, processed, and reported.

- Identify the points within the process where a misstatement – including a misstatement due to fraud – related to each relevant financial statement assertion could arise.

- Identify the controls that management has implemented to address these potential misstatements.

- Identify the controls that management has implemented over the prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets.

70. The nature and characteristics of a company's use of information technology in its information system affect the company's internal control over financial reporting. Paragraphs 16 through 20 of AU sec. 319, *Consideration of Internal Control in a Financial Statement Audit,* discusses the effect of information technology on internal control over financial reporting.

71. *Understanding the Period-end Financial Reporting Process*. The period-end financial reporting process includes the following:

- The procedures used to enter transaction totals into the general ledger;

- The procedures used to initiate, record, and process journal entries in the general ledger;

- Other procedures used to record recurring and nonrecurring adjustments to the financial statements, such as consolidating adjustments, report combinations, and classifications; and

- Procedures for drafting financial statements and related disclosures.

72. As part of understanding and evaluating the period-end financial reporting process, the auditor should evaluate:

- The inputs, procedures performed, and outputs of the processes the company uses to produce its financial statements,

- The extent of information technology involvement in each period-end financial reporting process element,

- Who participates from management,

- The number of locations involved,

- Types of adjusting entries (for example, standard, nonstandard, eliminating, and consolidating), and

- The nature and extent of the audit committee's involvement in the process.

73. The period-end financial reporting process is always a significant process because of its importance to financial reporting and to the auditor's opinions on internal control over financial reporting and the financial statements. The auditor's understanding of the company's period-end financial reporting process and how it interrelates with the company's other significant processes assists the auditor in identifying and testing controls that are the most relevant to financial statement risks.

74. *Identifying Controls to Test.* The auditor should obtain evidence about the effectiveness of controls (either by performing tests of controls himself or herself, or by using the work of others)[15] for all relevant assertions related to all significant accounts and disclosures in the financial statements. After identifying significant accounts, relevant assertions, and significant processes, the auditor should evaluate the following to identify the controls to be tested:

---

[15] See paragraphs 103-110 for additional direction on using the work of others.

- Where errors or fraud could occur,

- The nature of the controls implemented by management,

- The significance of each control in achieving the objectives of the control criteria and whether more than one control achieves a particular objective,

- The nature and extent of tests of the operating effectiveness of the controls performed by the company, if any, and

- The risk that the controls might not be operating effectively. Factors that affect whether the control might not be operating effectively include the following:

  — Whether there have been changes in the volume or nature of transactions that might adversely affect control design or operating effectiveness,

  — Whether there have been changes in the design of controls,

  — The degree to which the control relies on the effectiveness of other controls (for example, the control environment or information technology general controls),

  — Whether there have been changes in key personnel who perform the control or monitor its performance,

  — Whether the control relies on performance by an individual or is automated, and

  — The complexity of the control.

75. The auditor should clearly link individual controls with the significant accounts and assertions to which they relate.

76. The auditor should evaluate whether to test preventive controls, detective controls, or a combination of both for individual relevant assertions for individual significant accounts. For instance, when performing tests of preventive and detective controls, the auditor might conclude that a deficient preventive control could be compensated for by an effective detective control and, therefore, not result in a significant deficiency or material weakness. For example, a monthly reconciliation control procedure, which is a detective control, might detect an out-of-balance situation resulting from an unauthorized transaction being initiated due to an ineffective authorization procedure, which is a preventive control. When determining whether the detective control is

effective, the auditor should evaluate whether the detective control is sufficient to achieve the control objective to which the preventive control relates.

77. Because effective internal control over financial reporting often includes a combination of preventive and detective controls, the auditor ordinarily will test a combination of both.

78. The auditor should apply tests of controls to those controls that are important to achieving each control objective. It is neither necessary to test all controls nor is it necessary to test redundant controls (that is, controls that duplicate other controls that achieve the same objective and already have been tested), unless redundancy is itself a control objective, as in the case of certain computer controls.

79. *Performing Walkthroughs.* Walkthroughs are required procedures. The auditor should perform a walkthrough for all of the company's significant processes. In a walkthrough, the auditor should trace all types of transactions and events, both recurring and unusual, from origination through the company's information systems until they are reflected in the company's financial reports. Walkthroughs provide the auditor with evidence to:

- Confirm the auditor's understanding of the process flow of transactions,

- Confirm the auditor's understanding of the design of controls identified for all five components of internal control over financial reporting, including those related to the prevention or detection of fraud,

- Confirm that the auditor's understanding of the process is complete by determining whether all points in the process where misstatements related to each relevant financial statement assertion that could occur have been identified,

- Evaluate the effectiveness of the design of controls, and

- Confirm whether controls have been placed in operation.

80. The auditor's walkthroughs should encompass the entire process of initiating, recording, processing, and reporting individual transactions, and controls for all five internal control components and fraud, not just control activities. During the walkthrough, at each point where important processing procedures or controls occur, the auditor should question the company's personnel about their understanding of what is required by the company's prescribed procedures and controls and determine whether the processing procedures are performed as originally understood and on a timely basis. (Controls might not be performed regularly but still be timely.) During the

walkthrough, the auditor should be alert for exceptions to the company's prescribed procedures and controls.

81. While performing a walkthrough, the auditor should evaluate the quality of the evidence obtained and perform walkthrough procedures that produce a level of evidence consistent with the objectives listed in paragraph 79. Rather than reviewing copies of documents and making inquiries of a single person at the company, the auditor should follow the process flow using the same documents and information technology that company personnel use and make inquiries of relevant personnel involved in significant aspects of the process or controls. To corroborate information at various points in the walkthrough, the auditor might ask personnel to describe their understanding of the previous and succeeding processing or control activities and to demonstrate what they do. In addition, inquiries should include follow-up questions that could help identify the abuse of controls or indicators of fraud. Examples of follow-up inquiries include asking personnel:

- What they do when they find an error or what they are looking for to determine if there is an error (rather than simply asking them if they perform listed procedures and controls); what kind of errors they have found; what happened as a result of finding the errors, and how the errors were resolved. If the person being interviewed has never found an error, the auditor should evaluate whether that is due to good preventive controls or whether the individual performing the control lacks the necessary skills.

- Whether they have ever been asked to override the process or controls, and if so, to describe the situation, why it occurred, and what happened.

82. During the period under audit, when there have been significant changes in the process flow of transactions, including the supporting computer applications, the auditor should evaluate the nature of the change(s) and the effect on related accounts to determine whether to walkthrough transactions that were processed both before and after the change.

83. For non-routine and estimation processes, the auditor can often gain an understanding of the transaction flow, identify and understand controls, and conduct the walkthrough simultaneously.

Testing and Evaluating Design Effectiveness

84. Internal control over financial reporting is effectively designed when the controls complied with would be expected to prevent or detect material misstatements in the financial statements. The auditor should determine whether the company has controls to meet the objectives of the control criteria by:

- Identifying the company's control objectives in each area,

- Identifying the controls that satisfy each objective, and

- Determining whether the controls, if operating properly, can effectively prevent or detect material misstatements in the financial statements.

85. Procedures the auditor performs to test and evaluate design effectiveness include inquiry, observation, walkthroughs, and a specific evaluation of whether the controls are likely to prevent or detect misstatements if they are operated as prescribed by appropriately qualified persons.

86. The procedures that the auditor performs in evaluating management's assessment process and obtaining an understanding of internal control over financial reporting also provide the auditor with evidence about the design effectiveness of internal control over financial reporting.

87. The procedures the auditor performs to test and evaluate design effectiveness also might provide evidence about operating effectiveness.

Testing and Evaluating Operating Effectiveness

88. An auditor should evaluate the operating effectiveness of a control by determining whether the control is operating as designed and whether the person performing the control possesses the necessary authority and qualifications to perform the control effectively.

89. *Nature of Tests of Controls.* Tests of controls over operating effectiveness should include a mix of inquiries of appropriate personnel, inspection of relevant documentation, observation of the company's operations, and reperformance of the application of the control. For example, the auditor might observe the procedures for opening the mail and processing cash receipts to test the operating effectiveness of controls over cash receipts. Because an observation is pertinent only at the point in time at which it is made, the auditor should supplement the observation with inquiries of company personnel and inspection of documentation about the operation of such controls at other times.

90. Inquiry is a procedure that is used extensively throughout the audit and often is complementary to performing other procedures. Inquiry consists of seeking information, both financial and nonfinancial, of knowledgeable persons throughout the company. Inquiries may range from formal written inquiries to informal oral inquiries.

91. Evaluating responses to inquiries is an integral part of the inquiry procedure. Responses to inquiries might provide the auditor with information not previously possessed or with corroborative evidence. Alternatively, responses might provide information that differs significantly from other information the auditor obtains (for example, information regarding the possibility of management override of controls). In some cases, responses to inquiries provide a basis for the auditor to modify or perform additional procedures.

92. Because inquiry alone does not provide sufficient evidence to support the operating effectiveness of a control, the auditor should perform additional tests of controls. For example, if the company implements a control activity whereby its sales manager reviews and investigates a report of invoices with unusually high or low gross margins, inquiry of the sales manager as to whether he or she investigates discrepancies would be inadequate. To obtain sufficient evidence about the operating effectiveness of the control, the auditor should corroborate the sales manager's responses by performing other procedures, such as inspecting reports or other documentation used in or generated by the performance of the control, and evaluate whether appropriate actions were taken regarding discrepancies.

93. The nature of the control also influences the nature of the tests of controls the auditor can perform. For example, the auditor might examine documents regarding controls for which documentary evidence exists. However, documentary evidence regarding some aspects of the control environment, such as management's philosophy and operating style, might not exist. In circumstances in which documentary evidence of controls or the performance of controls does not exist and is not expected to exist, the auditor's tests of controls would consist of inquiries of appropriate personnel and observation of company activities. As another example, a signature on a voucher package to indicate that the signer approved it does not necessarily mean that the person carefully reviewed the package before signing. The package may have been signed based on only a cursory review (or without any review). As a result, the quality of the evidence regarding the effective operation of the control might not be sufficiently persuasive. If that is the case, the auditor should reperform the control (for example, checking prices, extensions, and additions) as part of the test of the control.

94. *Timing of Tests of Controls.* The auditor must perform tests of controls over a period of time that is adequate to determine whether, as of the date specified in management's report, the controls necessary for achieving the objectives of the control criteria are operating effectively. The period of time over which the auditor performs tests of controls varies with the nature of the controls being tested and with the frequency with which specific controls operate and specific policies are applied. Some controls operate continuously (for example, controls over sales), while others operate

only at certain times (for example, controls over the preparation of monthly or quarterly financial statements and controls over physical inventory counts).

95. The auditor's testing of the operating effectiveness of such controls should occur at the time the controls are operating. Controls "as of" a specific date encompass controls that are relevant to the company's internal control over financial reporting "as of" that specific date, even though such controls might not operate until after that specific date. For example, some controls over the period-end financial reporting process normally operate only after the "as of" date. Therefore, if controls over the December 31, 20X4 period-end financial reporting process operate in January 20X5, the auditor tests the control operating in January 20X5 to have sufficient evidence of operating effectiveness "as of" December 31, 20X4.

96. When the auditor reports on the effectiveness of controls "as of" a specific date and obtains evidence about the operating effectiveness of controls at an interim date, he or she should determine what additional evidence to obtain concerning the operation of the control for the remaining period. In making that determination, the auditor should evaluate:

- The specific controls tested prior to the "as of" date and the results of those tests,
- The degree to which evidence about the operating effectiveness of those controls was obtained,
- The length of the remaining period, and
- The possibility that there have been any significant changes in internal control over financial reporting subsequent to the interim date.

97. The auditor could also evaluate additional factors when determining what additional evidence to obtain.

98. For controls over significant nonroutine transactions, controls over accounts or processes with a high degree of subjectivity or judgment in measurement, or controls over the recording of period-end adjustments, the auditor should perform tests of controls closer to or at the "as of" date rather than at an interim date. However, the auditor should balance performing the tests of controls closer to the "as of" date with the need to obtain sufficient evidence of operating effectiveness.

99. Prior to the date specified in management's report, management might implement changes to the company's controls to make them more effective or efficient or to address control deficiencies. In that case, the auditor might not need to evaluate controls that have been superseded. For example, if the auditor determines that the

new controls achieve the related objectives of the control criteria and have been in effect for a sufficient period to permit the auditor to assess their design and operating effectiveness by performing tests of controls,[16] he or she will not need to evaluate the design and operating effectiveness of the superseded controls for purposes of expressing an opinion on internal control over financial reporting.

100. As discussed in paragraph 190, however, the auditor must communicate any identified significant deficiencies and material weaknesses in controls to the audit committee in writing. In addition, the auditor should evaluate how the design and operating effectiveness of the superseded controls relates to the auditor's reliance on controls for financial statement audit purposes.

101. *Extent of Tests of Controls.* Each year the auditor must obtain sufficient evidence about whether the company's internal control over financial reporting, including the controls for all internal control components, is operating effectively. The auditor also should vary from year to year the nature, timing, and extent of testing of controls to introduce unpredictability into the testing and respond to changes in circumstances. For example, each year the auditor might test the controls at a different interim period; increase or reduce the number and types of tests performed; or change the combination of procedures used.

102. In determining the extent of procedures to perform, the auditor should design the procedures to provide a high level of assurance that the control being tested is operating effectively. In making this determination, the auditor should consider the following factors:

- *Nature of the control*. Manual controls should be subjected to more extensive testing than automated controls. In some circumstances, testing a single operation of an automated control may be sufficient to obtain a high level of assurance that the control operated effectively, provided that information technology general controls also are operating effectively. For manual controls, sufficient evidence about the operating effectiveness of the controls is obtained by evaluating multiple operations of the control and the results of each operation. The auditor also should consider the complexity of the controls, the significance of the judgments that must be made in connection with their operation, and the level of competence of the person performing the controls that is necessary for the control to operate effectively. As the complexity and level of judgment

---

[16] Paragraph 166 provides reporting directions in circumstances when the auditor has not been able to obtain evidence that the new controls were appropriately designed or have been operating effectively for a sufficient period of time.

increase or the level of competence of the person performing the control decreases, the extent of the auditor's testing should increase.

- *Frequency of operation*. The more frequently a manual control operates, the more operations of the control the auditor should test. For example, for a manual control that operates in connection with each transaction, the auditor tests multiple operations of the control over a sufficient period of time to obtain a high level of assurance that the control operated effectively. For controls that operate less frequently, such as monthly account reconciliations and controls over the period-end financial reporting process, the auditor may test significantly fewer operations of the control. However, the auditor's evaluation of each operation of controls operating less frequently is likely to be more extensive. For example, when evaluating the operation of a monthly exception report, the auditor should evaluate whether the judgments made with regard to the disposition of the exceptions were appropriate and adequately supported.

- *Importance of the control*. Controls that are relatively more important should be tested more extensively. For example, some controls may address multiple financial statement assertions, and certain period-end detective controls might be considered more important than related preventive controls. The auditor should test more operations of such controls or, if such controls operate infrequently, the auditor should evaluate each operation of the control more extensively.

103. *Use of the Work of Management and Others.* The auditor should evaluate whether to use the work performed by management and others. When evaluating whether to use the results of procedures performed by others, the auditor should evaluate the following factors:

- The materiality or the risk of misstatement of the accounts and disclosures that the controls address.

- The degree of judgment required to evaluate the operating effectiveness of the control.

- The degree the control can be subjected to objective testing vs. a subjective evaluation.

- The pervasiveness of the control.

- The level of judgment or estimation that is required in the account or disclosure.

104. There are a number of areas in which the auditor should not use the results of testing performed by management and others, including:

- Controls that are part of the control environment, including controls specifically established to prevent and detect fraud that is reasonably likely to result in material misstatement of the financial statements.

- Controls over the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; to initiate, record, and process journal entries in the general ledger; and to record recurring and nonrecurring adjustments to the financial statements (for example, consolidating adjustments, report combinations, and reclassifications).

- Controls that have a pervasive effect on the financial statements, such as certain information technology general controls on which the operating effectiveness of other controls depend.

- Walkthroughs, as discussed beginning at paragraph 79.

105. The auditor's use of the results of procedures performed by management and others should be limited in the following areas:

- Controls over significant nonroutine and nonsystematic transactions (such as accounts involving *significant* judgments and estimates).

- Controls over significant accounts, processes, or disclosures where the auditor has assessed the risk of failure of the controls to operate effectively as high.

106. The auditor might decide to use the results of tests performed by management and others within the company in other areas, such as controls over routine processing of significant accounts and disclosures, without specific limitation.

107. If the auditor intends to use the results of tests performed by others to alter the nature, timing, and extent of the tests of controls that the auditor performs, he or she should assess the degree of objectivity and competence of the individuals performing the tests of controls. In addition to assessing the objectivity and competence of those performing the tests, the auditor should reperform some of the tests of controls originally performed by others.

108. Internal auditors would normally be expected to have greater competence with regard to internal control over financial reporting and objectivity than other company personnel. Therefore, the auditor may be able to use the results of their procedures to a greater extent than the results of procedures performed by others. This is particularly

true in the case of internal auditors who follow the *International Standards for the Professional Practice of Internal Auditing* issued by the Institute of Internal Auditors. At companies where the importance of the internal audit function results in a high degree of competence and objectivity and their work is extensive, the auditor could use their work to the greatest extent an auditor could use the work of others. On the other hand, if, for example, internal audit reports solely to management, which would reduce internal audit's objectivity, or if limited resources allocated to internal audit result in very limited testing procedures on its part, the auditor would need to perform more testing himself or herself.

109. In addition to following the directions in paragraphs 103-108, the auditor must perform enough of the testing himself or herself so that the auditor's own work provides the principal evidence for the auditor's opinion.

110. Appendix B, paragraphs B20 through B23, provides additional guidance as well as an application example on using the work of others.

111. *Use of Professional Skepticism when Evaluating the Results of Testing.* The auditor must conduct the audit of internal control over financial reporting and the audit of the financial statements with professional skepticism, which is an attitude that includes a questioning mind and a critical assessment of audit evidence. For example, even though a control is performed by the same employee whom the auditor believes performed the control effectively in prior periods, the control may not be operating effectively during the current period because the employee could have become complacent, distracted, or otherwise not effectively carry out his or her responsibilities. Also, regardless of any past experience with the entity or the auditor's beliefs about management's honesty and integrity, the auditor should recognize the possibility that a material misstatement due to fraud could be present. Furthermore, professional skepticism requires the auditor to consider whether evidence obtained suggests that a material misstatement due to fraud has occurred. In exercising professional skepticism in gathering and evaluating evidence, the auditor must not be satisfied with less-than-persuasive evidence because of a belief that management is honest.

112. When the auditor identifies exceptions to the company's prescribed control procedures, he or she should determine, using professional skepticism, the effect of the exception on the nature and extent of additional testing that may be appropriate or necessary and on the operating effectiveness of the control being tested. A conclusion that an identified exception does not represent an internal control deficiency is appropriate only if evidence beyond what the auditor had initially planned and beyond inquiry supports that conclusion.

Forming an Opinion on the Effectiveness of Internal Control Over Financial Reporting

113. When forming an opinion on internal control over financial reporting, the auditor should evaluate all evidence obtained from all sources, including:

- The results of tests of controls,

- The results of substantive procedures performed during the financial statement audit, and

- Any identified internal control deficiencies.

114. As part of this evaluation, the auditor should review all reports issued during the year by internal audit (or similar functions, such as loan review in a financial institution) that address controls related to internal control over financial reporting and evaluate any internal control deficiencies identified in those reports. This review should include reports issued by internal audit as a result of operational audits or specific reviews of key processes if those reports address controls related to internal control over financial reporting.

115. *Circumstances for Issuance of Unqualified Opinion.* The auditor may issue an unqualified opinion only when there are no identified material weaknesses and when there have been no restrictions on the scope of the auditor's work. The existence of a material weakness in internal control over financial reporting requires the auditor to express an adverse opinion (see paragraph 162), while a scope limitation requires the auditor to express a qualified opinion or a disclaimer of opinion, depending on the significance of the limitation in scope (see paragraph 165). The following paragraphs provide directions on evaluating internal control deficiencies noted during the audit.

116. *Evaluating Deficiencies in Internal Control Over Financial Reporting.* The auditor must evaluate identified internal control deficiencies and determine whether the deficiencies, individually or in combination, are significant deficiencies or material weaknesses.

117. The auditor should evaluate the significance of a deficiency in internal control over financial reporting initially by determining the following:

- The likelihood that a deficiency, or a combination of deficiencies, could result in a misstatement of an account balance or disclosure, and

- The magnitude of the potential misstatement resulting from the deficiency or deficiencies.

118. The significance of a deficiency in internal control over financial reporting depends on the *potential* for a misstatement, not on whether a misstatement actually has occurred.

119. Several factors affect the *likelihood* that a deficiency, or a combination of deficiencies, could result in a misstatement of an account balance or disclosure. The factors include, but are not limited to, the following:

- The susceptibility of the related assets or liability to loss or fraud; that is, greater susceptibility increases risk.

- The subjectivity, complexity, or extent of judgment required to determine the amount involved; that is, greater subjectivity, complexity, or judgment, like that related to an accounting estimate, increases risk.

- The nature of the accounts, processes, or disclosures; for example, suspense accounts and related party transactions involve greater risk.

- The cause and frequency of known or detected exceptions for the operating effectiveness of a control; for example, a control with an observed non-negligible deviation rate is a deficiency.

- The interaction or relationship of the control with other controls; that is, the interdependence or redundancy of the control.

120. When evaluating the likelihood that a deficiency or combination of deficiencies could result in a misstatement, the auditor should evaluate how the controls interact with other controls. There are controls, such as information technology general controls, on which other controls depend. Some controls function together as a group of controls. Other controls overlap, in the sense that these other controls achieve the same objective.

121. Several factors affect the magnitude of the misstatement that could result from a deficiency or deficiencies in controls. The factors include, but are not limited to, the following:

- The financial statement amounts or total of transactions that are exposed to the deficiency.

- The volume of activity in the account balance or class of transactions exposed to the deficiency that has occurred in the current period, or that is expected in future periods.

122. In evaluating the magnitude of the potential misstatement, the auditor should recognize that the maximum amount that an account balance or total of transactions can be overstated is generally the recorded amount. However, the recorded amount is not a limitation on the amount of potential understatement. The auditor also should recognize that the risk of misstatement might be different for the maximum possible misstatement than for lesser possible amounts.

123. The interaction of qualitative considerations that affect internal control over financial reporting with quantitative considerations ordinarily results in deficiencies in the following areas being at least significant deficiencies in internal control over financial reporting:

- Controls over the selection and application of accounting policies that are in conformity with generally accepted accounting principles,
- Antifraud programs and controls,
- Controls over non-routine and nonsystematic transactions, and
- Controls over the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; initiate, record, and process journal entries into the general ledger; and record recurring and nonrecurring adjustments to the financial statements.

124. When evaluating the significance of a deficiency in internal control over financial reporting, the auditor also should determine the level of detail and degree of assurance that would satisfy prudent officials in the conduct of their own affairs that they have reasonable assurance that transactions are recorded as necessary to permit the preparation of financial statements in conformity with generally accepted accounting principles. If the auditor determines that the deficiency would prevent prudent officials in the conduct of their own affairs from concluding that they have reasonable assurance,[17] then the auditor should consider the deficiency to be at least a significant deficiency. Having determined in this manner that a deficiency represents a significant deficiency, the auditor must further evaluate the deficiency to determine whether individually, or in combination with other deficiencies, the deficiency is a material weakness.

---

[17] See SEC Staff Accounting Bulletin Topic 1M2, *Immaterial Misstatements That Are Intentional,* for further discussion about the level of detail and degree of assurance that would satisfy prudent officials in the conduct of their own affairs.

125. Inadequate documentation of the design of controls and the absence of sufficient documented evidence to support management's assessment of the operating effectiveness of internal control over financial reporting also are internal control deficiencies. As with other internal control deficiencies, the auditor should evaluate these deficiencies as to their significance.

126. Each of the following circumstances should be regarded as at least a significant deficiency and is a strong indicator that a material weakness in internal control over financial reporting exists:

- Restatement of previously issued financial statements to reflect the correction of a misstatement.

- Identification by the auditor of a material misstatement in financial statements in the current period that was not initially identified by the company's internal control over financial reporting. (This is still a strong indicator of a material weakness even if management subsequently corrects the misstatement.)

- Oversight of the company's external financial reporting and internal control over financial reporting by the company's audit committee is ineffective. (Paragraphs 56 through 59 present factors to evaluate when determining whether the audit committee is ineffective.)

- For larger, more complex entities, the internal audit function or the risk assessment function is ineffective.

- For complex entities in highly regulated industries, an ineffective regulatory compliance function.

- Identification of fraud of any magnitude on the part of senior management.

- Significant deficiencies that have been communicated to management and the audit committee remain uncorrected after some reasonable period of time.

127. In addition, Appendix D provides examples of significant deficiencies and material weaknesses.

Requirement for Written Representations

128. In an audit of internal control over financial reporting, the auditor should obtain written representations from management:

a. Acknowledging management's responsibility for establishing and maintaining effective internal control over financial reporting,

b. Stating that management has performed an evaluation of the effectiveness of the company's internal control over financial reporting and specifying the control criteria,

c. Stating management's conclusion about the effectiveness of the company's internal control over financial reporting based on the control criteria as of a specified date,

d. Stating that management has disclosed to the auditor all significant deficiencies in the design or operation of internal control over financial reporting that it believes to be material weaknesses in internal control over financial reporting,

e. Describing any material fraud and any other fraud that, although not material, involves senior management or management or other employees who have a significant role in the company's internal control over financial reporting,

f. Stating whether internal control deficiencies identified and communicated to the audit committee during previous engagements pursuant to paragraph 190 have been resolved, and specifically identifying any that have not, and

g. Stating whether there were, subsequent to the date being reported on, any changes in internal control over financial reporting or other factors that might significantly affect internal control over financial reporting, including any corrective actions taken by management with regard to significant deficiencies and material weaknesses.

129. The failure to obtain written representations from management, including management's refusal to furnish them, constitutes a limitation on the scope of the audit sufficient to preclude an unqualified opinion. As discussed further in paragraph 165, when management limits the scope of the audit, the auditor should either withdraw from the engagement or disclaim an opinion. Further, the auditor should evaluate the effects of management's refusal on his or her ability to rely on other representations, including, if applicable, representations obtained in an audit of the company's financial statements.

130. AU sec. 333, *Management Representations*, explains matters such as who should sign the letter, the period to be covered by the letter, and when to obtain an updating letter.

Relationship of an Audit of Internal Control over Financial Reporting to an Audit of Financial Statements

131. The audit of internal control over financial reporting should be integrated with the audit of the financial statements. The objectives of the procedures for the audits are not identical, however, and the auditor must plan and perform the work to achieve the objectives of both audits.

132. The understanding of internal control over financial reporting the auditor obtains and the procedures the auditor performs for purposes of expressing an opinion on management's assessment are interrelated with the internal control over financial reporting understanding the auditor obtains and procedures the auditor performs to assess control risk for purposes of expressing an opinion on the financial statements. As a result, it is efficient for the auditor to coordinate obtaining the understanding and performing the procedures.

Tests of Controls in an Audit of Internal Control Over Financial Reporting

133. The objective of the tests of controls in an audit of internal control over financial reporting is to obtain evidence about the effectiveness of internal controls to support the auditor's opinion on whether management's assessment of the effectiveness of the company's internal control over financial reporting is fairly stated. The auditor's opinion relates to the effectiveness of the company's internal control over financial reporting as of *a point in time* and *taken as a whole*.

134. To express an opinion on internal control over financial reporting effectiveness as of *a point in time*, the auditor should obtain evidence that internal control over financial reporting has operated effectively for a sufficient period of time, which may be less than the entire period (ordinarily one year) covered by the company's financial statements. To express an opinion on internal control over financial reporting effectiveness *taken as a whole,* the auditor must obtain evidence about the effectiveness of controls related to all relevant assertions for all significant accounts and disclosures in the financial statements. This requires the auditor to test the design and operating effectiveness of controls he or she ordinarily would not test if expressing an opinion only on the financial statements.

135. When concluding on the effectiveness of internal control over financial reporting for purposes of expressing an opinion on management's assessment, the auditor should

incorporate the results of any additional tests of control performed to achieve the objective related to expressing an opinion on the financial statements, as discussed in the following section.

Tests of Controls in an Audit of Financial Statements

136. To express an opinion on the financial statements, the auditor ordinarily performs tests of controls and substantive procedures. The objective of the tests of controls the auditor performs for this purpose is to assess control risk. To assess control risk for specific financial statement assertions at less than the maximum, the auditor is required to obtain evidence that the relevant controls operated effectively during the *entire period* covered by the company's financial statements. However, the auditor is not required to assess control risk at less than the maximum for *all* relevant assertions for the entire period covered by the financial statements, and, for a variety of reasons, the auditor may choose not to do so.[18]

137. When concluding on the effectiveness of controls for the purpose of assessing control risk, the auditor also should consider the results of any additional tests of controls performed to achieve the objective related to expressing an opinion on management's assessment, as discussed in paragraphs 133 through 135. Consideration of these results may require the auditor to alter the nature, timing, and extent of substantive procedures and to plan and perform further tests of controls, particularly in response to identified internal control deficiencies.

Effect of Tests of Controls on Substantive Procedures

138. Regardless of the assessed level of control risk or the assessed risk of material misstatement in connection with the audit of the financial statements, the auditor should perform substantive procedures for all relevant assertions for all significant accounts and disclosures. Performing procedures to express an opinion on internal control over financial reporting does not diminish this requirement.

139. The substantive procedures that the auditor should perform consist of tests of details of transactions and balances and analytical procedures. Before using the results obtained from substantive analytical procedures, the auditor should either test the design and operating effectiveness of controls over financial information used in the substantive analytical procedures or perform other procedures to support the completeness and accuracy of the underlying information. For significant risks of material misstatement, it is unlikely that audit evidence obtained from substantive analytical procedures alone will be sufficient.

---

[18] See paragraph 146 for additional documentation requirements when the auditor assesses control risk as other than low.

140. When designing substantive analytical procedures, the auditor also should evaluate the risk of management override of controls. As part of this process, the auditor should evaluate whether such an override might have allowed adjustments outside of the normal period-end financial reporting process to have been made to the financial statements. Such adjustments might have resulted in artificial changes to the financial statement relationships being analyzed, causing the auditor to draw erroneous conclusions. For this reason, substantive analytical procedures are not well suited to detecting fraud.

141. The auditor's substantive procedures must include reconciling the financial statements to the accounting records and examining material adjustments made during the course of preparing the financial statements. Also, other auditing standards require auditors to perform specific tests of details in the financial statement audit. For instance, AU sec. 316, *Consideration of Fraud in a Financial Statement Audit,* requires the auditor to perform certain tests of details to further address the risk of management override, whether or not a specific risk of fraud has been identified. AU sec. 330.34, *The Confirmation Process*, states that there is a presumption that the auditor will request the confirmation of accounts receivable. Similarly, AU sec. 331.01, *Inventories*, states that observation of inventories is a generally accepted auditing procedure and that the auditor who issues an opinion without this procedure "has the burden of justifying the opinion expressed."

142. If, during the audit of internal control over financial reporting, the auditor identifies an internal control deficiency, he or she should determine the effect on the nature, timing, and extent of substantive procedures to be performed to reduce the risk of material misstatement of the financial statements to an appropriately low level.

Effect of Substantive Procedures on the Auditor's Conclusions About the Operating Effectiveness of Controls

143. In an audit of internal control over financial reporting, the auditor should evaluate the effect of the findings of all substantive auditing procedures performed in the audit of financial statements on the effectiveness of internal control over financial reporting. This evaluation should include, but not be limited to:

- The auditor's risk evaluations in connection with the selection and application of substantive procedures, especially those related to fraud (see paragraph 26),
- Findings with respect to illegal acts and related party transactions,
- Indications of management bias in making accounting estimates and in selecting accounting principles, and

- Misstatements detected by substantive procedures. The extent of such misstatements might alter the auditor's judgment about the effectiveness of controls.

144. However, the absence of misstatements detected by substantive procedures does not provide evidence that controls related to the assertion being tested are effective.

Documentation Requirements

145. In addition to the documentation requirements in AU sec. 339, *Audit Documentation*, the auditor should document:

- The understanding obtained and the evaluation of the design of each of the five components of the company's internal control over financial reporting,

- The process used to determine significant accounts, classes of transactions, and disclosures, including the determination of the locations or business units at which to perform testing,

- The identification of where misstatements related to relevant financial statement assertions could occur within significant accounts, assertions, and processes,

- The extent to which the auditor relied upon work performed by management or others,

- The evaluation of any deficiencies noted as a result of the auditor's testing, and

- Other findings that could result in a modification to the auditor's report.

146. For a company that has effective internal control over financial reporting, the auditor ordinarily will be able to perform sufficient testing of controls to be able to assess control risk related to relevant assertions for significant accounts and disclosures at a low level. If, however, the auditor assesses control risk as other than low for certain assertions or significant accounts, the auditor should document the reasons for that conclusion. Examples of when it is appropriate to not assess control risk as low include:

- When a control over a relevant assertion related to a significant account or disclosure was superseded late in the year and only the new control was tested for operating effectiveness.

- When a material weakness existed during the period under audit and was corrected by the end of the period.

147. The auditor also should document the effect of a conclusion that control risk is other than low for any relevant assertions for any significant accounts on his or her opinion on the audit of internal control over financial reporting.

Reporting on Internal Control Over Financial Reporting

Management's Report

148. Management is required to include in its annual report its assessment of the effectiveness of the company's internal control over financial reporting in addition to its audited financial statements as of the end of the most recent fiscal year. Management's report on internal control over financial reporting is required to include the following:[19]

- A statement of management's responsibility for establishing and maintaining adequate internal control over financial reporting for the company,
- A statement identifying the framework used by management to conduct the required evaluation of the effectiveness of the company's internal control over financial reporting,
- An assessment of the effectiveness of the company's internal control over financial reporting as of the end of the company's most recent fiscal year, including an explicit statement as to whether that internal control over financial reporting is effective, and
- A statement that the registered public accounting firm that audited the financial statements included in the annual report has issued an attestation report on management's assessment of the company's internal control over financial reporting.

149. Management should provide, both in its report on internal control over financial reporting and in its representation letter to the auditor, a written conclusion about the effectiveness of the company's internal control over financial reporting. The conclusion about the effectiveness of a company's internal control over financial reporting can take many forms, however, management is required to state a direct conclusion about whether the company's internal control over financial reporting is effective. This standard, for example, includes the phrase "management's assessment that W

---

[19] Management is required to include these matters in their report. See Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports, Securities and Exchange Commission Release No. 33-8238 (June 5, 2003) [68 FR 36636].

Company maintained effective internal control over financial reporting as of [*date*]" to illustrate such a conclusion. Other phrases, such as "management's assessment that W Company's internal control over financial reporting as of [*date*] is sufficient to meet the stated objectives," also might be used. However, the conclusion should not be so subjective (for example, "very effective internal control") that people having competence in and using the same or similar criteria would not ordinarily be able to arrive at similar conclusions.

150. Management is precluded from concluding that the company's internal control over financial reporting is effective if there are one or more material weaknesses. In addition, management is required to disclose all material weaknesses that exist as of the end of the most recent fiscal year.

151. Management might be able to accurately represent that internal control over financial reporting, as of the end of the company's most recent fiscal year, is effective even if one or more material weaknesses existed during the period. To make this representation, management must have changed the internal control over financial reporting to eliminate the material weaknesses sufficiently in advance of the "as of" date and have satisfactorily tested the effectiveness over a period of time that is adequate for it to determine whether, as of the end of the fiscal year, the design and operation of internal control over financial reporting is effective.[20]

Auditor's Evaluation of Management's Report

152. With respect to management's report on its assessment, the auditor should evaluate the following matters:

a. Whether management has properly stated its responsibility for establishing and maintaining adequate internal control over financial reporting.

b. Whether the framework used by management to conduct the evaluation is suitable. (As discussed in paragraph 13, the framework described in COSO constitutes a suitable and available framework.)

---

[20] However, when the reason for a change in internal control over financial reporting is the correction of a material weakness, management and the auditor need to evaluate whether the reason for the change and the circumstances surrounding the change are material information necessary to make the disclosure about the change not misleading in a filing subject to certification under Section 302. See discussion beginning at paragraph 183 for further direction.

c. Whether management's assessment of the effectiveness of internal control over financial reporting, as of the end of the company's most recent fiscal year, is free of material misstatement.

d. Whether management has expressed its assessment in an acceptable form.

- Management is required to state whether the company's internal control over financial reporting is effective.

- A negative assurance statement indicating that, "Nothing has come to management's attention to suggest that the company's internal control over financial reporting is not effective," is not acceptable.

- Management is not permitted to conclude that the company's internal control over financial reporting is effective if there are one or more material weaknesses in the company's internal control over financial reporting.

e. Whether material weaknesses identified in the company's internal control over financial reporting, if any, have been properly disclosed, including those corrected during the period.[21]

Auditor's Report on Management's Assessment of Internal Control Over Financial Reporting

153. The auditor's report on management's assessment of the effectiveness of internal control over financial reporting must include the following elements:

a. A title that includes the word *independent,*

b. An identification of management's conclusion about the effectiveness of the company's internal control over financial reporting as of a specified date based on the control criteria [for example, criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)] ,

c. An identification of the title of the management report that includes management's assessment (the auditor should use the same description of the

[21] See paragraph 189 for direction when a material weakness was corrected during the fourth quarter and the auditor believes that modification to the disclosures about changes in internal control over financial reporting are necessary for the annual certifications to be accurate and to comply with the requirements of Section 302.

company's internal control over financial reporting as management uses in its report),

d. A statement that the assessment is the responsibility of management,

e. A statement that the auditor's responsibility is to express an opinion on the written assessment based on his or her audit,

f. A definition of internal control over financial reporting as stated in paragraph 4,

g. A statement that the audit was conducted in accordance with auditing and related professional practice standards established by the Public Company Accounting Oversight Board (PCAOB),

h. A statement that the PCAOB standards require that the auditor plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects,

i. A statement that an audit includes obtaining an understanding of internal control over financial reporting, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as the auditor considered necessary in the circumstances,

j. A statement that the auditor believes the audit provides a reasonable basis for his or her opinion,

k. A paragraph stating that, because of inherent limitations, internal control over financial reporting may not prevent or detect misstatements and that projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate,

l. The auditor's opinion on whether management's assessment of the effectiveness of the company's internal control over financial reporting as of the specified date is fairly stated, in all material respects, based on the control criteria (see discussion beginning at paragraph 148),[22]

m. The manual or printed signature of the auditor's firm,

n. The date of the audit report.

---

[22] Nothing precludes the auditor from auditing management's assessment but opining directly on the effectiveness of internal control over financial reporting.

154. Example A-1 in Appendix A is an illustrative auditor's report – an unqualified opinion – on management's assessment of the effectiveness of the company's internal control over financial reporting.

155. *Separate or Combined Reports.* The auditor may choose to issue a combined report (that is, one report containing both an opinion on the financial statements and an opinion on internal control over financial reporting) or separate reports on the company's financial statements and on internal control over financial reporting. Appendix A includes an illustrative combined audit report on internal control over financial reporting and examples of separate reports on internal control over financial reporting.

156. If the auditor chooses to issue a separate report on internal control over financial reporting, he or she should add the following paragraph to the auditor's report on the financial statements:

> We also have audited, in accordance with auditing and related professional practice standards established by the Public Company Accounting Oversight Board, the effectiveness of W Company's internal control over financial reporting as of December 31, 20X3, based on [*identify criteria*] and our report dated [*date of report, which should be the same as the date of the report on the financial statements*] expressed [*include nature of opinion*].

157. *Report Date.* As stated previously, the auditor cannot audit internal control over financial reporting without also auditing the financial statements. Therefore, the reports should be dated the same.

158. When the auditor elects to issue a combined report on the audit of the financial statements and the audit of internal control over financial reporting, the audit opinion will address multiple reporting periods for the financial statements presented but only the end of the most recent fiscal year for management's assessment of the effectiveness of internal control over financial reporting. See a combined report in Example A-6 in Appendix A.

159. *Report Modifications.* The auditor should modify the standard report if any of the following conditions exist.

a. Management's assessment is inadequate or management's report is inappropriate. (See paragraph 161.)

b. There is a material weakness in the company's internal control over financial reporting. (See paragraphs 162 through 164.)

c. There is a restriction on the scope of the engagement. (See paragraphs 165 through 167.)

d. The auditor decides to refer to the report of other auditors as the basis, in part, for the auditor's own report. (See paragraphs 168 and 169.)

e. A significant subsequent event has occurred since the date being reported on. (See paragraphs 170 through 173.)

f. There is other information contained in management's report on internal control over financial reporting. (See paragraphs 174 through 176.)

160. If, for any of the situations listed in the paragraph above, the auditor plans to issue other than an unqualified opinion, the auditor should report directly on the effectiveness of the company's internal control over financial reporting rather than on management's assessment. Expressing an opinion on management's assessment in these circumstances could result in confusion. For example, if management makes an adverse assessment because a material weakness has been identified and not corrected ("…internal control over financial reporting is not effective…") and the auditor expressed his or her opinion on management's assessment ("…management's assessment that internal control over financial reporting is not effective is fairly stated, in all material respects…"), a reader might not be clear about the results of the auditor's testing and about the auditor's conclusions. Reporting directly on the effectiveness of the company's internal control over financial reporting better communicates to report users the effect of such conditions, because direct reporting more clearly states the auditor's conclusions about the effectiveness of internal control over financial reporting ("In our opinion, because of the effect of the material weakness described…, the Company's internal control over financial reporting is not effective.").

161. *Management's Assessment Inadequate or Report Inappropriate.* If the auditor determines that management's process for assessing internal control over financial reporting is inadequate, the auditor should modify his or her opinion for a scope limitation (discussed further beginning at paragraph 165). If the auditor determines that management's report is inappropriate, the auditor should modify his or her report to include, at a minimum, an explanatory paragraph describing the reasons for this conclusion.

162. *Material Weaknesses.* Paragraphs 116 through 127 describe significant deficiencies and material weaknesses. If there are significant deficiencies that, individually or in combination, result in one or more material weaknesses, management is precluded from concluding that internal control over financial reporting is effective. In these circumstances, the auditor must express an adverse opinion on the company's internal control over financial reporting.

163. When expressing an adverse opinion because of a material weakness, the auditor's report must include:

- The definition of a material weakness and a significant deficiency, as provided in paragraphs 8 and 9.

- A statement that a material weakness has been identified and included in management's assessment. (If the material weakness has not been included in management's assessment, this sentence should be modified to state that the material weakness has been identified but not included in management's assessment. In this case, the auditor also is required to communicate to the audit committee that the material weakness was not disclosed or identified as a material weakness in management's report, as discussed in paragraph 190.)

- A description of any material weaknesses identified in a company's internal control over financial reporting. This description should provide the users of the audit report with specific information about the nature of any material weakness, and its actual and potential effect on the presentation of the company's financial statements issued during the existence of the weakness. This description also should address requirements described in paragraph 178.

164. In addition, the auditor should modify the opinion paragraph to express an adverse opinion directly on the effectiveness of the company's internal control over financial reporting. Example A-2 in Appendix A illustrates the form of the report that is appropriate in this situation.

165. *Scope Limitations.* The auditor can express an unqualified opinion on internal control over financial reporting only if the auditor has been able to apply all the procedures necessary under the circumstances. If there are restrictions on the scope of the engagement imposed by the circumstances, the auditor should withdraw from the engagement, disclaim an opinion, or express a qualified opinion. The auditor's decision depends on his or her assessment of the importance of the omitted procedure(s) to his or her ability to form an opinion on the effectiveness of the company's internal control over financial reporting. However, when the restrictions are imposed by management, the auditor should withdraw from the engagement or disclaim an opinion on the effectiveness of internal control over financial reporting.

166. For example, management might have identified a material weakness in its internal control over financial reporting prior to the date specified in its report and implemented controls to correct it. If management believes that the new controls have been operating for a sufficient period of time to determine that they are both effectively designed and operating, management would be able to include in its assessment its

conclusion that internal control over financial reporting is effective as of the date specified. However, if the auditor disagrees with the sufficiency of the time period, he or she would be unable to obtain sufficient evidence that the new controls have been operating effectively for a sufficient period. In that case, the auditor should modify the opinion because of a scope limitation.

167. When the auditor plans either to issue a qualified opinion or to disclaim an opinion because of a scope limitation, the auditor should report directly on the effectiveness of internal control over financial reporting (rather than on management's assessment) to best communicate the effect of such factors on his or her opinion. Example A-3 in Appendix A illustrates the form of report when there is a limitation on the scope of the audit causing the auditor to issue a qualified opinion. Example A-4 illustrates the form of report when restrictions on the scope of the audit cause the auditor to disclaim an opinion.

168. *Opinion Based in Part on the Report of Another Auditor.* When another auditor has audited internal control over financial reporting of one or more subsidiaries, divisions, branches, or components of the company, the auditor should determine whether he or she may serve as the principal auditor and use the work and reports of another auditor as a basis, in part, for his or her opinion on internal control over financial reporting. If the auditor decides it is appropriate to serve as the principal auditor, he or she should decide whether to make reference in the report to the audit performed by the other auditor. In these circumstances, the auditor's criteria are similar to those of the independent auditor who uses the work and reports of other independent auditors when reporting on a company's financial statements. AU sec. 543, *Part of Audit Performed by Other Independent Auditors*, provides direction on the auditor's decision of whether to serve as the principal auditor and, if so, whether to make reference to the audit performed by the other auditor.

169. When the auditor decides to make reference to the report of the other auditor as a basis, in part, for his or her opinion, the auditor should disclose this when describing the scope of the audit and should refer to the report of the other auditor when expressing the opinion. Whether the other auditor's opinion is expressed on management's assessment or on the effectiveness of internal control over financial reporting does not affect the determination of whether the principal auditor's opinion is expressed on the assessment or on the subject matter itself.

170. *Subsequent Events.* Changes in internal control over financial reporting or other factors that might significantly affect internal control over financial reporting might occur subsequent to the date as of which internal control over financial reporting is being audited but before the date of the auditor's report. As described in paragraph 128, the auditor should obtain written representations from management relating to such

matters. Additionally, to obtain information about whether changes have occurred that might affect the effectiveness of the company's internal control over financial reporting and, therefore, the auditor's report, the auditor should inquire about and examine, for this subsequent period, the following:

- Relevant internal audit reports (or similar functions, such as loan review in a financial institution) issued during the subsequent period,

- Independent auditor reports (if other than the auditor's) of significant deficiencies or material weaknesses,

- Regulatory agency reports on the company's internal control over financial reporting, and

- Information about the effectiveness of the company's internal control over financial reporting obtained through other engagements.

171. The auditor could inquire about and examine other documents for the subsequent period. Paragraphs .01 through .09 of AU sec. 560, *Subsequent Events,* provides direction on subsequent events for a financial statement audit that may also be helpful to the auditor performing an audit of internal control over financial reporting.

172. If the auditor obtains knowledge about subsequent events that materially and adversely affect the effectiveness of the company's internal control over financial reporting as of the date specified in the assessment the auditor should issue an adverse opinion. If the auditor is unable to determine the effect of the subsequent event on the effectiveness of the company's internal control over financial reporting, the auditor should disclaim an opinion. As described in paragraph 175, the auditor should disclaim an opinion on management's disclosures about corrective actions taken by the company after the date of management's assessment, if any.

173. The auditor may obtain knowledge about subsequent events with respect to conditions that did not exist at the date specified in the assessment but arose subsequent to that date. If a subsequent event of this type has a material effect on the company, the auditor should include in his or her report an explanatory paragraph describing the event and its effects or directing the reader's attention to the event and its effects as disclosed in management's report. Management's consideration of such events to be disclosed in its report should be limited to a change that has materially affected, or is reasonably likely to materially affect, the company's internal control over financial reporting.

174. *Management's Report Containing Additional Information.* Management's report on internal control over financial reporting may contain information in addition to

management's assessment of the effectiveness of its internal control over financial reporting. Such information might include, for example:

- Disclosures about corrective actions taken by the company after the date of management's assessment,
- The company's plans to implement new controls, and
- A statement that management believes the cost of correcting a material weakness would exceed the benefits to be derived from implementing new controls.

175. If management's assessment includes such additional information, the auditor should disclaim an opinion on the information. For example, the auditor should use the following language as the last paragraph of the report to disclaim an opinion on management's cost-benefit statement:

> We do not express an opinion or any other form of assurance on management's statement referring to the costs and related benefits of implementing new controls.

176. If the auditor believes that management's additional information contains a material misstatement of fact, he or she should discuss the matter with management. If the auditor concludes that there is a valid basis for concern, he or she should propose that management consult with some other party whose advice might be useful, such as the company's legal counsel. If, after discussing the matter with management and those management has consulted, the auditor concludes that a material misstatement of fact remains, the auditor should notify management and the audit committee, in writing, of the auditor's views concerning the information. The auditor also should consider consulting the auditor's legal counsel about further actions to be taken, including the auditor's responsibility under Section 10A of the Securities Exchange Act of 1934.

177. *Effect of Auditor's Adverse Opinion on Internal Control Over Financial Reporting on the Opinion on Financial Statements.* In some cases, the auditor's report on internal control over financial reporting might describe a material weakness that resulted in an adverse opinion on the effectiveness of internal control over financial reporting while the audit report on the financial statements remains unqualified. Consequently, during the audit of the financial statements, the auditor did not rely on that control. However, he or she performed additional substantive procedures to determine whether there was a material misstatement in the account related to the control. If, as a result of these procedures, the auditor determines that there was not a material misstatement in the account, he or she would be able to express an unqualified opinion on the financial statements.

178. When the auditor's opinion on the financial statements is unaffected by the adverse opinion on the effectiveness of internal control over financial reporting, the report on internal control over financial reporting (or the combined report, if a combined report is issued) should include the following or similar language in the paragraph that describes the material weakness:

> This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 20X3 financial statements, and this report does not affect our report dated [*date of report*] on those financial statements. *[Revise this wording appropriately for use in a combined report.]*

179. Such disclosure is important to ensure that users of the auditor's report on the financial statements understand why the auditor issued an unqualified opinion on those statements.

180. *Subsequent Discovery of Information Existing at the Date of the Auditor's Report on Internal Control Over Financial Reporting*. After the issuance of the report on internal control over financial reporting, the auditor may become aware of conditions that existed at the report date that might have affected the auditor's opinion had he or she been aware of them. The auditor's evaluation of such subsequent information is similar to the auditor's evaluation of information discovered subsequent to the date of the report on an audit of financial statements, as described in AU sec. 561, *Subsequent Discovery of Facts Existing at the Date of the Auditor's Report*. That standard requires the auditor to determine whether the information is reliable and whether the facts existed at the date of his or her report. If so, the auditor should determine (1) whether the facts would have changed the report if he or she had been aware of them and (2) whether there are persons currently relying on or likely to rely on the auditor's report. For instance, if previously issued financial statements and the auditor's report have been recalled and reissued to reflect the correction of an error, the auditor should presume that his or her report on the company's internal control over financial reporting as of same specified date also should be recalled and reissued to reflect the material weakness that existed at that date. Based on these considerations, AU sec. 561.06 provides detailed requirements for the auditor.

181. *Filings Under Federal Securities Statutes.* AU sec. 711, *Filings Under Federal Securities Statutes,* describes the auditor's responsibilities when an auditor's report is included in registration statements, proxy statements, or periodic reports filed under the federal securities statutes. The auditor should also apply AU sec. 711 with respect to the auditor's report on management's assessment of the effectiveness of internal control over financial reporting included in such filings. In addition, the direction in AU sec. 711.10 to inquire of and obtain written representations from officers and other

executives responsible for financial and accounting matters about whether any events have occurred that have a material effect on the audited financial statements should be extended to matters that could have a material effect on management's assessment of internal control over financial reporting.

182. When the auditor has fulfilled these responsibilities and intends to consent to the inclusion of his or her report on management's assessment of the effectiveness of internal control over financial reporting in the securities filing, the auditor's consent should clearly indicate that both the audit report on financial statements and the audit report on management's assessment of the effectiveness of internal control over financial reporting (or both opinions if a combined report is issued) are included in his or her consent.

Auditor's Responsibilities for Evaluating Management's Certification Disclosures About Internal Control Over Financial Reporting

Required Management Certifications

183. Section 302 of the Act, as amended, requires a company's management, with the participation of the principal executive and financial officers (the certifying officers), to make the following quarterly and annual certifications with respect to the company's internal control over financial reporting:

- A statement that the certifying officers are responsible for establishing and maintaining internal control over financial reporting,
- A statement that the certifying officers have designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under their supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles, and
- A statement that the report discloses any changes in the company's internal control over financial reporting that occurred during the most recent fiscal quarter (the company's fourth fiscal quarter in the case of an annual report) that have materially affected, or are reasonably likely to materially affect, the company's internal control over financial reporting.

184. When the reason for a change in internal control over financial reporting is the correction of a material weakness, management and the auditor need to evaluate

whether the reason for the change and the circumstances surrounding that change are material information necessary to make the disclosure about the change not misleading.[23]

Auditor Evaluation Responsibilities

185. The auditor's responsibility as it relates to management's quarterly certifications on internal control over financial reporting is different from the auditor's responsibility as it relates to management's annual assessment of internal control over financial reporting. The auditor should perform limited procedures quarterly to provide a basis for determining whether he or she has become aware of any material modifications that, in the auditor's judgment, should be made to the disclosures about changes in internal control over financial reporting in order for the certifications to be accurate and to comply with the requirements of Section 302.

186. To fulfill this responsibility, the auditor should perform, on a quarterly basis, the following procedures:

- Inquire of management about significant changes in the design or operation of internal control over financial reporting as it relates to the preparation of annual as well as interim financial information that could have occurred subsequent to the preceding annual audit or prior review of interim financial information, and

- Determine, through a combination of observation and inquiry, whether significant changes in internal control over financial reporting may introduce significant deficiencies or material weaknesses in the design of internal control over financial reporting.

187. When matters come to auditor's attention that lead him or her to believe that modification to the disclosures about changes in internal control over financial reporting are necessary for the certifications to be accurate and to comply with the requirements

---

[23] The SEC's Final Rule: Management's Reports on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports, Securities and Exchange Commission Release No. 33-8238 (June 5, 2003) [68 FR 36636], states: "Although the final rules do not explicitly require the company to disclose the reasons for any change that occurred during a fiscal quarter, or to otherwise elaborate about the change, a company will have to determine, on a facts and circumstances basis, whether the reasons for the change, or other information about the circumstances surrounding the change, constitute material information necessary to make the disclosure about the change not misleading."

of Section 302, the auditor should communicate the matter(s) to the appropriate level of management as soon as practicable.

188. If, in the auditor's judgment, management does not respond appropriately to the auditor's communication within a reasonable period of time, the auditor should inform the audit committee. If, in the auditor's judgment, the audit committee does not respond appropriately to the auditor's communication within a reasonable period of time, the auditor should evaluate whether to resign from the engagement. The auditor should evaluate whether to consult with his or her attorney when making these evaluations. In these circumstances, the auditor also has responsibilities under AU sec. 317, *Illegal Acts by Clients,* and Section 10A of the Securities Exchange Act of 1934. The auditor's responsibilities for evaluating the disclosures about changes in internal control over financial reporting do not diminish in any way management's responsibility for ensuring that their certifications comply with the requirements of Section 302.

189. If matters come to the auditor's attention as a result of the audit of internal control over financial reporting that lead him or her to believe that modification to the disclosures about changes in internal control over financial reporting (addressing changes in internal control over financial reporting occurring during the fourth quarter) are necessary for the annual certifications to be accurate and to comply with the requirements of Section 302, the auditor should follow the same communication responsibilities as described in paragraphs 187 and 188. However, if management and the audit committee do not respond appropriately, in addition to the responsibilities described in the preceding two paragraphs, the auditor should modify his or her report on the audit of internal control over financial reporting to include an explanatory paragraph describing the reasons the auditor believes management's certification should be modified.

Required Communications in An Audit of Internal Control Over Financial Reporting

190. The auditor must communicate in writing to the audit committee all significant deficiencies and material weaknesses identified during the audit. The written communication should be made prior to the issuance of the auditor's report on internal control over financial reporting. The auditor's communication should distinguish clearly between those matters considered significant deficiencies and those considered material weaknesses, as defined beginning in paragraph 8.

191. In addition, the auditor should communicate to management, in writing, all deficiencies in internal control over financial reporting (that is, those deficiencies in internal control over financial reporting that are of a lesser magnitude than significant deficiencies) identified during the audit and inform the audit committee when such a

communication has been made. When making this communication, it is not necessary for the auditor to repeat information about such deficiencies that have been included in previously issued written communications, whether those communications were made by the auditor, internal auditors, or others within the organization. Rather, the auditor may incorporate those deficiencies by referring to the title and date of such reports. Furthermore, the auditor is not required to perform procedures sufficient to identify all internal control deficiencies; rather, the auditor should communicate deficiencies in internal control over financial reporting of which he or she is aware.

192. When auditing internal control over financial reporting, the auditor may become aware of fraud or possible illegal acts. If the matter involves fraud, it must be brought to the attention of the appropriate level of management. If the fraud involves senior management, the auditor must communicate the matter directly to the audit committee as described in AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*. If the matter involves possible illegal acts, the auditor must assure himself or herself that the audit committee is adequately informed, unless the matter is clearly inconsequential, in accordance with AU sec. 317, *Illegal Acts by Clients*. The auditor also must determine his or her responsibilities under Section 10A of the Securities Exchange Act of 1934.

193. When timely communication is important, the auditor should communicate the preceding matters during the course of the audit rather than at the end of the engagement. The decision about whether an interim communication should be issued should be determined based on the relative significance of the matters noted and the urgency of corrective follow-up action required.

Effective Date

194. Companies considered *accelerated filers* under Exchange Act Rule 12b-2 are required to comply with the internal control reporting and disclosure requirements of Section 404 of the Act *for fiscal years ending on or after June 15, 2004*. (Other companies have until fiscal years ending on or after April 15, 2005, to comply with these internal control reporting and disclosure requirements.) Accordingly, independent auditors engaged to audit the financial statements of accelerated filers for fiscal years ending on or after June 15, 2004, also are required to audit and report on the company's internal control over financial reporting as of the end of such fiscal year. This standard is required to be complied with for such engagements.

195. Early compliance with this standard is permitted.

APPENDIX A

Illustrative Reports on Internal Control Over Financial Reporting

A.1 Paragraphs 152 through 179 of this standard provide direction on the auditor's report on management's assessment of internal control over financial reporting. The following examples illustrate how to apply that guidance in several different situations.

Example A-1

ILLUSTRATIVE REPORT EXPRESSING AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING (SEPARATE REPORT)[1]

<u>Independent Auditor's Report</u>

[*Introductory paragraph*]

We have audited management's assessment, included in the accompanying [*title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify criteria,* f*or example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for its assessment about the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment based on our audit.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

---

[1] If the auditor issues separate reports on the audit of internal control and the audit of the financial statements, both reports should include a statement that the audit was conducted in accordance with auditing and related professional practice standards established by the Public Company Accounting Oversight Board.

[*Scope paragraph*]

We conducted our audit in accordance with auditing and related professional practice standards established by the Public Company Accounting Oversight Board. Those standards require that we plan and perform our audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[Signature]

[*Date*]

Example A-2

ILLUSTRATIVE REPORT EXPRESSING AN ADVERSE OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF THE EXISTENCE OF A MATERIAL WEAKNESS

Independent Auditor's Report

[*Introductory paragraph*]

We have audited management's assessment included in the accompanying [*title of management's report*] that W Company did not maintain effective internal control over financial reporting as of December 31, 20X3, because of the effect of [*material weakness identified in management's assessment*], based on [*Identify criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for its assessment about the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment based on our audit.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Scope paragraph*]

We conducted our audit in accordance with auditing and related professional practice standards established by the Public Company Accounting Oversight Board. Those standards require that we plan and perform our audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Explanatory paragraph*]

A material weakness is a significant deficiency that, by itself, or in combination with other significant deficiencies, results in more than a remote likelihood of a material misstatement of the annual or interim financial statements. A significant deficiency is an internal control deficiency that adversely affects the company's ability to initiate, record, process, and report external financial data reliably in accordance with generally accepted accounting principles. The following material weakness has been identified and included in management's assessment.[1] [*Include a description of the material weakness and its effect on the achievement of the objectives of the control criteria.*] This material weakness was considered in determining the nature, timing, and extent of audit tests applied in our audit of the 20X3 financial statements, and this report does not affect our report dated [*date of report, which should be the same as the date of this report on internal control*] on those financial statements.

[1] If the auditor has identified a material weakness that is not included in management's assessment, add the following wording to the report: "In addition, we have identified the following material weakness that has not been identified as a material weakness in management's assessment. *[Include a description of the material weakness and its effect on the achievement of the objectives of the control criteria.]*"

[*Opinion paragraph*]

In our opinion, because of the effect of the material weakness described above on the achievement of the objectives of the control criteria, W Company has not maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[*Signature*]

[*Date*]

Example A-3

ILLUSTRATIVE REPORT EXPRESSING A QUALIFIED OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF A LIMITATION ON THE SCOPE OF THE AUDIT

<u>Independent Auditor's Report</u>

[*Introductory paragraph*]

We have audited management's assessment included in the accompanying [*title of management's report*] that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for its assessment about the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on management's assessment based on our audit.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Scope paragraph*]

Except as described below, we conducted our audit in accordance with auditing and related professional practice standards established by the Public Company Accounting Oversight Board. Those standards require that we plan and perform our audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

[*Explanatory paragraph that describes scope limitation*]

A *material weakness* is a significant deficiency that, by itself, or in combination with other significant deficiencies, results in more than a remote likelihood of a material misstatement of the annual or interim financial statements. A *significant deficiency* is an internal control deficiency that adversely affects the company's ability to initiate, record, process, and report external financial data reliably in accordance with generally accepted accounting principles. The following material weakness has been identified and included in management's assessment.[1] Prior to December 20, 20X3, W Company had an inadequate system for recording cash receipts, which could have prevented the Company from recording cash receipts on accounts receivable completely and properly. Therefore, cash received could have been diverted for unauthorized use, lost, or otherwise not properly recorded to accounts receivable. We believe this condition was a material weakness in the design or operation of the internal control of W Company in effect prior to December 20, 20X3. Although the Company implemented a new cash receipts system on December 20, 20X3, the system has not been in operation for a sufficient period of time to enable us to obtain sufficient evidence about its operating effectiveness.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of

---

[1] If the auditor has identified a material weakness that is not included in management's assessment, add the following wording to the report: "In addition, we have identified the following material weakness that has not been identified as a material weakness in management's assessment. *[Include a description of the material weakness and its effect on the achievement of the objectives of the control criteria.]*"

changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, except for the effect of matters we might have discovered had we been able to examine evidence about the effectiveness of the new cash receipts system, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[*Signature*]

[*Date*]

Example A-4

ILLUSTRATIVE REPORT DISCLAIMING AN OPINION ON THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING BECAUSE OF A LIMITATION ON THE SCOPE OF THE AUDIT

<u>Independent Auditor's Report</u>

[*Introductory paragraph*]

We were engaged to audit management's assessment included in the accompanying [*title of management's report*] that W Company maintained effective internal control over financial reporting as of December 31, 20X3 based on [*Identify criteria,* f*or example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Omit scope paragraph*]

[*Explanatory paragraph that describes scope limitation*]

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

Since management [*describe scope restrictions*] and we were unable to apply other procedures to satisfy ourselves as to the company's internal control over financial reporting, the scope of our work was not sufficient to enable us to express, and we do not express, an opinion on the effectiveness of the company's internal control over financial reporting.

[*Signature*]

[*Date*]

Example A-5

ILLUSTRATIVE REPORT EXPRESSING AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING THAT REFERS TO THE REPORT OF OTHER AUDITORS AS A BASIS, IN PART, FOR THE AUDITOR'S OPINION

Independent Auditor's Report

[*Introductory paragraph*]

We have audited management's assessment that W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for maintaining effective internal control over financial reporting. Our responsibility is to express an opinion on management's assessment based on our audit. We did not examine the effectiveness of internal control over financial reporting of B Company, a wholly owned subsidiary, whose financial statements reflect total assets and revenues constituting 20 and 30 percent, respectively of the related consolidated financial statement amounts as of and for the year ended December 31, 20XX. The effectiveness of B Company's internal control over financial reporting was audited by other auditors whose report has been furnished to us, and our opinion, insofar as it relates to the effectiveness of B Company's internal control over financial reporting, is based solely on the report of the other auditors.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Scope paragraph*]

We conducted our audit in accordance with auditing and related professional practice standards established by the Public Company Accounting Oversight Board. Those standards require that we plan and perform our audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit and the report of the other auditors provide a reasonable basis for our opinion.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, based on our audit and the report of the other auditors, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*Identify criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

[*Signature*]

[*Date*]

Example A-6

ILLUSTRATIVE COMBINED REPORT EXPRESSING AN UNQUALIFIED OPINION ON FINANCIAL STATEMENTS AND AN UNQUALIFIED OPINION ON MANAGEMENT'S ASSESSMENT OF THE EFFECTIVENESS OF INTERNAL CONTROL OVER FINANCIAL REPORTING

<u>Independent Auditor's Report</u>

[*Introductory paragraph*]

We have audited the accompanying balance sheets of W Company as of December 31, 20X3 and 20X2, and the related statements of income, stockholders' equity and comprehensive income, and cash flows for each of the years in the three-year period ended December 31, 20X3. We also have audited management's assessment, included in the accompanying [*identify title of management's report*], that W Company maintained effective internal control over financial reporting as of December 31, 20X3, based on [*Identify criteria, for example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for these financial statements and for the assessment about the effectiveness of internal control over financial reporting. Our responsibility is to express an opinion on these financial statements and on management's assessment based on our audits.

[*Definition paragraph*]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that in reasonable detail accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[*Scope paragraph*]

We conducted our audits in accordance with auditing and related professional practice standards established by the Public Company Accounting Oversight Board. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. An audit of financial statements includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. An audit of internal control includes obtaining an understanding of internal control over financial reporting, testing and evaluating the design and operating effectiveness of internal control, and performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

[*Inherent limitations paragraph*]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[*Opinion paragraph*]

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of W Company as of December 31, 20X3 and 20X2, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 20X3 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, management's assessment that W Company maintained effective internal control over financial reporting as of December 31, 20X3, is fairly stated, in all material respects, based on [*Identify criteria,* for *example, "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

APPENDIX B

Additional Performance Requirements and Guidance; Extent of Testing Examples

Tests to be Performed When a Company Has Multiple Locations or Business Units

B1. To determine the locations or business units for performing audit procedures, the auditor should evaluate their relative financial significance and the risk of material misstatement arising from them. In making this evaluation, the auditor should identify the locations or business units that are individually important, evaluate their documentation of controls, and test controls over significant accounts and disclosures. For locations or business units that contain specific risks that, by themselves, could create a material misstatement, the auditor should evaluate the documentation of controls and test controls over the specific risks.

B2. The auditor should determine which other locations or business units, when aggregated, represent a group with a level of financial significance that could create a material misstatement in the financial statements. For that group, the auditor should determine whether there are company-level controls in place. If so, the auditor should evaluate the documentation and test such company-level controls. If not, the auditor should perform tests of controls at some of the locations or business units.

B3. No further work is necessary on the remaining locations and businesses, provided that they are not able to create, either individually or in the aggregate, a material misstatement in the financial statements.

Locations or Business Units That are Financially Significant

B4. Because of the importance of financially significant locations, the auditor should evaluate management's documentation of and perform tests of controls over all relevant assertions related to significant accounts and disclosures at each financially significant location or business unit, as discussed in paragraphs 84 through 110. Generally, a relatively small number of locations or business units will encompass a large portion of a company's operations and financial position, making them financially significant.

B5. In determining the nature, timing, and extent of testing at the individual locations or business units, the auditor should evaluate each entity's involvement, if any, with a central processing or shared service environment.

Locations or Business Units That Involve Specific Risks

B6. Although a location or business unit might not be individually financially significant, it might present specific risks that, by themselves, could create a material misstatement in the company's financial statements. The auditor should test the controls over the specific risks that could create a material misstatement in the company's financial statements. The auditor need not test controls over all relevant assertions for all significant accounts at these locations or business units. For example, a business unit responsible for foreign exchange trading could expose the company to the risk of material misstatement, even though the relative financial significance of such transactions is low.

Locations or Business Units That are Significant Only When Aggregated with Other Locations and Business Units

B7. In determining the nature, timing, and extent of testing, the auditor should determine whether management has documented and placed in operation company-level controls (see paragraph 53) over individually unimportant locations and business units that, when aggregated with other locations or business units, might have a high level of financial significance. Such a level of financial significance could create a greater than remote risk of material misstatement of the financial statements.

B8. For the purposes of this evaluation, company-level controls are controls management has in place to monitor the operations and to oversee the control environment and risk assessment process at these locations or business units.

B9. The auditor should perform tests of company-level controls to determine whether such controls are operating effectively. The auditor might conclude that he or she cannot evaluate the operating effectiveness of such controls without visiting some or all of the locations or business units.

B10. If management does not have company-level controls operating at these locations and business units, the auditor should determine the nature, timing, and extent of procedures to be performed at each location, business unit, or combination of locations and business units. When determining the locations or business units to visit and the controls to test, the auditor should evaluate the following factors:

- The relative financial significance of each location or business unit.

- The risk of material misstatement arising from each location or business unit.

- The similarity of business operations and internal control over financial reporting at the various locations or business units.

- The degree of centralization of processes and financial reporting applications.

- The effectiveness of the control environment, particularly management's direct control over the exercise of authority delegated to others and its ability to effectively supervise activities at the various locations or business units. An ineffective control environment over the locations or business units might constitute a material weakness.

- The nature and amount of transactions executed and related assets at the various locations or business units.

- The potential for material unrecognized obligations to exist at a location or business unit and to what degree the location or business unit could create an obligation on the part of the company.

- Management's risk assessment process and analysis for excluding a location or business unit from its assessment of internal control over financial reporting.

B11. Testing company-level controls is not a substitute for the auditor's testing of controls over a large portion of the company's operations or financial position. If the auditor cannot test a large portion of the company's operations and financial position by selecting a relatively small number of locations or business units, he or she should expand the number of locations or business units selected to evaluate internal control over financial reporting.

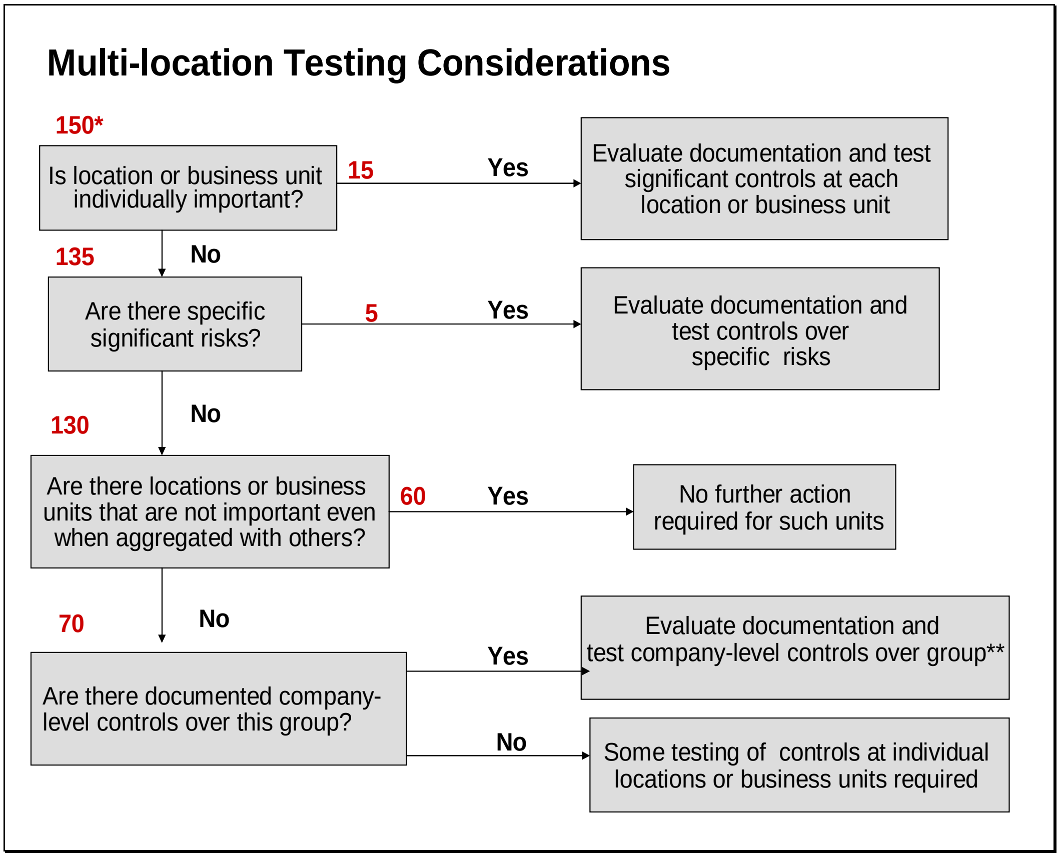
Locations and Business Units That Do Not Require Testing

B12. No testing is required with respect to locations or business units that individually, and when aggregated with others, could not result in a material misstatement to the financial statements.

Multi-Location Testing Considerations Flowchart

B13. Illustration B-1 depicts how to apply the directions in this section to a hypothetical company with 150 locations or business units, along with the auditor's testing considerations for those locations or business units.

Illustration B-1



* Numbers represent number of locations affected.

** See paragraph B7.

Special Situations

B14. The scope of the evaluation of the company's internal control over financial reporting should include entities that are acquired on or before the date of management's assessment and operations that are accounted for as discontinued operations on the date of management's assessment. The auditor should consider this multiple locations discussion in determining whether it will be necessary to test controls at these entities or operations.

B15. For equity method investments, the evaluation of the company's internal control over financial reporting should include controls over the reporting in accordance with generally accepted accounting principles, in the company's financial statements, of the company's portion of the investees' income or loss, the investment balance, adjustments to the income or loss and investment balance, and related disclosures. The evaluation ordinarily would not extend to controls at the equity method investee.

B16. For entities that are consolidated or proportionately consolidated, the evaluation of the company's internal control over financial reporting should include controls over significant accounts and processes that exist at the consolidated or proportionately consolidated entity. In some instances, however, such as for some variable interest entities as defined in Financial Accounting Standards Board Interpretation No. 46, *Consolidation of Variable Interest Entities,* management might not have the ability to obtain the information necessary to make an assessment because it does not have the ability to control the entity. If management is allowed to limit its assessment by excluding such entities,[1] the auditor may limit the audit in the same manner, and report without reference to the limitation in scope. However, the auditor should evaluate the reasonableness of management's conclusion that they do not have the ability to obtain the necessary information as well as the appropriateness of any required disclosure related to such a limitation. If the auditor believes that management's disclosure about the limitation requires modification, the auditor should follow the same communication responsibilities as described in paragraphs 187 and 188. If management and the audit committee do not respond appropriately, in addition to fulfilling those responsibilities, the auditor should modify his or her report on the audit of internal control over financial reporting to include an explanatory paragraph describing the reasons the auditor believes management's disclosure should be modified.

Identifying Significant Accounts

B17. When deciding whether an account is significant, it is important for the auditor to evaluate both quantitative and qualitative factors, including the:

- Size and composition of the account,

---

[1] It is our understanding that the SEC Staff may conclude that management can limit the scope of its assessment if it does not have the authority to affect, and therefore cannot assess, the controls in place over certain amounts. This would relate to entities that are consolidated or proportionately consolidated when the issuer does not have sufficient control over the entity to assess and affect controls. If management's report on its assessment of the effectiveness of internal control over financial reporting is limited in that manner, the SEC staff may permit the company to disclose this fact as well as information about the magnitude of the amounts included in the financial statements from entities whose controls cannot be assessed. This disclosure would be required in each filing, but outside of management's report on its assessment of the effectiveness of internal control over financial reporting.

- Susceptibility of loss due to errors or fraud,

- Volume of activity, complexity, and homogeneity of the individual transactions processed through the account,

- Nature of the account (for example, suspense accounts generally warrant greater attention),

- Accounting and reporting complexities associated with the account,

- Exposure to losses represented by the account (for example, loss reserves related to a consolidated captive insurance company),

- Likelihood (or possibility) of significant contingent liabilities arising from the activities represented by the account,

- Existence of related party transactions in the account, and

- Changes from the prior period in account characteristics (for example, new complexities or subjectivity or new types of transactions).

B18. For example, in a financial statement audit, the auditor might not consider the fixed asset accounts significant when there is a low volume of transactions and inherent risk is assessed as low, even though the balances are material to the financial statements. Accordingly, he or she might decide to perform only substantive tests on such balances. In an audit of internal control over financial reporting, however, such accounts are significant accounts because of their materiality to the financial statements.

B19. As another example, the auditor of the financial statements of a financial institution might not consider trust accounts significant to the institution's financial statements because such accounts are not included in the institution's balance sheet and the associated fee income generated by trust activities is not material. However, in determining whether trust accounts are a significant account for purposes of the audit of internal control over financial reporting, the auditor should assess whether the activities of the trust department are significant to the institution's financial reporting, which also would include considering the contingent liabilities that could arise if a trust department failed to fulfill its fiduciary responsibilities (for example, if investments were made that were not in accordance with stated investment policies). When assessing the significance of possible contingent liabilities, consideration of the amount of assets under the trust department's control may be useful. For this reason, an auditor who has not previously considered trust accounts significant accounts for purposes of the financial statement audit might determine that they are significant for purposes of the audit of internal control over financial reporting.

Using the Work of Others

Other Standards to Consider

B20. The auditor might find the directions in AU sec. 322, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements,* useful in assessing the competence and objectivity of internal auditors and others who have performed procedures as a basis for management's assessment.

Application Example

B21. The example included in the following paragraphs demonstrates how to apply the directions discussed in this section.

B22. In evaluating controls over the recording of revenue, the auditor needs to look at a variety of factors including, among other things, information technology general controls and controls over (1) determining the appropriate methods of revenue recognition under generally accepted accounting principles as it relates to the company's operations, (2) evaluating nonroutine sales transactions and contracts to determine the appropriate accounting and (3) the routine processing of daily sales through the company's accounting system.

- Because of the pervasive impact of the controls in (1) and the material impact those controls ordinarily have on the financial statements, the auditor should not use the results of testing by management and others within the company, as discussed in paragraph 104.

- The auditor should limit use of the results of testing performed by others within the company for the controls identified in (2), since the nonroutine nature of these transactions and contracts involve controls over decisions requiring considerable judgment.

- On the other hand, the auditor could increase the use of the results of testing by management and others relating to the controls in (3), which relate to the routine processing of daily sales transactions and accounts receivable. In that case, the auditor should follow the directions in paragraphs 106 through 109.

B23. In the situations described in (1) through (3) above, when evaluating whether sufficient evidence has been obtained, the auditor should understand that evidence obtained through his or her direct personal knowledge, observation, reperformance, and inspection is more persuasive than information obtained indirectly from others, such as from management, internal auditors, or other personnel. Furthermore, judgments about the sufficiency of evidence obtained and other factors affecting the auditor's opinion, such as the materiality of identified control deficiencies, should be those of the auditor.

Use of Service Auditor's Report

B24. When the company uses a service organization, the auditor, when planning the audit, should obtain an understanding of the portion of the company's internal control over financial reporting (that is, the initiating, recording, processing, and reporting of its transactions) performed at the service organization and the interaction of controls at the service organization with controls at the company.

B25. The use of a service organization does not reduce management's responsibility to maintain effective internal control over financial reporting. Rather, management should evaluate controls at the service organization, as well as related controls at the company, when making its assessment about internal control over financial reporting.

B26. The auditor should determine whether management has evaluated the activities of the service organization when making its assessment about internal control over financial reporting. For instance, a service organization is considered part of the company's internal control over financial reporting when it provides services that affect –

- How the company initiates its transactions,
- How the company's transactions are processed and reported in its accounting records, supporting information, and specific financial statement accounts,
- How the company's transactions are processed from the initiation of the transaction to its inclusion in the financial statements, or
- How the financial reporting process is used to prepare the client's financial statements.

B27. In addition, the auditor should evaluate the activities of the service organization in determining the nature, timing, and extent of evidence required to support his or her opinion on internal control over financial reporting. Paragraph .07 of AU sec. 324, *Service Organizations,* describes the procedures that management and the auditor should perform with respect to the activities performed by the service organization, which include:

- Obtaining an understanding of the controls at the service organization that are relevant to the company's internal control over financial reporting, and

- Obtaining evidence that the controls that are relevant to management's assessment and the auditor's opinion are operating effectively.

B28. A service organization might do several things to assist the auditor. For example, the service organization might:

- Engage its own auditor (service auditor) to review and report on the systems it uses to process the company's transactions.

- Engage a service auditor to test the effectiveness of the controls applied to the company's transactions to enable the auditor to evaluate controls at the service organization in an audit of internal control over financial reporting.

Auditor's Use of Service Auditor's Report

B29. Whenever the company uses a service organization to provide services that are part of the company's information system, the auditor should inquire whether management has received a service auditor's report. If so, the auditor should read the report for information that might be useful in planning the audit.

B30. A service auditor's *report on controls placed in operation,* as described in Paragraph .24a of AU sec. 324, expresses an opinion on a description of the controls at the service organization as of a specified date. The opinion indicates whether the controls described (a) were presented fairly in all material respects and (b) were suitably designed to provide reasonable assurance that the control objectives specified in the description would be achieved if complied with satisfactorily.

B31. A report on controls placed in operation might be helpful when planning the audit; however, it provides assurance only with respect to the control objectives specified in the description. Accordingly, there is no assurance that the specified objectives include all those that would be relevant to the company's internal control over financial reporting. Furthermore, if such a report contains a caveat that the stated control objectives might be achieved only if the company applies controls contemplated in the design of the system by the service organization, the auditor should evaluate whether the company is applying the necessary procedures. For example, completeness of processing payroll transactions might depend on the company's validation that all payroll records sent to the service center were processed by checking a control total. Finally, this type of report does not provide any evidence of the operating effectiveness of controls.

B32. If the auditor uses a service auditor's report when planning the audit, he or she should make inquiries concerning the service auditor's reputation, competence, and independence. In making those inquiries, the auditor should evaluate the relevance of the information in AU sec. 543, *Part of Audit Performed by Other Independent Auditors of Financial Statements.* The auditor also should read the report to determine whether it provides information the auditor needs, for example, by addressing the service organization's controls relevant to the assertions the auditor is testing. If the service auditor's report is not sufficient to meet the auditor's objectives, the auditor should gather the desired information from other sources, such as those discussed in the next section.

Unavailable Service Auditor's Report

B33. If a service auditor's report on controls placed in operation is unavailable, the auditor might obtain information about the service organization's controls needed to plan the audit from a variety of sources, such as –

- User manuals.
- System overviews.
- Technical manuals.
- The contract between the client and the service organization.
- Reports by internal auditors or regulatory authorities on the information system and other controls placed in operation by the service organization.
- Inquiries or observations of personnel at the company or at the service organization.

B34. In addition, the auditor's prior experience with the specific service organization might be helpful in planning the audit.

Report on Operating Effectiveness

B35. If the auditor believes that he or she also must obtain evidence about the operating effectiveness of service center controls, one way an auditor can obtain such evidence is by obtaining a service auditor's *report on controls placed in operation and tests of operating effectiveness,* as described in Paragraph .24b of AU sec. 324. This report provides a description of the tests of controls and results of those tests performed by the service auditor, as well as the service auditor's opinion on whether the controls that were tested were operating effectively during the specified period. If a service auditor's report on controls placed in operation and tests of operating effectiveness is available, management and the auditor should evaluate whether the report provides sufficient evidence to support their assessment and opinion, respectively. The evaluation should include the following factors:

- The time period covered by the service auditor's tests of controls in relationship to the date of management's assessment of internal control over financial reporting,
- The controls tested by the service auditor and how they relate to the company's controls,
- The results of the tests of controls performed by the service auditor, and
- The service auditor's opinion on the operating effectiveness of the controls.

B36. Such evaluations are similar to those the auditor would make when determining whether the service auditor's report provides sufficient evidence to support the auditor's assessed level of control risk in an audit of the financial statements, as described in Paragraph .16 of AU sec. 324. However, the auditor is responsible for evaluating the evidence provided by the service auditor's report and for determining its effect on the audit of internal control over financial reporting.

Inquiries About Changes in Controls

B37. When a significant period of time has elapsed between the time period covered by the service auditor's tests of controls and the date of management's assessment, the auditor should inquire of management about whether there have been changes in the service organization's controls subsequent to the period covered by the service auditor's report. Such changes might include:

- Changes communicated to management from the service organization,
- Changes in personnel, with whom management interacts, at the service organization,
- Changes in reports or other data received from the service organization,
- Changes in contracts or service level agreements with the service organization, or
- Errors identified in the service organization's processing.

B38. If management has informed the auditor of the types of changes noted in the preceding paragraph, the auditor should determine whether management has performed procedures to evaluate the effect of the changes on the effectiveness of the company's internal control over financial reporting. The auditor also should evaluate whether management was aware of changes in the service organization's controls that the auditor discovered while performing other procedures during the audit of internal control over financial reporting. In light of such evaluations, the auditor should determine whether there is a need for obtaining additional evidence about the operating effectiveness of controls at the service organization. If additional evidence is necessary, the auditor should:

- Reperform tests performed by management or others within the company,
- Contact the service organization, through the client, to obtain specific information,
- Request that a service auditor be engaged to perform procedures that will supply the necessary information, or
- Visit the service organization and perform procedures that will supply the necessary evidence.

B39. Because the auditor is responsible for obtaining sufficient evidence to support the opinion on internal control over financial reporting, he or she should not refer to the service auditor's report when expressing such an opinion.

Examples of Extent of Testing Decisions

B40. As discussed throughout this standard, determining the effectiveness of a company's internal control over financial reporting includes evaluating the design and operating effectiveness of controls over all relevant assertions related to all significant accounts and disclosures in the financial statements. Paragraphs 88 through 110 provide the auditor with directions about the nature, timing, and extent of testing of the operating effectiveness of internal control over financial reporting.

B41. Examples B-1 through B-4 illustrate how to apply this information in various situations. These examples are for illustrative purposes only.

Example B-1 – ***Daily Programmed Application Control and Daily Information Technology-Dependent Manual Control***

The auditor has determined that cash and accounts receivable are significant accounts to the audit of XYZ Company's internal control over financial reporting. Based on discussions with company personnel and review of company documentation, the auditor learned that the company had the following procedures in place to account for cash received in the lockbox:

a. The company receives a download of cash receipts from the banks.

b. The information technology system applies cash received in the lockbox to individual customer accounts.

c. Any cash received in the lockbox and not applied to a customer's account is listed on an exception report (Unapplied Cash Exception Report).

   — Therefore, the application of cash to a customer's account is a programmed application control, while the review and follow-up of unapplied cash from the exception report is a detective control.

To determine whether misstatements in cash (existence assertion) and accounts receivable (existence, valuation, and completeness) would be prevented or detected on a timely basis, the auditor decided to test the controls provided by the system in the daily reconciliation of lock box receipts to customer accounts, as well as the control over reviewing and resolving unapplied cash in the Unapplied Cash Exception Report.

Nature, Timing, and Extent of Procedures. To test the programmed application control, the auditor:

- Identified, through discussion with company personnel, the software used to receive the download from the banks and to process the transactions and determined that the banks supply the download software.

  — The company uses accounting software used from a third-party supplier. The software consists of a number of modules. The client modifies the software only for upgrades supplied by the supplier.

- Determined, through further discussion with company personnel, that the cash module operates the lockbox functionality and the posting of cash to the general ledger. The accounts receivable module posts the cash to individual customer accounts and produces the Unapplied Cash Exception Report, a standard report supplied with the package. The auditor agreed this information to the supplier's documentation.

- Identified, through discussions with company personnel and review of the supplier's documentation, the names, file sizes (in bytes), and locations of the executable files (programs) that operate the functionality under review. The auditor then found the compilation dates of these programs and agreed them to the original installation date of the application.

- Identified the objectives of the programs to be tested. The auditor wanted to determine whether only appropriate cash items are posted to customers' accounts and matched to customer number, invoice number, amount, etc., and that there is a listing of inappropriate cash items (that is, any of the above items not matching) on the exception report.

In addition, the auditor had evaluated and tested general computer controls, including program changes (for example, confirmation that no unauthorized changes are undertaken) and logical access (for example, data file access to the file downloaded from the banks and user access to the cash and accounts receivable modules) and concluded that they were operating effectively.

To determine whether such programmed controls were operating effectively, the auditor performed a walkthrough in the month of July. The computer controls operate in a systematic manner, therefore, the auditor concluded that it was sufficient to walkthrough only the one item. During the walkthrough, the auditor performed and documented the following items:

a. Selected one customer and agreed the amount billed to the customer to the cash received in the lockbox.

b. Agreed the total of the lockbox report to the posting of cash receipts in the general ledger.

c. Agreed the total of the cash receipt download from the bank to the lockbox report and supporting documentation.

d. Selected one customer's remittance and agreed amount posted to the customer's account in the accounts receivable subsidiary ledger.

To test the detect control of review and follow up on the Daily Unapplied Cash Exception Report, the auditor:

a. Made Inquiries of Company Personnel. To understand the procedures in place to ensure that all unapplied items are resolved, the time frame in which such resolution takes place, and whether unapplied items are handled properly within the system, the auditor discussed these matters with the employee responsible for reviewing and resolving the Daily Unapplied Cash Exception Reports. The auditor learned that when items appear on the Daily-Unapplied Cash Exception Report, the employee must manually enter the correction into the system. The employee typically performs the resolution procedures the next business day. Items that typically appear on the Daily Unapplied Cash Exception Report relate to payments made by a customer without reference to an invoice number/purchase order number or underpayments of an invoice due to quantity or pricing discrepancies.

b. Observed Personnel Performing the Control**.** The auditor then observed the employee reviewing and resolving a Daily Unapplied Cash Exception Report. The day selected contained four exceptions – three related to payments made by a customer without an invoice number, and one related to an underpayment due to a pricing discrepancy.

   – For the pricing discrepancy, the employee determined, through discussions with a sales person, that the customer had been billed an incorrect price; a price break that the sales person had granted to the customer was not reflected on the customer's invoice. The employee resolved the pricing discrepancy, determined which invoices were being paid, and entered a correction into the system to properly apply cash to the customer's account and reduce accounts receivable and sales accounts for the amount of the price break.

c. Reperformed the Control. Finally, the auditor selected 25 Daily Unapplied Cash Exception Reports from the period January to September. For the reports selected, the auditor reperformed the follow-up procedures that the employee performed. For instance, the auditor inspected the documents and sources of information used in the follow-up and determined that the transaction was properly corrected in the system. The auditor also scanned other Daily Unapplied Cash Exception Reports to determine that the control was performed throughout the period of intended reliance.

Because the tests of controls were performed at an interim date, the auditor had to determine whether there were any significant changes in the controls from interim to year-end. Therefore, the auditor asked company personnel about the procedures in place at year-end. Such procedures had not changed from the interim period, therefore, the auditor observed that the controls were still in place by scanning Daily Unapplied Cash Exception Reports to determine the control was performed on a timely basis during September to year-end.

Based on the auditor's procedures, the auditor concluded that the employee was clearing exceptions in a timely manner and that the control was operating effectively as of year-end.

Example B-2 – ***Monthly Manual Reconciliation***

The auditor determined that accounts receivable is a significant account to the audit of XYZ Company's internal control over financial reporting. Through discussions with company personnel and review of company documentation, the auditor learned that company personnel reconcile the accounts receivable subsidiary ledger to the general ledger on a monthly basis. To determine whether misstatements in accounts receivable (existence, valuation, and completeness) would be detected on a timely basis, the auditor decided to test the control provided by monthly reconciliation process.

Nature, Timing, and Extent of Procedures. The auditor tested the company's reconciliation control by selecting a sample of reconciliations based upon the number of accounts, the dollar value of the accounts, and the volume of transactions affecting the account. Because the auditor considered all other receivable accounts immaterial, and because such accounts had only minimal transactions flowing through them, the auditor decided to test only the reconciliation for the trade accounts receivable account. The auditor elected to perform the tests of controls over the reconciliation process in conjunction with the auditor's substantive tests over the accounts receivable confirmation procedures, which were performed in July.

To test the reconciliation process, the auditor:

- Made Inquiries of Personnel Performing the Control. The auditor asked the employee performing the reconciliation a number of questions, including the following:
  - What documentation describes the account reconciliation process?
  - How long have you been performing the reconciliation work?
  - What is the reconciliation process for resolving reconciling items?
  - How often are the reconciliations formally reviewed and signed off?
  - If significant issues or reconciliation problems are noticed, to whose attention do you bring them?
  - On average, how many reconciling items are there?
  - How are old reconciling items treated?
  - If need be, how is the system corrected for reconciling items?

- What is the general nature of these reconciling items?

- Observed the Employee Performing the Control**.** The auditor observed the employee performing the reconciliation procedures. For nonrecurring reconciling items, the auditor observed whether each item included a clear explanation as to its nature, the action that had been taken to resolve it, and whether it had been resolved on a timely basis.

- Reperformed the Control**.** Finally, the auditor inspected the reconciliations and reperfomed the reconciliation procedures. For the May and July reconciliations, the auditor traced the reconciling amounts to the source documents on a test basis. The only reconciling item that appeared on these reconciliations was cash received in the lockbox the previous day that had not been applied yet to the customer's account. The auditor pursued the items in each month's reconciliation to determine that the reconciling item cleared the following business day. The auditor also scanned through the file of all reconciliations prepared during the year and noted that they had been performed on a timely basis. To determine that the company had not made significant changes in its reconciliation control procedures from interim to year-end, the auditor made inquiries of company personnel and determined that such procedures had not changed from interim to year-end. Therefore, the auditor verified that controls were still in place by scanning the monthly account reconciliations to determine that the control was performed on a timely basis during the interim to year-end period.

Based on the auditor's procedures, the auditor concluded that the reconciliation control was operating effectively as of year-end.

Example B-3 – ***Daily Manual Prevent Control***

The auditor determined that cash and accounts payable were significant accounts to the audit of the company's internal control over financial reporting. Through discussions with company personnel, the auditor learned that company personnel make a cash disbursement only after they have matched the vendor invoice to the receiver and purchase order. To determine whether misstatements in cash (existence) and accounts payable (existence, valuation, and completeness) would be prevented on a timely basis, the auditor tested the control over making a cash disbursement only after matching the invoice with the receiver and purchase.

Nature, Timing, and Extent of Procedures. On a haphazard basis, the auditor selected 25 disbursements from the cash disbursement registers from January through September. In this example, the auditor deemed a test of 25 cash disbursement transactions an appropriate sample size because the auditor was testing a manual control performed as part of the routine processing of cash disbursement transactions through the system. Furthermore, the auditor expected no errors based on the results of company-level tests performed earlier. [If, however, the auditor had encountered a control exception, the auditor would have tested an additional number of items. If another control exception had been noted, the auditor would have decided (a) that this control was not effective and (b) to increase the extent of substantive tests to be performed in connection with the financial statement audit of the cash and accounts payable accounts.]

After obtaining the related voucher package, the auditor examined the invoice to see if it included the signature or initials of the accounts payable clerk, evidencing the clerk's performance of the matching control. However, a signature on a voucher package to indicate signor approval does not necessarily mean that the person carefully reviewed it before signing. The voucher package may have been signed based on only a cursory review (or without any review).

The auditor decided that the quality of the evidence regarding the effective operation of the control evidenced by a signature or initials was not sufficiently persuasive to ensure that the control operated effectively during the test period. In order to obtain additional evidence, the auditor reperformed the matching control corresponding to the signature, which included examining the invoice to determine that (a) its items matched to the receiver and purchase order and (b) it was mathematically accurate.

Because the auditor performed the tests of controls at an interim date, the auditor updated the testing through the end of the year (initial tests are through September to December) by asking the accounts payable clerk whether the control was still in place and operating effectively. The auditor confirmed that understanding by performing a walkthrough of one transaction in December.

Based on the auditor's procedures, the auditor concluded that the control over making a cash disbursement only after matching the invoice with the receiver and purchase was operating effectively as of year-end.

Example B-4 – ***Programmed Prevent Control and Weekly Information Technology-Dependent Manual Detect Control***

The auditor determined that cash, accounts payable, and inventory were significant accounts to the audit of the company's internal control over financial reporting. Through discussions with company personnel, the auditor learned that the company's computer system performs a three-way match of the receiver, purchase order, and invoice. If there are any exceptions, the system produces a list of unmatched items that is reviewed and followed up by employees on a weekly basis.

In this case, the computer match is a programmed application control, and the review and follow-up of the unmatched items report is a detect control. To determine whether misstatements in cash (existence) and accounts payable/inventory (existence, valuation, and completeness) would be prevented or detected on a timely basis, the auditor decided to test the programmed application control of matching the receiver, purchase order, and invoice as well as the review and follow-up control over unmatched items.

Nature, Timing, and Extent of Procedures. To test the programmed application control, the auditor:

- Identified, through discussion with company personnel, the software used to process receipts and purchase invoices. The software used was a third party package consisting of a number of modules.

- The auditor established through further discussion with company personnel that they do not modify the core functionality of the software, but sometimes make personalized changes to reports to meet the changing needs of the business. From previous experience with the company's information technology environment, the auditor believes that such changes are infrequent and that information technology process controls are well established.

- Established, through further discussion, that the inventory module operated the receiving functionality, including the matching of receipts to open purchase orders. Purchase invoices were processed in the accounts payable module, which matched them to an approved purchase order against which a valid receipt has been made. That module also produced the Unmatched Items Report, a standard report supplied with the package to which the company has not made any modifications. That information was agreed to the supplier's documentation and to documentation within the information technology department.

- Identified, through discussions with the client and review of the supplier's documentation, the names, file sizes (in bytes), and locations of the executable files (programs) that operate the functionality under review. The auditor then identified the compilation dates of the programs and agreed them to the original installation date of the application. The compilation date of the report code was agreed to documentation held within the information technology department relating to the last change made to that report (a change in formatting).

- Identified the objectives of the programs to be tested. The auditor wanted to determine whether appropriate items are received (for example, match a valid purchase order), appropriate purchase invoices are posted (for example, match a valid receipt and purchase order, non-duplicate reference numbers) and unmatched items (for example, receipts, orders or invoices) are listed on the exception report. The auditor then reperformed all those variations in the packages on a test-of-one basis to determine that the programs operated as described.

In addition, the auditor had evaluated and tested general computer controls, including program changes (for example, confirmation that no unauthorized changes are undertaken to the functionality and that changes to reports are appropriately authorized, tested, and approved before being applied) and logical access (for example, user access to the inventory and accounts payable modules and access to the area on the system where report code is maintained), and concluded that they were operating effectively. (Since the computer is deemed to operate in a systematic manner, the auditor concluded that it was sufficient to walkthrough only the one item.)

- To determine whether the programmed control was operating effectively, the auditor performed a walkthrough in the month of July. As a result of the walkthrough, the auditor performed and documented the following items:

  – Receiving cannot record the receipt of goods without matching the receipt to a purchase order on the system. The auditor tested that control by attempting to record the receipt of goods into the system without a purchase order. However, the system did not allow the auditor to do that. Rather, the system produced an error message stating that the goods could not be recorded as received without an active purchase order.

  – An invoice will not be paid unless the system can match the receipt and vendor invoice to an approved purchase order. The auditor tested that control by attempting to approve an invoice for payment in the system. The system did not allow the auditor to do that. Rather, it produced an error message indicating that invoices could not be paid without an active purchase order and receiver.

  – The system disallows the processing of invoices with identical vendor and identical invoice numbers. In addition, the system will not allow two invoices to be processed against the same purchase order unless the sum of the invoices is less than the amount approved on the purchase order. The auditor tested that control by attempting to process duplicate invoices. However, the system produced an error message indicating that the invoice had already been processed.

  – The system compares the invoice amounts to the purchase order. If there are differences in quantity/extended price, and such differences fall outside a pre-approved tolerance, the system does not allow the invoice to be processed. The auditor tested that control by attempting to process an invoice that had quantity/price differences outside the tolerance level of 10 pieces, or $1,000. The system produced an error message indicating that the invoice could not be processed because of such differences.

- The system processes payments only for vendors established in the vendor master file. The auditor tested that control by attempting to process an invoice for a vendor that was not established in the vendor master file. However, the system did not allow the payment to be processed.

- The auditor tested user access to the vendor file and whether such users can make modifications to such file by attempting to access and make changes to the vendor tables. However, the system did not allow the auditor to perform that function and produced an error message stating that the user was not authorized to perform that function.

- The auditor verified the completeness and accuracy of the Unmatched Items Report by verifying that one unmatched item was on the report and one matched item was not on the report.

To test the detect control of review and follow up on the Unmatched Items Report, the auditor performed the following procedures in the month of July for the period January to July:

- Made Inquiries of company personnel. To gain an understanding of the procedures in place to ensure that all unmatched items are followed-up properly and that corrections are made on a timely basis, the auditor made inquiries of the employee who follows up on the weekly-unmatched items reports. On a weekly basis, the control required the employee to review the Unmatched Items Report to determine why items appear on it. The employee's review includes proper follow-up on items, including determining whether:

  - All open purchase orders are either closed or voided within an acceptable amount of time.

  - The requesting party is notified periodically of the status of the purchase order and the reason for its current status.

  - The reason the purchase order remains open is due to incomplete shipment of goods and, if so, whether the vendor has been notified.

  - There are quantity problems that should be discussed with purchasing.

- Observed the Performance of the Control**.** The auditor observed the employee performing the control for the Unmatched Items Reports generated during the first week in July.

- Reperformance of the Control**.** The auditor selected five weekly Unmatched Items Reports, selected several items from each, and reperformed the procedures that the employee performed. The auditor also scanned other Unmatched Items Reports to determine that the control was performed throughout the period of intended reliance.

To determine that the company had not made significant changes in their controls from interim to year-end, the auditor discussed with company personnel the procedures in place for making such changes. Since the procedures had not changed from interim to year-end, the auditor observed that the controls were still in place by scanning the weekly Unmatched Items Reports to determine that the control was performed on a timely basis during the interim to year-end period.

Based on the auditor's procedures, the auditor concluded that the employee was clearing exceptions in a timely manner and that the control was operating effectively as of year-end.

APPENDIX C

Safeguarding of Assets

C1. *Safeguarding of assets* in a financial reporting context includes protection only against losses arising from intentional and unintentional misstatements in processing transactions and handling the related assets. Examples of unintentional misstatements include:

- Understatement of sales through failure to prepare invoices or through incorrect pricing or computation;
- Overpayments to vendors or employees arising from inaccuracies in quantities of materials or services, prices or rates, or computations;
- Physical loss or misappropriation of assets such as cash, securities, or inventory; and
- Improper allocation of certain costs, which would result in failure to recover these costs from customers.

C2. Examples of intentional misstatements include falsification of records for the purpose of causing improper computation of commissions, profit-sharing bonuses, royalties, and similar payments based on the recording of other transactions. Consequently, safeguarding controls over the use of a lockbox system for collecting cash and over access controls, such as passwords, that limit access to data and programs that process cash disbursements might both be relevant to an audit of internal control over financial reporting.

C3. The definition of *safeguarding of assets* used in this standard does not encompass the concept that one of management's primary functions is to protect the company's existing assets and acquire new ones. Thus, when evaluating whether the company's internal control over financial reporting is effective, the auditor is not required to understand and test controls over management's decision-making process for all sales and acquisitions. For example, management's decision to sell a product at a price that proves to be unprofitable might be regarded as a failure to protect existing assets. However, because that decision is outside the financial reporting process, it is not considered to be a deficiency in internal control over financial reporting. Likewise, decisions to incur expenditures for equipment that prove to be unnecessary or inefficient, for materials that prove to be unsatisfactory in production, for merchandise that proves to be unsaleable, for research that proves to be unproductive, for advertising that proves to be ineffective, and for similar management decisions are not deficiencies in a company's internal control over financial reporting because they are outside the scope of internal control over financial reporting.

APPENDIX D

Examples of Material Weaknesses and Significant Deficiencies

D1. Paragraph 7 of this standard defines an *internal control deficiency*. Paragraphs 8 and 9 go on to define a *significant deficiency* and a *material weakness*.

D2. Materiality in an audit of internal control over financial reporting is discussed in paragraphs 21-23, and paragraphs 116-126 provide additional direction on evaluating deficiencies in internal control over financial reporting.

D3. The following examples illustrate how to evaluate the significance of internal control deficiencies in various situations. These examples are for illustrative purposes only.

Example D-1**— *Reconciliations of Intercompany Accounts Are Not Performed on a Timely Basis***

Scenario A – Significant Deficiency. The company processes a significant number of routine intercompany transactions on a monthly basis. Individual intercompany transactions are not material and primarily relate to balance sheet activity, for example, cash transfers between business units to finance normal operations.

A formal management policy requires monthly reconciliation of intercompany accounts and confirmation of balances between business units. However, there is not a process in place to ensure performance of these procedures. As a result, detailed reconciliations of intercompany accounts are not performed on a timely basis. Management does perform monthly procedures to investigate selected large-dollar intercompany account differences. In addition, management prepares a detailed monthly variance analysis of operating expenses to assess their reasonableness.

Based only on these facts, the auditor should determine that this deficiency represents a significant deficiency for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be more than inconsequential, but less than material, because individual intercompany transactions are not material and the compensating controls operating monthly should detect a material misstatement. Furthermore, the transactions are primarily restricted to balance sheet accounts. However, the compensating detective controls are designed only to detect material misstatements. The controls do not address the detection of misstatements that are more than inconsequential but less than material. Therefore, the likelihood that a misstatement that was more than inconsequential, but less than material, could occur is more than remote.

Scenario B - Material Weakness. The company processes a significant number of intercompany transactions on a monthly basis. Intercompany transactions relate to a wide range of activities, including transfers of inventory with intercompany profit between business units, allocation of research and development costs to business units and corporate charges. Individual intercompany transactions are frequently material.

A formal management policy requires monthly reconciliation of intercompany accounts and confirmation of balances between business units. However, there is not a process in place to ensure that these procedures are performed on a consistent basis. As a result, reconciliations of intercompany accounts are not performed on a timely basis, and differences in intercompany accounts are frequent and significant. Management does not perform any alternative controls to investigate significant intercompany account differences.

Based only on these facts, the auditor should determine that this deficiency represents a material weakness for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be material, because individual intercompany transactions are frequently material and relate to a wide range of activities. Additionally, actual unreconciled differences in intercompany accounts have been, and are, material. The likelihood of such a misstatement is more than remote because such misstatements have frequently occurred and compensating controls are not effective, either because they are not properly designed or not operating effectively. Taken together, the magnitude and likelihood of misstatement of the financial statements resulting from this internal control deficiency meet the definition of a material weakness.

Example D-2—***Modifications to Standard Sales Contract Terms Not Reviewed To Evaluate Impact on Timing and Amount of Revenue Recognition***

Scenario A – Significant Deficiency. The company uses a standard sales contract for most transactions. Individual sales transactions are not material to the entity. Sales personnel are allowed to modify sales contract terms. The company's accounting function reviews significant or unusual modifications to the sales contract terms, but does not review changes in the standard shipping terms. The changes in the standard shipping terms could require a delay in the timing of revenue recognition. Management reviews gross margins on a monthly basis and investigates any significant or unusual relationships. In addition, management reviews the reasonableness of inventory levels at the end of each accounting period. The entity has experienced limited situations in which revenue has been inappropriately recorded in advance of shipment, but amounts have not been material.

Based only on these facts, the auditor should determine that this deficiency represents a significant deficiency for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be more than inconsequential, but less than material, because individual sales transactions are not material and the compensating detective controls operating monthly and at the end of each financial reporting period should reduce the likelihood of a material misstatement going undetected. Furthermore, the risk of material misstatement is limited to revenue recognition errors related to shipping terms as opposed to broader sources of error in revenue recognition. However, the compensating detective controls are only designed to detect material misstatements. The controls do not effectively address the detection of misstatements that are more than inconsequential but less than material, as evidenced by situations where transactions that were not material were improperly recorded. Therefore, there is a more than remote likelihood that a misstatement that is more than inconsequential but less than material could occur.

Scenario B - Material Weakness. The company has a standard sales contract, but sales personnel frequently modify the terms of the contract. The nature of the modifications can affect the timing and amount of revenue recognized. Individual sales transactions are frequently material to the entity and the gross margin can vary significantly for each transaction.

The company does not have procedures in place for the accounting function to regularly review modifications in sales contract terms. Although management reviews gross margins on a monthly basis, the significant differences in gross margin on individual transaction make it difficult for management to identify potential misstatements. Improper revenue recognition has occurred, and the amounts have been material.

Based only on these facts, the auditor should determine that this deficiency represents a material weakness for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be material, because individual sales transactions are frequently material, and gross margin can vary significantly with each transaction (which would make compensating detective controls based on a reasonableness review ineffective). Additionally, improper revenue recognition has occurred, and the amounts have been material.

Therefore, the likelihood of material misstatements occurring is more than remote. Taken together, the magnitude and likelihood of misstatement of the financial statements resulting from this internal control deficiency meet the definition of a material weakness.

Scenario C – Material Weakness. The company has a standard sales contract, but sales personnel frequently modify the terms of the contract. Sales personnel frequently grant unauthorized and unrecorded sales discounts to customers without the knowledge of the accounting department. These amounts are deducted by customers in paying their invoices and are recorded as outstanding balances on the accounts receivable aging. Although these amounts are individually insignificant, they are material in the aggregate and have occurred consistently over the past few years.

Based on only these facts, the auditor should determine that this deficiency represents a material weakness for the following reasons: The magnitude of a financial statement misstatement resulting from this deficiency would reasonably be expected to be material, because the frequency of occurrence allows insignificant amounts to become material in the aggregate. The likelihood of material misstatement of the financial statements resulting from this internal control deficiency is more than remote (even assuming that the amounts were fully reserved for in the company's allowance for uncollectible accounts) due to the likelihood of material misstatement of the gross accounts receivable balance. Therefore, this internal control deficiency meets the definition of a material weakness.

Example D-3—***Identification of Several Deficiencies***

Scenario A – Material Weakness. During its assessment of internal control over financial reporting, management identified the following deficiencies. Based on the context in which the deficiencies occur, management and the auditor agree that these deficiencies individually represent significant deficiencies:

- Inadequate segregation of duties over certain information system access controls.
- Several instances of transactions that were not properly recorded in subsidiary ledgers; transactions were not material, either individually or in the aggregate.
- A lack of timely reconciliations of the account balances affected by the improperly recorded transactions.

Based only on these facts, the auditor should determine that the combination of these significant deficiencies represents a material weakness for the following reasons:

Individually, these deficiencies were evaluated as representing a more than remote likelihood that a misstatement that is more than inconsequential, but less than material, could occur. However, each of these significant deficiencies affects the same set of accounts. Taken together, these significant deficiencies represent a more than remote likelihood that a material misstatement could occur and not be prevented or detected. Therefore, in combination, these significant deficiencies represent a material weakness.

Scenario B – Material Weakness. During its assessment of internal control over financial reporting, management of a financial institution identifies deficiencies in: the design of controls over the estimation of credit losses (a critical accounting estimate); the operating effectiveness of controls for initiating, processing, and reviewing adjustments to the allowance for credit losses; and the operating effectiveness of controls designed to prevent and detect the improper recognition of interest income. Management and the auditor agree that, in their overall context, each of these deficiencies individually represent a significant deficiency.

In addition, during the past year, the company experienced a significant level of growth in the loan balances that were subjected to the controls governing credit loss estimation and revenue recognition and further growth is expected in the upcoming year.

Based only on these facts, the auditor should determine that the combination of these significant deficiencies represents a material weakness for the following reasons:

- The balances of the loan accounts affected by these significant deficiencies have increased over the past year and are expected to increase in the future.

- This growth in loan balances, coupled with the combined effect of the significant deficiencies described, results in a more than remote likelihood that a material misstatement of the allowance for credit losses or interest income could occur.

Therefore, in combination, these deficiencies meet the definition of a material weakness.

APPENDIX E

Special Internal Control Over Financial Reporting Considerations for Small and Medium-Sized Companies

E1. Although the five components of internal control over financial reporting apply to every company, regardless of its size, the manner in which each component applies depends on a number of factors, including the:

- Nature and size of the business,
- Diversity and complexity of operations,
- Methods for processing financial information, and
- Applicable legal and regulatory requirements.

E2. The following paragraphs discuss how the five components of internal control over financial reporting might be applied in a typical small or medium-sized company (referred to as a *small company* throughout this section).

E3. *Control Environment***.** The integrity of senior management often plays a critical role in establishing a strong control environment in a small company. Because written policies and procedures at such companies often are less complete or less formal than at large companies, the behavior and interaction of senior managers is critical to an effective control environment. For instance, a small company might not monitor developments in corporate governance best practices or maintain codes of conduct that reflect current best practice except for senior financial officers. However, ethical behavior and core values can still exist and be supported by the senior management through their daily interaction with employees.

E4. In a small company, the actions of senior management play an important role in the control environment. Sometimes, senior management interacts directly with external parties such as critical suppliers, vendors, customers, independent auditors, and regulators. For that reason, their integrity and ethical values are critical.

E5. Another component of the control environment is the organizational structure. A company's size, complexity, and operations determine the proper organizational structure for that company. Generally, larger organizations that have several operating divisions with prescribed responsibilities and reporting protocols are structured more formally than small companies that focus on accomplishing business objectives with only a few employees. The challenge in a small company is to ensure that the organizational structure does not hinder the company's ability to produce reliable financial reports and to safeguard assets.

E6. If a company has not formed an audit committee, Section 301 of the Act states that the entire board of directors will be designated as the audit committee.

E7. *Risk Assessment.* Small companies generally have a less formal risk assessment process than larger ones. Fewer layers of management in a small company often results in more timely and direct communication of risks with senior management. Furthermore, senior managers who are directly involved in business operations often have a more in-depth understanding of the company's processes and, thus, are in a much better position to identify problems with them than are senior managers in a larger organization. For instance, managers involved in the company's day-to-day operations are more likely to be aware of risks posed by the following—

- Variances between actual and expected results.
- Problems with operational or financial data.
- Issues and concerns about operational issues, such as production processes, inventory shortages.
- Complaints and other communications received from customers or vendors.
- Communications received from regulators and other third parties.

E8. Also, once risks are identified, a small company might be able to more quickly develop and implement action plans.

E9. *Control Activities.* As with the risk assessment process, although the concept of control activities in a small company is the same as in a larger one, the formality with which the activities operate might be different. Furthermore, because of the active involvement of senior managers, certain control activities might not be necessary. For example, the CFO's careful review of daily sales and key ratios might be just as effective in a small company as lower level control activities that might be found in a larger business. In fact, the CFO's day-to-day involvement in the company goes a long way in identifying and preventing material errors in the financial statements.

E10. Because of the limited number of employees in a small company, segregation of duties is not always possible. However, even small companies with few employees might be able to achieve adequate segregation of duties by assigning responsibilities wisely. If that is not possible, the president or other senior manager usually can provide the necessary control through his or her direct oversight. For example, procedures performed directly by the CFO (such as signing all checks and reviewing all bank statements and reconciliations) might mitigate the lack of segregation of duties in the cash area.

E11. *Information and Communication.* Although it might be less formal, the process of communication in a small company can be both effective and efficient. Effective communication often is easier to achieve in small companies since they usually have fewer layers of management. In fact, communication often takes place through daily discussions with senior management. Such communication usually is not only more frequent but more effective. Nevertheless, even with frequent and effective communications, smaller public companies need effective accounting systems and most will benefit greatly from modest investments in information technology. Indeed, completely manual accounting systems have almost completely disappeared.

E12. *Monitoring.* Similar to many of the other components previously discussed, the monitoring component in a small company is likely to be informal. Generally, a small company does not have an internal audit department or other group that evaluates internal controls throughout the company. Rather, senior managers often perform monitoring procedures as part of their normal, routine tasks. Sometimes, while performing such procedures, they identify a deficiency in internal control over financial reporting. When other employees identify a deficiency, the few layers of management usually simplify determining to whom communication of the deficiency should be made.

Ref: PCAOB Rulemaking Docket Matter Number 008

Dear Mr./Ms. Secretary:

Thank you for the opportunity to comment on the proposed Auditing Standard (the "Standard"). As a director of public and private companies, my interest is in enhancing the quality of information available to exercise my fiduciary duty to protect the interests of shareholders. One source of facts on which directors rely is the external audit.

I commend the PCAOB for including in the definition of internal controls "operating efficiency and effectiveness and compliance with applicable laws and regulations" (page 4) and in the audit standards a review of ". . . controls that focus primarily on effectiveness and efficiency of operations or compliance with laws and regulations. . . ." (Appendix A, Paragraph 14, p. A-11) The definition goes on to incorporate "safeguarding of assets."

These three factors: operating efficiency and effectiveness, compliance with laws and regulations and safeguarding of assets are at the crux of regaining shareholder confidence. Financial statements, after all, represent the results of operations and corporate conduct.

Illegal, illicit or the ***appearance*** of unethical corporate behavior is what shakes shareholder confidence. Section 302 of the Sarbanes-Oxley Act requires executives to certify information contained in reports "fairly present in all material respects the financial condition and results of operations of the issuer." It requires both "financial condition" ***and*** "results of operations." It is a misstatement of material fact for executives to certify they have reviewed their controls and processes and found them to be effective when they turn a blind eye to illegal and unauthorized activity. The legal exposure and subsequent headline risk to the business materially impacts a company's performance.

Legal proceedings are lengthy, costly and disruptive to operations. If a company is at risk for violating a law – whether knowingly or unintentionally – stakeholders require a heads up. Stakeholders relying on the accuracy of financial statements must have confidence that the reports reflect adherence to all laws and regulations. They expect the audit to confirm (1) companies run well, (2) assets are protected, (3) corporate conduct is responsible and (4) companies obey the law.

With the thought in mind that financial reports ***represent*** the operating condition and corporate conduct, the proposed Standard does not go far enough to protect interests of stakeholders. Throughout the document, the Standards hedge on the real meat of the audit by qualifying ". . . which also have a material affect on reliability of financial reporting." In Appendix C the Standards capitulate on the strength of the protection of assets by citing: "the auditor is not required to understand and test controls over management's decision-making processes for all sales and acquisitions." This hedge enables auditors to overlook processes that affect the company's ability to operate within the law. While it is inappropriate for the auditor to second-guess management's decision-making, it should be on the auditor's radar screen whether processes or lack of controls fail to protect assets, cause the company to run poorly or permit the company to break laws or violate regulations.

Case in point, software license compliance. When management permits employees to load software on company computers without prior authorization and proper documentation, it not only violates agreements with software developers, it is a federal crime. Fines, fees, damages and settlements are material. Yet failure to have internal controls to prevent the illegal activity is a dereliction of management responsibility.

By limiting the audit to those information technology controls on which other controls are dependent (#41 page A-20), instead of focusing on the real meat of shareholder concern and the intent of Congress, auditors are focused on reviewing software code rather than auditing the events, processes and procedures the reports ostensibly represent. Excluding from consideration specific legal requirements all companies are expected to adhere to, the PCAOB gives tacit approval to auditors to ignore adherence to laws. The use of software without proper licenses and proofs of purchase is material, affects operating results and impacts the financial reports which represent those results of operations.

While the Standard requires audit of information technology general controls, its lack of spelling out for auditors the inclusion of acquisition, deployment, implementation, use and disposition of software – whether packaged or custom developed – has enabled audit firms to omit it from their internal control testing in their audit plans.

The emphasis on financial reporting rather than the events and activities the statements represents defies the intent of Congress and fails to protect shareholder interests. It serves merely to mollify and shield auditors from making attestations about company operations, giving them wiggle room when called to task.

The Securities and Exchange Commission recognizes the COSO framework in its adoption of Final Rule: Management Reports on Internal Controls Over Financial Reporting and Certification . . . "The scope of internal control therefore extends to policies, plans, procedures, systems, activities, functions, projects, initiatives and endeavors of all types at all levels of a company." The final rule defines internal control over financial reporting as "a process . . . to provide reasonable assurance regarding the reliability of financial reporting. . . . and includes those policies and procedures that . . . (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of the registrant's assets that could have a material effect on the financial statements."

The Standard recognizes operational considerations and incorporates tone-at-the-top and "adherence to laws and regulations" in the control environment. It is simple to test the control environment, tone-at-the-top, the integrity and values of top management and corporate culture. If management cannot produce one license plus proof of right to use the license (proof of purchase) and chain of ownership (record retention) for each instance of a program found on company computers, the courts have upheld the company is out of compliance. This black-and-white, open-and-shut approach is telling of a management that allows unethical practices to run rampant in a company and has dire consequences on company performance and financial results.

U.S. businesses lose $2.2 billion annually from unlicensed use of software. It is material. A review of the MultexInvestor database on November 14, 2003 reveals that for 16% of all public companies, misuse of software assets would have a material impact on results. For 28% of public companies, the average settlement in litigation involving misappropriation and misuse of software indicates a significant deficiency.

The PCAOB should require auditors to attest to the efficiency and effectiveness of operations, effectiveness of controls and processes designed to protect assets and assure adherence to laws and regulations. I ask the PCAOB to adopt strong audit requirements for effectiveness of processes and controls for adherence to laws and specifically, software license compliance. The alternative is to force government agencies and the courts to impose further regulation on U.S. business. It is far preferable it remain the domain of self-regulatory environment rather than revert to government oversight.

Respectfully submitted,

M. Murry

Subject: Docket 008

For the PCAOB

I believe the definitions of significant deficiency and material weakness are too vague. There is no clear delineation between the two, and this will lead to much wasted time and debate between firms and their auditors.

Recommend the definitions be clarified. Supplement the definitions by using numerous examples to illustrate the PCAOB's intent. Another suggestion would be to come up with some sort of rule of thumb based on percent (%) of revenue impacted, or potentially impacted by the issue(s).

Thank you

Michael Murphy

Terms Table.doc
(34 KB)

The roundtable discussion highlighted the confusion concerning the definitions of internal control deficiency, significant deficiency and material weakness. The first five paragraphs of the "Evaluating the Results and Forming an Opinion" section (pg. 8 of 12) of the Proposed Auditing Standard aim to clarify the definitions. The problem is that you have to read those five paragraphs several times to conceptualize the differences in definition and treatment between internal control deficiency, significant deficiency and material weakness. I think the PCAOB's definitions for internal control deficiency, significant deficiency and material weakness should be presented in a table (please see attached). Something like this is easier to grasp than the first five paragraphs of the section mentioned above.

Best Regards,

Brad

<<Terms Table.doc>>

Terms Used in Evaluating the Results and Forming an Opinion

Term	Definition	Action(s) Required by the Auditor
Internal Control Deficiency	Exists when the design or operation of a control does not allow the company's management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis.	• The auditor is required to evaluate the severity of all identified internal control deficiencies because such deficiencies can have an effect of his or her overall conclusion about whether internal control is effective. • The auditor also has a responsibility to make sure that certain parties, such as the audit committee, are aware of internal control deficiencies that rise to a certain level of severity. • The auditor also is required to communicate in writing to the company's management all internal control deficiencies of which he or she is aware and to notify the audit committee that such communication has been made.
Significant Deficiency	An internal control deficiency (or a combination of internal control deficiencies) should be classified as a significant deficiency if it results in more than a remote likelihood of misstatement of the company's annual or interim financial statements that is more than inconsequential in amount.	• The auditor is required to communicate in writing to the company's audit committee all significant deficiencies of which the auditor is aware.
Material Weakness	A significant deficiency should be classified as a material weakness if, by itself or in combination with other internal control deficiencies, it results in more than a remote likelihood of a material misstatement in the company's annual or interim financial statements.	• The auditor is required to communicate in writing to the company's audit committee all material weaknesses of which the auditor is aware. • Most importantly, if a material weakness exists as of the end of the company's most recent fiscal year, management and the auditor must conclude that the internal control is ineffective.

Re: PCAOB Rulemaking Docket Matter No. 008

Dear Board Members:

Thank you for the opportunity to comment on the Proposed Auditing Standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of the Financial Statements*. We firmly believe that the PCAOB has an historic role to play in leading the reform of public companies' financial reporting processes, which should ultimately help to restore and increase investor confidence and security to new levels. As a public company, we depend on the Board to use care and a balanced approach to ensure that not only is the end goal achieved, but that no significant unintended consequences impede that goal. Agilent Technologies, Inc. (Agilent) is a global technology leader in communications, electronics, life sciences and chemical analysis. The company's approximately 29,000 employees serve customers in more than 110 countries. On behalf of Agilent, we offer the following comments with regard to the proposed standards for your consideration.

EXECUTIVE SUMMARY

1) Significant Deficiency and Material Weakness Definitions

We appreciate the Board's attention to the importance of clear definitions in the attestation process. However, the exposure draft has dropped the materiality threshold for what is considered to be a significant deficiency or a material weakness. Under the proposed rules, a shortcoming that is neither significant nor material can nevertheless qualify for one of these labels, with serious consequences.

The exposure draft states that a circumstance that creates more than a "remote" likelihood of a misstatement, which is more than "inconsequential" in amount, qualifies as a significant deficiency. The word "inconsequential" is not defined and will likely be interpreted differently. Many companies could point to a control activity failure that has a 10% probability of occurring and involves potential monetary amounts that are 5-10% of what those companies would consider "material." Although the likelihood of such an occurrence is small and the monetary amounts are not material, this, under example D-1, Scenario A, might be a significant deficiency.

If these definitions are retained, we ask the PCAOB to consider and clarify whether the relevant monetary threshold is the dollar impact that could reasonably occur, or the maximum financial impact under a worse case scenario. Currently, the PCAOB proposed definitions would include a number of scenarios from the worst case; ranging from more than remote likelihood with a material impact, to a probable likelihood with a very small impact. Is the intention of the PCAOB to cover this wide range of probability in required disclosures to the audit committee?

A review of the exposure draft examples reveals that the exceedingly low threshold proposed, exponentially increases the risk that companies will trigger multiple significant deficiencies; without regard to any compensating controls. Example D-1, Scenario A on its face seems to be an example of a deficiency, not a significant deficiency, especially given the compensating controls in place to catch material errors. The proposed standard will lead to disclosure of many significant deficiencies which may aggregate to a material weakness judgment and which may cause shareholders and third parties to consider the risk of material misstatement to be much greater than it actually is. This in turn may bring unwarranted volatility in a company's stock price. We are also concerned that the proposed standards will open the door for litigation against companies when an adverse internal control report is issued even though the company's financials are accurate and fairly presented.

2) Use of Internal Audit

With the statement that "the more extensive and reliable management's assessment is, the less extensive and costly the auditor's work will need to be.", the Board has wisely recognized the fiscal benefit to companies of a strong internal audit function. In other portions of the proposed standards, the exposure draft seems to move away from the above statement. While certain sections encourage the use of management, including internal audit, other provisions limit the circumstances in which internal audit may be used. The draft proposes that internal audit cannot be utilized for the following areas:

- Control environment, including fraud controls.
- Controls over period-end financial reporting process.
- Controls that have a pervasive effect on the financial statements, such as certain IT general controls on which the operating effectiveness of other controls depend.
- Walk throughs.

These prohibited functions are some of the key areas in which an internal audit group can provide significant insight and audit evidence based on its experience with the company. Public companies would not expect external auditors to rely solely on internal audit for 100% of testing, but to eliminate internal audit from these critical areas is a dramatic change from present accepted practices. In addition, this proposed point does not allow the external auditors latitude to use their own professional judgment.

We urge the Board to utilize the provisions of Statement of Auditing Standards No. 65, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements*, which address the relationship of the internal audit function in the external audit of financial statements. Rather than redefining this relationship, it would seem that the Board's standard should extrapolate the SAS 65 standards to the audit of internal control over financial reporting especially given that external auditors are now required to perform an integrated audit of financial statements and internal control over financial reporting.

3) Scope of Procedures External Auditors Are Required To Perform

We are concerned that the exposure draft contains a dramatic increase in the number of procedures that external auditors are required, or are planning to, perform and document. Due to fears that their CPA firms may not pass a PCAOB quality audit, as well as mindful of the litigation that would follow, it is logical to assume that external auditors will feel required to perform every procedure in detail even when circumstances would not otherwise dictate such actions. Coupled with the requirement to seek out anything that is more than inconsequential, the proposed rules create an unprecedented amount of painstaking procedures. The exposure draft provides opportunities for assistance from internal audit functions but, as discussed above, these have been greatly reduced. For CPA firms to meet these very substantive new requirements, such firms are proposing to raise fees approximately 25 to100%.

In the area of "walkthroughs" it is not clear if all processes in all locations (significant or otherwise) must have a "walkthrough." By way of example, Agilent, as other multinationals, has complex global operations with an extensive list of processes located in numerous geographies involving multiple sites. In addition, some financial transactions are performed in shared service centers while some are not. This leads to a complex environment that may have many different possible scenarios for walkthroughs. We believe the CPA firm should be allowed to use its judgment based on the specific circumstances of the company that it is evaluating to determine which "walkthroughs" are significant.

Sample sizes for testing of internal controls must also be taken into account. Multinational corporations with operations in multiple geographies could have a large number of immaterial entities and operations. If the company is required to view those immaterial operations together, this creates the potential for a material problem through the aggregation of these entities, only if they all in combination, have a problem. This is extremely unlikely. A careful reading of the exposure draft leads to the conclusion that a company's CPA firm or internal audit is obligated to test all of these small organizations yearly since in combination they could be material and since no rotation is allowed. While the chances of a material problem occurring are probably well below remote, large corporations, their internal audit functions and CPA firms will be forced to allocate time and shareholder dollars to these relatively insignificant operations rather than to significant operations. If a problem with a material operation is overlooked because of this allocation of resources, both the corporation and the investing public suffer.

4) Scope of Procedures Public Companies Are Required To Perform

We are concerned that the exposure draft is unclear as to the level of testing and documentation required by management. The proposed standards require external auditors to evaluate a number of proscribed procedures that a public company must perform in order to receive a "clean" opinion on their internal control over financial reporting from their auditors. If left unclarified, in light of the points mentioned in Item 3 above, external auditors can be expected to take a very conservative view of management testing and documentation. This would necessitate a considerable increase in the number of procedures that a public company would need to document and perform to avoid the external auditors declaring a significant deficiency or a material weakness. The type of evidence that a public company would be required to produce would far exceed the guidance currently given by the SEC to obtain reasonable assurance that a company's internal control over financial reporting is working effectively. For a public company of Agilent's size and complexity, the amount of documentation, evaluation and self-testing will be significant.

As stated before, Agilent has 5 main businesses, located in approximately 30 geographies with multiple sites, some of which may or may not be shared. In addition, some financial transactions are performed in shared service centers while some are not. Each of these different scenarios will need to be assessed by the company to determine what impact, if any, there could be to the internal control over financial reporting. In addition, this assessment will need to be reperformed throughout the year as a company of our size is not static. Then, the company will need to document the internal controls in those impacted areas and periodically test. In addition, the company will need to monitor and test, at an extremely low level, any changes that occur during the year to ensure that the internal controls are working effectively. This will require an incredible amount of effort to just provide adequate documentation, which will take away from the company's focus on those most significant and critical potential issue areas.

In addition, we believe that if a company is required to provide evidence of that control effectiveness to the extremely low level required by the proposed standards, the level of work performed by our external auditors will need to be at the same level or lower. Also, even though the internal control over financial reporting may be working effectively, if we are missing documentation around these controls or our self-testing, our external auditors may determine this situation is, at the minimum, a significant deficiency and potentially a material weakness. Again, the level of documentation, evaluation and testing by both the company and their external auditor may force the cost of implementing the proposed standards to exceed the benefit achieved by more effective internal control over financial reporting.

5) Service Providers

We respectfully request the Board to reconsider what companies must produce as required evidence of the internal controls of their service providers. Due to the potential impact and breadth of this issue, we believe that it may be best to defer the final rules effective date, in this area, for one year.

A SAS 70 report is an accepted United States standard, though it is a report that is expensive ($50,000 to $70,000) and time-consuming to produce. However, it may be considered reasonable to require a nationally-recognized service provider such as Fidelity or ADP to obtain a SAS 70 report yearly. But, as company fiscal years vary, will a CPA firm be allowed to rely on a 10-month old SAS 70 evaluation? If not, there will be a need to have service providers change their procedures and deliverables. Companies with non-standard fiscal calendars may not have the ability or the resources to pressure these service providers to deliver on the new requirements in time to meet their next SEC filing deadlines. Companies are also unlikely to have the contractual right to review any of the service provider's controls themselves. If there is no SAS 70 report the auditor will have to perform significant alternative procedures at a high cost to the public company. Add to this the complexity of using international service providers in dozens of countries. These service providers are not familiar with Sarbanes Oxley's Section 404 requirements and are naturally quite resistant to new requests to produce a detailed certification of their internal functions, utilizing a standard that may not comport with their local regulatory framework.

The end result for a U.S. corporation might be the need to terminate a beneficial relationship with a foreign service provider who will not, or cannot, meet the Board's requirements. The detrimental effect to the U.S. company is clear, as operations would need to be transitioned, workers terminated and new workers hired and trained, with the attendant legal complications, loss of local beneficial arrangements, and perhaps lawsuits or penalties. As the U.S. economy teeters on the edge of recovery, with the fate of U.S. companies hanging on the balance, locating a new service provider who can meet the PCAOB requirements as well as the corporation's requirements in a short period of time is very risky. These risks directly impact the ability of a company such as Agilent to produce quality products and services and our ability to generate profit.

6) Evaluating the Effectiveness of the Audit Committee

We believe that more guidance is necessary to understand the extent of the Board's requirements for evaluating the effectiveness of the audit committee. In the infamous Enron audit committee failure, it should have been clear to Enron's external auditors what the relative levels of effectiveness were for each member of the committee. As a result of the PCAOB proposed standards, CPA firms are now planning significant audit procedures -- including lengthy surveys and interviews with the audit committee -- to fulfill the evaluation requirement. In reality, after working with the audit committee for a year, an external auditor should be able to determine rather quickly if the audit committee is effective. The added benefit of surveys and interviews at the end of the year appears to be quite small, while the detriment is a procedural burden for audit committee members whose time is better spent on their other duties. While the ability to oversee the preparation of audited financials and disclosure is a key function of an audit committee, this is not the only role that it plays. We question whether external auditors are the proper arbiters of the overall effectiveness of an audit committee. Ultimately, the company must make that decision. In addition, there is an inherent conflict of interest in asking the external auditors to evaluate the audit committee.

* * *

Agilent supports what we initially perceived Section 404 to be: A primer on what proper level a company's internal controls system should be operating at, which would provide a reasonable basis of assurance that material errors would be prevented and detected prior to being included in the financial statements. We have seen Section 404 evolve into an attempt to go from reasonable assurance to almost absolute assurance. The average industry process relies on an approximately 95-97% confidence level that things will perform as planned. The cost to increase a percentage point of confidence is not a linear increase but rather an exponential increase. In judging the effect of the proposed regulations, to move from 96 to 97% does not equal one percentage point of additional effort, but rather might be 100 to 500% more effort and cost. At Agilent, we believe that strong internal controls pay for themselves, but the suggested level of analysis, disclosure, documentation and assurances proposed to implement Section 404 exceed what is reasonably required and will force companies to spend significantly beyond any type of benefit. The impact of this will be the loss of productivity and company jobs, lower R&D spending and innovation, and a diminished focus on customers and industries by top managers. We urge the Board to consider that the external auditor's attestation is not an independent test of management's assessment of internal controls, but rather is part of an integrated review with the financial statement audit, which views internal controls as a network of many procedures and compensating controls.

We would hope that you will take into account the concerns above when you review our list of prioritized concerns on the exposure draft.

Thank you for your consideration and as always, please do not hesitate to contact us for clarification or follow-up questions.

Sincerely,

Adrian Dillon
CFO
Agilent Technologies, Inc.

EXHIBIT A
Selected Responses To PCAOB Questions

Question regarding the audit of internal control over financial reporting:

5. Should the Board, generally or in this proposed standard, specify the level of competence and training of the audit personnel that is necessary to perform specified auditing procedures effectively? For example, it would be inappropriate for a new, inexperienced auditor to have primary responsibility for conducting interviews of a company's senior management about possible fraud.

No. We do not see a need to devise new measures beyond the existing competence and training standards. As professional firms, external auditors have always been required to be competent in the areas in which they provide services. They should be able to determine the training necessary to execute the attestation in accordance with PCAOB's framework.

Questions regarding evaluation of management's assessment:

6. Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?

We agree that the scope might be appropriate, in that the auditor may need to obtain certain evidence directly. However, the depth and extent of testing suggested is beyond a reasonable cost-benefit to an average shareholder. We urge the Board to allow the external auditors to exercise judgment and utilize their comprehensive audit knowledge about the risks and control environment at each company. The auditors should be able to use discretion to determine the appropriate level of testing required to gain comfort on the internal controls over financial reportings.

7. Is it appropriate that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation?

We believe the guidance is fine, but as stated above, the standard should leave room for the external auditor's professional judgment.

Questions regarding obtaining an understanding of internal control over financial reporting:

9. Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?

10. Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors, or others?

We believe there is value in performing walkthroughs. Wherever possible, walkthroughs should be conducted in conjunction with the financial statement audit. The auditors need to have the freedom to determine what walkthroughs are necessary. They should not be required to perform a walkthrough for every process at every location or site or in future years be required to repeat walkthroughs if those processes have not changed. We also believe that internal audit should be able to participate under the direction of the auditor in these procedures.

Questions regarding using the work of management and others:

12. To what extent should the auditor be permitted or required to use the work of management and others?

13. Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?

14. Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

15. Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?

With the statement that "the more extensive and reliable management's assessment is, the less extensive and costly the auditor's work will need to be.", the Board has wisely recognized the fiscal benefit to companies of a strong internal audit function. In other portions of the proposed standards, the exposure draft seems to move away from the above statement. While certain sections encourage the use of management, including internal audit, other provisions limit the circumstances in which internal audit may be used. The draft proposes that internal audit cannot be utilized for the following areas:

- Control environment, including fraud controls.
- Controls over period-end financial reporting process.
- Controls that have a pervasive effect on the financial statements, such as certain IT general controls on which the operating effectiveness of other controls depend.
- Walk throughs.

These prohibited functions are some of the key areas in which an internal audit group can provide significant insight and audit evidence based on its experience with the company. Public companies would not expect external auditors to rely solely on internal audit for 100% of testing, but to eliminate internal audit from these critical areas is a dramatic change from present accepted practices. In addition, this proposed point does not allow the external auditors latitude to use their own professional judgment.

We urge the Board to utilize the provisions of Statement of Auditing Standards No. 65, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements*, which address the relationship of the internal audit function in the external audit of financial statements. Rather than redefining this relationship, it would seem that the Board's standard should extrapolate the SAS 65 standards to the audit of internal control over financial reporting especially given that external auditors are now required to perform an integrated audit of financial statements and internal control over financial reporting.

Questions regarding evaluating results:

17. Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?

18. Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?

We appreciate the Board's attention to the importance of clear definitions in the attestation process. However, the exposure draft has dropped the materiality threshold for what is considered to be a significant deficiency or a material weakness. Under the proposed rules, a shortcoming that is neither significant nor material can nevertheless qualify for one of these labels, with serious consequences.

The exposure draft states that a circumstance which creates more than a "remote" likelihood of a misstatement, which is more than "inconsequential" in amount, qualifies as a significant deficiency. The word "inconsequential" is not defined and will likely be interpreted differently. Many companies could point to a control activity failure that has a 10% probability of occurring and involves potential monetary amounts that are 5-10% of what those companies would consider "material." Although the likelihood of such an occurrence is small and the monetary amounts are not material, this, under example D-1, Scenario A, might be a significant deficiency.

If these definitions are retained, we ask the PCAOB to consider and clarify whether the relevant monetary threshold is the dollar impact which could reasonably occur, or the maximum financial impact under a worse case scenario. Currently, the PCAOB proposed definitions would include a number of scenarios from the worst case; ranging from more than remote likelihood with a material impact, to a probable likelihood with a very small impact. Is the intention of the PCAOB to cover this wide range of probability in required disclosures to the audit committee?

A review of the exposure draft examples reveals that the exceedingly low threshold proposed, exponentially increases the risk that companies will trigger multiple significant deficiencies; without regard to any compensating controls. Example D-1, Scenario A on its face seems to be an example of a deficiency, not a significant deficiency, especially given the compensating controls in place to catch material errors. The proposed standard will lead to disclosure of many significant deficiencies which may aggregate to a material weakness judgment and which may cause shareholders and third parties to consider the risk of material misstatement to be much greater than it actually is. This in turn may bring unwarranted volatility in a company's stock price. We are also concerned that the proposed standards will open the door for litigation against companies when an adverse internal control report is issued even though the company's financials are accurate and fairly presented.

20. Is it appropriate to require the auditor to communicate all internal control deficiencies (not just material weaknesses and significant deficiencies) to management in writing?

No. We believe all substantial and significant deficiencies should be escalated based on the auditor's judgment. By requiring all deficiencies to be reported to management, you have several unintended consequences.

1. This will create debate and animosity between the process owners and the external auditors. There will be great debate on what is a deficiency versus a decision by management to have a higher level compensating control in place to catch material issues or a decision by management that the costs far outweigh any risk of loss or exposure for the company.
2. Companies are not static and systems technology and people change. Companies are continually adapting their controls to their business environment. The proposal to communicate all internal control deficiencies would inundate management, potentially reducing their time to review, or causing them to lose focus on, more significant control issues.
3. With the increased pressure and exposure that audit committees are facing, audit committees will feel obliged to review the list of deficiencies presented to management. This will force audit committees to spend significant time reviewing these deficiencies even though they did not reach the level of a significant deficiency.

22. Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?

23. Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?

We believe that more guidance is necessary to understand the extent of the Board's requirements for evaluating the effectiveness of the audit committee. In the infamous Enron audit committee failure, it should have been clear to Enron's external auditors what the relative levels of effectiveness were for each member of the committee. As a result of the PCAOB proposed standards, CPA firms are now planning significant audit procedures -- including lengthy surveys and interviews with the audit committee -- to fulfill the evaluation requirement. In reality, after working with the audit committee for a year, an external auditor should be able to determine rather quickly if the audit committee is effective. The added benefit of surveys and interviews at the end of the year appears to be quite small, while the detriment is a procedural burden for audit committee members whose time is better spent on their other duties. While the ability to oversee the preparation of audited financials and disclosure is a key function of an audit committee, this is not the only role that it plays. We question whether external auditors are the proper arbiters of the overall effectiveness of an audit committee. Ultimately, the company must make that decision. In addition, there is an inherent conflict of interest in asking the external auditors to evaluate the audit committee.

24. If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the audit engagement?

No, we do not believe this would be an appropriate response and believe that this material weakness should be treated no differently than any other identified material weakness.

Re: PCAOB Rulemaking Docket Matter No. 008 - Proposed Auditing Standard- An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements

Gentlemen:

I believe compliance with your Proposed Auditing Standard will result in excessive and redundant costs. Adoption of your proposal will immediately place foreign subsidiaries of American businesses at a distinct disadvantage relative to local competitors and hamper the ability of American business to compete globally. It will hinder responsiveness in a rapidly changing business environment. I urge the PCAOB to reconsider the need for the “audit of internal control” mandated by the Proposed Standard and adopt provisions more closely aligned with the report on management’s assessment of internal control required by the Sarbanes-Oxley Act of 2002 (SOX).

The requirements of your Proposed Standard appear to be particularly onerous for the small and medium-sized issuers referenced in your question 4. We for example are a medium-sized manufacturer consisting of several smaller business units operating in six countries. One-on-one training and close supervision are more frequently encountered than user manuals and formal documentation. We have been active in acquiring other companies, many of whom are small, privately held entities that have loose and informal procedures. Our business environment requires that we very carefully watch our head-count, our capital expenditures and virtually all other aspects of the business that require resources.

Our efforts to comply with SOX began over a year ago. A conscious effort was made to ensure we are performing comprehensive quarterly reviews while incurring minimal expense and disruption to our team. We have learned, we have improved, and we expect to continue doing so in the foreseeable future. Into this environment comes your Proposed Standard, which we believe will have the following effects:

1) A substantial increase in annual external audit fees.
2) A substantial increase in expense to prepare user manuals, flowcharts and other types of formal documentation. This is evidently advisable because under the terms of your Proposed Standard “inadequate documentation of the design of controls” is an “internal control deficiency” (page A-43, paragraph 125).
3) A substantial, ongoing increase in expense to change the user manuals and formal documentation mentioned above to reflect changes in systems and procedures as they occur.
4) A substantial increase in expense for management to test and evaluate control procedures relating to “all relevant assertions related to all significant accounts and disclosures” (page A-19, paragraph 41), presumably in all business units and in all countries. We should be happy to do so knowing that the majority of what we do will be disregarded by our auditors and must be repeated by them, since there are a number of significant areas “in which the auditor should not use the results of testing performed by management” (Page A-38, paragraph 104) and, in the end, “the auditor must perform enough of the testing himself or herself so that the auditor’s own work provides the principal evidence for the auditor’s opinion” (page A-39, paragraph 109).

5) Severely constrained and highly impractical timing in finalizing and integrating acquisitions. Presumably deals involving significant acquisition targets having little documentation and substantial room for improvement in controls would have to be either finalized early in the fiscal year or avoided completely. If consummated there will be only a few months to make the substantial changes needed to avoid possible negative disclosures resulting from the annual "audit of internal control". Further, these changes would have to be completed early enough in the year to permit testing of their operating effectiveness.
6) Severely constrained timing and a substantial increase in expense relating to significant system changes and conversions. These too may have to be completed early enough in the fiscal year to permit testing of their operating effectiveness. Each significant system change or conversion could become far more expensive; since related controls typically are regarded as "information technology general controls" and as such are one of those "areas in which the auditor should not use the results of testing performed by management and others".

I do not believe the "audit of internal control" mandated in your Proposed Standard results from a kind of ground swell of investor demand as implied in the first paragraph of page 8. Rather, I note that the approach outlined in your Standard is largely identical to the approach described by the AICPA's Auditing Standards Board in its proposal offered in March 2003. The "audit of internal control" I submit, results more from the profession's concern for protecting itself. That concern is understandable. I suggest a revised proposal along the following lines:

- Define management's responsibilities in performing its assessment of internal control in much the same manner as your paragraph 19 which begins on page A-13;

- Define the auditor's responsibilities in evaluating management's assessment along the lines of paragraph 41. Be specific as practicable and provide criteria the auditor can use to determine if management appears to have satisfied its responsibilities. The end result of the auditor's work should be his or her opinion as to whether management appears to have a reasonable basis for expressing their opinion on internal control. Make clear in the resulting report that internal control and its assessment is a responsibility of management, while the auditor's responsibility is to determine if management had a reasonable basis for their assessment.

- Reconsider the interpretation of SOX Section 103(a)(2)(A)(iii), which heretofore seems to have been construed to require substantial tests of control procedures performed directly by the auditor in conjunction with an "audit of internal control". I believe the public would be better served by a description of the scope of testing performed as part of the integrated audit of the financial statements and management's assessment of internal control. The auditor's report might state for example that his or her tests of internal control were limited to those considered necessary in the circumstances to ensure management had a reasonable basis for their assessment of internal control, ensure receipts and expenditures were being made only in accord with appropriate authorizations, and ensure reasonably accurate and detailed records were being maintained.

- Work to provide the public accounting profession with some form of safe harbor concerning their review of management's assessment of internal control. The auditor's liability should be limited if he or she can show they satisfied the auditor's responsibilities defined by the PCAOB. Limited liability is, in my estimation; preferable to the enormous costs involved in an "audit of internal control."

Management's assessment has value, and the public good is well served by ensuring their assessment has substance. The auditor's attestation on management's assessment can and should be a very different, far more focused service than the broad "audit of internal control" proposed. Please work toward a more cost-effective solution than that described in the Proposed Standard.

Respectfully submitted,

Dennis M. Stevens

Subject: Comments For Docket Matter No. 008

November 14, 2004

Office of the Secretary

PCAOB

1666 K Street, N.W.

Washington, D.C. 20006-2803

Regarding: PCAOB Rulemaking Docket Matter No. 008

Dear PCAOB Representative:

I would like to provide the PCAOB with my comments regarding question 17 in the Docket Matter noted above. The question asked is as follows:

17. Will the definition in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?

The answer to the first question is no. The reasons for my answer are described in the answer to the second question noted below.

The answer to the second question is as follows.

The concept of a “significant deficiency” occurring where there is a “more than remote likelihood” involving an amount that is “more than inconsequential in amount” is defined at too low a threshold of possibility and magnitude. Every company has certain critical accounting policies which individually or in combination with other critical accounting policies may actually result in amounts differing from estimated amounts with more than a remote likelihood of occurrence at more than inconsequential amounts. That’s why such policies are listed as critical. Such examples at my company are i) estimated liabilities for managed care sales rebate and other incentive programs, the largest of which relates to Medicaid sales, and ii) income taxes, which includes both current and deferred taxes. Additionally, fair value computations under SFAS No. 123 are inherently inaccurate, but the Financial Accounting Standards Board indicated in its deliberations before adopting SFAS No. 123 that some estimate of value was better than no estimate of value at all. The PCAOB must realize that these amounts are estimated using a SFAS No. 5 concept of “probable” and “reasonably estimable,” which does not require a less than slight chance of being wrong.

The combination of probable and reasonably estimable does not equate to recordation of estimated amounts that can be certified to be accurate to a degree that will not vary by less than an inconsequential amount at a less than a remote likelihood. The concepts are theoretically different. Probable is something akin to 60% to 65% likelihood and remote is akin to less than 5%, or the inverse amount of 95% as to accuracy. As such, these critical policy accounts will always be by definition a significant deficiency, and their effects must always be combined with other accounts to determine if a material weakness occurs in combination with all accounts that are considered significant deficiencies. I believe the threshold for likelihood should be changed to something that is not more than a “possible likelihood,” which I define as something less than a 20% likelihood, which is clearly less than “reasonably possible,” but well above “remote,” as defined by SFAS No. 5.

The PCAOB should also address the following question in this auditing standard. If a company properly identifies for its readers its critical accounting policies and states that the estimated amounts included in the company’s financials have more than a remote likelihood of actually varying by amounts that are more than inconsequential, can those accounts then be considered exempt from combination with other accounts when determining if a material weakness exists when evaluating internal controls over financial reporting? I believe they should be exempt if properly disclosed.

This proposed auditing standard appears to create a sense of utopia in financial reporting. Rhetorically speaking, if every thing in accounting could be recorded with a less than remote likelihood of error at less than inconsequential amounts, we could truly achieve a brave new world in accounting. I don’t believe the economics of business support that possibility, even if a big brother is designated by law to watch over corporate America.

Respectfully,

Re: PCAOB Rulemaking Docket No. 008
Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements

Dear Secretary:

Thank you for the opportunity to comment on the above referenced Proposed Auditing Standard (Proposed AS) which we believe represents an important step in promoting investor confidence through the effective assessment and reporting on internal controls over financial reporting. While we support your overall efforts concerning this very complex subject, we also appreciate the opportunity to comment on several important areas addressed in the Proposed AS. These areas include certain inconsistencies between the general framework and the Proposed AS, the testing of operational effectiveness, use of the work of management and others, and the definition of a significant deficiency. We urge the Board to carefully consider our comments, which we believe will promote a more efficient, cost-effective, and balanced evaluation of internal controls over financial reporting.

Inconsistencies between the Framework and Proposed AS

The general framework of the Proposed AS appropriately identifies a number of key concepts common to audits and evaluations of internal controls including the following:

- **Auditor's Objective in an Audit of Internal Control Over Financial Reporting**

- *The auditor's objective in an audit of internal control over financial reporting is to form a basis for expressing such an opinion, the auditor must plan and perform the audit to obtain reasonable assurance about whether the company maintained, in all material respects, effective internal control over financial reporting…..*

- *To obtain reasonable assurance, the auditor evaluates the assessment performed by management and obtains and evaluates evidence about whether the internal control over financial reporting is designed and operated effectively…..*

- **Inherent Limitations in Internal Control Over Financial Reporting**

- *Internal control over financial reporting cannot provide absolute assurance of achieving financial reporting objectives because of its inherent limitations…..*

- **Reasonable Assurance**

- *Management's assessment of the effectiveness of internal control over financial reporting is expressed at the level of reasonable assurance. The concept of reasonable assurance is built into the definition of internal control over financial reporting and also is integral to the* *auditor's opinion. Reasonable assurance includes the understanding that there is a relatively low risk that material misstatements will not be prevented or detected on a timely basis. Although not absolute assurance, reasonable assurance is, nevertheless, a high level of assurance.*

- **Materiality Considerations in an Audit of Internal Control Over Financial Reporting**

- *The auditor should apply the concept of materiality in an audit of internal control over financial reporting at both the financial-statements level and at the individual account-balance level……*

- *The same conceptual definition of materiality that applies to financial reporting applies to information on internal control over financial reporting, including the relevance of both quantitative and qualitative considerations.*

Despite recognition of the key concepts of reasonable assurance, inherent limitations, and materiality in the general framework of the Proposed AS, the Proposed Standard itself abandons these critical concepts through the inappropriate use of words such as "all", "each," and "entire". We believe that through the use of these "all inclusive" words the Proposed AS directly contradicts the basic notion of reasonable assurance, inherent limitations, and materiality and in so doing sets an unattainable standard for both the registrant and the independent auditors in carrying out their responsibilities under the Proposed AS. More specifically, we do not believe it would be either cost-beneficial or possible to document, test, and attest to the effectiveness of "all" or "each" control within the "entire" internal control over financial reporting system as could reasonably be construed by the language in the Proposed AS. It is our assumption that the use of words such as "all", "each", and "entire" was unintended as it is inconsistent with the PCAOB's recognition in it's general framework that there are inherent limitations in any internal control system such that obtaining "absolute assurance" of its effectiveness cannot be obtained. Moreover, we believe the PCAOB recognized that fact when it suggested that when testing internal controls over financial reporting the tests should be designed to obtain "reasonable assurance" that the controls are operating effectively. Although the term "reasonable assurance" is not adequately defined in either the Proposed AS or related literature, it is our understanding that it has historically incorporated judgment and an assessment of materiality in designing tests to meet the "reasonable assurance" threshold which is definitively different than the "absolute assurance" threshold implied by the use of words such as "all", "each," and "entire". Accordingly, we strongly suggest eliminating words such as "all", "each," and "entire" in the Proposed AS as they suggest the imposition of a level of review and testing that is neither cost-beneficial or possible.

Testing Operating Effectiveness

Question 11:

Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?

We believe the independent auditor should apply their judgment and place appropriate reliance on their previous experience within the industry and with the registrant when determining the evidence necessary to support their opinion on management's assessment of internal controls over financial reporting. We believe the independent auditor's knowledge and understanding of a registrant's internal control structure is enhanced with experience as many components within a company's internal control structure do not change significantly from year to year. Accordingly, the independent auditor should be permitted to appropriately leverage this experience and modify the timing and extent of internal control testing aimed at determining whether controls over financial reporting are appropriately designed and operating effectively. Assuming the preceding, the independent auditor would appropriately focus their substantive tests on areas within the registrant's internal control structure that have changed.

Use of the Work of Management and Others

The Proposed AS summary suggests that the work performed by management in connection with its assessment of internal controls over financial reporting can have a significant effect on the nature, timing and extent of the work performed by the independent auditor, however, the Proposed AS does not appear to support this statement given its restrictions on the use of the work of management and internal auditors.

Question 13:

Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?

We believe the complete restriction placed on the use of the results of testing performed by management and internal auditors is inappropriate and severely limits the independent auditor's ability to appropriately alter the nature, timing and extent of their substantive tests. While we generally understand the Board's attempt to identify more critical areas for the independent auditors in the current business environment, we believe the work of management and internal auditors should not be ignored when determining the nature, extent and timing of substantive audit procedures. We believe that to the extent the independent auditor's consideration of work completed by internal auditors expressly considers their independence, approach, and competence there is no reason their work should not be relied on. The same approach should be applied to the work of management, not withstanding their lack of independence.

Question 9:

Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?

We believe walkthroughs would be very time-consuming and costly for the independent auditors to complete for each of the registrant's significant processes. Moreover, the independent auditor's primary focus should be on evaluating the design and operational effectiveness of internal controls over financial reporting. In contrast, documenting internal controls over financial reporting is typically completed by management and internal auditors. Furthermore, as noted above in our response to question 11, requiring auditors to perform walkthroughs each year does not appropriately consider the independent auditors previous experience and knowledge of the industry or the registrant. Assuming documentation supporting the control environment already exists, we believe the independent auditor should only perform walkthroughs of significant processes on a limited test basis applying their judgment by taking into account their previous experience with the industry and with the registrant to validate their understanding of the process as documented by management and the internal auditors.

Question 14:

Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

We believe the Proposed AS does not appropriately leverage the work completed by internal auditors. The Proposed AS would require significant duplication of work and inefficiencies resulting in a higher cost of performing substantive tests by the independent auditors. Accordingly, we believe the Proposed AS should consider the outcome of the required assessment of the competence and objectivity of the internal auditors as outlined in AU § 322 and allow the independent auditors to apply an appropriate level of reliance on the work of internal auditors. AU § 322 requires the independent auditor to obtain information on the educational level and professional experience of internal auditors (including professional certifications and continuing education), audit policies, audit programs and procedures, practices regarding assignment of internal auditors, supervision and review of internal auditors' activities, quality of working-paper documentation, reports and recommendations, an evaluation of internal auditors' performance, and consideration of the organizational status of the internal auditors. We believe that, depending on the outcome of this comprehensive review, the independent auditors should be allowed to rely on the work of internal auditors.

Significant Deficiency Definition

Question 17:

Will the definitions in the proposed standard of a significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?

We believe the definition of a significant deficiency in the Proposed AS is ambiguous, would be difficult to apply, and therefore would not provide for increased consistency in the evaluation of deficiencies (both individually and collectively). To improve upon the definition in the Proposed AS we believe the PCAOB should incorporate specific evaluative criteria into the definition against which reporting entities could easily and consistently evaluate deficiencies in internal controls over financial reporting. Moreover, we believe the evaluation criteria should give due consideration to both the nature and the actual (or potential) materiality of the item in relation to the annual or interim financial statements to which they (it) relate(s).

The definition in the Proposed AS of a significant deficiency in internal controls over financial reporting is as follows:

> *A significant deficiency is an internal control deficiency that adversely affects a reporting entity's ability to initiate, record, process, or report external financial data reliably in accordance with generally accepted accounting principles. A significant deficiency is a deficiency that, by itself or a combination of deficiencies, results in more than a remote likelihood of a misstatement of the annual or interim financial statements that is more than inconsequential in amount and would not be prevented or detected.*

We do not believe the term "more than a remote likelihood of a misstatement of the annual or interim financial statements that is more than inconsequential" provides clear, objective criteria against which one can easily and consistently evaluate deficiencies in internal control over financial reporting. More specifically, we believe that without evaluative criteria against which to evaluate deficiencies, reporting entities will interpret and apply the terms "more than a remote likelihood" and "more than inconsequential" in an inconsistent manner. Moreover, when developing the evaluative criteria we suggest that certain concepts be incorporated to eliminate the potential that minor deficiencies, that exist in even the most well-controlled business environments, are not inappropriately designated as significant deficiencies as that could have the unintended consequence of de-sensitizing relevant parties (i.e. financial statement preparers, users, and independent auditors) to the importance of significant deficiencies.

To ensure that deficiencies (both individually and collectively) are consistently evaluated against a set of objective criteria designed to identify only those individual and collective deficiencies that warrant designation as a significant deficiency we propose the following definition and set of evaluative criteria:

Proposed Definition – Significant Deficiency

> *A significant deficiency is a deficiency in internal controls over financial reporting that adversely affects a reporting entity's ability to initiate, record, process, or report external financial data reliably in accordance with generally accepted accounting principles. A significant deficiency is a deficiency that, by itself or in combination with other deficiencies, results in the reasonable possibility of a misstatement of the annual or interim financial statements that would not be prevented or detected and that by its nature or amount, represents a misstatement that would affect the judgments of a reasonable investor or creditor.*

Proposed Evaluative Criteria – Nature of the Deficiency

When evaluating the nature of a deficiency (or combination of deficiencies) in internal controls over financial reporting the following factors should be considered:

- Whether the related actual (or potential) misstatement arises from an item capable of precise measurement or whether it arises from an estimate and, if so, the degree of imprecision inherent in the estimate;
- Whether the related actual (or potential) misstatement masks a change in earnings or other trends;
- Whether the related actual (or potential) misstatement changes a loss into income or vice versa; and
- Whether the related actual (or potential) misstatement involves concealment of an unlawful transaction.

Proposed Evaluative Criteria – Actual or Potential Significance of the Deficiency

When evaluating the significance of a deficiency (or combination of deficiencies) the following criteria should be used as a guide to determine whether the deficiency (or combination of deficiencies) is significant (or has the potential to become significant) as it relates to the annual or interim financial statements of the relevant registrant:

- Does the deficiency (or combination of deficiencies) concern information related to the registrant that would cause a reasonable investor to make a different decision with regard to the purchase of the registrant's securities (either debt or equity)?
  - Does the deficiency (or combination of deficiencies) significantly affect the reported earnings or financial strength ratings of the registrant? A deficiency affecting reported earnings but not the financial strength of the registrant may not affect the investing decisions of a holder of the registrant's debt securities.
- Are the financial statements filed by the registrant for a specific purpose (e.g. are they required to support the issuance of certain products – e.g. variable insurance policies)?
  - If so consider how the purchasers of those products would view the deficiency in light of what information they consider important to their investment decision.
- Determine whether the deficiency (or combination of deficiencies) could significantly affect the registrant's financial strength ratings.
  - Does the deficiency significantly affect the registrant's regulatory capital ratios, if any?
  - Does the deficiency significantly affect the registrant's asset/liability management, asset quality, liability duration, or key financial strength measures?
  - Does the deficiency (or combination of deficiencies) significantly affect the run-rate of the registrant's business operations?

Re: PCAOB Rulemaking Docket Matter No. 008

Dear Ladies and Gentlemen:

We are pleased to respond to the proposed auditing standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements.* Amerada Hess Corporation (the Corporation) is a global, independent energy company with worldwide exploration and production activities and domestic refining and marketing operations.

Specific responses to certain of the Board's questions are attached in Appendix 1. Our responses are keyed to the numbered question in the request for public comment. We agree with the proposed auditing standard as drafted for those areas where we have not responded to one of the Board's questions. Provided below are general observations on the proposed auditing standard:

- We believe the proposed auditing standard requires duplication of work by an independent auditor and management not contemplated by Congress when it passed Section 404(b) which requires an independent auditor to attest to, and report on, the assessment made by management of the issuer. We believe there is a difference in the elements of work that management must do to establish and report on processes and controls and the work done by the independent auditor when attesting to management's assessment.

  The proposed auditing standard provides significant guidance for auditors in determining the scope of work necessary to support the required attestation. The guidance for management's assessment seems to create a duplication of work. The proposed standard appears to not only require management to document all significant processes and controls and perform walkthroughs but also requires management tests of all key controls to support its assessment. The auditor is required to review management's documentation of significant processes and controls, perform independent walkthroughs and perform similar tests of all key controls to support the auditor's conclusion. We do not believe the standard should require management and its auditor to perform similar testing on all key controls. While this duplication adds costs it does not seem to add additional support to the auditor's attestation. This duplication appears inconsistent with the Section 404 (b) requirement to have auditors attest only to management's assessment. We understand the Board's desire to have an integrated audit and have separate audit opinions for the financial statements and the internal controls over financial reporting. We therefore believe the testing of key controls should be performed solely by the auditor in accordance with requirements established in the auditing standard. Guidance for management's evaluation of the effectiveness of internal control should exclude the need for duplicate testing. Management should be required to design effective control processes, including monitoring controls, document all significant processes and controls and the effectiveness of controls should be evaluated solely by the performance of a walkthrough and the ongoing daily or periodic monitoring of the processes.

- If the proposed auditing standard is adopting substantially in its current form to require duplicate testing by management and the auditor, the requirement for the independent auditor to obtain sufficient evidence about the design and operating effectiveness of controls related to all financial statement assertions for all significant accounts and disclosures in the financial statements will cost significantly more than the benefit gained by implementing such a standard. We believe the independent auditor should be able to use professional judgment when determining the scope of work in an audit of internal control over financial reporting. Specifically, we believe the final auditing standard should permit the independent auditor to rely to a greater extent on work performed by internal audit and others and the outcome of procedures performed in conjunction with the audit of the financial statements, particularly in the areas of disclosures, significant estimates and significant non-routine transactions.

- We believe the independent auditor should not be required to evaluate the effectiveness of the audit committee. Rather we believe the independent auditor should consider its view of the audit committee's effectiveness when determining the scope of work in an audit of internal control over financial reporting.

* * * * * * *

Thank you for considering our views. We would be pleased to answer any questions or discuss these issues further. I can be reached at (212) 536-8550.

Very truly yours,

/s/ John Y. Schreyer

John Y. Schreyer
Executive Vice President
and Chief Financial Officer

Appendix 1

Responses to Questions

We have responded to questions 6, 12, 13, 14, and 15 assuming the proposed auditing standard is adapting substantially in its current form to require duplicate testing by management and the auditors.

6. Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?

   If the final standard requires an audit of internal control over financial reporting, we believe the independent auditor should have the ability to exercise professional judgment when determining the extent of direct evidence necessary regarding the design and operating effectiveness of controls related to all financial statement assertions for all significant accounts and disclosures in the financial statements.

8. Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?

   We believe inadequate documentation should not automatically rise to the level of significant deficiency or material weakness. The focus should be on the existence of effective operating controls. Documentation by itself does not contribute to the prevention or detection of material misstatements in the financial statements.

10. Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors or others?

    We believe the independent auditor should be able to rely on walkthrough procedures performed by internal audit, and in limited circumstances, management.

11. Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?

    We do not believe it is necessary to obtain evidence for all relevant assertions for all significant accounts and disclosures every year. Evidence obtained in prior years plus the outcome of procedures performed in conjunction with the audit of the financial statements should be considered in determining the level of work to render an opinion on internal control over financial reporting.

12. <u>To what extent should the auditor be permitted or required to use the work of management and others?</u>

    We believe auditor judgment should determine the extent to which the work of others is relied upon. Factors to consider include the quality of the control environment and the competency and independence of the individuals performing the work.

13. <u>Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?</u>

    We agree with the three categories of controls. However, we do not believe it is cost effective to require management and the independent auditor to separately test IT general controls every year.

14. <u>Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?</u>

    We believe the proposed standard does not give enough recognition to the work of internal audit. The independent auditor should assess the capabilities and independence of internal audit in determining the level of reliance to be placed on internal audit's work.

15. <u>Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?</u>

    We believe the independent auditor should use professional judgment in determining the extent of reperformance of work performed by others.

18. <u>Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?</u>

    We do not believe the examples in Appendix D provide helpful guidance. We believe management and its auditor should determine if a deficiency is a significant deficiency or a material weakness using the definitions provided in paragraphs 7 through 9. These definitions should be applied to the specific facts and circumstances of the individual deficiency. We appreciate the Board's desire to provide additional guidance, however we believe the use of the limited fact patterns in the examples may create inappropriate minimum thresholds for significant deficiencies and/or material weaknesses.

22. Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?

As stated in our opening comments, we do not believe it is appropriate to require the independent auditor to evaluate the effectiveness of the audit committee due to the inherent conflict of interest caused by the audit committee's role to hire, fire and set the fees for the independent auditor.

24. If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the audit engagement?

We do not believe the standard should require the auditor to withdraw from the engagement in that situation, although the auditor may choose to do so.

America's Community Bankers Shaping Our Future

Re: PCAOB Rulemaking Docket Matter No. 008
Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements

Dear Sir or Madam:

America's Community Bankers ("ACB")[1] is pleased to comment on the proposed auditing standard for attestation engagements required by Section 404(b) and Section 103(a)(2)(A) of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley") issued by the Public Company Accounting Oversight Board "PCAOB".[2]

Sarbanes-Oxley was passed to strengthen public company corporate governance and financial disclosure in an effort to restore investor confidence in the public markets. To further the public interest in the preparation of complete and accurate public company audit reports, Sarbanes-Oxley mandated the creation of the ("PCAOB") to oversee and regulate the public company auditing profession. The proposed standard would establish professional guidelines to govern the independent auditor's attestation of and reporting on management's assessment of the effectiveness of internal control over financial reporting.

[1] America's Community Bankers represents the nation's community banks. ACB members, whose aggregate assets total more than $1 trillion, pursue progressive, entrepreneurial and service-oriented strategies in providing financial services to benefit their customers and communities.
[2] Pub. L. 107-204 (2002).

ACB Position

The PCAOB's proposed auditing standard would add burdensome, conflicting, and overlapping requirements on community banks. ACB believes that section 404 was meant to mirror the similar requirements imposed on financial institutions by the Federal Deposit Insurance Corporation Improvement Act of 1991 ("FDICIA").[3] FDICIA, which has been in place for 12 years, requires management of depository institutions with $500 million or more in assets to assess the effectiveness of the institution's internal control structure.[4] The institution's independent public accountant must examine, attest to, and report separately on, management's assessment. The federal banking regulators have never interpreted this legislative language to require an independent audit of the effectiveness of the internal control structure, as is being proposed by the PCAOB. Congress was aware of the process used to comply with FDICIA, but still adopted almost identical language in section 404(b) of Sarbanes-Oxley to describe the responsibility of the public auditor.

We believe that the PCAOB should conform the standard to the requirement mandated by Congress by requiring an attestation only of management's assessment of the internal control structure to avoid duplication of work and unnecessary expense. If the PCAOB adopts the proposal to require an audit of internal control over financial reporting, the PCAOB should exempt from that requirement insured depository institutions that are regularly examined and subject to continuing supervision by federal banking regulators. The PCAOB should recognize the significant and substantial protections afforded to depositors and investors by the banking laws and establish a standard for depository institutions that mirrors the standard in FDICIA that only requires an attestation of management's evaluation of internal control over financial reporting.

ACB also has concerns with the following provisions of the proposal:

- The requirement that the auditor conduct evaluations of the internal control structure over financial reporting be conducted on a *quarterly* basis.
- The requirement that the external auditor evaluate the effectiveness of the audit committee's oversight of the company's financial reporting and internal control structure.
- The requirement that the external auditor limit the use of testing performed by management and others in a number of areas.
- The lack of adequate guidance regarding attestation procedures for small and medium-size businesses.

Attestation of Management's Assessment of Internal Control

In its proposed auditing standard, the PCAOB proposes to adopt an unnecessary and significantly expanded interpretation of the Sarbanes-Oxley requirements. Two sections of Sarbanes-Oxley

---

[3] Pub. L. 102-242 (1991).
[4] 12 U.S.C. § 1831m and 12 C.F.R. Part 363.

address the attestation of management's assessment of the internal control structure. Section 103(a)(2)(A) stipulates that the PCAOB develop an auditing standard that would require the external auditor to "*describe in each audit report the scope of the auditor's testing of the internal control structure and procedures of the issuer, required by section 404(b)*…." Following this wording, Section 404(b) of Sarbanes-Oxley directs public company auditors to "*attest to, and report on, the assessment made by management*." However, the PCAOB is proposing that the auditor perform a detailed integrated audit of internal control and financial statements and opine directly on the effectiveness of internal controls.

An attestation traditionally refers to a process in which the auditor provides a conclusion about the reliability of management's written assertion, while an audit traditionally involves examination of the financial statements. There is a very distinct difference between the two that was recognized by Congress. Requiring an independent audit of internal control over financial reporting will be duplicative of work performed by a company's internal audit function and senior management and will ultimately be very costly and burdensome. Public company auditors will interpret their responsibilities under the standard quite broadly and, in an effort to avoid future liability, will err on the side of doing too much, rather than not doing enough. This would be understandable in light of recent corporate scandals and the collapse of Arthur Andersen. However, the public auditors will be adequately compensated for this work at a significant cost to public companies and their shareholders.

We urge the PCAOB to reconsider whether a separate audit of internal controls is really necessary and scale back these standards to a reasonable level of inquiry that allows an auditor to opine on the conclusions reached by management. There are other requirements recently put in place that will protect the investing public and that make a more burdensome standard inappropriate. For instance, the chief executive officer and chief financial officer must certify each quarter as to the accuracy of the company's financial statements and their responsibility for establishing and maintaining internal controls.[5] They also must certify that the internal controls have been designed to provide reasonable assurance about the reliability of the financial statements and that they have evaluated the effectiveness of the internal controls. The certifications with regard to the compliance of the periodic filing with the Securities Exchange Act of 1934 are made under the threat of criminal liability if the officer knowingly makes a false certification.

ACB believes that the standard adopted by the banking regulators under FDICIA of requiring an attestation of management's assessment of internal controls, as provided for in section 36 of the Federal Deposit Insurance Act and implemented by Part 363 of the Federal Deposit Insurance Corporation,[6] should be adopted as the standard under the plain language of section 404(b) of Sarbanes-Oxley. If the PCAOB does not believe that this standard is appropriate for all public companies, it should at least acknowledge the comprehensive scheme of regulation and examination that governs depository institutions and their holding companies and exempt these institutions and holding companies from the more burdensome requirement of an independent internal control audit. Insured depository institutions are required to have internal controls,

---

[5] Sections 302 and 906 of Sarbanes-Oxley; Final Rule: Certification of Disclosure in Companies' Quarterly and Annual Reports, 67 Fed. Reg. 57276 (Sept. 9, 2003).
[6] 12 U.S.C. § 1831m and 12 C.F.R. Part 363.

information systems and an internal audit function adequate and appropriate for the institution's size and the nature and scope of its activities.[7] An institution's compliance with these safety and soundness requirements is subject to regular examinations by the federal bank regulators.[8]

Quarterly Reviews

The proposed standard outlines some responsibilities that the auditor would have for evaluating management's section 302 disclosures about internal control over financial reporting. ACB opposes the requirement that the auditor perform limited procedures on a quarterly basis to confirm that management's disclosures are complete. Quarterly evaluations are not mandated by Sarbanes-Oxley. Section 404 of Sarbanes-Oxley requires that annual reports include an internal control report and that the independent auditor attest to, and report on, this annual assessment. ACB believes that quarterly evaluations would be impractical, time-consuming, and costly. The experience of the banking industry under FDICIA has shown that an annual auditor review of management's evaluation of internal controls is quite adequate.

Evaluation of the Audit Committee

The proposed standard would require the independent auditor to evaluate the effectiveness of the audit committee's oversight of the company's financial reporting and internal control over financial reporting. This would create serious conflict of interest issues for the auditor and the audit committee. Among the most important goals of Sarbanes-Oxley was to strengthen the role of the audit committee in overseeing the auditor. The audit committee is now specifically responsible for hiring and compensating the external auditor. The proposed requirement will, in effect, dilute the power of the audit committee and may lead to inadequate oversight in an effort to ensure a satisfactory evaluation. The auditor, on the other hand, may be reluctant to issue a harsh evaluation of the committee that is responsible for his or her hiring and compensation. Furthermore, there are no objective criteria or adequate guidelines for the auditor to use to evaluate the audit committee. The evaluation would be completely subjective and based on each auditor's opinions and beliefs on how an audit committee should function. We believe that the review of the effectiveness of the audit committee, at least for regulated financial institutions, is more properly left to the federal banking agencies.

Reliance on the Work of Others

The proposed standard addresses the auditor's use of testing performed by management and others and limits this use in a number of areas, including controls over the period-end financial reporting process and certain information technology general controls. The inability to use the testing performed by management to the fullest extent possible, together with requiring the auditor to conduct walkthroughs of the company's significant processes, would result in unnecessary cost and burden. The external auditor's responsibility should be to obtain a thorough understanding of the processes in place and evaluate if, and to what extent, he or she

---

[7] 12 U.S.C. § 1831p-1; 12 C.F.R. Parts 30, 364, and 570, and Appendix D-1 to Part 208.
[8] *See*, for example, section 355 of the Office of Thrift Supervision's *Thrift Activities Handbook*, available at www.ots.treas.gov

can rely on the work performed by management and others by considering the factors discussed in paragraph 103 of the standard. The company's professional and independent audit staff, especially in the highly technical areas like IT controls, may be better suited than the external auditor to understand the internal accounting controls and how they perform. The external auditor's task should be to determine whether he or she can rely on the work performed by the company's professional staff.

If a walkthrough has been sufficiently performed and documented by the company's internal auditors, there is no reason for duplicating their work. This is particularly true in the case of financial institutions, which are required by banking law and regulation to have an internal audit function and that function is evaluated during safety and soundness examinations. The PCAOB itself acknowledges the importance of internal audit by indicating in paragraph 108 of the standard that the auditor may be able to use the results of procedures conducted by internal auditors to a greater extent than the results of procedures performed by others.

Guidance for Small and Medium-Size Companies

ACB is particularly concerned about the effect of the proposed auditing standard on small and medium-sized community banks. The PCAOB states that it is sensitive to the possible effects of the auditing standard on small and medium-size businesses. However, the PCAOB does not offer any specific examples that might serve as guidelines for reviewing internal controls for these companies. The external auditor is left to decide what constitutes an acceptable review and will most likely take a conservative approach. The PCAOB also does not indicate what constitutes a small or medium-size company.

The PCAOB should provide more specific guidance to auditors in evaluating internal controls at small and medium-size companies. As a preliminary matter, the PCAOB should define these companies. An approach would be to define these companies as those that are not considered "accelerated filers" under the rules of the Securities and Exchange Commission ("SEC"). The SEC defines an accelerated filer as a company that (i) has a common equity public float of at least $75 million; (ii) has been subject to the reporting requirements of the Securities Exchange Act for a period of at least 12 months; and (iii) has filed at least one annual report as a public company.[9]

Small and medium-sized businesses will find the extensive walkthroughs, quarterly evaluations, and other requirements in the proposed standard to be prohibitively burdensome and costly. This is especially true for small community banks, which, in addition to the lack of resources that larger banks possess, might not have ready access to auditors experienced in attestation procedures. The requirements would only add to already increasing costs and would likely decrease the competitiveness of these institutions. The PCAOB should provide specific examples of how the external auditor should address the issues particular to small and medium-size businesses and how the attestation process for those companies would differ from that used for larger companies. For example, the requirements for the walkthroughs could be scaled back and the auditor could be given more leeway to rely on the testing performed by management.

[9] 17 C.F.R. § 240.12b-2.

Also, the PCAOB could provide guidance on the review that is expected when there cannot be complete segregation of duties because of the limited staff resources at many smaller companies. While we appreciate the PCAOB's efforts to recognize the special circumstances of small and medium-size companies, more specific guidance in this area is needed to limit the cost and burden of the attestation for community banks.

Conclusion

ACB believes that many aspects of the proposed standard would be unnecessarily costly and burdensome. The standard goes beyond what is required by Sarbanes-Oxley by requiring an integrated audit of internal control and financial statements. Quarterly evaluations and limits on the use of testing performed by others will multiply the cost of the audit and the requirement to evaluate the audit committee will create conflicts of interest. If the PCAOB adopts the standard as proposed, exceptions should be made for depository institutions in light of the existing substantial oversight of those institutions by federal banking agencies.

ACB appreciates the invitation to comment on this issue. If you have any questions about our comments, please do not hesitate to contact me. RE: Invitation to Comment on PCAOB Rulemaking Docket Matter No. 008

Dear PCAOB:

The Auditing Standards Committee (ASC) of the Auditing Section of the American Accounting Association welcomes the opportunity to comment on the proposed auditing standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction With An Audit of Financial Statements*. Overall, we believe that the proposed auditing standard is very clear and quite sound in its logic and requirements. We commend the PCAOB for its thoughtful consideration of the many issues involved in reporting on internal control.

The comments below are organized around the 31 questions posed in Release No. 2003-017. We conclude with other comments that are not directly tied to the questions posed.

We particularly call your attention to the following issues, as they reflect our most substantive suggestions:

- Controls in smaller companies (question 4)
- Reliance on the work of others (question 13)
- Definition of significant deficiency and material weakness (question 17)
- Evaluating the audit committee’s oversight (questions 22-24)
- “Except for” opinions (question 26)
- Controls over quarterly reports (question 31)
- The definition of internal control over financial reporting (other comment #1)
- Heavy focus on control activities (other comment #2).

No.	Question Topic	Response
1	Use of "audit of internal control over financial reporting"	Based on the content of the proposed standard, we believe that this terminology appropriately conveys the nature of the auditor's work. However, we do believe that it is important to prominently highlight that the auditor is attesting to management's assertion about internal control effectiveness. If this notion is not prominently highlighted, we believe that there is the potential for an expectation gap to be created (e.g., some may believe that the auditor is almost solely responsible for statements regarding the company's internal control over financial reporting).
2	Prohibiting internal control audit in absence of financial statement audit	We believe that it is appropriate to require the auditor performing an internal control audit also to perform the financial statement audit. The knowledge gained in the financial statement audit is a key input to the internal control audit.
3	Requiring only work *comparable* to a financial statement audit	We prefer the requirement that the auditor actually perform the financial statement audit, as this will better ensure that the auditor has more complete information about the quality of the company's financial statements and disclosures.
4	Internal control in small companies	We have significant concerns with the discussion of internal control in smaller public companies. Research (see Beasley, Carcello, and Hermanson, *Fraudulent Financial Reporting: 1987-1997, An Analysis of U.S. Public Companies*, COSO, 1999) indicates that financial statement fraud among U.S. public companies is concentrated among smaller companies, those with assets and revenues under $100 million. In addition, in over 80% of public company fraud cases, the CEO and/or CFO were implicated in the fraud. However, a pervasive theme of the discussion in the proposed standard is that oversight by ethical top managers may reduce the need for "elaborate internal control systems" in smaller companies. Since small-company accounting fraud typically is perpetrated by CEOs and CFOs, we are concerned that executive-level oversight in such organizations may provide very little protection and may give auditors a false sense of security. In a sense, to prevent fraud, the auditor would be relying on the oversight of the most likely perpetrators. As a result, we question the extent to which executive-level oversight can be an effective substitute for more traditional internal controls. On a related note, if an auditor were to conclude that ethical, executive-level oversight was an appropriate substitute for more extensive internal control systems in a small company, we believe that

		it would be imperative for the auditor to perform significant procedures to assess the ethical orientation of the executives. In the absence of a specific requirement along these lines, we are concerned that many auditors may be inclined to simply state that their small audit clients have effective controls because the CEO and/or CFO are keeping a close eye on the day-to-day operations – without any formal assessment of whether it is reasonable to rely on the oversight of these individuals. We recognize that there are requirements to evaluate the control environment, but we suggest being quite explicit about the auditor's responsibility for assessing top management integrity and values in cases where management oversight is being viewed as an effective form of internal control. Overall, given the concentration of fraud in smaller public companies (and apparently committed largely by CEOs and CFOs), we would strongly prefer to see more focus on formal internal controls in smaller companies. This focus on small company internal controls would be consistent with the SEC's and stock exchanges' decision ultimately to extend recent audit committee reforms to most public companies, rather than exempting those companies with market capitalizations under $200 million.
5	Specifying level of competence and training	We believe that a general statement about the level of competence and training would be appropriate. We recommend including language such as "sufficiently" trained and experienced within the body of the standard. Given that the PCAOB conducts quality reviews of registered firms, we recommend avoiding specific guidelines and instead recommend that the Board focus on competence and training in its quality control efforts.
6	Scope of audit of internal control	We agree with the proposed scope of the audit of internal controls. We believe that it is important for the auditor to obtain direct evidence on the effectiveness of internal controls in addition to evaluating management's assessment method.
7	Criteria for evaluating management documentation	We believe that it is appropriate to provide criteria for evaluating management's internal control documentation. Sound documentation is the first step to understanding controls and ultimately assessing their effectiveness. We do encourage the Board to provide examples that auditors could refer to when evaluating management's documentation.

8	Inadequate documentation as deficiency, significant deficiency, or material weakness	We appreciate the need for auditor judgment in this area and do not believe that inadequate documentation should automatically rise to the level of a significant deficiency or material weakness. Inadequate documentation, and the deficiencies associated with it, should be assessed on a case-by-case basis by the auditor. As a practical matter, we believe that inadequate documentation, in many cases, will rise to at least the level of a significant deficiency. If the controls are not properly documented (i.e., not properly understood by management), then it seems there would be at least "more than a remote likelihood that a misstatement of the annual or interim financial statements that is more than inconsequential in amount will not be prevented or detected."
9	Requiring walkthroughs	We strongly agree with the requirement regarding walkthroughs. However, it would be helpful to provide more guidance about the extent of walkthroughs. For example, is one walkthrough for each significant process sufficient (see paragraphs 79-83)? Also, additional guidance on how to perform walkthroughs for control environment issues would be helpful. Finally, we suggest including more explicit language regarding where walkthroughs should begin. Because many information systems at public companies are interconnected and driven by relational databases, identifying the starting point might be difficult. We are concerned that auditors will start the walkthrough at the point where traditional accounting transactions begin, without moving backwards in the process to where the transaction is first initiated. As an example of the complexities involved, under many of the strategic alliance agreements that exist, companies interface their information systems such that transactions initiate at another entity. In such cases, we suggest requiring auditors to begin walkthroughs at alliance partner locations when necessary to understand relevant controls that impact financial reporting.
10	Requiring walkthroughs to be performed by auditor himself or herself	We agree with requiring the auditor to perform the walkthrough himself or herself.

11	Obtaining evidence of control effectiveness each year versus using prior year evidence to support current year conclusion	We agree that "each year's audit must stand on its own." Information from prior-year audits (particularly related to control design) may be an important input into the current year audit, but we do not believe that it can provide the basis for the current year opinion. The same is true for financial statement audits – last year's substantive testing of Accounts Receivable does not allow the auditor to skip Accounts Receivable this year. However, the extent of evidence needed should be reduced if the auditor is comfortable that no significant changes occurred in the design or implementation of a control from a prior year. Finally, we are unclear about the substance of the change to "relevant assertions" from "significant controls" and how this resolves the "so-called 'rotating tests of controls' issue." We suggest that the Board more clearly explain this issue.
12	Using the work of management or others	We do not believe that the auditor ever should be required to use the work of others, and we believe that reliance on such work should always be permitted (although the extent of reliance may be required to vary – see question 13 below). We encourage the Board to consider more carefully defining what constitutes the work of management and others, including a listing of "other" parties who may be considered appropriate.
13	Appropriateness of three categories of controls and extent of auditor reliance on others	The three-tiered approach described in the standard (i.e., controls for which auditor cannot rely, controls for which auditor's reliance is limited, and controls for which auditors can rely) generally seems appropriate. However, we are not fully supportive of having a no reliance category. We understand that some controls (like those in the control environment) are critical. However, even for these critical controls, we believe that the auditor should be able to gain some assurance from work performed by management/internal audit. Granted, the external auditor would need to carefully limit reliance in these areas, but should not be completely prohibited from some degree of reliance. Further, we wonder whether it makes sense to discuss the reliance issue from the perspective of the work performed at interim vs. the "as of" date. For example, to what extent can an auditor rely on interim work by others that is supplemented with the auditor's own work at year-end?
14	Appropriateness of recognition of internal audit work	We believe that the recognition of internal audit is adequate. However, as indicated above, we do not believe it is appropriate to completely prohibit reliance on internal audit's work in some areas, if in fact they have met the quality standards put forth in SAS No. 65.

15	Appropriateness of flexibility in determining reperformance of others' testing	Overall, allowing flexibility in determining the extent of reperformance seems appropriate. Using professional judgment, auditors should be able to decide how much work to reperform, and the conditions under which they should reperform the work. Further, this flexibility should be helpful in terms of concerns about fraud detection – if reperformance is "random" or based on auditors' perceptions about client risk or internal control weaknesses, then there is more of a "surprise" element to the internal control audit, which we believe is appropriate. Having said this, we note that an earlier report by the POB suggested that the level of testing of internal auditors' work when relied upon in a financial statement audit was inadequate in many of the audits they reviewed. Without being specific as to testing requirements (e.g., reperform some tests of all significant accounts) we have some concern that reperformance levels may be too low. We encourage the Board to rely on its quality reviews of registered firms to assess the sufficiency of reperformance and to provide more specific guidance if needed.
16	Auditor obtaining the principle evidence	We agree that the auditor should obtain the principle evidence, but we encourage the Board to more carefully define the concept of principle evidence.
17	Definitions of significant deficiency and material weakness	We have some concerns related to these definitions. First, we anticipate uneven application/interpretation of these definitions. Perhaps moving to a model using terms such as "low, medium, or high" risk of misstatement would result in more consistent application, given that these are commonly-used terms. Second, we are concerned that negotiations between auditors and clients will result in some weaknesses being "bargained down" to significant deficiencies so they will not be publicly disclosed. As a result, we wonder whether there would be merit to requiring public disclosure of <u>both</u> significant deficiencies and material weaknesses.
18	Examples in Appendix D	We found these examples to be helpful. However, we would like to see some discussion about the example of a material misstatement in the financial statements not being initially identified by the company's internal controls. Often, material misstatements identified by the external auditor are in the accounts which are estimates (e.g., allowance for doubtful accounts). Would misstatements identified by the auditor for these accounts be considered significant deficiencies (and possibly material weaknesses)? Or would it depend on whether the process management used to come up with the estimate was reasonable? Providing more discussion on this topic would be useful.

19	Necessity of evaluating all internal control deficiencies	We agree that all internal control deficiencies need to be evaluated. In addition, we recommend that the Board consider utilizing the risk management literature (as COSO has done for its Enterprise Risk Management Framework) to help in making these assessments. Auditors can assess the probability and magnitude of the risk of material misstatement given the control weakness as inputs into determining the severity of the control deficiency. Auditors can base their evaluation of the deficiency on measures such as the expected impact of the deficiency (computed as probability of misstatement times the impact). The assessments of severity ultimately should be based on professional judgment, but utilizing a framework to help in making that judgment helps to improve consistency.
20	Communicating all internal control deficiencies to management in writing	We agree that all internal control deficiencies need to be reported to management in writing.
21	Strong indicators of material weakness	We agree that these factors all reflect likely material weaknesses. However, we are concerned that the list of circumstances in paragraph 126 of the standard might lead to auditors not considering other circumstances. We recommend that the Board include language at the beginning of the paragraph very clearly stating that other circumstances may exist that should lead auditors to the same conclusion.
22	Appropriateness of auditor evaluation of audit committee oversight	We believe that it is appropriate for the auditor to evaluate the effectiveness of audit committee oversight – as part of both the internal control audit and the financial statement audit. Research clearly indicates that stronger audit committees are associated with reduced financial reporting risk. In addition, the literature (e.g., Beasley 1996 and others) also draws a strong linkage between overall board quality, particularly independence, and the risk of financial reporting problems. As a result, we encourage consideration of whether the auditor also should be specifically required to evaluate the overall board's oversight effectiveness when performing internal control or financial statement audits. Having said this, we do appreciate the practical and other concerns (see question 23 below) related to this requirement. In light of these concerns, one radical and perhaps cost-prohibitive suggestion is to require a second audit firm to perform the audit committee assessment on a less frequent basis (e.g., every 3 – 5 years).

23	Ability of auditors to effectively carry out responsibility to evaluate audit committee	We anticipate that this requirement could raise some significant issues in practice. The audit committee will both hire and be evaluated by the auditor. It certainly would be awkward in situations where the auditor concludes that the audit committee's oversight is ineffective, especially since this would be a specific criticism of the three or four members of the audit committee. In the past, investors were concerned that the auditor was hired by management and audited management's books. In a sense, that has been replaced by the auditor being hired by the audit committee and auditing the audit committee's oversight. In both instances, there is a conflict of interest for the auditor that must be recognized and managed. In today's environment, many investors may not believe that auditors can effectively carry out this responsibility from an appearance standpoint, if not from a fact standpoint. We call the Board's attention to press reports associated with the release of this proposed standard. Articles in major publications quickly noted that auditors would be evaluating those who hire and fire them. Going beyond the human/perception issues, we wonder whether there are liability concerns that may substantially limit the instances where an auditor cites ineffective audit committee oversight as a material weakness. For example, would an adverse internal control opinion citing inadequate audit committee oversight trigger shareholder suits against the directors? We encourage careful consideration of such issues.
24	Implications of audit committee representing material weakness	Given the concerns expressed in question 23 above, as a practical matter, we believe that the most likely outcome is that auditors simply will not accept/continue serving audit clients whose audit committees are ineffective. We would expect to see very few internal control opinions that cite inadequate audit committee oversight. Also, we question how requiring an auditor who has knowledge of a material weakness (sufficient to issue an adverse opinion) to withdraw from an engagement serves the public interest. Under the general standard of due professional care, we argue that an auditor with knowledge of ineffective audit committee oversight should issue an adverse opinion rather than be required to withdraw.
25	Material weakness requiring adverse opinion from auditor	We strongly agree that the presence of a material weakness must result in an adverse internal control opinion. In addition, we recommend that the Board discuss more explicitly in the standard the extent to which companies can fix controls that have been identified as significantly deficient in order to avoid an adverse opinion. For audits of financial statements, the threat of an adverse opinion

		traditionally has served as an important control to ensure that financial statements are corrected prior to being issued to the public. Based on our reading of the exposure draft, we are unclear on precisely to what extent this process is possible when auditing management's assessment of internal control.
26	Appropriateness of qualified "except for" auditor opinion	We do not believe that qualified "except for" opinions should be allowed in the presence of material weaknesses because the definition of material weakness states that there is "more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected." In such a case, we believe that internal control is, by definition, not effective – the company would not have "reasonable assurance regarding the reliability of financial reporting." In addition, we are not convinced that internal control can be compartmentalized very well. If there is a material weakness with one aspect of internal control, it is possible that the effects of this issue could permeate other areas. Again, overall internal control would not be effective. Given the above concerns, our view is that the presence of a material weakness should automatically result in an adverse internal control opinion. Finally, based on the spirit of the Sarbanes-Oxley Act in requiring adverse opinions for any material weakness, it might be most consistent to require disclaimers of opinion in any condition in which a material scope limitation exists. Under this line of reasoning, there would be no circumstances under which a qualified "except for" opinion should be allowed.
27	Auditor speaking directly to internal control effectiveness for non-standard opinions	We believe that requiring the auditor to speak directly to internal control effectiveness in such situations provides the most informative, least confusing reporting.

28	Providing specific guidance on independence and internal control-related non-audit services	If possible, it would be useful to add such guidance. For example, could the audit firm help in documenting the client's internal controls? Could the audit firm provide guidance on the internal control assessment process that management employs? We believe that many companies are hoping to be able to look to their external auditors for guidance on this whole process (including documentation requirements, number of items to test, etc.). If there are activities that the Board believes should not be performed, they should be specified in the standard. Without specific guidance, some firms, offices, or individuals may find themselves stepping over the line. Having said this, if this suggestion would result in significant delays in issuing the standard, then this issue could be addressed in subsequent standards.
29	Specific internal control-related non-audit services to prohibit	Please refer to question 28 above for some of the services that may be prohibited.
30	Auditor responsibilities for quarterly certifications – 4th quarter versus other quarters	Please refer to question 31 below regarding concerns over quarterly controls. In addition, we encourage the Board to work with the SEC to reconsider the decision to shorten the period for when the quarterly reports are due. Accounting firms were severely challenged when trying to meet the shorter deadlines for one review. It seems quite burdensome to potentially double the requirements on a quarterly basis without enabling a sufficient amount of time to effectively conduct both reviews.
31	Auditor responsibilities for quarterly certifications – appropriateness of scope	We have a significant concern related to internal controls over quarterly reporting, and we recognize that our concern actually ties back to the wording in the Sarbanes-Oxley Act and related SEC rules. Research (see Beasley, Carcello, and Hermanson, *Fraudulent Financial Reporting: 1987-1997, An Analysis of U.S. Public Companies*, COSO, 1999) indicates that financial statement fraud among U.S. public companies often begins in quarterly financial statements. A common pattern among the approximately 200 frauds studied was a fraud beginning in the first quarter of year 1, growing through the second, third, and fourth quarters of year 1, and then progressing through the first three quarters of year 2 (the typical fraud length was approximately two years, and a few frauds only involved interim periods). Our concern is that the 21-month fraud above would involve the misstatement of seven periods' financial statements (six quarters and one annual period), but only one of these seven periods (the annual

		period) is directly covered by the internal control reporting requirements (i.e., as of the end of the fiscal year). In other words, if management and the auditor have an obligation only to assess internal control effectiveness as of the end of the fiscal year, has the door been left somewhat open to allow fraud to occur during the first three quarters of the year? This may be the case if the controls over preparation of the quarterly financial statements are not as extensive or effective as the controls over annual financial statement preparation. While the definitions of "significant deficiency" and "material weakness" both refer to interim and annual misstatements, we are unclear how interim reporting risks can be evaluated effectively if controls over interim reporting are not extensively tested. In light of these concerns, we encourage more consideration of how to address internal control effectiveness in the first three quarters of the year. Again, we do recognize the constraints of the Act and the related SEC rules.

Other comments:

1. <u>Definition of internal control</u> – This comment also is offered recognizing that the Board is operating within the constraints of the Sarbanes-Oxley Act and related SEC rules on internal control reporting. The use of "internal control over financial reporting" seems to imply that there are different controls over operations and financial reporting. Under many of the information systems being utilized by publicly-traded companies, a common information system is utilized for operations and financial reporting. We suggest that the Board consider wording along the lines that the assurance is over any controls at the organization that can reasonably be expected to impact financial reporting. While this language change may appear subtle, we recommend avoiding any language that suggests there are multiple types of internal control. Rather, internal controls at an organization help to manage various risks at the organization, some of which have a direct impact on financial reporting. Other controls might only have an indirect impact on financial reporting (e.g., a lagged impact or an impact on another part of the organization that directly impacts financial reporting). While the standard provides the definition of internal control over financial reporting in paragraph 6, we are concerned that many controls related to key risks at the organization might not be investigated. The source of this concern is deciding when an internal control over financial reporting is *initiated*. For example, ineffective controls related to the customer service business process might impact the estimation process for warranties or recalls. However, under the proposed standard, it is not clear whether this control would fall under the proposed definition. This same problem is contained in the COSO (1992) framework that is used as background for this standard in paragraphs 13-14.

2. Heavy focus on control activities – The proposed standard seems to be focused more on the control activities component of COSO than on the other components. Our concern with this focus is that auditors are likely most familiar with the control activities component of COSO and would probably benefit from more direction, guidance, and examples related to the other four components of internal control (especially those that focus on entity-wide controls, rather than those that focus on initiating, recording, processing, and reporting transactions). For example, in the paragraphs discussing documentation (beginning with paragraph 43), there is not a lot of guidance as to what would be included in the documentation of the elements of the control environment (e.g., what should be documented about integrity of management, management's operating philosophy, etc.?). Similarly, in Appendix B, all of the examples related to extent of testing seem to focus on control activities. It would be helpful to have some examples for control environment controls, and others. The same applies to the examples provided in Appendix D.

3. Issues related to testing control effectiveness

    a. The discussion in paragraph 85 mentions that procedures used to test design effectiveness include inquiries, observations, and walkthroughs. Should review of documentation be added to this list of procedures?

    b. The tests discussed in the standard include inquiries of the client (see paragraph 90). Based on our understanding of the approaches being used by some client firms, some of the inquiry data are being obtained via structured surveys. We believe that the readers of the standard could benefit from some discussion about ensuring the validity of survey data, designing appropriate survey instruments/questions, etc.

    c. Paragraph 112 – Would it be useful to have some discussion as to the appropriateness of describing an identified exception as an "isolated instance?" We are concerned that some auditors may be too quick to consider an item isolated.

4. Other minor/editorial comments:

    a. Paragraph 22, 2nd bullet – We encourage additional explanation of this point. Our concern is that practitioners will not understand what types of qualitative factors to consider.

    b. Paragraph 24 – This paragraph relates to the control environment. However, one of the bullet points indicates "company's risk assessment process." Under COSO, the risk assessment process is not part of the control environment, but is a separate component of internal control. In addition, we wonder whether internal audit activity typically is identified as part of the control environment.

    c. Paragraph 50, 3rd bullet – It might be useful to elaborate on the last sentence. Could examples be provided?

    d. Paragraphs 85 and 87 – We encourage more specific guidance on testing design effectiveness. We are concerned that auditors will not have a good basis for performing such tests. Available guidance typically has discussions on assessing design effectiveness and then assessing and testing operational effectiveness. We are not familiar with much guidance on testing design effectiveness.

e. Paragraph 126 – This paragraph should specifically refer to paragraph 180. When reading paragraph 126 we had questions about the issues subsequently discussed in paragraph 180.

f. Paragraph 140 – We found the last sentence of paragraph 140 to be surprising. Research indicates that analytical procedures can be quite helpful in fraud detection, and SAS No. 99 specifically calls for auditors to perform analytical procedures to assist in fraud detection.

g. Paragraph 145 – The first bullet calls for the auditor to document "the evaluation of the design of each of the five components of the company's internal control over financial reporting." Does the Board truly intend for the auditor to document separate conclusions about each of the five components, given that only one overall opinion on internal control will be provided?

h. Paragraph 191 states that the auditor is not required to perform procedures sufficient to identify all internal control deficiencies. However, is the auditor required to perform procedures necessary to identify all significant deficiencies and/or all material weaknesses? A clarifying comment on this issue would be useful.

We hope that our suggestions are helpful and will assist in finalizing the auditing standard. Please feel free to contact our committee Chair for elaboration on or clarification of any comment.

Re: PCAOB Rulemaking Docket Matter No. 008- An Audit of Internal Control over Financial Reporting Performed in Conjunction with an Audit of Financial Statements

Members and Staff of the Public Company Accounting Oversight Board:

I appreciate the opportunity to comment on the above-referenced docket matter.

I am both surprised and concerned about the language in the draft relating to reliance on the work of internal audit.

I am surprised because there has been an enormous amount of work put into developing a very thorough framework for the auditor's consideration of the internal audit function in an audit. The framework can be found in the AICPA professional standards/U.S. Auditing Standards (AU)/Section 322. This standard is based on Statement of Auditing Standard (SAS) 65. SAS 78 also further strengthens the framework by requiring a focus on corporate controls.

These current auditing standards already require a high degree of consideration before an external auditor can rely on the work of internal audit. The external auditor, among many other things, has to obtain an understanding of the internal audit function, assess their competence as well as their objectivity, consider the extent of the effect of the audit work, evaluate and test the quality and effectiveness of the internal auditors' work, assess the risk of a misstatement, and obtain evidence of management's assertions. The standard also specifically states that the external auditor has the ultimate responsibility to express an opinion and that responsibility can not be shared with the internal auditors.

I believe the auditing standards referenced (AU Section 322) should be incorporated into the language of the audit of internal control over financial reporting. Paragraph 104 in the current draft in particularl should be eliminated. This paragraph would prevent the external auditor from relying on the work of internal audit in a number of areas. Specifically, certain general controls such as physical environment, disaster recovery, business continuity, change management, network security, back-up procedures, database security, operating system security, and operations are possible areas where external audit might want to rely on the work of internal audit. Unfortunately, if the broadest interpretation of the limitation on information technology control testing is adopted, the external auditors will not be able to choose to rely on the work of internal audit. Consequently, the external auditors will perform much redundant work – in many cases with less competent staff – resulting in a lower quality of work at an unnecessarily high expense.

Many registrants have dedicated significant resources and achieved a high level of expertise in their internal audit departments**.** Particularly in the area of information technology, organizational expertise becomes more of a necessity as an organization's technology infrastructure gets larger and more complex. I believe most investors would prefer to place reliance on a seasoned group of information technology professionals with deep company-specific knowledge rather than a third party with less experience and more limited company-specific knowledge. Particularly if the work was performed in an objective manner and reperformed on a test-basis by the third party.

Another problem with paragraph 104 is that it is very ambiguous and appears to be contrary to the relevant auditing standards discussed above. Consequently, there appears to be a conflict regarding the reliance of internal audit for a financial statement audit versus the audit of internal control. Since these are for all intents and purposes performed in the same annual audit, I would recommend using the same audit standards.

I agree that under any number of scenarios a decision in which the auditor should not use the results of others, including external audit, might be the right decision. However, I believe current auditing standards already provide adequate guidance about how an external auditor should make that assessment.

Thank you for your consideration.

Re: Release No. 2003-17, Rulemaking Docket Matter No. 008 Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements

Dear Mr. Ray,

The American Bankers Association (ABA) is pleased to have this opportunity to comment on the proposed auditing standard issued by the Public Company Accounting Oversight Board (PCAOB), "An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements" (the proposal). ABA brings together all categories of banking institutions to best represent the interests of the rapidly changing industry. Its membership – which includes community, regional, and money center banks and holding companies, as well as savings associations, trust companies and savings banks – makes ABA the largest banking trade association in the country.

The ABA commends the PCAOB on its efforts to establish standards for the audit of internal controls over financial reporting in conjunction with the audit of the financial statements as directed under the Sarbanes-Oxley Act of 2002. The banking industry is unique compared with other industries, as it has been required to follow rules to maintain strong internal control environments for many years under the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA). Strong internal controls are critical, not only to provide users of financial statements with reasonable assurance about the integrity of financial statements, but also to provide management with a foundation for appropriately managing the company's risks.

We are concerned the proposal goes beyond the requirements set forth under the Sarbanes-Oxley Act and what is prudent at this time. The proposal requires an audit of internal controls over financial reporting rather than the attestation regarding management's assessment of internal controls that is required under the Sarbanes-Oxley Act. We agree with the definition of an attestation in the introduction to the proposal, which states that: "An attestation, in a general sense, is an expert's communication of a conclusion about the reliability of someone else's assertion."

This is what was intended in the Sarbanes-Oxley Act, and we believe that the PCAOB should require attestations rather than audits.

During the development of FDICIA, the accounting profession lobbied members of Congress to require that financial institutions provide certifications and accounting firms provide attestations on management assertions. Banking institutions are responsible for maintaining strong internal control environments. Banks document internal control responsibilities of employees, document the functions of internal controls and flow of processes, and test the reliance on internal controls. Since 1991, banks have been required to produce annual reports on internal controls, and external audit firms have assessed the effectiveness of bank internal controls and have attested to these reports. Many hours have been spent among bankers, banking regulators, and representatives from the accounting profession to specifically determine how such attestations were to be achieved. The Sarbanes-Oxley Act used the FDICIA attestation as its model.

The PCAOB's requirement to go beyond an attestation, to require a full audit, significantly alters the requirements under the Sarbanes-Oxley Act and will significantly increase the costs to companies. Audit firms are already quoting exorbitant fees to bankers under the assumption that the PCAOB will require audits rather than attestations. (In fact, audit firms are telling their banking clients that they must follow the PCAOB proposal for 2003 reporting – even though the rule is not final.) The accounting firms have not been able to sufficiently justify to bankers how their procedures will differ, how they are more valuable to shareholders, or specifically why the costs are so excessive.

We strongly suggest that the PCAOB require attestations rather than audits. Many industries, other than banking institutions, will have an enormous amount of work to do to document their internal control systems so that management will have a foundation on which to certify to its internal controls. Piling on the huge additional fees that are being quoted by the accounting firms for audits, as opposed to attestations, is simply unnecessary at this time. We believe that it would be much better for the PCAOB to require attestations, as contemplated during the development of and required by the Sarbanes-Oxely Act. We believe that the quality of attestations will likely improve dramatically even if the PCAOB does not require audits, simply because of the focus that has recently been placed on the accounting profession. Additionally, we respectfully encourage the PCAOB to reconsider the following areas in the proposal:

- External auditors should be permitted to rely on work performed by internal audit when appropriate.
- The walkthrough requirements are excessive and unnecessary.
- The requirement for external auditors to evaluate the effectiveness of audit committee should be removed from the proposal.
- The definitions of "significant deficiency" and "material weakness" are too broad and should be modified.
- "Except for opinions" should be permitted for circumstances involving business combinations or operating system changes.

External auditors can rely on work of others.
The proposal requires certain procedures to be followed by the external auditor to complete an audit of the internal controls over financial reporting. Because of the vast number of tests and extent of the audit, we believe that external auditors will need to be and should be permitted to exercise discretion on the extent to which the external auditor can rely on information provided by internal auditors.

We are concerned that the proposal creates unnecessary work for external auditors, and, frankly, unnecessary costs. Many functions performed by internal auditors within a company are recurring and routine in nature, and to require the external audit firm to prepare its own original documentation is duplicative. Further, if the quality of the internal audit function within a company is deemed to be reliable, there is no reason why the external auditor must duplicate such work. In fact, we would argue that if the external auditor relies on the work of a sound internal audit process, it frees up the auditing firm to focus on the important issue: areas of risk. We believe that the external audit firm, the company, and investors would benefit more by permitting the external audit firm to identify which tests should be performed and exercise professional judgment regarding the completion of the attestation. External auditors should not be prohibited from relying on the work of internal auditors, and should be permitted to use their work when it is prudent to do so.

Walkthroughs are excessive.
The proposal requires external audit firms to perform walkthroughs of all significant processes of a company each year as part of the audit firm's attestation on the effectiveness of internal controls. Banking institutions are required to maintain a reliable internal control environment. Instead of automatically requiring walkthroughs, external audit firms should use professional judgment to determine what additional evidence is needed each year regarding accounts, disclosures, or processes for the audit firm to gather sufficient, competent evidence to attest to management's assertion on internal controls.

External auditors should not assess audit committee.
The proposal requires that the external audit firm assess the effectiveness and independence of the audit committee. This should be eliminated from the proposal. External audit firms are not necessarily equipped to make such an assessment, they are not trained in making these types of evaluations, and there are no rules or guidelines against which firms would make such assessments. Further, this requirement creates a conflict of interest between auditors and audit committees with respect to independence. Under rules issued by the SEC and stock exchanges, the external audit firm reports to the audit committee. The audit committee also has the sole authority to hire and remove the external audit firm and establishes the compensation for the external audit firm. Independence of the accounting firm is also disclosed to shareholders by the Board of Directors for shareholders to evaluate. We believe that the proposal, as drafted, is not workable and should be removed from the proposal.

<u>Definitions of "significant deficiency" and "material weakness" are too prescriptive.</u>
The terms "significant deficiency" and "material weakness" in the proposal are too narrowly defined and could cause unwarranted concern over a company's internal control structure. Defining a material weakness as having a "more than remote likelihood of occurrence" is broad and too low a threshold to assist in evaluating internal control deficiencies.

The American Institute of Certified Public Accountants (AICPA) identified thresholds for evaluating reportable conditions regarding material weaknesses in its Professional Standard AU Section 325 and Standard AT Section 501. Rules issued by the Securities and Exchange Commission pursuant to Section 404 of the Sarbanes-Oxley Act reference the AICPA's Section 325 and Section 501 as the standards that should be used in determining whether a significant deficiency or material weakness exists within a company. We believe that those particular AICPA Standards contain a more clear definition of a reportable material weakness than the definition provided in the PCAOB proposal. We encourage the PCAOB to modify the definitions of "significant deficiency" and "material weakness" to be based on the reasonably likelihood that an internal control would cause a significant or material misstatement of the annual or interim financial statements. In this way, disclosures would be based on a reasonable level and would provide investors with more important and useful information about failures in internal controls. It is important that the definitions be based on reasonable thresholds that would provide reasonable assurance that a failure in internal controls exists.

<u>"Except for opinions" should be permitted.</u>
External audit firms should be permitted to issue "except for" opinions in situations that involve mergers, acquisitions, or systems changes that affect the internal control environment of the bank. During the time when companies engage in mergers or acquisitions, it often takes time for the acquiring company to learn the internal functions of the acquired company, integrate operating systems, and convert internal control processes to the acquiring company. Often, legacy systems are maintained for a brief period of time until systems can be transitioned to the surviving company. There can also be situations near the end of the reporting cycle that would make it difficult for the acquiring company to consolidate, evaluate, and certify the internal control environment of the combined company. In these situations, it may not be possible for the audit firm to conduct a comprehensive evaluation of the combined company's internal controls, and external audit firms should be given permission to issue "except for" opinions on the attestation on the combined company's internal control environment.

In conclusion, we believe that the PCAOB should require attestations rather than audits. We believe that external auditors should be permitted to rely on work performed by internal audit when appropriate and that external auditors should evaluate processes in order to determine whether walkthroughs on all processes are needed. The requirement for external auditors to evaluate the effectiveness of audit committees should be removed from the proposal. The definitions of "significant deficiency" and "material weakness" are too narrow and should be modified to provide users of financial statements with useful and meaningful information. Last, we believe that "except for opinions" should be permitted for circumstances involving business combinations or operating system changes.

Thank you for the opportunity to comment on this proposal and for your consideration. If you would like to discuss this letter in more detail, please contact me at 202-663-5318.

Sincerely,

Donna Fisher

Re: PCAOB Rulemaking Docket Matter No. 008: An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements

Dear Mr. Ray,

The American Bankers Association (ABA) is pleased to have this opportunity to comment on the proposed auditing standard issued by the Public Company Accounting Oversight Board (PCAOB), "An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements" (the proposal). ABA brings together all categories of banking institutions to best represent the interests of the rapidly changing industry. Its membership – which includes community, regional, and money center banks and holding companies, as well as savings associations, trust companies and savings banks – makes ABA the largest banking trade association in the country.

We wish to supplement to our letter of December 10, 2003 with this letter. Although we recognize that the comment period has ended, we have learned some additional important information that we hope the PCAOB will consider prior to issuing final rules.

As you know, banks have been required to prepare management reports on internal controls and auditors have been required to attest to management's assertions for many years under the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA). Some banks have purchased computer software that is in a question and answer (Q&A) format to identify and evaluate controls. Our concern is that the proposal is being read by accounting firms as no longer permitting the Q&A format. To provide a specific example, a banking institution ($2.5 billion in total assets) that uses a Q&A format has been told by its accounting firm that the bank must convert from the Q&A to either a flowchart or narrative. The bids that the bank is receiving for such conversion are between $200,000 and $300,000. Our hope is that this is not the intent of the PCAOB and that you will clarify this in your final rules.

The proposal requires that auditors perform certain procedures in order to evaluate management's assessment process. It requires auditors to determine whether management's documentation provides reasonable support for its assessment, including an evaluation of whether certain information is included in the entity's documentation (a list is provided at paragraph 43 of the proposal).

The proposal also states that documentation might take many forms, and that no one form of documentation is required:

> Paragraph 44: "Documentation might take many forms of presentation and can include a variety of information, including policy manuals, process models, flowcharts, job descriptions, documents and forms. No one form of documentation is required, and the extent of documentation will vary depending on the size, nature, and complexity of the company."

We are curious as to whether the PCAOB believes that Q&A formats must be replaced by narratives or flowcharts. If controls can appropriately be identified and evaluated with a Q&A format, should the Q&A be acceptable? If the PCAOB intends to use narratives and flowcharts rather than the Q&A, is there sufficient additional benefit to justify the cost of converting from the Q&A to narratives or flowcharts? Although the proposal does not currently appear to intentionally preclude the use of the Q&A, is it possible that list in paragraph 43 and the walkthroughs in paragraph 79 effectively eliminate the use of the Q&A format?

The SEC final rules relating to Section 404 of the Sarbanes-Oxley Act of 2002 are not significantly different from the FDICIA requirements. However, the PCAOB rules seem to establish new rules not only for accounting firms, but also for the companies they audit by requiring documentation that reaches well beyond the existing requirements. We are not suggesting that additional documentation may not be needed; instead, our hope is that if the PCAOB's final rules result in new rules for banking institutions, the PCAOB will carefully consider the impact of such rules, including costs versus benefits.

Again, we would appreciate your consideration of these points prior to issuing a final rule if at all possible. If you would like to discuss this letter in more detail, please contact me at 202-663-5318.

Sincerely,

Donna Fisher

Re: PCAOB Rulemaking Docket Matter No. 008

Dear Board Members:

On behalf of the Committee on Law and Accounting and the Committee on Federal Regulation of Securities, Section of Business Law of the American Bar Association (jointly, the "Committees"), we are pleased to have the opportunity to comment on the Public Company Accounting Oversight Board's (the "PCAOB") proposed auditing standards relating to audits of internal control over financial reporting (the "Proposed Standards").

The comments expressed in this letter represent the views of the Committees only and have not been approved by the American Bar Association's House of Delegates or Board of Governors and therefore do not represent the official position of the ABA. In addition, they do not represent the official position of the ABA Section of Business Law, nor do they necessarily reflect the views of all members of the Committees.

The Committees recognize the PCAOB's obligation to implement the legislative mandate of Sections 103(a)(2)(iii) and 404(b) of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley") and support the PCAOB's overall approach in the Proposed Standards. While the Committees believe that the Proposed Standards should achieve the goal of ensuring the confidence of the investing public in the integrity of public companies' internal control over financial reporting, highlighted below are certain aspects of the PCAOB's proposals with which the Committees do not agree and our suggestions that are intended to clarify the Proposed Standards.

I. Audit Committee Proposals.

The Committees acknowledge the central role of the audit committee in the oversight of a company's financial reporting process. However, we believe that the proposed attestation standards relating to the audit committee are not consistent with the requirement that the audit committee appoint and oversee the outside auditors.

Under Section 301 of Sarbanes-Oxley and the rules and regulations promulgated thereunder by the Securities and Exchange Commission (the "SEC"), the New York Stock Exchange and The Nasdaq Stock Market (the "SROs"), a listed company's audit committee is directly responsible for the appointment, compensation and oversight of the work of the company's outside auditors. Because of the direct supervision obligations that have been imposed on such audit committees by Congress, the Proposed Standards appear flawed and circular in their requirement that the very body that is directly responsible for appointing and determining compensation of the outside auditors, as well as directly overseeing their work, would be subject, in turn, to that outside auditors' scrutiny as part of its audit of internal control over financial reporting.

In addition, we believe that a weakness in the oversight by the audit committee of the financial reporting process may suggest a deficiency in the way the outside auditors manage their relationship with the audit committee. Such a deficiency should be addressed by the outside auditors through better communication with the audit committee. If such dialogue does not improve the effectiveness of the audit committee, the outside auditors should consider resigning.

We disagree with the identification in Paragraph 53 of the activities of the audit committee as an example of the activities that the outside auditors should evaluate as a part of the "monitoring of controls." The audit committee's oversight role is not comparable to the monitoring role of the internal audit function, the CEO and CFO certification process or any other process that a company follows to ensure the adequacy of its financial disclosures, including as a result of the certifications required by Sections 302 and 906 of Sarbanes-Oxley. In our opinion, it is more appropriate for any evaluation of the audit committee's oversight role to be considered in connection with a general review of a company's control environment.

In our view, not only are the proposed attestation procedures relating to the audit committee not contemplated by Sarbanes-Oxley, they may be duplicative of the responsibilities imposed and enforced by the SEC, the SROs, state law and stockholders on boards of directors and audit committees. Moreover, some of these proposed procedures would require that the outside auditors make legal judgments and therefore not judgments within their expertise. We specifically recommend deleting, or revising, if not deleting, the following proposed procedures:

- Paragraph 57 of the Proposed Standards would require the outside auditors to evaluate the independence of the audit committee as one of the factors related to the effectiveness of the audit committee's oversight of external financial reporting and internal control over financial reporting. In evaluating the audit committee's independence, Paragraph 58 of the Proposed Standards would require the outside auditors to evaluate how audit committee members are nominated and selected and whether they act independently from management. We do not agree with, and are troubled by, the conclusion in Paragraph 58 that audit committee members are more likely to be independent if they are nominated through an independent process. More importantly, the evaluation of independence is more properly a corporate governance matter, which is governed by the mandates of Section 301 of Sarbanes-Oxley, state law, SEC regulations and listing standards (as acknowledged by the PCAOB in Footnote 13 to the Proposed Standards), than a matter for the outside auditors in the context of their evaluation of internal control. Boards of directors are required by applicable listing standards to make an affirmative determination of independence for each outside director. Furthermore, a recently-adopted SEC rule that addresses, in part, disclosure relating to nominating committee functions, will result in significant public disclosure of the details surrounding a company's nomination process. See SEC Release No. 33-8340 (November 24, 2003). Therefore, the Committees find it an unnecessarily duplicative and costly requirement, and one with respect to which the outside auditors lack expertise, for the outside auditors to evaluate matters of director independence. Moreover, because the audit committee is established by the board of directors, which has the ability and responsibility to replace committee members and alter the audit committee charter as necessary or appropriate, the board of directors is the proper body to evaluate the audit committee's performance.

- Paragraph 57 would require the outside auditors to evaluate the clarity with which the audit committee's responsibilities are articulated and how well the audit committee and management understand those responsibilities. We assume that this factor would require a review of the audit committee charter, which is a publicly-filed document available to stockholders. We believe that the review of the charter by the outside auditors and evaluation of whether the audit committee and management understand those responsibilities are matters more appropriately covered by the board self-assessment process and are not matters within the expertise of the outside auditors.

- Paragraph 57 would require the outside auditors to evaluate the level of involvement and interaction of the audit committee with the outside auditors, including the audit committee's role in their appointment, retention and compensation. This circular requirement could create conflicts of interest for the audit committee. As noted above, audit committees of listed committees will be required by law to perform these duties.

- Paragraph 57 would require the outside auditors to evaluate the level of involvement and interaction of the audit committee with the internal audit department, including the audit committee's line of authority and role in appointing and compensating employees in the internal audit function. In addition, Paragraph 24 identifies the internal audit activity as a control intended to address the risks of fraud. These Paragraphs assume, incorrectly, that all companies have an internal audit function. While NYSE-listed companies are required by the new corporate governance listing standards to have an internal auditor function, NYSE-listed companies are permitted to outsource the internal auditor function and Nasdaq-listed companies and other companies are not so required. Therefore, this requirement, if retained, should be revised to acknowledge that some companies may not have employees performing internal audit functions or may not have, and may not need to have, an internal audit function at all.

- Paragraph 57 would require the outside auditors to evaluate the audit committee's compliance with applicable listing standards adopted pursuant to Section 301 of Sarbanes-Oxley. As noted above, this is a circular requirement and one that would be inconsistent with Rule 10A-3 promulgated under the Securities Exchange Act of 1934, as amended, under which audit committees must comply with applicable listing standards or face delisting.

- Paragraph 57 would require the outside auditors to evaluate whether the audit committee has an audit committee financial expert. Besides the fact that this information is required to be disclosed in a company's public filings, we question whether the existence of an audit committee financial expert is probative of whether an audit committee is functioning appropriately.

- Paragraph 57 would require the outside auditors to evaluate the amount of time the audit committee devotes to control issues and other committee activities. An evaluation of the time spent would be incomplete absent discussions with the members of the audit committee to determine the time that each member spends preparing for audit committee meetings. Interviewing audit committee members to determine this accurately does not seem like a good use of auditor time. In addition, the time spent by the audit committee is of far less importance to the evaluation of the oversight role played by the audit committee than the way in which that time was used. Intense analytical discussions about accounting or internal control issues during a four-hour period among fully prepared audit committee members will result in far more effective oversight than unfocused discussions between audit committee members who are not prepared to discuss the issues. We believe this proposal should be deleted. If it is retained, we request that the PCAOB consider revising the language to focus on the audit committee's quality of participation in committee activities rather than the amount of time the members devote to those activities.

- Paragraph 72 would require the outside auditors to evaluate the nature and extent of the audit committee's involvement in the period-end financial reporting process. This evaluation would appear to require, with respect to NYSE-listed companies, an evaluation of compliance with listing standards, a legal judgment. Furthermore, because the audit committee's period-end evaluation process significantly depends upon input from and interaction with the outside auditors, we are not certain what is contemplated by the inclusion of this factor as an auditing standard.

Finally, we believe that the Proposed Standards inappropriately broaden or characterize the scope of audit committee duties. In some cases, the Proposed Standards go beyond what the law requires. For example, Paragraph 24 of the Proposed Standards suggests that the audit committee is responsible for monitoring the code of conduct. Although the audit committee often has this responsibility, it is not required under applicable listing standards and regulations or any state or federal law. In addition, the reference in Paragraphs 34 and 35 of the Proposed Standards to the audit committee's responsibilities with respect to the outside auditors' independence could be understood to suggest a shift to the audit committee of some of the outside auditors' independent burden to determine its own independence.

II. <u>Issues Related to the Scope of the Audit</u>.

The Committees agree that the process of auditing internal control over financial reporting should be done in connection with audit of the financial statements and will require more than just merely acknowledging that auditor agrees with management's assessment. Audit fees appear to have increased significantly since 2002, and costs associated with an audit of internal controls will surely result in substantial additional increases in audit fees. We urge the PCAOB to consider ways to reduce the scope of the procedures required by the Proposed Standards, and thereby reduce the attendant costs to reporting companies, to more closely tailor the procedures to those required by Sarbanes-Oxley without adversely affecting the quality of the internal control audit.

Mindful of mounting compliance costs, the Committees submit that certain of the approaches contemplated by the Proposed Standards appear to be duplicative of other procedures and, therefore, unnecessary. In addition, the Proposed Standards require a great deal of origination of supporting evidence by the outside auditors. For those procedures that are necessary in the audit process, we generally support, where appropriate, greater permissibility of the outside auditors' use of professional judgment in determining the extent to which reliance on the work performed by the internal auditors is appropriate.

The PCAOB states on page eight of the Summary of the Proposed Standards that: "the more extensive and reliable management's assessment is, the less extensive and costly the auditor's work will need to be." We agree with the appropriateness of this approach but, as drafted, the outside auditors do not appear to be permitted to rely very much on management's work at all. Therefore, we question the conclusion that the Proposed Standards will permit the outside auditor's work to be less extensive if management's assessment is relatively more complete. Given that management's assessment is at a level of "reasonable assurance," which "includes the understanding that there is a relatively low risk that material misstatements will not be prevented or detected on a timely basis" (as contemplated by Paragraph 16 of the Proposed Standards), we also recommend that the Proposed Standards permit a reasonableness evaluation by the outside auditors in determining what procedures are required in the audit.

As noted above, the Proposed Standards require that a great deal of the supporting evidence for the outside auditors' opinion originate with the outside auditor. However, Paragraph 109 of the Proposed Standards is unclear as to whether all "principal evidence" must originate with the outside auditors.

We also question whether the procedures called for by the Proposed Standards ought to be required to be performed on an annual basis and whether the same level of testing each year is really necessary to justify the additional expense of such testing. It may be more appropriate to permit the outside auditors to use the previous year's audit evidence in some cases. However, with increased reliance on internal auditors, as discussed below, annual testing may be more acceptable.

Where appropriate, the PCAOB should consider permitting more reliance on the internal auditors' work once the outside auditors confirm their understanding of internal control over financial reporting and test the internal auditors' tests. We note that Statements on Auditing Standards Number 65, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements*, provides well-established guidance to outside auditors in determining the nature, timing and extent of auditing procedures to be performed in an audit of an entity's financial statements. We would suggest that the PCAOB consider allowing outside auditors to use the same or similar criteria in assessing the appropriateness of reliance on the work of the internal auditors in connection with an internal control audit, even with respect to matters covered in Paragraphs 104 and 105 of the Proposed Standards. To do otherwise could result in unnecessary re-testing of controls. If an internal auditor follows applicable professional standards, reports to the audit committee, is deemed independent of management and is considered by the outside auditors to do reliable work, reliance ought to be permitted consistent with current practice.

One of the procedures called for by the Proposed Standards with respect to which the outside auditors would be precluded from relying on others is the proposed requirement that the outside auditors perform "walkthroughs" in the audit process. To the extent that it is reasonable for the outside auditors to rely upon the work of the internal auditors, the outside auditors should be permitted to rely, to a significant extent, on walkthroughs that have already been completed. That said, if a walkthrough is required as part of the final standards, the PCAOB should consider whether it is necessary and cost-effective to extend that procedure to <u>all</u> of the company's significant processes and include <u>all</u> types of company transactions and events, both routine and unusual, as is currently required by Paragraph 79 of the Proposed Standards.

In our opinion, additional reliance could also be placed on management's work or the work of third parties where the outside auditors appropriately test the work to evaluate the extent to which the outside auditors could reasonably rely upon it. We encourage the PCAOB to consider whether that approach could be permitted in the following specific areas:

- The identification of significant accounts as contemplated by Paragraph 60.
- The identification of relevant financial statement assertions as contemplated by Paragraph 66.
- The identification of significant processes as contemplated by Paragraph 69.
- The identification of controls to test as contemplated by Paragraph 74.
- The evaluation of the use of work performed by management and others as contemplated by Paragraph 103.

We also question the proposal to broaden the responsibilities of the outside auditors to include disclosures outside the financial statements. Paragraph 184 would require the outside auditors to "evaluate" with management appropriate disclosure about a change in internal control over financial reporting resulting from the need to correct a material weakness. It may be more appropriate to require a "review" rather than an "evaluation," as the latter would appear to come very close to requiring the outside auditors to act in a managerial capacity.

We recommend that the Proposed Standards address the attestation and reporting requirements when a company's internal control over financial reporting has not been fully reviewed and appropriately modified after a merger, acquisition or corporate restructuring that took place too close to the end of the fiscal year for such a review to have been completed. For example, the requirement in Paragraph 128 for management representations should acknowledge and provide guidance as to how to respond when management may be unable to make the necessary representations as to the internal controls. In addition, in such circumstances, a qualified opinion or "except for" opinion should be acceptable rather than an adverse opinion, which is what the Proposed Standards would require.

A qualified opinion can be useful to convey information to stockholders that would otherwise not be conveyed by a blanket adverse opinion. In addition to a qualified opinion providing more meaningful information about the impact of a recent acquisition or restructuring on a company than an adverse opinion, a qualified opinion may be preferable to an adverse opinion in other contexts. For example, it could highlight that a deficiency is confined to one business segment.

Finally, we question the requirement in Paragraph 145 of the Proposed Standards that the outside auditors' documentation of their attestation work include an evaluation of all deficiencies. We encourage the PCAOB to consider whether the documentation needs to include an evaluation of deficiencies other than "significant deficiencies."

III. Clarification of Definitions.

We are concerned about the clarity and potential consequences of the proposed definitions of "significant deficiency" and "material weakness." Not only has the PCAOB not used the definitions in existing generally accepted auditing standards ("GAAS") (AU Sections 325 and 501) of "reportable condition" and "material weakness," but the PCAOB has also not explained how the proposed definitions would differ from the existing terms under GAAS. Moreover, the PCAOB's use of the term "more than a remote likelihood" in the proposed definitions would appear to be a lower standard than existing GAAS and would require many more deficiencies in internal control to be identified as "significant" or as "material weaknesses" than under current GAAS.

In view of the severe consequences to a company if its internal control over financial reporting is considered to have significant deficiencies or material weaknesses, we recommend that the definitions be clarified to be consistent with existing GAAS. In addition, we recommend that the PCAOB provide further examples of significant deficiencies and material weaknesses to enhance the likelihood of more consistent conclusions by outside auditors as to the types of deficiencies in internal control that should be considered to be significant deficiencies or material weaknesses. Such guidance would be particularly important with respect to the independence and effectiveness of the audit committee if the PCAOB retains the attestation procedures related to the independence and effectiveness of the audit committee.

Thank you for your consideration of our comments on this important matter. Please do not hesitate to contact the undersigned with any questions you may have.

Re: PCAOB Rulemaking Docket Matter No. 008:
Proposed Auditing Standard--An Audit of Internal
Control Over Financial Reporting Performed in
Conjunction with an Audit of Financial Statements

Dear Sir/Madam:

On behalf of the American Federation of Labor and Congress of Industrial Organizations, I am writing to express our strong support for the Public Company Accounting Oversight Board's proposed standard for the audit of internal financial controls. The PCAOB's proposed auditing standard will be a significant contribution to restoring investor confidence in the financial statements of American corporations.

The AFL-CIO is the federation of America's labor unions, representing more than 66 national and international unions and their membership of more than 13 million working women and men. Union members participate in benefit plans with over $5 trillion in assets. Union-sponsored pension plans hold almost $400 billion in assets, and union members also participate in the capital markets as individual investors.

We applaud the thoughtful and comprehensive approach the PCAOB has taken in its proposed rulemaking. This new standard, mandated by the Sarbanes-Oxley Act, empowers audit firms to examine and test systems put in place by companies to ensure the soundness of their financial statements. This marks an important step in preventing the kind of accounting scandals that have shaken investor faith in corporate America.

The proposed standard strikes the right balance between the obligations placed on public companies and their auditors, and the needs of investors to have assurances that corporate internal controls are effective. As investors, we believe that any additional costs that companies incur in meeting the proposed standard will be greatly outweighed by the savings shareholders will gain from more accurate financial statements.

A key provision of the new standard is the requirement that auditors evaluate and test – not simply report on – the internal controls at large companies. The risk of a breakdown of a firm's own internal controls such as occurred at Worldcom grows with the company's size and complexity. Requiring accountants to test their client's internal controls will empower auditors to meet with employees involved at various stages of the financial reporting process, and thereby reinforce proper accounting procedures.

Last but not least, we wholeheartedly support the requirement that external auditors evaluate the effectiveness and independence of the audit committee. As the collapse of Enron showed, an ineffectual and conflicted audit committee is a recipe for disaster. The simple fact of having to attest that the audit committee is doing its job will encourage auditors to politely remind them to do it. Such a standard might have prevented the resulting loss of confidence in Arthur Anderson.

We congratulate Chairman McDonough and the other members of the Public Company Accounting Oversight Board for a job well done, and thank them for this opportunity to express our views.

Sincerely,

Richard L. Trumka

RE: PCAOB Rulemaking Docket Matter No. 008

Proposed Auditing Standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements*

Dear Mr. Secretary:

The American Institute of Certified Public Accountants ("AICPA") respectfully submits the following written comments on the Public Company Accounting Oversight Board's ("PCAOB" or "Board") proposed auditing standard (the proposed standard) governing the independent auditor's attestation and reporting on management's assessment of the effectiveness of internal control over financial reporting pursuant to Section 103(a)(2)(A) of the Sarbanes-Oxley Act of 2002 ("the Act"). Our comments reflect our views as they pertain to audits of issuers subject to the Act and do not necessarily reflect our viewpoint for audits of nonissuers. The AICPA is the largest professional association of Certified Public Accountants in the United States, with more than 330,000 members in public practice, business, industry, government, and education.

Executive Summary

The AICPA has long supported reporting on the effectiveness of internal control over financial reporting by public companies accompanied by auditor attestation because effective internal control is a critical component of reliable financial reporting. We believe that this practice will lead to increased quality in the preparation of financial statements.

The AICPA recognizes the enormous effort put forth by the PCAOB members and staff to implement the provisions of the Act. Initially, a significant responsibility of the PCAOB will be to help restore public confidence in audited financial statements of public companies. The establishment and maintenance of high quality auditing and other professional standards is critical to that goal. The AICPA is committed to working cooperatively with the PCAOB in the continuous improvement of high quality audit standards.

We believe that incorporating our recommendations into the final standard will enhance auditors' reports for users and also will significantly improve implementation of the requirements of the Act both by auditors and issuers. The following are among our more significant recommendations:

- **Retain the auditor's option to express either a qualified opinion or an adverse opinion when there is a material weakness in internal control over financial reporting.** Reporting options provide better, more flexible disclosure and thus are more informative for users of the report. We believe reporting alternatives also are consistent with the Securities and Exchange Commission's ("SEC") reporting guidance for management.

- **Identify and communicate to the profession and to the public *all* areas where proposed requirements diverge from existing requirements in the Board's interim standards.** Some significant changes have been made that relate to audit areas other than internal control over financial reporting. These modifications are not discussed in the introductory material to the proposed standard and easily could be overlooked by auditors.

- **Require the auditor to assess the effectiveness of the audit committee within the consideration of the overall control environment instead of as a separate evaluation.** The audit committee is only one element of the control environment and its effectiveness should be assessed as part of the overall control environment. In addition, the criteria to assess this element of the control environment should be clarified and strengthened.

- **Change the requirement that the auditor, in performing walkthroughs, should trace *all* types of transactions and events, both recurring and unusual, from origination to reflection in the financial reports.** This requirement excludes any consideration of materiality, removes auditor judgment, and will be costly to implement with little incremental benefit. We believe that the auditor should perform independent walkthroughs for all the company's significant processes and for *significant* events and transactions.

- **Work in conjunction with the SEC to develop more definitive guidance about management's extent of testing.** Issuers appear to hold widely differing views about the extent of tests of controls that is appropriate to provide sufficient evidence to support management's assessment. We urge the PCAOB to coordinate with the SEC on the issuance of guidance on management's extent of testing.

Specific Recommendations

Forming an Opinion and Reporting

We strongly believe that the auditor should be permitted to express either a qualified opinion or an adverse opinion when there is a material weakness in internal control because these different reporting options are more informative for users of the auditor's report. We also believe that permitting these reporting options is consistent with the SEC's reporting guidance for management.

The SEC's release on the final rules implementing section 404 "preclude management from determining that a company's internal control over financial reporting is effective if it identifies one or more material weaknesses in the company's internal control over financial reporting." Footnote 72 at this sentence states that "this is consistent with interim attestation standards. See AT § 501."We agree with the above conclusion and with paragraph 37 of AT section 501 in the Board's interim standards which states:

> . . . the presence of a material weakness will preclude the practitioner from concluding that the entity has effective internal control. However, depending on the significance of the material weakness and its effect on the achievement of the objectives of the control criteria, the practitioner may qualify his or her opinion (that is, express an opinion that internal control is effective "except for" the material weakness noted) or may express an adverse opinion.

Accordingly, we believe that the SEC's final rule does not preclude management's expression of a qualified "except for" conclusion about the effectiveness of its internal control over financial reporting, depending on the significance of the material weakness, consistent with the above guidance.

Alternative reporting options that are based on the significance of the material weakness and its effect on the achievement of the objectives of the control criteria provide better, more flexible disclosure that is more informative for users of the report. In some circumstances, the auditor may conclude that the effect of one or more material weaknesses on the achievement of the objectives of the control criteria is pervasive enough that it renders internal control, taken as a whole, ineffective. An example of such a material weakness might be the existence of multiple material weaknesses in several different applications. In such circumstances, an adverse opinion that "internal control over financial reporting is not effective in all material respects" is appropriate and communicates to users of the report the gravity of the effect of the material weakness on achieving the entity's overall internal control objectives.

In other circumstances, the auditor may conclude that the effect of the material weakness on the achievement of the objectives of the control criteria is more isolated and does not result in ineffective internal control taken as a whole. An example of such a material weakness might be inadequate controls at a subsidiary that the company acquired in the last week of the year. In such circumstances, the auditor may determine that an adverse opinion is not appropriate, and perhaps potentially misleading, because the significance of the material weakness is not pervasive enough to warrant a conclusion that internal control, taken as a whole, is ineffective. In such circumstances, the auditor may determine that a qualified, "except for," opinion, such as the following from paragraph 55 of AT section 501 in the Board's interim standards, is more appropriate, and also more informative for users of the report, than a conclusion that "internal control is not effective":

> In our opinion, except for the effect of the material weakness described in the preceding paragraph on the achievement of the objectives of the control criteria, W Company has maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X3, based on [*identify criteria*].

In addition, we believe that the requirement always to express an adverse opinion when there is a material weakness places smaller companies at a disadvantage since smaller companies may be more predisposed to have specific material weaknesses that are not pervasive. In such circumstances we believe that a qualified "except for" report is more informative for investors.

We agree that when the auditor issues a non-standard opinion, such as a qualified or adverse opinion, the auditor's opinion should speak directly to the effectiveness of the internal control rather than to whether management's assertion about the effectiveness of internal control is fairly stated.

Process for Identifying and Communicating Changes to Various Interim Standards

We note areas where guidance in the Board's interim standards has been modified in subtle but significant ways, particularly with regard to substantive procedures. For example, paragraph 138 states that "the auditor should perform substantive procedures *for all relevant assertions* [italics added] for all significant accounts and disclosures." As additional examples, paragraph 141 states that "the auditor's substantive procedures must include reconciling the financial statements to the accounting records;" and paragraph 140 states that "for significant risks of material misstatement, it is unlikely that audit evidence obtained from substantive analytical procedures alone will be sufficient."

Our comment does not relate to the substance of the proposed changes, but to the process by which these proposed changes have been identified and communicated. We believe that proposed standards should identify and communicate to the profession and to the public how requirements diverge from existing requirements and how issuance of the standard would affect existing standards. The introductory discussion of the proposed standard appropriately focuses on reporting on internal control. However, it fails to mention other changes in auditing requirements, some of which auditors would consider to be significant. Furthermore, since some of these changes are only a sentence or two in a document that is over 100 pages in length, they easily could be overlooked.

Accordingly, we strongly urge the PCAOB to highlight in the final standard all such changes to existing requirements and describe how the issuance of this proposed standard affects the Board's existing interim standards.

Evaluating the Effectiveness of the Audit Committee's Oversight

We agree that the audit committee, which along with the board of directors comprises one of the factors of the control environment in the Committee of Sponsoring Organizations of the Treadway Commission's report, *Internal Control—Integrated Framework* (the COSO report), plays a significant role in the oversight of a company's internal control over financial reporting and in creating a positive "tone at the top." Accordingly, we believe that the auditor's responsibility to evaluate the control environment encompasses consideration of factors about the board of directors and the audit committee such as those outlined on pages 26 and 27 of the COSO report. Even though the auditor evaluates the control environment in its totality and does not separately conclude on any single element of the control environment, we do agree that the importance of those who govern is such that their overall ineffectiveness generally would lead to a conclusion that the control environment is ineffective. Therefore, we recommend that the proposed standard be revised to require the auditor to assess the audit committee's effectiveness as part of evaluating the company's overall control environment which includes those who govern. We also believe that it is the responsibility of the board of directors to evaluate the effectiveness of the overall board including the audit committee.

In order to achieve more consistent and effective assessment of the audit committee as part of the auditor's evaluation of the overall control environment, we also believe that the PCAOB should clarify and strengthen the guidance in paragraph 57. For example, some of the factors that the auditor would be required to assess in paragraph 57 of the proposed standard could be subject to inconsistent interpretation. Since the auditor does not have unfettered access to the audit committee, the auditor's ability to assess the committee's commitment of time to its activities or to internal control and to evaluate the involvement and interaction with external and internal auditors would be difficult and additionally may not be a meaningful measure of the audit committee's effectiveness. It presumes that levels of time and interaction are measurable when in reality each situation will call for different efforts and degrees of involvement. Therefore, to assess effectiveness against levels of time, effort, and interaction is neither appropriate nor effective.

In addition, in the first bullet of paragraph 57 or in paragraph 58, "independence" should be specifically defined so that everyone is using the same criteria to assess it. The second bullet of paragraph 57 should be clarified to identify potential written sources (for example, the charter) that would be expected to enumerate the audit committee's responsibilities. Finally, we believe that the audit committee's "compliance with applicable listing standards adopted pursuant to Section 301 of the Act" and "whether the committee includes one or more financial experts as described in Section 407 of the Act" (the fifth and sixth bullets) are matters for legal determination and outside the scope of the auditor's responsibility.

As discussed above, the auditor does not have unlimited access to the audit committee. Therefore, if the PCAOB retains the requirement that the auditor make a separate evaluation of the audit committee, we recommend that the PCAOB require the auditor to obtain a written representation from the audit committee in order to facilitate the auditor's obtaining the additional evidence necessary to support this evaluation. At a minimum, such a letter must be signed by the chair of the audit committee. An audit committee's refusal to furnish written representations constitutes a scope limitation.

Because we agree that an effective audit committee is an important element of the control environment, we also believe that management should be required to assess the audit committee as part of its assessment of the overall control environment. Accordingly, the PCAOB should require that the auditor obtain from management its assessment of the audit committee and consider that assessment in forming the auditor's opinion.

Finally, in response to question 24, we strongly believe it would be a disservice to investors and to the public to require the auditor to withdraw from an audit engagement because the auditor has concluded that the audit committee is ineffective. The auditor always has the option to withdraw from an engagement. Requiring that action, however, does not appear to be in anyone's interest. The auditor could still express an unqualified opinion on the financial statements. Furthermore, the communication of the material weakness(es) that resulted in the adverse opinion is useful information to the public.

Walkthroughs

We believe walkthroughs have always been an important part of the auditor's evaluation of internal control. We therefore support the PCAOB's requirement that the auditor perform walkthroughs "for all of the company's significant processes."

However, the requirement that the auditor "should trace *all* types of transactions and events, both recurring and unusual, from origination through the company's information systems until they are reflected in the company's financial reports" appears to be an additional requirement which is separate from the discussion of significant processes and which is unnecessarily onerous given that it potentially encompasses hundreds of immaterial types of transactions and events. As stated later in this letter in the discussion of the use of the term "all," a requirement related to all of a population by its nature excludes any consideration of materiality, removes auditor judgment, and will be costly to implement with little incremental benefit. We do not believe the auditor needs to walk through every immaterial or insignificant event and transaction within a significant process in order to identify risks that could create a material misstatement of the financial statements.

Furthermore, we do not believe the concept of significant processes that appears in paragraph 79 is consistent with that in paragraph 69. Paragraph 69 states that "the auditor should identify each significant process over each major class of transactions affecting significant accounts or groups of accounts." This suggests that the processes that are of concern to the auditor are those that are both significant and also are related to major classes of transactions affecting significant accounts or groups of accounts. We believe that this guidance is appropriate. The discussion of significant processes in paragraph 79, however, seems to have lost the notion of relatedness to major classes of transactions affecting significant accounts or groups of accounts. We believe that the guidance in paragraph 79 should be clarified and made consistent with that in paragraph 69.

In order to achieve the objectives described in paragraph 79, we believe that the auditor should perform independent walkthroughs for all the company's significant processes and for *significant* events and transactions. We do not believe the auditor should be required to perform independent walkthroughs for insignificant events and transactions.

Consideration of Management's Extent of Testing

There is considerable confusion among issuers about the extent of testing that management must perform in order to obtain sufficient evidence to support management's assessment. There appears to be a wide range of views among issuers as to what the appropriate levels of testing should be, including how monitoring controls and other aspects of the control environment affect the extent of testing. We believe that the PCAOB should work with the SEC to develop some definitive guidance for preparers. Furthermore, such guidance needs to make it clear that the auditor's testing cannot be used as the basis for management's assertion about the effectiveness of internal control.

In general, and as it relates to control activities in particular, we believe that management's extent of testing needs to be, *at a minimum*, at the same level as the auditor's in order for management to have sufficient evidence to provide a basis for its assessment. This concept needs to be applied on an overall basis. It should recognize that the controls tested and the nature of tests might differ, however, management's testing needs to provide the same level of reasonable assurance that is required of the auditor, and therefore the level of evidence to support management's assessment should be at least equal to the level of evidence obtained by the auditor.

Paragraph 125 of the proposed standard states:

> Inadequate documentation of the design of controls *and the absence of sufficient documented evidence to support management's assessment of the operating effectiveness of internal*

> *control over financial reporting* [italics added] also are internal control deficiencies. As with other internal control deficiencies, the auditor should evaluate these deficiencies as to their significance.

We believe that the above guidance should be expanded to address the extent of testing. We also believe that the proposed standard should require that the absence of sufficient evidence to support the responsible party's evaluation of the operating effectiveness of internal control constitutes either a significant deficiency or a material weakness because the monitoring component of internal control cannot be demonstrated in the absence of sufficient evidence to support management's assertion. Accordingly, we believe that the absence of sufficient evidence to support management's assessment should be added to the list of circumstances in paragraph 126 that is a strong indicator of a material weakness.

Considerations for Small and Medium-Sized Issuers

Page 6 of the introductory discussion in the proposed standard states:

> The Board is sensitive to the possible effects of the proposed standard on small and medium-sized companies . . . For a smaller, less complex company, the Board expects that the auditor will exercise reasonable professional judgment in determining the extent of the audit of internal control and perform only those tests that are necessary to ascertain the effectiveness of the company's internal control.

We agree with this statement because we believe that, *regardless of entity size and complexity*, the auditor should exercise reasonable professional judgment in determining the extent of the audit of internal control and perform only those tests that are necessary to ascertain the effectiveness of the entity's internal control. We are concerned, however, that the PCAOB's statement above will create an expectation among smaller issuers that the auditor should apply to audits of smaller entities a lower standard concerning sufficiency of evidence. Appendix E also appears to create a lower standard of internal control for smaller issuers that may be inappropriately interpreted by some as a justification for giving inadequate attention to their assessment of internal control.

Appendix E focuses primarily on the lack of formality in implementing various components of internal control at smaller companies. While this may be valid, the examples that are given fail to describe sufficiently what kinds of controls are likely to be different in smaller issuers, and importantly, what kinds of compensating controls can smaller issuers implement to overcome potential control deficiencies. For example, paragraph E9 suggests that a "CFO's careful review of daily sales and key ratios might be just as effective in a small company as lower level control activities that might be found in a larger business." We do not believe that such a review is an adequate compensating control that would appropriately address all relevant financial statement assertions. Additionally, we believe the discussion throughout Appendix E substantially overemphasizes the benefits of direct interaction by senior management with employees in smaller entities as a compensating control.

Paragraph 27 states that:

> . . . the auditor must obtain sufficient competent evidence about the design and operating effectiveness of controls related to all relevant financial statement assertions for all significant accounts and disclosures in the financial statements.

We believe that the above requirement or objective applies to small, medium-sized, and large issuers. It is important for the auditor to understand the difference of auditing internal control over financial reporting in a smaller less formal setting than a highly complex large organization. However, we believe the proposed guidance does not adequately emphasize that the auditor of small entities is still required to meet the objective of paragraph 27 and to evaluate design and operating effectiveness for all relevant assertions for all significant accounts and disclosures.

Finally, Appendix E provides *no* guidance on how the auditor might tailor his or her procedures for smaller issuers. Some examples of how this may be done and still meet the objective set forth in paragraph 27 would be helpful.

Safeguarding of Assets

The guidance in Appendix C of the proposed standard should be significantly enhanced. As currently written, it is not sufficient to answer the questions that are arising in practice about which controls over safeguarding of assets are within the scope of internal control over financial reporting, and which are not. Following are several examples where it would be difficult to conclude, using the guidance provided in Appendix C, that management or the auditor should be concerned about the effectiveness of the controls related to safeguarding the selected assets.

Retail Inventory Shrinkage. A retail client has made a cost-benefit decision not to install theft prevention techniques (for example, tagged clothing and security devices at entrances) in their retail stores. Actual shrinkage in each store ranges from 5-10 percent of inventory on a monthly basis. Are the controls related to theft prevention part of internal control over financial reporting? If so, does the lack of controls over inventory shrinkage represent a significant deficiency or a material weakness if management takes a quarterly physical inventory and properly records the shrinkage?

Music Piracy. The auditor has a client that produces music for sale on CDs. Customers copy the CDs and make them available over Internet sites that allow for file swapping. Technology exists that allows the CDs to be encrypted in such a way that they cannot be copied. Management makes a decision not to encrypt the CDs because they do not want to alienate their customers.

Does management's decision not to encrypt the CDs (and thus not protect the related asset – music) fall within internal control over financial reporting? If so, does it represent a significant deficiency or a material weakness?

Disaster Recovery. A client has made a cost-benefit decision not to provide controls for adequate disaster recovery. Is management's decision not to provide disaster recovery controls part of internal control over financial reporting? If so, does it represent a significant deficiency or a material weakness? If it is an internal control over financial reporting, how would management and the auditor test disaster recovery?

Insurance Underwriting. Do the controls over accepting risk and pricing an insurance policy fall into controls related to financial reporting? These controls affect the level of risk and therefore the balance sheet reserves required, however, the company has strong controls over setting loss reserves and those controls take into account the level of controls that exist over the underwriting process. Does the lack of such controls represent a significant deficiency or a material weakness?

We believe that none of the examples would be a significant deficiency or a material weakness. The definitions of both significant deficiency and material weakness require there be more than a remote likelihood that a misstatement of the annual or interim financial statements will not be prevented. In the retail and insurance underwriting examples, the company has a detective control (quarterly physical inventories, controls over setting loss reserves, and monthly bank reconciliations) to ensure that the financial statements are not misstated. The music piracy issue and the lack of a formal disaster recovery policy do not result in a misstatement of the financial statements.

Based on the proposed definitions, we do not believe an ineffectiveness issue could be raised in any of the above scenarios since an ineffective system of internal control results only when a material weakness exists, and in these cases no deficiency exists that could cause the financial statements to be misstated. If the PCAOB concludes that these types of controls *do* fall within the definition of internal control over financial reporting, and the lack of such controls results in an ineffective system of internal control over financial reporting, we believe the PCAOB should modify its proposed definitions of internal control deficiency, significant deficiency, and material weakness to be consistent with that conclusion.

Service Organizations

We believe the PCAOB should revise the guidance on service organizations that appears in Appendix B of the proposed standard to clarify how it relates to the Board's existing interim standard, *Service Organizations*. Some of the guidance from the interim standard has been paraphrased or described using different wording. As a result, it is not clear whether the Board intended to change the interim standard and just omitted any mention of such changes from the introduction to the proposed rule (see our comment above entitled "Process for Identifying and Communicating Changes to Various Interim Standards"). In addition, we believe the Board should significantly enhance the guidance on what the auditor should do, and what management should do, when the company uses a service organization as part of its internal control.

Use of "All"

The proposed auditing standard significantly increases various requirements for auditors to perform a procedure for "all" of a specific item. By its nature, a requirement related to all of a population excludes any consideration of materiality, removes auditor judgment, and will be costly to implement. Consideration must be given to whether the benefits to be achieved outweigh the cost of such requirements. In addition, we are concerned that in some instances the proposed guidance is establishing a threshold for the auditor that may be unachievable because the auditor's testing is generally selective. Requiring the auditor to perform a procedure for "all" of a population also inappropriately removes the auditor's ability to apply his or her professional judgment to the unique facts and circumstances of an audit engagement. The following are examples of paragraphs where we believe the word "all" (identified in boldface italics) needs to be reconsidered to ensure the requirements do not exceed the benefits obtained and result in the auditor performing procedures that would not result in discovery of material weakness in internal control over financial reporting.

79. In a walkthrough, the auditor should trace ***all*** types of transactions and events, both recurring and unusual, from origination through the company's information systems until they are reflected in the company's financial reports. (Also see the discussion of walkthroughs earlier in this letter)

114. As part of this evaluation, the auditor should review ***all*** reports issued during the year by internal audit (or similar functions, such as loan review in a financial institution) that address controls related to internal control over financial reporting and evaluate any internal control deficiencies identified in those reports.

191. In addition, the auditor should communicate to management, in writing, ***all*** deficiencies in internal control over financial reporting (that is, those deficiencies in internal control over financial reporting that are of a lesser magnitude than significant deficiencies) identified during the audit and inform the audit committee when such a communication has been made. (Also see our response to question number 20)

Indicators of Material Weakness

We agree with the guidance in paragraph 126 of the proposed standard that a restatement of previously issued financial statements to reflect the correction of a misstatement is at least a significant deficiency and is a strong indicator that a material weakness in internal control over financial reporting existed at that time. However, the subsequent discovery of a material misstatement of the financial statements, or of a material weakness in internal control, is not, in and of itself, evidence of (*a*) failure to obtain reasonable assurance; (*b*) inadequate planning, performance, or judgment; (*c*) the absence of due professional care; or (*d*) a failure to comply with PCAOB standards. Given the inherent limitation of an audit as described in paragraph 15 of the proposed standard, absolute assurance is not possible. Therefore, we believe the proposed standard should include the following statement: “Since the practitioner’s opinion on internal control is based on the concept of obtaining reasonable assurance, the practitioner is not an insurer and his or her report does not constitute a guarantee.”

Effective Date

We understand that the PCAOB’s effective date for the proposed standard is based on the date established by the Securities and Exchange Commission for implementation by registrants of its final 404 rule.

Nonetheless, we do not believe it is realistic to require implementation by accelerated filers of the internal control reporting and disclosure requirements of Section 404 of the Act for fiscal years ending in June, July, or August of 2004. Under the best of circumstances, we do not believe this proposed standard can be issued as a final document before early 2004. Since management as well as auditors are looking to this guidance to undertake what is a significant new approach to the audits of public companies, we do not believe that a time frame that is less than six months is sufficient to implement these requirements. In addition to the lack of final guidance, many implementation questions will need to be addressed by both management and the auditor. Time will be required to surface, resolve, and provide guidance on these issues. Accordingly, we believe that the effective date should be extended to audits of financial statements for fiscal years ending on or after September 15, 2004.

Authoritative Appendices

The Statement of Authority at the beginning of the proposed standard states that “appendices to the Board’s standards are an integral part of the standard and carry the same authoritative weight as the body of the standard.” We believe that the PCAOB should clarify whether this statement applies to the appendices in the Board’s interim transitional standards.

We also recommend that the PCAOB clarify whether examples in the appendices are intended to establish requirements, or to provide illustrative guidance to be used by the auditor in making judgments about similar circumstances. For example, paragraph D3 states: “The following examples illustrate how to evaluate the significance of internal control deficiencies in various situations. These examples are for illustrative purposes only.” However, each of the scenarios in Appendix D has a conclusion that states, “based only on these facts, the auditor *should determine* that this deficiency represents a significant deficiency [material weakness] for the following reasons” (italics added). The “should determine” language is inconsistent with the statement in paragraph D3 that the examples are for illustrative purposes only.

Responses to Questions

Questions regarding an integrated audit of the financial statements and internal control over financial reporting:

1. **Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting?**

   It is appropriate to refer to the auditor’s attestation as an audit. The auditor’s objective is to express an opinion on management’s assertion about the effectiveness of internal control over financial reporting, just as the auditor’s objective in an audit of the financial statements is to express an opinion on the financial statements. The level of assurance provided by the auditor’s opinion is the same for either engagement. The requirement to obtain sufficient competent audit evidence to support the opinion is the same for either engagement. Only the subject matter on which the opinion is expressed is different.

2. Should the auditor be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements?

We agree that for public company audits, the auditor should be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements.

The applicability of the proposed standard and the continuing applicability of AT section 501 needs to be clarified. The first sentence of paragraph 2, on its own, does not appear to be correct since not all companies subject to the reporting requirements of the Securities Exchange Act of 1934 are required to report on internal control over financial reporting. Furthermore, footnote 1 states that "this standard supersedes AT section 501 as it relates to performing an audit of the design and operating effectiveness of internal control over financial reporting." Does that mean that AT section 501 is superseded, or that it is superseded only with respect to some guidance? Should public companies not subject to section 404 of the Sarbanes-Oxley Act but that voluntarily wish to obtain an auditor attestation of internal control use the proposed standard or AT section 501?

3. Rather than requiring the auditor to also complete an audit of the financial statements, would an appropriate alternative be to require the auditor to perform work with regard to the financial statements comparable to that required to complete the financial statement audit?

No. Requiring something less would be difficult to define and would result in significant inconsistencies in practice for public company audits. We also agree that the audit of internal control and the audit of financial statements should be completed as of the same date.

Question regarding the costs and benefits of internal control:

4. Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?

See comment above entitled "Considerations for Small and Medium-Sized Issuers."

Question regarding the audit of internal control over financial reporting:

5. Should the Board, generally or in this proposed standard, specify the level of competence and training of the audit personnel that is necessary to perform specified auditing procedures effectively? For example, it would be inappropriate for a new, inexperienced auditor to have primary responsibility for conducting interviews of a company's senior management about possible fraud.

The PCAOB's interim standards require that the person or persons performing the engagement have adequate technical training and proficiency as an auditor (or in the attest function) and adequate knowledge of the subject matter, and that work is to be properly supervised. SAS No. 47, *Audit Risk and Materiality in Conducting an Audit* (AICPA, *Professional Standards*, vol. 1, AU sec. 312.17), further states:

> Whenever the auditor has concluded that there is significant risk of material misstatement of the financial statements, the auditor should consider this conclusion in determining the nature, timing, or extent of procedures; assigning staff; or requiring appropriate levels of supervision. The knowledge, skill, and ability of personnel assigned significant engagement responsibilities should be commensurate with the auditor's assessment of the level of risk for the engagement. Ordinarily, higher risk requires more experienced personnel or more extensive supervision by the auditor with final responsibility for the engagement during both the planning and the conduct of the engagement.

We believe the existing interim standards are adequate. We do not believe that it is realistic to mandate levels of experience for the performance of specific procedures because development of personnel does not progress on a uniform timetable. We believe appropriate judgment needs to be made around staffing assignments and it would be inappropriate to specify the level of staff for specific audit procedures.

Questions regarding evaluation of management's assessment:

6. Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?

Yes, we believe that for public companies it is appropriate that the scope of the audit requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is designed and operating effectively, as stated in paragraph 5 of the proposed standard.

We also believe that the auditor's opinion in report Examples A-1 and A-6 should run directly to the effectiveness of internal control over financial reporting rather than to management's assessment both to be consistent with the scope paragraph in those reports and to eliminate any confusion that the auditor is expressing an opinion on the effectiveness of internal control over financial reporting. Accordingly, we believe that report element "l" in paragraph 153 should be changed to read "the auditor's opinion on whether the company maintained, in all material respects, effective internal control over financial reporting as of the specified date based on the control criteria" so that it is consistent with report element "h."

7. Is it appropriate that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation?

Yes. It is appropriate to provide criteria. However, we believe the Board needs to clarify paragraph B-3 of the proposed standard. Does the guidance in B-3 mean that management would not be required to have controls documented at locations or business units that are not able to create, either individually or in the aggregate, a material misstatement? We believe that management should have at least a minimum level of documentation of controls at these locations or business units consistent with the requirement that registrants must maintain adequate books and records.

We also believe more guidance is needed in the area of documentation of locations or business units that individually are insignificant but when aggregated could result in a material misstatement. We believe management should be required to document all significant controls at these locations as it relates to the significant accounts at the consolidated financial levels. Without appropriate documentation, we do not believe management can demonstrate adequate company wide controls since documentation of controls is a foundation of company wide controls.

Further, as part of providing criteria that auditors should use to evaluate the adequacy of management's documentation, we believe that the Board, in conjunction with the SEC, should address the matter of management's level of documentation and retention of documentation as well as the auditor's documentation of the entity's systems and controls.

8. Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?

We do not believe inadequate documentation should automatically rise to the level of a significant deficiency or a material weakness. The effect of inadequate documentation is a judgmental matter to be considered in the auditor's evaluation of internal control over financial reporting.

Paragraph 46 states that "in evaluating the deficiency as to its significance, the auditor should determine whether management can demonstrate the monitoring component of internal control over financial reporting in the absence of documentation." This language suggests that there are ways in which management can demonstrate the monitoring component in the absence of documentation of controls. We believe there needs to be clarification around this statement and if this statement is retained, examples of how management would do this should be provided. We believe that documentation provides the foundation for the entity's evaluation of and monitoring of the effective operation of controls.

Questions regarding obtaining an understanding of internal control over financial reporting:

9. Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?

10. Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors, or others?

See comment above entitled "Walkthroughs."

Question regarding testing operating effectiveness:

11. Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?

We believe that the auditor needs to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year. Reliance on prior year work is inappropriate.

We do not, however, believe that this requirement is clearly stated in the proposed standard. Paragraph 101 of the proposed standard states:

> Each year the auditor must obtain sufficient evidence about whether the company's internal control over financial reporting, including the controls for all internal control components, is operating effectively. The auditor also should vary from year to year the nature, timing, and extent of testing of controls to introduce unpredictability into the testing and respond to changes in circumstances. For example, each year the auditor might test the controls at a different interim period; increase or reduce the number and types of tests performed; or change the combination of procedures used.

We believe that the guidance in the above paragraph does not make it clear that the auditor is required to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year, without using some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment. The guidance in the proposed standard should be stated as explicitly as question 11 so that it is clear to auditors.

Questions regarding using the work of management and others:

12. To what extent should the auditor be permitted or required to use the work of management and others?

Allowing the auditor to rely on certain testing performed by management should be permitted but not required. It should be based on the auditor's judgment of the competence and objectivity of those performing the work, and subject to the overall requirement that the auditor should obtain the principal evidence for the opinion.

13. Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?

Paragraph 104 of the proposed standard states that areas in which the auditor should not use the work of others includes "controls that have a pervasive effect on the financial statements, such as certain information technology general controls on which the operating effectiveness of other controls depend." Internal auditors in many companies possess both the skills and the objectivity to perform tests of IT general controls very effectively. We believe that to prohibit using the work of such professionals altogether would result in a costly redundancy of work effort between the company and the auditor that provides no benefit. Accordingly, we strongly believe that controls that have a pervasive effect on the financial statements, such as IT general controls, should be included among the areas of controls discussed in paragraph 105 where the auditor's use of the results of procedures performed by others should be limited, but not prohibited.

With regard to the areas in which the work of others should be limited (paragraph 105), we believe the PCAOB should provide additional guidance to clarify the meaning of "limited."

In paragraph 106, the phrase "without specific limitation" does not clearly communicate what level of auditor involvement is appropriate in areas such as controls over routine processing of significant accounts and disclosures. Does this imply the auditor would not necessarily be required to do some testing of each control in this category? We believe that the auditor needs to perform some tests in the areas described in paragraph 106 because it is inappropriate to rely exclusively on the results of tests performed by others. See also our response to question 15.

14. Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

We do believe that the proposed standard gives appropriate recognition to the work of internal auditors in paragraph 108. The guidance in paragraph 108 supports our response to question 13 as it relates to using the results of tests of IT general controls performed by internal auditors.

15. Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?

Paragraph 107 states that if the auditor intends to use the work of others, "the auditor should reperform some of the tests of controls originally performed by others." We believe more guidance is needed here to indicate if reperformance must be done at each individual control level, the account balance level, or just on an overall basis.

In addition, it is not clear whether the guidance in paragraph 107 is intended to apply to both paragraphs 105 and 106 or only to paragraph 105.

16. Is the requirement for the auditor to obtain the principal evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?

Yes, the requirement in paragraph 109 that "the auditor must perform enough of the testing himself or herself so that the auditor's own work provides the principal evidence for the auditor's opinion" is an appropriate benchmark for the amount of work that is required to be performed by the auditor. However, we believe the following guidance should be added to paragraph 109: "Because controls over certain areas are not always susceptible to mathematical measurement, the auditor will need to apply judgment to determine that he or she has obtained the principal evidence from his or her own testing."

Questions regarding evaluating results:

17. Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?

We recognize how difficult it is to develop a meaningful definition of internal control deficiency that can be understood and applied consistently. The AICPA's Auditing Standards Board task force spent significant time in its own deliberations on this subject. We believe the definitions included in the proposed standard provide a reasonable level of clarity that would provide a more consistent application. However, we believe by including the probability concept of "remote" in the definition of significant deficiency, the PCAOB has lowered the threshold and as a result will increase the number of deficiencies that will be classified as significant deficiencies. Although the number of deficiencies is not of major concern to us, what does concern us is that the number may ultimately dilute the importance of significant deficiencies and, as a result, cause management, audit committees, boards of directors, and others to view this category as irrelevant or unimportant. At the same time, requiring unresolved significant deficiencies to be strong indicators of a material weakness would capture significant deficiencies when the likelihood of a misstatement is slightly more than remote (for example, a 5-8 percent likelihood) and the amount of misstatement is slightly more than inconsequential (for example, more than 1 percent). Doing so seems inappropriate and could result in adopting controls that far exceed the benefit. We believe the Board needs to evaluate if it intended to have these consequences when applying the proposed definitions and consider removing the concept of "remote" from the definition.

We also note that in the report Examples A-2 and A-3, the definition of significant deficiency in the explanatory paragraphs includes only the part of the definition that states that "a significant deficiency is an internal control deficiency that adversely affects the company's ability to initiate, record, process, and report external financial data reliably in accordance with generally accepted accounting principles." We do not believe that this definition will be meaningful to users of the report since it does not communicate anything about the materiality or the likelihood of the deficiency, in contrast to the definition of material weakness.

In addition, we think the Board should change the definition of significant deficiency to read "A significant deficiency *is*" rather than "A significant deficiency *could be*" so that the construction is parallel to the definition of material weakness. Finally, we believe the Board should drop the words "in amount" following "more than inconsequential," since we believe the determination of what is "more than inconsequential," just as well as what is "material," could involve qualitative as well as quantitative considerations.

18. Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?

We believe the examples are helpful in providing some clarity around the application of the definition. However, they are reasonably straightforward (black and white) situations. The difficulty will come in the gray areas. Additional examples should be provided where deficiencies would not meet the threshold of "more than remote" and less obvious examples and conclusions are needed.

19. Is it necessary for the auditor to evaluate the severity of all identified internal control deficiencies?

Yes. Once the auditor becomes aware of an internal control deficiency, the auditor needs to evaluate whether it is a significant deficiency or a material weakness.

20. Is it appropriate to require the auditor to communicate all internal control deficiencies (not just material weaknesses and significant deficiencies) to management in writing?

We believe it is appropriate to require the auditor to communicate to management all deficiencies in internal control (that is, those deficiencies that are of a lesser magnitude than significant deficiencies) that were identified by the auditor during the audit.

However, paragraph 191 goes beyond communication of deficiencies identified by the auditor and includes all deficiencies identified by management, internal auditors, or others. In large multi-national companies this could amount to hundreds, even thousands, of comments that do not reach the level of significant deficiency and would create a level of effort that would far exceed the benefits. We believe that management should be expected to be responsible for accumulating these comments as part of its overall monitoring function. It is inappropriate for the auditor to play this role.

21. Are the matters that the Board has classified as strong indicators that a material weakness in internal control exists appropriately classified as such?

As stated earlier, we believe that the absence of sufficient evidence to support the responsible party's evaluation of the operating effectiveness of internal control would result in a strong indicator of material weakness. We believe that this matter should be added to the list in paragraph 126 and deleted from paragraph 125.

While we agree that an ineffective regulatory compliance function may result in a material misstatement in the financial statements, there are many aspects of the function that by themselves may be ineffective without affecting the financial statements. Singling out the entire function will lead to confusion regarding whether the regulatory process falls within the definition of internal control over financial reporting. We believe each deficiency within the regulatory function first needs to be evaluated to determine if it applies to internal control over financial reporting. If it does, then it should be evaluated to determine whether it is a significant deficiency or a material weakness.

We agree fraud on the part of senior management is a serious issue, however, we do not believe it is the responsibility of the auditor to identify fraud of any magnitude. We also do not believe that fraud of any magnitude would necessarily constitute a significant deficiency or a material weakness, particularly in situations where the company's controls uncovered the issue. We also do not believe that the auditor should be required to consider issues that occur outside the company's environment such as filing a false tax return.

22. Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?

23. Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?

24. If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the audit engagement?

See comment above entitled “Evaluating the Effectiveness of the Audit Committee’s Oversight.”

Questions regarding forming an opinion and reporting:

25. Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management?

26. Are there circumstances where a qualified "except for" conclusion would be appropriate?

27. Do you agree with the position that when the auditor issues a non-standard opinion, such as an adverse opinion, that the auditor's opinion should speak directly to the effectiveness of the internal control over financial reporting rather than to whether management's assessment is fairly stated?

See comment above entitled “Forming an Opinion and Reporting.”

Questions regarding auditor independence:

28. Should the Board provide specific guidance on independence and internal control-related non-audit services in the context of this proposed standard?

No. We do not believe that this proposed standard is the appropriate place for guidance on independence and internal control-related non-audit services.

29. Are there any specific internal control-related non-audit services the auditor should be prohibited from providing to an audit client?

We believe that the non-audit services currently prohibited for audits of issuers are appropriate and that no additional rules are necessary.

Questions regarding auditor's responsibilities with regard to management's certifications:

30. Are the auditor's differing levels of responsibility as they relate to management's quarterly certifications versus the annual (fourth quarter) certification, appropriate?

31. Is the scope of the auditor's responsibility for quarterly disclosures about the internal control over financial reporting appropriate?

As in financial statement reporting, we believe differing levels of responsibility are appropriate.

We believe paragraphs 8 and 9 of the proposed standard may imply that the auditor is obligated to identify deficiencies that could result in a misstatement to interim financial statements. We do not believe that an auditor should be required to plan his or her annual audit of internal control to consider materiality or tolerable errors at the materiality level of the interim financial statement. Therefore, we believe the PCAOB needs to be explicit that this is not required or state what they believe is required relative to the existing model (that is, SAS 100).

In addition, we believe that the language in the second bullet of paragraph 186 should be changed from “whether significant changes in internal control over financial reporting may introduce significant deficiencies or material weaknesses in the design of internal control over financial reporting” to “whether any change in internal control over financial reporting has materially affected, or is reasonably likely to materially affect, the company’s internal control over financial reporting” to conform to wording in the SEC's final 404 rule. We do not believe that the auditor's responsibility should be extended beyond that required for management.

Finally, we believe the auditor evaluation responsibilities described in paragraphs 185 through 189 should not be required until the first quarter after the company's issuance of its first annual 404 report.

Additional/Editorial Comments

1. The proposed standard should include guidance on the work that is required of the auditor to determine whether an identified deficiency in one interim period has been corrected in a subsequent interim period. Since the auditor has no responsibility to do testing on a quarterly basis, what would be the basis for the auditor to conclude that the control is now designed and operating effectively?

2. In regard to paragraph B15 of the proposed standard, we believe that the internal control of all equity investees should be excluded from the company's evaluation of internal control over financial reporting, except with regard to controls over accounting for these investments in accordance with generally accepted accounting principles. Therefore, we believe the word "ordinarily" should be eliminated from the statement that "the evaluation *ordinarily* [italics added] would not extend to controls at the equity method investee." However, if it is not eliminated, we believe an example should be provided of a situation where the evaluation of the company's internal control would extend to controls at an equity method investee.

3. In paragraph 2, change the beginning of the fourth sentence to either "the audit firm that audits" or "the auditor who audits."

4. Although we agree with the statement, the last sentence of paragraph 11 seems misplaced.

5. Although we agree with the statement, the last sentence of paragraph 36 seems off point in that it doesn't tie back to the discussion of professional skepticism.

Thank you for the opportunity to comment on this proposed standard. We would be pleased to meet with PCAOB members and staff to discuss our comments.

Sincerely,

S. Scott Voynich, CPA
Chairman of the Board

Barry C. Melancon, CPA

Re: PCAOB Rulemaking Docket Matter No. 008

Dear Board Members:

The American Society of Corporate Secretaries, Inc. ("Society") is a professional association founded in 1946, serving more than 4,000 corporate attorneys and other business executives who represent over 3,000 companies. The members' major duties include working with corporate boards of directors to improve corporate governance; assuring company compliance with securities regulations; coordinating activities of stockholders, including proxy voting for the annual meeting of shareholders; and administering other activities handled by the Corporate Secretary's Office. The majority of the Society's members are attorneys.

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements (the "Proposed Standard"). The Proposed Standard covers attestation engagements under Sections 404(b) and 103(a)(2)(A) of the Sarbanes-Oxley Act of 2002 (the "Act").

First, the Society would like to make general comments about its perception of the approach that the Proposed Standard seems to be taking. Then we would like to address selected topics of particular interest to our members: External auditors' oversight of the effectiveness of audit committees; communications among external auditors, management and the audit committee; the ability of external auditors to rely on the work of others, especially internal audit; the introduction of new terminology; and the characterization of the external auditors' attestation opinion.

*** * * * ***

General

We applaud the PCAOB for being sensitive to the fact that internal control over financial reporting cannot be "one-size-fits-all." However, as a general comment, we would like to note that the Proposed Standard takes away much of the professional judgment and expertise that external auditors could bring to the assessment of internal controls over financial reporting in a given factual situation. We recommend that the Board allow external auditors to exercise their judgment to a greater extent than currently contemplated under the Proposed Standard.

Oversight of Effectiveness of Audit Committees

Section 301 of the Act states that "[t]he audit committee . . . shall be directly responsible for the appointment, compensation, and oversight of the work of any registered public accounting firm employed by the issuer . . . and each such registered public accounting firm shall report directly to the audit committee . . . ." Paragraphs 56-59 of the Proposed Standard require the external auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting.

Conflict of Interest. We believe that Paragraphs 56 – 59 create an unworkable conflict of interest for the external auditors. Paragraph 59 of the Proposed Standard states that "[i]neffective oversight by the audit committee of the company's external financial reporting and internal control over financial reporting should be regarded as at least a significant deficiency and is a strong indicator that a material weakness in internal control over financial reporting exists." Paragraph 57 states that the external auditor should evaluate the "Committee's compliance with applicable listing standards adopted pursuant to Section 301 of the Act." Major new laws, rules and standards have arisen from numerous regulatory fronts affecting both issuers and their external auditors. One of the audit committee's primary responsibilities is to retain, terminate and determine the compensation paid to external auditors. In its final listing standards' discussion on the role of audit committees, the New York Stock Exchange ("NYSE") states that one of the committee's purposes is to "assist board oversight of… the independent auditor's qualifications and independence. We believe this critical responsibility and oversight function of the audit committee is incompatible with, and would be compromised by, an evaluation of the audit committee by the external auditors under the Proposed Standard.

Scope of External Auditors' Evaluation. The Proposed Standard gives as examples seven factors that the external auditor should consider in evaluating the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting. With due deference to the professionalism and expertise of external auditors, some of the proposed factors venture into the realm of what the Securities and Exchange Commission (the "SEC") and the stock exchanges are addressing, not matters inherently within the expertise of external auditors. For instance, paragraph 58 of the Proposed Standard states that "[a]s part of evaluating the independence of committee members, the auditor should evaluate how audit committee members are nominated and selected and whether they act independently from management . . . For example, are qualified candidates identified by outsiders, such as an outside search firm or a nominating committee composed of outside directors, . . . ?"

We strongly recommend that the PCAOB defer to Section 303A.4(b) of the NYSE's final listing standards as approved by the SEC on November 4, 2003, which states that the nominating committee's purpose and responsibilities at a minimum must be to "identify individuals qualified to become board members, consistent with criteria approved by the board, and to select, or to recommend that the board select, the director nominees for the next annual meeting of shareholders . . . ." There are mechanisms to monitor and enforce the listing standards.

We note that, as a result of the Proposed Standard, external auditors are now planning significant audit procedures including lengthy surveys and interviews with audit committee members to fulfill this evaluation requirement. Given the existence of the NYSE listing standards addressing board and committee nominees and their independence, we believe that any added benefit of the external auditors also reviewing directors' independence would be immaterial and unnecessary, particularly when balanced against the significant added burden of the extra audit procedures.

Communications

Paragraph 191 of the Proposed Standard requires the external auditor to communicate "to management, in writing, *all* [emphasis supplied] deficiencies in internal control over financial reporting (that is, those deficiencies in internal control over financial reporting that are of a lesser magnitude than significant deficiencies) identified during the audit . . . ." In addition, the external auditor must "inform the audit committee when such a communication has been made." This provision would require a change from external auditors' current practice of communicating significant deficiencies (reportable conditions) and material weaknesses in writing to the audit committee to an approach that would require communication to management of **all** deficiencies in internal controls over financial reporting identified during the audit and to inform the audit committee when a communication has been made.

The probable result is that most audit committees will feel that they cannot simply take on its face the fact that the external auditor reported deficiencies to management without exploring further. Instead, audit committees are likely to feel compelled to ask about the substance of all the deficiencies. What may then happen is that the committee will become bogged down in reviewing insignificant matters rather than focusing on topics of greater importance to the company and its owners. Accordingly, we recommend that the PCAOB retain the current reporting structure.

Reliance on Work of Others, Especially Internal Audit

The Society appreciates the PCAOB's recognition of the expense and work incurred by companies: "[t]he more extensive and reliable management's assessment is, the less extensive and costly the auditor's work will need to be." It seems to recognize that the external auditor can rely on the work of internal audit in certain areas: "The proposed auditing standard . . . would allow the auditor to incorporate into the audit . . . some of the work performed by others, such as internal auditors or third parties . . . ."

However, other provisions limit the circumstances in which internal audit may be used. The draft proposes that internal audit *cannot* be used for the following areas:

- Control environment, including fraud controls.
- Controls over period-end financial reporting process.
- Controls that have a pervasive effect on the financial statements, such as certain IT general controls on which the operating effectiveness of other controls depend.

- Walkthroughs.

These prohibited functions are some of the key areas in which an internal audit group can provide significant insight and audit evidence based on its experience with the company. Public companies do not expect external auditors to rely solely on internal audit for 100% of testing. Eliminating internal audit from these critical areas, however, is a dramatic change from present accepted practices. In addition, this proposed point does not allow the external auditors latitude to use their own professional judgment. For example, in the new "walkthrough" concept that the Proposed Standard introduces, it is not clear if all processes in all locations (significant or otherwise) must have a walkthrough. Multinationals with complex global operations could have hundreds of processes located in numerous geographies involving multiple sites. We believe that external auditors should be allowed to use their judgment, taking into account the specific circumstances of the company, to determine the operating effectiveness of controls for all relevant assertions for all significant accounts and disclosures.

The proposed auditing standard also would require that, overall, the external auditor obtain directly the "principal evidence" about the effectiveness of internal control over financial reporting. It is our understanding that many external auditors are interpreting the Proposed Standard to mean that only they can provide the principal evidence. The result is significant increased costs to companies, without necessarily any more benefits going to the investing public. For all companies, small, mid-sized and large, the additional costs are likely to be very high. Anecdotally, our members report that their external auditors have told them to expect 25-100% fee hikes to cover internal control work.

Unfortunately, one unintended consequence if the Proposed Standard is adopted in this area will be to diminish or eliminate the role of internal audit. In its final listing standards, the NYSE reaffirmed the importance of internal audit by requiring that all listed companies have an internal audit function, a stance we urge the PCAOB to support. Effectively decimating strong internal audit functions will diminish, not enhance, the ability of corporations to maintain a strong control environment from which management can produce transparent financial statements with integrity that will inspire investor confidence.

Introduction of New and Broad Terminology

While we appreciate the Board's efforts to clarify the definition of "significant deficiency," which is not currently well defined in the auditing literature, we believe the Board's proposed definitions of both "significant deficiency" and "material weakness" capture an unnecessarily low and insignificant level of control deficiencies which were not within the intent of Congress when it adopted the Act. These new definitions also introduce significant ambiguities that make it difficult for companies or external auditors to interpret and apply the definitions. As an alternative to the Board's approach, we recommend the Proposed Standard give companies and the external auditors latitude to exercise judgment in determining those deficiencies that are significant enough to be elevated to management and the audit committee, or disclosed in public filings, while using more well-established terminology to provide definitional guidance. Rather than introducing the term "inconsequential" in the significant deficiency definition, we recommend that the Board use the well-understood concept of materiality in addressing the magnitude of both a significant deficiency and a material weakness, and use different degrees of likelihood to distinguish between the two. Specifically, we recommend that the definitions hinge on whether there is a reasonable possibility that individual or aggregated deficiencies would lead to a material adjustment in the financial statements, in the case of significant deficiencies, and on whether it is reasonably likely the deficiencies would lead to a material adjustment in the financial statements, in the case of material weaknesses. Using terminology that is already well interpreted in the auditing literature, SEC guidance and judicial decisions will give companies and auditors greater ability to apply the definitions in exercising their judgment.

In addition, we ask that the Board avoid using terminology that appears to extend beyond the financial reporting controls scope of the SEC's rules. For instance, ineffective internal audit, risk assessment, and regulatory compliance functions are listed as examples of significant deficiencies. Yet in many companies, these functions extend beyond the realm of internal controls over financial reporting.

Characterization of Qualified Attestation

The Proposed Standard, in Paragraphs 177-179 discusses situations where there is an adverse opinion on the effectiveness of internal controls over financial reporting due to a material weakness but the auditor's opinion on the financial statements is unqualified because they were able to perform substantive procedures to satisfy themselves that there was no material misstatement in the financial statements. Paragraph 178 proposes the inclusion of qualifying language in the report on internal control over financial reporting explaining that the material weakness does not impact the audit report on financial statements. We are concerned that the appearance of an unqualified opinion on the financial statements alongside an *adverse* opinion on the effectiveness of internal control over financial reporting due to a material weakness that did not result in a material misstatement in the financial statements will create the perception to the investing public that the financial reports are unreliable despite the inclusion of the qualifying language in the report on internal control over financial reporting. We recommend that the external auditor be allowed to exercise judgment as to whether the opinion on the effectiveness of internal control over financial reporting should be regarded as a *qualified* opinion rather than an *adverse* opinion based upon the materiality of the weakness and scope limitations if any.

* * * * *

The Society’s members vigorously support the accountability of management for establishing and maintaining adequate internal controls over financial reporting. We hope that the Proposed Standard will permit companies and their owners to take full advantage of the professional and thorough work and expertise of management and internal audit. We also hope that external auditors are permitted to exercise their considerable professional expertise and judgment. If not, we risk violating the PCAOB’s sensitivity that “internal control is not ‘one-size-fits-all,’ and the nature and extent of controls that are necessary depend, to a great extent, on the size and complexity of the company.”

We appreciate your consideration of these comments. If you have any questions, please call me at 650-752-5339.

Cordially,

American Society of Corporate Secretaries

Washington, D.C. 20006-2803.

Dear Sir,

PCAOB Rulemaking docket Matter No 008

I wish to comment on the new PCAOB draft standard referenced above. I write in the context on an informed private individual having spent my entire career in audit and finance both in Europe and the US. I am particularly motivated because of the loss of trust in financial markets and my own personal pension savings losses.

It is of great comfort to see that he PCAOB is establishing its independence of mind right from the start and is not minded to continue to allow the accounting profession to regulate itself. Indeed in the run-up to the issue of these standards I was following with interest the view of the profession that it would itself set the standards and more importantly it viewed the introduction of S 404 of Sarbanes Oxley as an opportunity to boost sagging profitability on audit work. As I understood it the profession viewed S 404 as a second government mandated franchise to extract much larger fees from its clients by calling the attestation on internal control over financial reporting a second audit engagement and therefore billable as such.

My view of the wording of Sarbanes Oxley is that the attestation of management's evaluation of the effectiveness of internal control over financial reporting is to be considered a necessary part of the audit of financial statements. It is work which enables the independent auditor to opine, in a truly meaningful manner, on the financial statements and is therefore a necessary component of the statutory audit. It should therefore be performed at no extra cost to the client's shareholders.

Indeed the implosion of Arthur Andersen has served only to redistribute the audit pie to an even smaller number of accounting firms. The fact that there are now only 4 firms left is in itself is not a desirable state of affairs, and I have disagreed with the mega mergers that have taken place on grounds of competition.

The audit profession came out of this far better than I or they could have expected, given their role and complicity, and in some cases outright involvement in the manufacture of schemes, which resulted in considerable losses to the shareholders and perhaps more important the stakeholders in the corporations involved.

ROANMERLIN@STARPOWER.NET

It is clear to me that public trust will only return to the markets in the same measure as the PCAOB and SEC visibly and boldly act to protect those markets. In the mid 1980s I spoke to Sir David Tweedie, then David Tweedie, who was just taking over at the IASB from Bryan Carlsberg. His view was that new standards would be ignored until standard setters were willing to publicly hang the first transgressor.

I can see that powerful lobbies have been visiting the PCAOB, and vested interests are being actively protected, notably the issues of additional client services performed by the independent auditor, independence and the issue of foreign jurisdiction. My hope is that the PCAOB will uphold the spirit of al of the provisions of the act. I would like to see non-US audit firms treat the inspections by the PCAOB very seriously indeed, and be aware that very competent people will be reviewing their activities and revealed failures can have dire consequences.

Before I answer the requested questions, I feel that there is one very important omission in the structure of the PCAOB draft standard. The standard often cites the pervasive nature of information systems and in fact notes that even the smallest of companies relies for its financial accounting and reporting on three level computer architectures, software, databases and infrastructures. Since the Treadway Report over 10 years ago the use of IT in financial reporting has expanded exponentially. My own experience tells ma that there are a bewildering number of applications, databases and infrastructures that combine together in layers to arrive at the consolidated numbers for a large international corporation. Even the analytical reviews and substantive tests will have recourse to some IT system output somewhere.

You mention that a standard or model for internal control could be the COSO or Treadway standard. No one would disagree. However I would like to see the Cobit standard added for internal control as applies to IT. It would in my view be a simple addition to the draft standard and would be fully understood by all auditors around the world. The standard points to the advantage of common standard and common vocabulary. The use of Cobit would I believe offer the same standard and reference point as regards IT systems and control. Recourse to Cobit would for example be very useful to resolve IT related control issues where management and audit differ in their view of significant deficiency or material weakness.

Yours sincerely,

Donald Neil Anderson.

Responses to Docket Matter No 008

1. Yes. It is essential to have one unique definition or title. The wording adequately encompasses the "disclosure" controls envisaged in the Act.

2. No. If the opinion on the financial statements is independent of the S 404 opinion why should the auditor have to perform a financial statement audit? It makes sense of course but the S 404 attestation includes text that refers to possibility or probability as opposed to certainty such as, "more than a remote likelihood" It is possible is it not that internal control over financial reporting could be bad but the reported amounts present a true and fair view?

3. Yes. I view the work on internal control as a component of the work needed to attest to the assertions of management regarding the financial statements. Otherwise what is management basing their assertions on?

4. Yes. By implementing "principle-based" as opposed to "rule-based" standards the appropriate forms applicable to small and medium sized companies should be relatively clear in each circumstance.

5. Yes. It is clear to anyone who has performed an audit or who has been audited themselves that the requirement of the profession to make profit from the work and still cover the compensation of Partners Managers and Staff not to mention overheads, requires that junior staff be used to the maximum. Persons in the profession wish to progress as quickly as possible so there is considerable mobility. The result is that more and more work is done by junior persons who are wholly unfamiliar with the business of their clients.

   Having served in the profession I know this to be true and I know that supervision is not always consistent either. From the client perspective I detect enormous amounts of discontent at the level and competence of staff performing the audits. In Germany a famous saying is that KPMG actually stand for **K**inderen **P**rufen **M**eine **G**eschellscaft, translated "Children Audit My Company". The youth/competence trade off is clearly an issue. I know for a fact that when older more experienced people are auditing the response from management is far higher, as well as the level and depth of explanation. A more experienced person is far less easier to fool and far more tenacious. The huge profits of the profession might be reduced but the stakeholders would be better served if audits were performed by competent experienced persons.

6. Yes. I cannot see how it would be possible to refute an assertion by management at any level without having more than a solid grasp of the internal control environment.

7. Yes. If adequacy of documentation can be considered as a control deficiency then the PCAOB should assist management and audit alike to determine what those criteria are. Without such criteria conflicts of opinion can easily arise.

8. Yes. Inadequate documentation demonstrates a lack of will on the part of management to engage in the spirit of the Act. Documentation is testimony to commitment and professional execution. It is also auditable and reviewable by all parties and should take a position in the "Control Environment" as defined by COSO.

9. Yes. Walk-through is a standard procedure. Making it mandatory only formalizes it.

10. Yes. The walk-through is a key audit procedure. If the auditor has to rely on his own opinion then this part of the audit should not be delegated.

11. Yes. Every year, every relevant assertion for all significant accounts and disclosures. To do otherwise would introduce a very serious flaw in the audit and the related opinion.

12. This is another one of those questions that needs to be answered. If all things were simple, or auditors were all –knowing then the auditor would not need the knowledge, expertise or experience of others. The world alas is otherwise. The auditor should be advised to rely on the work on Internal Auditor where that function is properly staffed and constituted. That is to say it is independent, expert and experienced and shares the reporting structure enjoyed by independent auditors. That is to say with access and reporting to the Audit Committee, staffed by qualified individuals .The same may be true of outside experts in specialized areas. The cost of the audit should be as low as possible and avoid duplication or parallel checks.

13. Yes. Systemic controls. Specialized controls such as Health and Safety, Expert controls such as Tax or Legal.

14. No. The standard should be more explicit about the work of internal audit. It should ascribe criteria that define what constitutes an internal audit department whose work can and should be relied upon. See above. CFOs will expect to see a cost effective coverage not duplication and confusion.

15. Yes. Flexibility in this domain brings in professional judgment, which is fine.

16. Yes. The auditor should collect the principal evidence on which the opinion is based.

17. No. The definitions are problematic. Firstly they are negatively stated. I think there should be more straightforward and not couched in unusual terminology. After all this is the critical part of the process. Definitions should more appropriate to internal control reports. Most reports rate deficiencies as low medium or high, each with its own simple definition. One High need not be significant but if accompanied by 25 Mediums the whole risk profile changes. In any audit of internal control there are going to be lots of issues and items, so it make s sense to look at a cumulative view of all of the issues ranked y importance. If The PCAOB wished there are already a number of ranking criteria available. If these same criteria were used by all auditors independent as well as internal, a great deal would be achieved at no cost, and great benefit to Boards and shareholders alike.

18. Yes. Audit reports are tightly worded in any case.

19. Yes. Without some idea of severity there is no consequential idea of importance and hence relevance. See 17 above for ranking criteria.

20. Yes. I have participated in many audit meetings when the true impact of a control weakness has in fact been either missed or over-stated. It is essential to get it all out on the table.

21. No. I think the PCAOB can go further with what constitutes the High risk or material weakness. The more comfortable people become with the criteria the less likely will be the misclassification of any deficiency.

22. Yes. The PCAOB will however have to issue guidelines on exactly what is expected, so Audit Committees can fulfill their obligations and how auditors should go about their annual check of the fulfillment of these obligations. The same applies to smaller entities although few of these will find themselves "issuers" and caught by the Act.

23. Yes. It depends on the quality of the guidelines set by the PCAOB. I am positive Audit Committees would like to have authoritative guidance on this subject.

24. No. No purpose is served by withdrawing from the engagement other than to create confusion, and introduce the possibility of "shopping around" for opinion. If the Audit committee is not competent surely this is exactly what shareholders need to know and what trust in financial statements is all about. Who should/will pay for a withdrawal?

25. No. A <u>single</u> material weakness should <u>not</u> be enough. Internal control consists of many issues some interlock and amplify other compensate and dilute. There may be one single "crock of gold" as in WorldCom and Ahold but this is rare and overly simplistic. An internal control report will not have a single material weakness, unless it is couched in very generic terms. What is more likely is that there will be a number of issues and the skill is to see what they all mean when put together. It is the weight of the issues in the final control matrix which is important to determine if control is effective or not, not one single large item. Auditors will have to look at and opine on softer issues like competence, compensation and motivation, estimation techniques and possible value ranges, complex assertions such as hollow swaps.

26. No. I think you describe control just as it is. That way you can opine on changes in the level and quality of control and demonstrate continued improvement which is something of more value to shareholders and markets. The High Medium Low matrix referred to earlier can be part of a balanced scorecard approach.

27. Yes. Where opinions differ the shareholders have aright to the expert opinion they have paid for. If they disagree with management's assertion the job is only half done in my view and adds a) no value b) considerable confusion c) considerable ill feeling d) constructs nothing. What is key to this issue is that management and the auditors share the same conceptual and practical view of what constitutes an internal control deficiency for the purpose of the Act. Management must be aware of the laws they are breaking, or the rules to which they are not conforming. Otherwise it gets to a difference of opinion and subjective interpretation as opposed to matters of fact.

28. Yes. Everything is to be gained by being as specific as possible.

29. Yes. There are many of these.

30. Yes. The idea of quarterly certifications is OK for the CFO and CEO on the numbers but for internal control it is over-kill. The only time the quarterly certification should demand independent audit work is a) the first opinion b) the follow up to an adverse opinion or qualification. For the rest the previous annual report suffices unless something new and of consequence has arisen ad interim.

31. Yes. See 30 above. Getting audit involved each quarter will mean that staff never leaves the client. This happens today for big clients viz Enron but increasing the quarterly obligation will only exacerbate this.

Subject: Docket #008, Internal Controls

*** PLEASE REMOVE NAME FROM POSTING IN PUBLIC COMMENTS IF POSSIBLE ***

Dear Sirs:

As controller for a large public company who is principally responsible for our organizations assessment of internal controls, I read your proposed rules with great interest. Finally I could refer to a set of rules that truly represented the intent of the standard setting body for some guidance. Your rules provide tremendous clarity and also a significant amount of ambiguity. Although at times seemingly very clear, they leave many things open to interpretation.

Our company has an executive steering committee with representatives from our internal audit department, IT department, accounting department, and executive offices charged with overseeing our organizations response to the requirements of Section 404 of the Sarbanes-Oxley Act. Our external auditor is represented on this committee and has played a key role in establishing our agenda based on their interpretations of the pending rules. The committee meets periodically to define the requirements necessary for our company to become compliant.

Our external auditor has provided us with some rudimentary tools to help enable us to document our controls throughout our organization. They have indicated that we need to be able to document these controls to a standard that they would find “acceptable.” They have refused to publicly provide specific controls that they think may be important. They have not allowed us to review their internal documentation (process narratives) related to internal controls from prior audits. However, they have actively sought to participate in “assisting” our team in “assessing” and “documenting” our controls. They have been careful to say they cannot help us “design” controls but have shown us that the SEC’s own rules clearly state that they can and should assist us in “assessing, evaluating, and improving” our internal controls.

Several of our internal team members have expressed dismay at the level and quality of the work being performed by the staff and seniors whom the external auditors have sent to “assist” us. Our staff has noticed that these individuals have very limited business experience, they lack an appreciation of our rather complex information systems environment, and they continually appear to be engaged in an exercise of “cutting and pasting” comments from prior year work papers as they complete templates, forms, and checklists that were all part of their existing audit methodology.

Needless to say our team is frustrated with both the quality and value that our external auditors have brought to the table. The team has brought forth this issue to several members of our executive team – but unfortunately our executives (myself included) are very reluctant to take an approach that is not consistent with our external auditors requirements. We have been reminded, at the executive steering committee meetings, that it is “important” to provide sufficient and extensive documentation in order to meet the requirements (some might say “demands”) of our auditors.

Our organization is spending thousands of hours on this “documentation” initiative. We are going through literally hundreds of different business processes and painstakingly recording control points throughout our system. We are identifying controls that will satisfy the external auditors requirements (many of which they have covertly provided to us in generic templates and other “off the record” discussions).

Recently we completed review of one major business process, or “cycle”, and asked the auditors to review the quality and completeness of this one major cycle. The feedback we received was very favorable. They did suggest that we would have to continue to perform the same evaluation and documentation for several of our other business units and subsidiaries. Overall, they were “pleased” with the level of detail and completeness of our efforts. Remember, they were very involved in helping us define our approach and execute the approach.

We also asked some internal business unit controllers to review the same documentation. We asked them if the information was complete, accurate, and of a nature to sufficiently identify significant control points that might likely prevent our financial reporting from being substantially inaccurate. The internal feedback we received was dramatically different then the feedback we received from our auditors. Our business unit controllers pointed out several flaws in the documentation whereby our internal controls could easily be undermined. They pointed out that several of the “key controls” that our auditors had helped us identify were meaningless. Surprisingly their standards for quality and completeness are much higher then our external auditors.

Having had the opportunity to step back and critically evaluate the work that they feel is “acceptable” I have been troubled by one simple question. Would this evaluation have helped prevent another Enron or HealthSouth? The answer is a simple NO. This troubles me greatly because our company, like many other companies, is going to spend several million dollars complying with these requirements and quite frankly they provide little or no value to our organization. More importantly, these efforts do not address the needs they were intended to assist in addressing.

This has to be one of the single worst regulatory initiatives imposed on business. It does not address the problem it purports to fix. It does not protect investors. If anything it provides them with a false sense of security and misleads them. The fact is much of what we did the auditors should do as part of their normal audit procedures. How an auditor cannot evaluate internal controls, as part of a financial statement auditor is incomprehensible.

It seems to me that the root cause of many of the major corporate failures that led to this legislation is in fact simply an audit failure. Audit firms have not performed appropriate quality audits. Auditors have repeatedly compromised their integrity and independence in pursuit of maintaining a relationship with their clients that enabled them to sell other highly profitable services.

As a result of these transgressions we have witnessed a few firms abuse the process. The auditors became too predictable and too concerned with selling tax shelters and internal audit services and less concerned with the audits. They admittedly used the audit as a loss leader for other service offerings.

Rather then impose strict rules on companies that provide no meaningful or purgative value to investors, I would suggest that you focus on the following critical reforms:

1) Require auditors to provide quality audits. Your inspectors should

closely review their audits and the auditors should be required to implement stringent quality improvements in their audit methods. The problem is not ineffective controls – the problem is ineffective audits.

2) Require audit firms of public companies to divest themselves of their tax, internal audit, and other consulting like services. These services could easily be provided by a separate entity. Audit firms that provide no other service except for audits would likely provide higher quality audits. They would not encounter the obvious independence and conflicts that are customary in today's environment.

3) Consider imposing a much less intrusive requirement on corporate executives relative to internal controls. I would suggest that you work with industry (instead of the public accounting profession) to develop an appropriate standard that would be reasonable to implement and possibly much more meaningful then the current proposed approach.

4) Place less emphasis on the "documentation" requirements and more on the principles of what contributes to a sound internal control environment. Many companies already have a strong internal control function, typically in internal audit. Having the auditors lead this initiative is not a good idea. It places them in the position that they will have to audit their own work (documentation). As we have seen their quality and understanding of internal controls is woefully inadequate.

5) Finally, I would advocate that you consider not requiring the auditors to "attest" to the assessment provided by management. Relieving the auditors of this responsibility and instead focusing on requiring them to conduct quality audits with minimum standards much higher then theer current standards would be more meaningful. You could then possibly establish some minimum expectations for companies relative to point #4 above in terms of internal audit procedures.

Having started my career working for one of the largest public accounting firms still in existence, I am truly disappointed in what I perceive as a total lack of quality and professionalism. Although the firms tout their "focus on quality" this is more political rhetoric then material fact.

We have been subject to unfair and excessive increases in the cost of our audit fees. The fees have more then doubled. In addition to these fee increases the auditors have also imposed additional fees for services that they are now providing relative to assisting us in meeting the 404 requirements. These fees are substantial and as I have expressed above the quality of these services is dubious. We also seem to be threatened by statements such as: "if you don't engage us now, we won't have resources to help you later," "If we are not on your team and no engaged to help you may not pass your audit," and "switching auditors may point to the other firms that you have an internal control weakness," are but a few examples of statements our Audit partner and senior members of his team have made.

These statements and tactics not only frustrate me and our team… they insult our organization. But there is very little we can do. Our auditors have convinced our Board that they are "just helping solve the problem the government created." They continue to blame government and congress for this and at least our team thinks the blame belongs in the public accounting profession.

The salaries and partner distributions that these professionals are drawing make Dick Grasso look like a pauper. Sure they may not be making a $140mm each but they are consistently overpaid relative to the value they bring to our firm. Our average billing rates are approaching $180/hour. This translates into an average cost per full time equivalent (FTE) of over $360,000 annually. This is outrageous! Many of their staff are inexperienced. By comparison our average compensation (fully loaded with benefits) for fulltime employees is only $112,000/employee.

We are being held hostage by our external auditors and there isn't much we can do about it. I have asked for my name and contact information to remain confidential because of the obvious threat to my career and my company if I should publicly proclaim my fears and frustration with this deception of the public investor. These rules do more to undermine investor confidence and corporate performance then they proclaim.

Sincerely,

Re: PCAOB Rulemaking Docket No. 008 – Proposed Auditing Standard

---

Dear Board Members:

I applaud your efforts in preparing PCAOB Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements and the public comments you have solicited. However, the proposed standard gives conflicting directives to the Public Accounting Firms. On the one hand, they are advised to rely on the work performed by others, namely the Internal Audit Department and Management. However, the firms are also instructed to perform extensive walkthroughs on their own to test and evaluate the design of the internal controls giving rise to even a separate opinion on internal controls. This will cost many companies from an internal resource perspective to document the entire internal control environment and from a pure dollars standpoint to pay for the sharp increases in audit fees for the public accounting firms to re-do management's work.

Secondly, I believe we have lost sight of what a system of internal controls is designed to accomplish. If the controls are tested and opined on early in the year, they should not have to be retested at the end of the year unless there has been a material change in the control environment. Our auditors, Ernst & Young, are asking the Internal Audit Department to retest all audits on financial statement accounts completed prior to June as a result of the Proposed Auditing Standard. This is a tremendous duplication of audit work. Again, if the system of internal controls is functioning without material change, then we should be able to rely on the controls at year end. If corporate America can't rely on its system of internal controls for more than six months, then we have much deeper issues to deal with overall.

Sincerely,

[Redacted]

Re: PCAOB rulemaking docket matter no. 008 – proposed auditing standard

The PCAOB should try to meet the worldwide expectations surrounding the SOA Corporate Governance reform and contribute to the closing of an extremely dangerous credibility gap, as it is in the position to do if an innovative and effective standard is eventually issued.

- The proposed standard is very disappointing. It retains much of what was submitted by the *"big four"* and expresses an old fashioned, "pre-CoSO", self-serving, accountant's way of looking at control.
- Moreover, there seems to be a regression –in the position expressed by the external auditors- to an old fashioned way of looking at control; the "*audit paradigm shift*" and "*continuous assurance"* concepts (1), which were presented in 1998 to the world in the Aicpa's study on Assurance, seem to be completely forgotten now. For an audit firm who knows well its client, the logic of *continuous assurance* implies that no additional work of any significance should be required in order to attest to the effectiveness of internal control
- Radical changes are needed because an unreasonable burden is about to be charged over all companies listed in the US, when compared with other countries, where advanced corporate governance arrangements are in place, such as Canada and the UK.
- There is very little understanding of CoSO in the proposed standard and little more than a formal homage is paid to it. The reference to CoSO would allow for a much more intelligent, useful, manageable, less costly and burdensome exercise: a higher level overview, which would focus on the right issues and controls.
- The Coso framework (and suggested approach to assessing and reporting on internal control) should be the reference also because it has been extremely successful:
  - It is reflected in the most authoritative, subsequent frameworks (Rutteman-Turnbull in the UK, Coco in Canada, Basel committee in 1998, and it is, finally, incorporated, in its integrity, in the new ERM-Coso, which was released in draft and it is expected to be finalised in February 2004)
  - It has been translated in several languages (French, Italian, Spanish and Portuguese, to my knowledge) and adopted, as an authoritative reference or even as a standard, in several countries
  - It has been used, since years, by best practice internal audit functions to assess and report on internal control (not only in the US).
- The PCAOB should go way beyond the very narrow horizon, which is mirrored, in the current proposed standard. To this purpose it should:
  - Account for the international dimension of the issue and seek ideas and advice in other countries, such as the UK, where a wider internal control assessment and reporting (covering not only financial reporting but compliance and operational effectiveness as well) is carried-out, since 1998, as prescribed by the Combined Code of LSE and specified by the Turnbull operational guidance. A similar high level guidance should be provided by your standard, in my opinion.
  - Consider carefully, and look for, other (than accountants) parties' points of view on the issue of assessing and reporting on internal control; first and foremost, the PCAOB should listen, very carefully, to what the affected oganizations have to say and try perceive how all this is being received from them. One of the strongest points of CoSO is that it represents a shared vision of internal control, which was developed with the participation of CEO's and management and is aimed at the integration of internal control within operations.
  - Read carefully the "Executive Summary", at least, of the actual CoSO framework document (not only documents, derived therefrom, which express the accountants' interpretation thereof).
  - Consider asking the advice of consultants who have gained a worldwide reputation as "internal control experts", because of their recognized ability to carry-out internal control assessments and to report on them. External auditors have very limited experience on this complex subject.
  - Consult with internal control assessors (2) who do believe that CoSO and other similar frameworks are, in reality, appropriate tools for assessing the effectiveness of the internal control process. Those people have actually used these frameworks and gained experience and knowledge thereof, in the process. They have done so not to comply with any rule but solely in order to assess (as advised to do by the Treadway commission, back in 1987, and by the CoSO report) the internal control of their organizations, to learn whether this process would provide (or deny, when ineffective) the reasonable assurance of achieving the reporting, compliance and operational objectives of their organization.

- The “entity level internal control framework”, represents the very heart of the Internal Control assessment, in accordance with Coso vision. It is the most difficult to assess and where the most significant, dangerous, pervasive and difficult to mend, weaknesses can be found.
- The real risks and the significant control weaknesses emerge when the entity-wide assessment is carried-out. Almost any control weakness at the process/activity level could, in fact, be identified and remedied, when you have a strong internal control framework in place, whereas the strongest activity/process level control would be, easily, voided (circumvented, overridden, by-passed, ridiculed even) within a weak internal control framework. This is fully confirmed by Enron and Worldcom.
- The current focus, within the organizations, is on the documentation of low-level controls for financial reporting. This is absolutely unwarranted on the basis of such consolidated *new* way of looking at internal control; it has nothing to do with the prevention of significant fraud; it has always been considered with sufficient attention within the traditional auditors’ approach to assessing audit risk and there are no additional words which could be spent to deal usefully with this subject. There is no reason to put any additional emphasis on this subject, especially since it is subtracting attention to the really critical subjects which are -—as per CoSO- the control environment.
- There is an almost “grotesque”, disproportion in the proposed standard. A lot of attention and detailed guidance is devoted to the easy and less critical assessment of the activity/process risk-control status. In the meanwhile, the assessors is almost left alone to come up with some sort of assessment -and with the task of putting together the related evidence- when extremely difficult and sensitive issues are raised.
- This seems to reflect distrust in the ability to gather persuasive evidence when dealing with entity level control. The use of an anonymous survey of personnel (3) has become a recognised, effective and rather common way of gathering adequate evidence when dealing with the soft, decisive component of control. This technique is well known to the external auditors who regularly use it when assessing the stakeholders’ relationship and dialogue within corporate social responsibility’s assignments. To prescribe (or, at least, encourage) using this effective, widely tested and relied upon technique would represent a significant innovation and an improvement of the auditors’ ability to assess the soft component of internal control.

An Internal Auditor

RE: PCAOB Rulemaking Docket Matter No. 008

Dear Board Members:

I commend the Public Company Accounting Oversight Board's for the research and effort that has been put into the proposed auditing standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements,* and appreciate the opportunity to comment on the proposed standard. The proposed standard was issued pursuant to Section 404 of the Sarbanes-Oxley Act of 2002 (the "Act").

Our Firm provides representation in securities and corporate governance matters to private and public companies, including "issuers" under the Act. I have had informal discussions regarding the comments below with several issuers, including several large public companies that are not clients of our firm. In addition, I personally am a non-practicing CPA and have experience as an auditor and as a corporate controller, so I have some experience in internal control issues.

(On a personal note, I should mention that I attended Mr. McDonough's presentation last night at the Georgia Society of CPAs dinner; I enjoyed his remarks and appreciated his taking the time to visit us in Atlanta.)

We believe that shareholders are benefited most when there is a proper balance between the benefits of improvements in controls and disclosure on the one hand, and the costs of those improvements on the other. Also, it is important for the process to be efficient and avoid undue duplication of effort. While the PCAOB proposed standard does a good job of giving a framework for internal control, it does not strike the proper balance of costs versus benefits. In addition, we believe that the standard should be more principles-based in giving guidance rather than specific rules. The attached comments are directed toward achieving a better balance.

Sincerely,

ARNALL GOLDEN GREGORY LLP

PCAOB Comments

Questions regarding an integrated audit of the financial statements and internal control over financial reporting:

1. *Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting?*

Response:

No, we don't think this terminology is appropriate for two reasons. First, it is not consistent with the terms used in Section 404 of the Act. Second, the term "audit" has come to have a very specific meaning in the accounting literature as it relates to the audit of financial statements. We think using this term for the review of internal controls will cause confusion, thereto, possibly misleading investors as to the level of assurance that can be given to the attestation of internal controls. A higher level of assurance inherently can be given as to financial statements which speak only as of a past date. Although companies will review the internal controls as of a past date, by the nature of the review you are trying to give assurance regarding a system and its capacity to prevent misstatements in the future. This will always engender a lower level of assurance no matter how much work is put into it.

2. *Should the auditor be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements?*

Response:

Yes. An audit of the financial statements provides unique insight into the internal controls.

3. *Rather than requiring the auditor to also complete an audit of the financial statements, would an appropriate alternative be to require the auditor to perform work with regard to the financial statements comparable to that required to complete the financial statement audit?*

Response:

No. The review should be part of the audit engagement, as specified in the Act.

Questions regarding the costs and benefits of internal control:

4. *Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?*

Response:

In the portions of the standard that address documentation, there should be an acknowledgement that smaller companies may have different levels of controls with many different levels of documentation, and that this is acceptable provided that the auditor can be satisfied that the general controls and closer review by management sufficiently compensate for the lack of other formal controls. This is one of the areas where the costs and benefits should be given special consideration.

Question regarding the audit of internal control over financial reporting:

5. *Should the Board, generally or in this proposed standard, specify the level of competence and training of the audit personnel that is necessary to perform specified auditing procedures effectively? For example, it would be inappropriate for a new, inexperienced auditor to have primary responsibility for conducting interviews of a company's senior management about possible fraud.*

Response:

No, this should be left to the judgment of the auditor.

Questions regarding evaluation of management's assessment:

6. *Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?*

Response:

Yes, the auditor should obtain some level of direct evidence. However, the auditor should be permitted to rely on the work of others to provide a large portion of the evidence.

7. *Is it appropriate that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation?*

Response:

Yes.

8. *Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?*

Response:

It is appropriate to have the auditor evaluate the severity. There will likely be varying degrees of documentation among companies and it would be difficult to draw a simple bright line rule that articulates the appropriate level of documentation in all cases.

Questions regarding obtaining an understanding of internal control over financial reporting:

9. *Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?*

Response:

Walkthroughs are an effective way for the auditor to learn the client's system and evaluate it. However, it is not necessary for the auditor to repeat the walkthrough every year. Once the auditor has performed a walkthrough for a significant process, in subsequent years the auditor should be permitted to rely on a combination of prior years' walkthroughs, inquiry of management that indicates no material change, and the results of testing which are consistent with management representations.

10. *Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors, or others?*

Response:

The auditor needs to perform the initial walk-through himself or herself. However, the auditor should be allowed to use the work of others to assist in the walk-through, e.g., review flow charts prepared by internal audit. Also, as noted in No. 9 above, it may not be necessary for the auditor to perform the walk-through every year. The auditor should be allowed to rely on the work of others to decide it is not necessary to re-perform a walk-through in a subsequent year.

<u>Question regarding testing operating effectiveness</u>:

11. *Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year, or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?*

Response:

The auditor should obtain some evidence each year, but should be able to rely on prior years' work to reduce the amount of testing in the current year.

<u>Questions regarding using the work of management and others</u>:

12. *To what extent should the auditor be permitted or required to use the work of management and others?*

Response:

The auditor should be permitted and <u>encouraged</u> to make careful use of the work of management and internal auditors, to make sure the process is more efficient. The key is for the auditor to make an initial assessment of the objectivity and competence of the personnel performing the work. The auditor then should make selective use of the results of re-testing and the auditor's own testing to validate the conclusions.

13. *Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?*

Response:

The Board should re-craft these categories in the form of guidance for the auditor to consider in deciding the extent to use the work of others, rather than making mandatory categories. This would represent a better principles-based approach, and would lead to a more efficient process.

14. *Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?*

Response:

No. Because of the proposed standard's emphasis on having the independent auditor himself or herself provide the principal source of evidence, the role of the internal auditor will be minimized. The independent auditor should be allowed to place a higher degree of reliance on internal auditor's work than is suggested by the current proposal.

However, we do agree with the general tone of the proposed standard, which suggests that the auditor can place a greater degree of reliance on the work of an objective and competent internal auditor than on other sources.

The IIA standards, while helpful, should not be the exclusive source of guidance. The auditor should be permitted to make his/her own assessment by re-testing the internal auditor's work and reviewing the internal auditor's reports to the audit committee.

15. *Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?*

Response:

There should not be a specified level of work. This will vary from engagement to engagement based on the company's risk profile, and the competence and integrity of the company personnel performing the work for management.

16. *Is the requirement for the auditor to obtain the principle evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?*

Response:

No. See responses to Nos. 12, 13 and 15 above. The auditor should always obtain <u>some</u> independent work, but may in some circumstances use the work of management and internal audit as the majority of its evidence. This determination would turn on two major considerations: (1) an overall risk assessment of the company's control environment, and (2) an assessment of the objectivity and competence of the personnel performing the work.

<u>Questions regarding evaluating results</u>:

17. *Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?*

Response:

The definitions are difficult to apply because of the problems in determining "remote." This definition has been difficult to apply even under SFAS No. 5. In addition, there is no definition of "inconsequential" which becomes an important concept in the proposed standard. Remote and inconsequential create too low of a threshold when combined with the requirement that a single material weakness results in an adverse opinion. This combination will lead to heated debates about the remoteness of the likelihood of errors and will create the temptation to be inconsistent with the definitions of remote and inconsequential. This will make consistency unlikely (or "remote").

18. *Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?*

Response:

The examples are helpful. Please consider adding additional examples in the future.

19. *Is it necessary for the auditor to evaluate the severity of all identified internal control deficiencies?*

Response:

Yes. This is one of the most important steps in this process by the auditor and also the area that requires the greatest level of professional judgment.

20. *Is it appropriate to require the auditor to communicate all internal control deficiencies (not just material weaknesses and significant deficiencies) to management in writing?*

Response:

Yes, all deficiencies should be communicated to management in writing. This serves to better document the work performed and to put management on notice of the deficiencies. Management's response represents an important factor in evaluating the control environment.

21. *Are the matters that the board has classified as strong indicators that a material weakness in internal control exists appropriately classified as such?*

Response:

See comments 22 and 23 below re: audit committees. Otherwise, the matters listed by the board appear appropriate.

22. *Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?*

Response:

The auditor should evaluate the role of the audit committee as part of its overall assessment of the control environment. In most cases, the auditor should not give a pass/fail type grade on the committee. To ask the auditor to do so may do harm to the important relationship between the auditor and the committee. There may be some extreme cases, e.g., a committee that has no meetings at all, where the auditor may conclude that there is a totally ineffective committee.

23. *Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?*

Response:

See response to No. 22 above. The auditor should include the audit committee as part of its overall assessment of the control environment. To require the auditor to make a separate pass/fail assessment of the committee will put too much strain on the relationship. Also, because the committee hires the auditor and serves as the auditor's overseer it will be difficult for the auditor to give an objective and frank assessment on a stand-alone basis.

24. *If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the engagement?*

Response:

Definitely not. The auditor should remain engaged and report its findings. This will better serve the shareholders than forcing the auditor to withdraw. In most cases, an ineffective audit committee would not make it impossible to do an evaluation and a report on internal control, although it would likely lead to some qualification of that report.

<u>Questions regarding forming an opinion and reporting</u>:

25. *Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management?*

Response:

No. The auditor should be <u>permitted</u> to issue an "except for" qualified report in instances where there is an isolated material weakness and there have been no errors or irregularities in the financial statements. However, in most cases the auditor would issue an adverse opinion.

26. *Are there circumstances where a qualified "except for" conclusion would be appropriate?*

Response:

Yes. See No. 25 above.

27. *Do you agree with the position that when the auditor issues a non-standard opinion, such as an adverse opinion, that the auditor's opinion should speak directly to the effectiveness of the internal control over financial reporting rather than to whether management's assessment is fairly stated?*

Response:

Questions regarding auditor independence:

28. *Should the Board provide specific guidance on independence and internal control-related non-audit services in the context of this proposed standard?*

Response:

The Board should give more guidance in this area, and change the tone or the rhetoric to move toward finding acceptable ways for the auditors to help management make the internal control environment more effective and the control assessment process more efficient. Everyone understands that the auditor cannot design the controls that he/she then has to evaluate, but that does not mean that the auditor cannot give guidance and educate management without impairing independence. Give more examples of acceptable ways for auditors to do this.

29. *Are there any specific internal control-related non-audit services the auditor should be prohibited from providing to an audit client?*

Response:

SEC rules already preclude the independent auditor from designing controls or acting as internal auditor. That is sufficient.

Questions regarding auditor's responsibilities with regard to management's certifications:

30. *Are the auditor's differing levels of responsibility as they relate to management's quarterly certifications versus the annual (fourth quarter) certification, appropriate?*

Response:

Yes. The auditor does not have a duty to report at quarter end, nor should one be added. However, the auditor should not continue the engagement if he/she is aware of misleading disclosures about controls.

31. *Is the scope of the auditor's responsibility for quarterly disclosures about the internal control over financial reporting appropriate?*

Response:

Yes.

Dear Ms. Primus:

The Association for Investment Management and Research® (AIMR) is pleased to comment on the Public Company Accounting Oversight Board's (PCAOB) Proposed Auditing Standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements*. With headquarters in Charlottesville, VA, and regional offices in Hong Kong and London, AIMR is a non-profit professional organization of 67,000 financial analysts, portfolio managers, and other investment professionals in 115 countries of which 55,800 are holders of the Chartered Financial Analyst® (CFA®) designation. AIMR's membership also includes 127 affiliated societies and chapters in 46 countries. AIMR is internationally renowned for its rigorous CFA curriculum and examination program. More than 102,000 candidates worldwide enrolled for the June 2003 CFA Examination.

General Comments

We commend the efforts of the Public Company Accounting Oversight Board (PCAOB) to strengthen the financial reporting system for companies that are publicly traded in the United States, increase the reliability and validity of financial reports, and provide greater oversight and transparency of both the attest function and the evaluation of systems of internal controls. Reliable financial information is the life blood of the financial markets. Participants in these markets must have complete, reliable, and transparent information in order to make appropriate financial decisions, including valuation and investment decisions, and to properly allocate capital.

In recent years, when it became apparent to investors and other users of financial statements that they might no longer be able to rely upon the reliability of companies' financial disclosures, their trust and confidence in the markets collapsed. The loss of investor confidence has harmed everyone who participates in the financial markets, including the issuers of securities themselves. Consequently, we support strongly the PCAOB's initiatives which we believe will contribute in a fundamental way to restoring the essential trust and confidence of investors and other users of financial statements.

In particular, we support the Board's proposal to:

1. Require auditors to evaluate management's process for determining whether its standards are effective; and

2. Require auditors to gather evidence through testing to determine whether the

    a. Controls are effective, and

    b. Management's assertion to that effect is fairly stated.

The critical core of any audit of financial statements is the evaluation of the effectiveness of the company's system of internal controls. If material failures occur in the internal control systems, as we have seen in a number of the recent corporate collapses, then the reporting system cannot be relied upon to produce reliable financial statements. It is not sufficient that auditors merely review internal control system documentation and management's assertions as to the effectiveness of the system. Attestation as to the effectiveness of the system requires direct tests to evaluate the:

- Control environment;

- Control and other business and operational risks;

- Control activities;

- Information and communication system; and

- Monitoring of the control and reporting systems.

Auditors must test each of the critical components of internal control systems, and provide sufficient independent and competent evidence to be able to provide an opinion that can be relied upon by investors and other users of the statements. In the absence of such tests and evidence, there is no basis for reliance on the system, or for auditors to formulate an opinion on the financial statements, or for users (whether they are internal or external to the company) to rely on system outputs. Consequently, the risk premium that investors and other providers of capital will demand if they are to provide their capital to issuers of such financial statements will place a great burden on the operations of companies. We believe that failure to ensure the reliability of these systems will ultimately be more costly for everyone.

We realize and expect that the costs of audits will likely increase with the increased audit activities and that these costs will ultimately be borne by shareholders. We would observe, however, as been widely reported, that the average cost of audits has been artificially low in the past because of the effective subsidization of audit fees by revenues generated from additional services auditors provided to their audit clients. Indeed, one of the chief objections raised by the audit profession to the prohibition under the Sarbanes-Oxley Act of 2002 of auditors' providing non-audit consulting services to their audit clients was that without those services, the audit firms would have to increase their audit fees significantly. Shareholders were already bearing the costs of *both* the audits and the additional consulting services.

There is a clear economic tradeoff between the cost of audits and the cost of capital. That is, if, in order to reduce or contain audit costs, the scope of audit activities is restricted, then the resulting decrease in the confidence that users have in audited financial reports will be reflected directly in higher costs of capital demanded by investors. Moreover, because of the greater uncertainty resulting from reduced reliability, we believe the increased risk premium is likely to be greater than the cost savings realized by the reduced audit activities. Such a circumstance would ill-serve issuers and their existing shareholders as well as other investors.

We also concur with the Board's proposal that auditors should identify circumstances that constitute a significant deficiency and which are a strong indicator of material weakness. In particular, the proposal states that the auditor should evaluate the effectiveness of the audit committee's oversight of the company's internal control and external financial reporting systems. A cornerstone of effective as well as efficient internal control systems is a strong and continuous internal monitoring and audit function.

The Sarbanes-Oxley Act mandated that US registrants must have an effective and independent audit subcommittee within their boards of directors. This committee would serve as the apex of the internal audit and financial reporting functions. However, it is not sufficient that such a committee be formed. Rather, in order to fulfill the intent of the Sarbanes-Oxley legislation, the effectiveness with which the committee performs its fiduciary responsibilities to oversee the internal control system and financial reporting process must be assessed as well. Again, in a number of the recent corporate collapses, it was clear that the directors failed in their responsibility to monitor and evaluate such systems, and, in some cases, had even acquiesced in management’s overriding of the control systems.

Consequently, we concur with the provision to expand the auditor's current responsibilities to evaluate the effectiveness of the oversight function, particularly with regard to the audit committee's responsibilities. We do not believe that this will involve a significant increase in the costs of audits because auditors are currently required to communicate with the audit committee and discuss with them both the results of their audits and any concerns or material deficiencies revealed by their tests. Indeed, this increased responsibility could lead to greater cooperation between auditors and the committee. We believe that improving this relationship could make a very constructive contribution to both the auditor's work and the audit committee's efforts and effectiveness.

Concluding Remarks

In conclusion we support the Board's efforts to improve the quality and effectiveness of audits of companies that are publicly traded in the United States and believe these proposals will lead to greater reliability and transparency of the financial reports that are essential to investors and other participants in the financial markets. We strongly encourage the Board to continue with such improvements.

AIMR appreciates the opportunity to express its views on the Proposed Auditing Standard, *An Audit of Internal Control over Financial Reporting Performed in Conjunction with an Audit of Financial Statements*. If the Board or staff have questions or seek amplification of our views, please contact Rebecca McEnally at 1-434-951-5319 or at rebecca.mcenally@aimr.org. We would be pleased to answer any questions or provide additional information you might request.

Respectfully yours,

Attention: Office of the Secretary

Re: PCAOB Release No. 2003-17; Rulemaking Docket Matter No. 008 Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements

Ladies and Gentlemen:

This letter is submitted on behalf of the Financial Reporting Committee of The Association of the Bar of the City of New York (the "Committee") in response to Release No. 2003-17, October 7, 2003 (the "Release"), in which the Public Company Accounting Oversight Board (the "PCAOB") announced a proposed auditing standard for Internal Control Over Financial Reporting (the "proposed standard" or "proposal"). Our Committee is composed of lawyers with diverse perspectives on securities issues, including members of law firms, counsel to major corporations, investment banks, and institutional investors.

Introduction

The Committee supports the PCAOB's objective of creating an integrated standard for the purpose of performing an audit of internal control over financial reporting in conjunction with an audit of the financial statements. The recommendations that follow are offered with the intention of revising definitions which could lead to unintended outcomes with costs to companies and shareholders that far exceed the benefits to investors and to make suggestions that further support the goal of an efficient, effective, and integrated audit through principles-based rulemaking as opposed to overly rigid, technical rules. While our responses refer to specific question numbers, we have organized our responses not by the sequential numbering of the PCAOB's questions, but rather by the importance we believe each topic deserves.

1. Overview.

We request that the PCAOB consider four main themes:

- Certain of the key definitions have thresholds that are too low.
- Certain of the rules, particularly those related to the identification of fraud, should be more principles-based and less rigid to allow external auditors to assess the facts and circumstances of each individual situation and to exercise their professional judgment in light of these facts and circumstances.
- Certain of the required activities of auditors are inappropriate, beyond their expertise and impose inherent conflicts of interest that will impede the relationship between the audit committee and the auditor and undermine the enhanced authority of the audit committee granted by Sarbanes-Oxley.
- Auditors should be given greater ability to rely on internal audits where, in their professional judgment, such reliance is appropriate.

A. Certain Definitions Should Have Higher Thresholds.

Although the PCAOB may not be able to perform a cost impact analysis as to the new requirements to be implemented in the proposed standard, we believe the PCAOB should consider the impact of definitions that we believe include excessively low thresholds by which to measure deficiencies. A complete discussion of our proposed revisions to the thresholds definitions is included below. We request that the PCAOB keep in mind while reviewing our comments that the proposed requirements will be broadly applied and will not be limited to issuers and auditors with unlimited resources.

B. Rules, Particularly Those Related to the Identification of Fraud, Should Be Less Prescriptive and Rigid and More Principles-Based to Allow External Auditors to Exercise Professional Judgment.

We believe the general preference of the Securities and Exchange Commission ("SEC") for principles-based accounting over rules-based accounting should extend to some of the new PCAOB proposals identified below. In our opinion, certain proposed standards are too prescriptive and rigid and we respectfully suggest that those technical, rigid rules be replaced with more principles-based rules under which certain facts and circumstances would be identified as factors to be considered by the external auditor rather than as items mandating certain findings. The proposal states repeatedly that external auditors must be able to exercise judgment so that their procedures adapt to the size and complexity of each public company. We respectfully submit, however, that the proposal in certain areas does not adequately allow exercise of that professional judgment because in many instances the rules are too mechanical in that they mandate certain findings and are more "check-the-box" in approach rather than allowing the external auditor to give appropriate consideration and weight to the items specified in the proposed rules.

For example, the proposal specifies a rigid list of circumstances in which an external auditor must find at least a significant deficiency and provides that an auditor should consider those circumstances as a strong indicator of a material weakness. We believe such a rigid list would detract from the ability of external auditors to exercise their professional judgment in a meaningful manner.

We believe mandating annual walkthroughs of **all** of the company's significant processes for **all** types of transactions and events, both recurring and unusual, is excessively prescriptive. Also, the extent to which external auditors must review management's documentation should be determined in part by the external auditors using the PCAOB's principles on how to make that determination, not by rigid rules that dictate the degree of review required.

The SEC Fortune 500 review resulted in a substantial number of financial restatements by corporations to reflect the current SEC policy on identification and aggregation of segments. Applying the proposal, the external auditor may be required to automatically label a company as having a significant deficiency or material weakness in financial reporting even though the segment reporting was not intentionally misleading or fraudulent, but instead improperly aggregated in light of guidance released after the publication of the financial statements in question. We believe such a result would be inappropriate and perhaps even unfair. External auditors should be guided by the principle that the factors surrounding the need for a restatement should be considered in determining whether a significant deficiency or material weakness exists. There should not be an arbitrary rule that all restatements must fall into one of those categories without having the external auditors exercise their professional judgment in considering the circumstances surrounding the restatement. A restatement reflects an issue in a prior reporting period; it should not automatically result in a significant deficiency or material weakness in subsequent periods.

Similarly, we respectfully submit that the identification of fraud *of any magnitude* as an automatic significant deficiency and a strong indicator of a material weakness is too rigid and arbitrary. The magnitude of the fraud, the length of time over which the fraud was committed and the method of its discovery are all factors that should be considered by external auditors in determining whether a significant deficiency exists. If fraud is detected through existing internal control procedures and it is determined that the fraud in question was isolated, not material to the company and was not committed over a lengthy period of time, that may in fact evidence proper internal controls. As stated in the proposed standard, there are both preventive and detective controls, and the discovery of fraud is an accomplishment of the detective control system. Accordingly, we submit that the external auditors should be able to consider discovery of the fraud by the internal control system as a mitigating factor.

In our opinion, the appropriate principle should be that circumstances surrounding a finding of fraud should be examined by external auditors and they should use their professional judgment about the circumstances surrounding and the seriousness of each fraud. Using that judgment, the external auditors will likely determine that a fraudulent act committed by a senior member of a multinational retail chain's internal accounting staff indicates a greater likelihood of a serious problem than a single double billing fraudulent act related to an airline ticket reimbursement committed by a senior marketing manager. The latter does not indicate a significant deficiency and possibly a material weakness, whereas the former may very well so indicate.

Proposed Rule: Paragraph 126 -- "Each of the following circumstances should be regarded as at least a significant deficiency and is a strong indicator that a material weakness in internal control over financial reporting exists," and continues to list said circumstances.

Suggested Revised Rule: "In each of the following circumstances, *the external auditor should conduct appropriate inquiries and procedures to determine whether a significant deficiency, and possibly a material weakness, exists*."

2. Definitions.

Questions 17-18: Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved? Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?

Considering that the proposal revolves around identifying significant deficiencies and ultimately material weaknesses in the internal control of financial reporting, we feel most strongly about implementing definitions with realistic thresholds that are principles-based and act as proper filters for identifying internal deficiencies.

First, both terms center on the standard of "remote likelihood," and refer to the definition of "remote" in SFAS No. 5. SFAS No. 5 defines "remote" as the "chance of the future event or events occurring is slight." It is our belief that such a threshold is far too low, and not only differs from the "reasonable assurance" standard required by management that was adopted by the SEC in Release No. 33-8238 and reflected under COSO and Codification of Statement on Auditing Standards AU §319.18, but would also make for a condition in which every auditor would be forced to create a laundry list of deficiencies, no matter how small or insignificant.

This lies in stark contrast to the AICPA standard of a "reportable condition," which allows the auditor to use professional judgment in determining whether a significant deficiency exists. Under the current state of the proposal, the PCAOB would essentially be tying the AICPA auditing standards to the lowest threshold of probability for a material misstatement under SFAS No. 5. Creating such a definition for "significant deficiency" would have consequences that lower the bar across all auditing procedures.

The possibility of human error or inadvertent misjudgment at every level of preventive or detective control would make it difficult, and nearly impossible, to categorize even the most stringent internal control system as reducing possibility to "slight." We believe that even in corporations with the most effective internal oversight, the chances of a material misstatement can be reduced only to "probably not," a definition that follows most closely the "reasonably possible" standard of SFAS No. 5, which is defined to mean "the chance that a future event or events occurring is more than remote but less than likely." Even at this level, however, we believe that many of the significant deficiencies identified will not be material, but nevertheless may cause auditors to issue unwarranted adverse opinions or refuse to issue an opinion at all. Investor confidence will not be restored in financial reporting of public companies if well-managed companies with robust internal controls are not able to meet unnecessarily strict and inadequately differentiated standards.

Probable	The future event or events are likely to occur.
Reasonably possible	The chance of the future event or events occurring is more than remote but less than likely.
Remote	The chance of the future event or events occurring is slight.

The term "inconsequential" in the definition of significant deficiency is not defined and confuses the definition of the threshold at which auditors must declare that such a problem exists.

<u>Proposed Rule:</u>

- <u>Paragraph </u>8 -- A *significant deficiency* is an internal control deficiency that adversely affects the company's ability to initiate, record, process, or report external financial data reliably in accordance with generally accepted accounting principles. A significant deficiency could be a single deficiency, or a combination of deficiencies, that results in more than a remote likelihood that a misstatement of the annual or interim financial statements that is more than inconsequential in amount will not be prevented or detected.

- Paragraph 9 -- A *material weakness* is a significant deficiency that, by itself, or in combination with other significant deficiencies, results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected.

Suggested Revised Rule:

- "Significant deficiency" *is a single deficiency, or a combination of deficiencies in the same or closely related reporting area, that results in a reasonable possibility that a misstatement of the annual or interim financial statements* in an amount that is *more than de minimis but less than material will not be prevented or detected*." **OR** the term as currently used by the AICPA.

- "Material weakness" *is a significant deficiency that, by itself, or in combination with other significant deficiencies in the same or a closely related reporting area, results in a reasonable possibility that a material misstatement of the annual or interim financial statements will not be prevented or detected*."

These revised definitions have higher thresholds using terms with which accountants already have experience and extensive accounting literature and guidance. We believe the higher thresholds are more likely to provide practical warning flags rather than extensive laundry lists of false negatives.

3. <u>External Auditors Should Be Able to Use the Work of Others At the External Auditors' Discretion.</u>

Question 12-15: To what extent should the auditor be permitted or required to use the work of management and others? Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined? Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough? Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?

The proposal specifies certain procedures that must be performed by the auditor such as mandatory requirements for the external auditor to retest internal controls over other controls as well as those over fraud. We believe this rule should be rewritten to allow the auditors to exercise discretion on the extent of review required and the frequency with which these reviews must occur (for example, if a review was done in a prior year, we do not believe it necessarily, under all circumstances and for all issuers, needs to be completely redone in subsequent years). We believe the PCAOB should also recognize that unnecessary retesting by auditors can result in interruption of the operations and financial reporting processes of companies.

In being so prescriptive, the PCAOB proposal risks undermining the role of an internal audit entirely, or, in the case of a smaller company, creating a financially unsupportable situation for the simultaneous presence of both internal and external oversight structures. The rules should make clear that the auditors should be free to exercise their reasonable professional judgment on the appropriate reliance level on internal work, including the work of internal auditors.

If the testing of the controls listed in Paragraph 104 of the proposal becomes mandatory for an outside auditor, management's incentives could shift from ensuring that their own internal auditors properly test the design and operation of these controls, at a high cost, to limiting the internal audit function involvement in such testing, thereby encouraging companies to cut costs in areas which will be retested by external auditors rather than paying twice for the same services. This will have the effect of undermining the role of the internal auditors.

We believe the three-tiered categorization of where to retest certain internal controls is too rigid and precludes auditors from exercising professional judgment. Why is it more important for an outside auditor to retest internal controls designed to prevent fraud on nonroutine transaction errors instead of testing those controls over routine transactions? We do not believe in a blanket rule that implies the existence of a hierarchy between transactions within a system of internal controls. The professional judgment of auditors should not be hindered or superceded in this rigid manner.

Proposed Rule:

- Paragraph 104 -- "There are a number of areas in which the auditor should not use the results of testing performed by management and others, including: (list of certain tests)"

- Paragraph 105 -- "The auditor's use of the results of procedures performed by management and others should be limited in the following areas: (list of certain tests)"

- Paragraph 106 -- "The auditor might decide to use the results of tests performed by management and others within the company in other areas, such as controls over routine processing of significant accounts and disclosures, without specific limitations."

Suggested Revised Rule: We respectfully submit that Paragraphs 104-106 be omitted and that the PCAOB rely solely on Paragraph 103 as proposed:

"The auditor should evaluate whether to rely on the work performed by management and others. When evaluating whether to use the results of procedures performed by others, the auditor should evaluate the following factors:

- The materiality or the risk of misstatement of the accounts and disclosures that the controls address.
- The degree of judgment required to evaluate the operating effectiveness of the control.
- The degree the control can be subjected to objective testing vs. a subjective evaluation.
- The pervasiveness of the control.
- The level of judgment or estimation that is required in the account or disclosure."

4. Evaluating Audit Committee Oversight Should be Significantly Reduced and the Proposal Requiring the Auditors to Evaluate Audit Committees Should be Dropped.

Questions 22-23: Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting? Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?

Audit committees retain, supervise, compensate and fire auditors, as directed by Sarbanes-Oxley and the rules of securities exchanges and self-regulatory organizations. We respectfully believe, therefore, that the auditors should not be required to test the "effectiveness" of the audit committee. Effectiveness is not defined - does it mean failure to recognize issues, ability to recognize issues but failure to adequately address them, or something entirely different?

The proposal would require the auditor to evaluate the effectiveness of the audit committee's oversight of external financial reporting and internal control. Included in this evaluation are factors such as independence from management, clarity of the committee's responsibilities, level of involvement and interaction with the auditor and internal audit, including the committee's role in appointment and compensation of the auditor and internal audit, presence of an audit committee financial expert, compliance with applicable listing standards, the amount of time the committee devotes to control issues, and the amount of time committee members are able to devote to committee activities. This would require a much greater degree of involvement by the auditors in the internal operation of the audit committee and require observation of the work of the audit committee and the individual members as well as their interaction with third parties, such as internal audit. This would require skills that are beyond the expertise of auditors (such as knowledge of listing standards and interpretations). It would also interfere with the allocation of responsibility to the audit committee by state corporation law and by Sarbanes-Oxley.

In particular, the proposed standard requires the auditor to determine independence in the selection of candidates for the audit committee. This raises many issues of whether an auditor is qualified and able to make the subjective and perhaps legal determinations required by the proposal. It also presents conflicts since the auditors are to report to and be compensated by the audit committee. Can they be realistically requested to objectively make the enumerated determinations? Or does this present such a fundamental conflict of interest that it should not be required? We believe auditors currently view the audit committee as an important part of the financial integrity of a company and its internal control, but the key consideration for them is whether they have adequate access to and reaction from the audit committee rather than whether the audit committee is acting as a monitor.

Proposed Rule: Paragraph 58 -- "As part of evaluating the independence of committee members, the auditor should evaluate how audit committee members are nominated and selected and whether they act independently from management. Generally, the more independence that is built into the process of nominating members of the audit committee to the board, the more the auditor can be assured of committee independence. For example, are qualified candidates identified by outsiders, such as an outside search firm or a nominating committee composed of outside directors, or does management pick 'friends?' Are board candidates for the audit committee selected based upon desired skill sets?"

Suggested Revised Rule: Delete the requirement.

In addition, auditors should not be in a position of undermining the current requirement that boards determine the qualifications of the audit committee Financial Expert ("ACFE"). Sarbanes-Oxley made this decision the responsibility of the Board of Directors; the PCAOB should not change that responsibility. The standards for determining an ACFE are prescribed by the SEC pursuant to statutory direction, as implemented by the SEC's rule, and the Board's determination of satisfying that standard, which is likely a legal interpretation, should not be challenged by the auditor if the Board has based its decision on the SEC's implementing regulation. Sarbanes-Oxley also made the audit committee financial expert not a requirement, but a disclosure item. The Board of a reporting company could conclude that finding a person meeting the rather restrictive qualifications of the SEC's rule was unnecessary because it has confidence in the expertise of the members of its audit committee. The PCAOB would change this dynamic with its proposal.

5. Qualified Opinions Should be Allowed.

Questions 25-26: Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management? Are there circumstances where a qualified "except for" conclusion would be appropriate?

Under the proposal, if there are one or more material weaknesses, management would be precluded from concluding that internal control over financial reporting is effective. In these circumstances, the auditor is required to express an adverse opinion on the company's internal control over financial reporting in connection with the annual attestation report and would not be permitted to issue a qualified "except for" opinion. For the reasons specified below, we respectfully submit that qualified "except for" opinions might be appropriate under certain circumstances.

We believe that during any given year, a significant number of public companies have outstanding "material weakness" designations, and we believe that it almost invariably takes more than one quarter to rectify them. Because it is in everyone's interest, particularly investors', to have problems identified and remedied, detecting a material weakness should not so significantly penalize a company that no opinion can be issued, resulting in consequences far beyond the magnitude of the material weakness, such as limiting the company's access to the capital markets. This result would have an enormous chilling effect on identifying problems in the first place and on capital markets transactions.

Proposed Rule: Paragraph 162 -- "If there are significant deficiencies that, individually or in combination, result in one or more material weaknesses, management is precluded from concluding that internal control over financial reporting is effective. In these circumstances, the auditor must express an adverse opinion on the company's internal control over financial reporting."

Suggested Revised Rule: Paragraph 162 -- "If there are significant deficiencies that, individually or in combination, result in one or more material weaknesses, management *must consider the extent of one or more material weaknesses in* concluding that internal control over financial reporting is effective, *and must disclose the nature of the material weaknesses and the actions being taken to correct them, in all earnings releases and 1934 Act filings*. In these circumstances, the auditors *should exercise professional judgment in deciding whether the nature of the material weakness requires them to issue* an adverse opinion on the company's internal control over financial reporting."

We respectfully propose that the PCAOB alter the requirement to allow for judgment on the part of auditors in identifying material weaknesses and determining whether the material weaknesses are being corrected as quickly as possible before issuing an adverse opinion.

6. Small and Medium-Sized Issuers

Question 4: Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?

We applaud the PCAOB for not having prescribed a single method for compliance by all types of companies. Particularly, we agree with the PCAOB's view that "the nature and extent of controls that are necessary depend, to a great extent, on the size and complexity of the company." We respectfully urge the PCAOB to extend this acceptance of subjective decision-making by the auditors to the overall proposal as we have outlined in this letter.

7. Effective Date Question and Degree of Quarterly Auditor Involvement

The proposed standard would require the auditor to make inquiries of management on a quarterly basis about significant changes in the design or operation of internal control over financial reporting as it relates to the preparation of annual as well as interim financial information and to assess whether significant changes in internal control over financial reporting may have resulted in significant deficiencies or material weaknesses. Depending upon management's response, the auditor would be required to take additional action, ranging from communicating with the audit committee to reach an appropriate resolution to considering resigning from the engagement. Any communications of significant deficiencies or material weaknesses by the auditor may have an impact on and will need to be considered by management in making its Section 302 certifications and the company's disclosures under Item 308 of Regulation S-K. The effective date of the proposal, however, looks only to the 404 audit. We believe that the effective date of the proposal should be clarified to indicate that the 302 certification process with respect to matters covered in the proposal will not become effective until the respective 404 effective date.

The proposed standard would require an auditor to make certain determinations, "through a combination of observation and inquiry" as to whether significant changes in internal control over financial reporting have occurred during the quarter. We request the PCAOB to clarify that these determinations can be accomplished in connection with the current usual level of quarterly auditor involvement and will not require continuous observation by the auditor during the quarter.

Conclusion

We commend the PCAOB for proposing new standards of audits for internal controls over financial reporting. It is the belief of the Committee that the public would be well served if the PCAOB gave additional consideration to specific elements of the proposed rule, as set forth in this letter.

Please note that Committee member Wayne Carlin of the United States Securities and Exchange Commission did not participate in the preparation of this letter or the vote by the Committee to submit this letter to the PCAOB. In addition, this letter does not necessarily reflect the individual views of members of the Committee.

Members of the Committee would be pleased to answer any questions you might have regarding our comments, and to meet with the Staff if that would assist the PCAOB's efforts.

Respectfully Submitted,

Consultation Response

PROPOSED AUDITING STANDARD

AN AUDIT OF INTERNAL CONTROL OVER FINANCIAL REPORTING PERFORMED IN CONJUNCTION WITH AN AUDIT OF FINANCIAL STATEMENTS

PCAOB Rulemaking Docket Matter No. 008

Comments from ACCA

November 2003

ACCA is the largest and fastest-growing international accountancy body. Over 300,000 students and members in 160 countries are served by more than 70 staffed offices and other centres.

ACCA's mission is to work in the public interest to provide quality professional opportunities to people of ability and application, to promote the highest ethical and governance standards and to be a leader in the development of the accountancy profession.

Further information on ACCA is available on ACCA's website, www.accaglobal.com

General Comments

ACCA is please to provide comments on PCAOB Rulemaking Docket Matter No. 008 – Proposed Auditing Standard – *An Audit of Internal Control over Financial Reporting Performed in Conjunction with an Audit of Financial Statements* (the Proposed Standard).

PCAOB is currently issuing new standards while having established Interim Professional Auditing Standards in respect of auditing, attestation, quality control, ethics, and independence. These Interim Professional Auditing Standards are essentially those that were established by the American Institute of Certified Public Accountants (AICPA). ACCA considers that, to further its objectives over the longer term, it is vital that PCAOB develops new standards that promote consistent, high quality auditing around the world. To achieve this, we strongly encourage PCAOB to ensure that, wherever possible, it develops standards that are consistent with those of the International Auditing and Assurance Standards Board of the International Federation of Accountants. Global harmonisation of auditing standards of the highest quality is essential to the integrity and efficiency of capital markets and we encourage PCAOB to work closely with IAASB to achieve that end.

Our primary concern with the Proposed Standard is that its emphasis on requiring auditors to obtain direct evidence of the effectiveness of internal control, taken together with the extent of detailed requirements and guidance, may cause auditors to adopt a 'bottom up' rather than a 'top down' approach to their work. The 'bottom up' approach is neither effective nor efficient.

Corporate failures, such as Enron and WorldCom can be attributed to weaknesses in the control environment. The risk is that a 'bottom up' approach may mean that auditors pay insufficient attention to the control environment, which COSO rightly recognises as *'the foundation for all other components of internal control'.*

Companies already face cost increases relating to their own compliance with the Act. There is a risk that they will also experience both direct and indirect costs of auditor inefficiency that are greatly disproportionate to the benefit to their investors.

ACCA has a wide experience of auditing in many jurisdictions and we are aware of the fact that many will heed the words in the Proposed Standard that: *'the Board expects that the auditor will exercise reasonable professional judgment in determining the extent of the audit of internal control and perform only those tests that are necessary to ascertain the effectiveness of the company's internal control.'* Nevertheless, we perceive a significant risk that, particularly for larger enterprises, auditors will do too much work. If this happens, there is a risk that PCAOB standards themselves will be devalued. We urge PCAOB to address this perception problem aggressively to ensure that standards are seen as proportionate and cost effective as well as being of the highest quality.

Response to the Questions in the PCAOB's Request for Comments

1 Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting?

No. It would be better to retain the term 'audit' for the financial statement audit and to refer to the attestation as an attestation.

2 Should the auditor be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements?

Yes. The Act does not anticipate that these engagements will be separate.

3 Rather than requiring the auditor to also complete an audit of the financial statements, would an appropriate alternative be to require the auditor to perform work with regard to the financial statements comparable to that required to complete the financial statement audit?

We see no value in requiring equivalent work without actually reporting as the financial statement auditor.

4 **Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?**

Yes. Much of the guidance is, however, given in Appendix E rather than in the main body of the Proposed Standard.

5 **Should the Board, generally or in this proposed standard, specify the level of competence and training of the audit personnel that is necessary to perform specified auditing procedures effectively? For example, it would be inappropriate for a new, inexperienced auditor to have primary responsibility for conducting interviews of a company's senior management about possible fraud.**

Yes - generally. This is an area where the PCAOB should consider harmonisation with the IFAC standards on education and quality control.

6 **Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?**

Yes. It is important that the auditor does not simply rely on others throughout. In our general comments we have, however, drawn attention to the risk of auditors doing too much work because they perceive that obtaining direct evidence is emphasised.

7 Is it appropriate that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation?

Yes. Criteria are necessary and the provision of consistent criteria beneficial. We suggest, however, that the criteria in paragraphs 43 to 47 may be perceived as inflexible and that auditors might concentrate too much on documentation.

8 (a) Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? (b) Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?

(a) Yes. This allows for the use of professional judgement.
(b) No.

9 Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?

No. Walkthroughs may be useful in some systems but provide little evidence of effectiveness. The 'controls' identified by walkthroughs are often no more than aspects of the accounting system which provide little mitigation of business risks.

10 Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors, or others?

No. The auditor should use professional judgement to determine the extent to which he or she performs walkthroughs.

11 (a) Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures (b) every year or (c) may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?

(a) Yes. We are concerned however that this will be perceived as requiring all low level controls to be tested.
(b) & (c) Although audit evidence may be obtained from work carried out in previous periods, the migration of that evidence to the current period is a complex matter of audit methodology which is rightly left to the judgement of the auditor.

12 To what extent should the auditor be permitted or required to use the work of management and others?

This should be permitted as a matter for the judgement of the auditor.

13 Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?

No. We suggest that such material would be better presented as guidance and the decisions on reliance on the work of others left to the auditor.

14 Does the proposed standard give appropriate recognition to the work of the internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

Yes. Internal auditors play a vital role in many companies and it is appropriate that the independent auditor has the capacity to rely on their work.

15 (a) Is the flexibility in determining the extent of reperformance of the work of others appropriate, or (b) should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?

(a) Yes.
(b) No. This should be a matter of professional judgement.

16 Is the requirement for the auditor to obtain the principal evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?

No. This should be a matter of professional judgement. A requirement in this regard would add substantially to the perception that the Proposed Standard is not cost effective.

17 Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?

Yes. Auditors need to focus on matters of significance and materiality. The definitions are one area where PCAOB should avoid issuing a Standard that is not easily reconcilable to the output of IAASB.

18 (a) Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? (b) Are there other specific examples that commenters could suggest that would provide further interpretive help?

(a) Yes.
(b) We do not suggest any further examples.

19 Is it necessary for the auditor to evaluate the severity of all identified internal control deficiencies?

Yes. The evaluation need not be extensive except where there is a potentially significant deficiency.

20 Is it appropriate to require the auditor to communicate all internal control deficiencies (not just material weaknesses and significant deficiencies) to management in writing?

Yes. Trivial matters should, however, be excluded from such a requirement.

21 Are the matters that the Board has classified as strong indicators that a material weakness in internal control exists appropriately classified as such?

Yes.

22 Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?

This is a difficult question. Theoretically the auditor's relationship with the audit committee may preclude such an evaluation. Nevertheless, oversight exercised by the audit committee may in itself be important to internal control. On balance we suggest that there be no requirement to evaluate the effectiveness of oversight as a separate matter but that the impact of the work of the audit committee can be a factor that the auditor considers as part of his or her evaluation of the internal control environment at the highest levels.

23 Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?

See our answer above.

24 If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the audit engagement?

See our answer above.

25 Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management?

No. The auditor should use professional judgement to determine whether an adverse conclusion is appropriate (see answer below).

26 Are there circumstances where a qualified "except for" conclusion would be appropriate?

Yes. In some circumstances, such an opinion will provide better information to users and this should, therefore, be a matter of professional judgement.

27 Do you agree with the position that when the auditor issues a non-standard opinion, such as an adverse opinion, that the auditor's opinion should speak directly to the effectiveness of internal control over financial reporting rather than to whether management's assessment is fairly stated?

No. The Act is concerned with management's assessment. PCAOB should consider research of user understanding before moving towards a direct report.

28 Should the Board provide specific guidance on independence and internal control-related non-audit services in the context of this proposed standard?

No. Independence should be addressed in other pronouncements.

29 Are there any specific internal control-related non-audit services the auditor should be prohibited from providing to an audit client?

It would be appropriate to refer to the SEC independence rules.

30 Are the auditor's differing levels of responsibility as they relate to management's quarterly certifications versus the annual (fourth quarter) certification, appropriate?

Yes. In the case where a rule requires quarterly certifications of a different nature to annual certifications it is appropriate for the responsibility of the auditor also to differ.

31 Is the scope of the auditor's responsibility for quarterly disclosures about the internal control over financial reporting appropriate?

Yes. Given the limited nature of quarterly certification we do not believe that more should be required.

Re: PCAOB Rulemaking Docket Matter No. 008

Ladies and Gentlemen:

The financial management of AT&T Corp. ("AT&T") would like to thank the Board for the opportunity to comment on your proposed auditing standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements* ("the proposed standard"). AT&T would like to commend the Public Company Accounting Oversight Board (the "Board") for their work in preparing this proposed standard. AT&T supports the requirement for management to take responsibility for creating and maintaining an effective control environment. We believe this is an important cornerstone for reliable financial reporting.

For the most part, we believe that the proposed standard represents a good approach to achieving the objectives of Section 404 of the Sarbanes-Oxley Act of 2002. However, AT&T does see a few areas where some cost/benefit improvements can be made. Specifically, we believe that the external auditors should have the ability to rely more heavily on the work of independent, internal audit departments that they have assessed to have the skills necessary to properly evaluate internal controls. This is especially true in the information technology controls area. We also believe that after the base year audit, where the external auditor has done all the required independent testing of management's internal control assertions, that some sort of rotational, independent work could be done with more reliance placed on management's work. However, if paragraph 101 of the proposed standard provides for this flexibility then the only comment we have relates to the ability of the external auditor to rely more heavily on the work of the internal auditors.

Using the Work of Management and Others

In general, AT&T agrees with the three categories that the Board has included in the proposed standard, however we believe that types of controls included in the section where the external auditor cannot place any reliance on competent, independent internal audit testing could be overly restrictive. Specifically, we believe that the Board has placed little value on the documentation and testing performed by internal audit for internal controls that have a pervasive effect on the financial statements, in particular general information technology controls. The proposed standard requires that the external auditor complete its own series of tests for which similar, if not identical testing plans and results are available from internal audit. At many companies these control activities are mature and the external auditor can re-perform testing of general information technology controls. AT&T recommends that the external auditor be permitted to apply judgment in this area and be able to utilize some of internal audit's work related to general information technology controls if the auditor assesses the internal audit function as competent and objective and the controls as mature.

If the proposed standard is adopted in its current form, the testing of general information technology controls will result in duplicative activities between internal audit and the external audit. As a result, the costs associated with these activities would appear to mitigate the benefits gained in this specific area.

Testing Operating Effectiveness

We believe, the proposed standard requires the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year. While AT&T agrees with this requirement during the initial year of implementation, the proposed standard may not adequately recognize the cumulative knowledge the external auditor gains from their results of their own testing of management's internal controls and the review of management's and internal audit's testing of those internal controls. Additionally, in instances where there are little to no changes to the internal controls the auditor should be able to utilize their judgment in determining the appropriate level of testing year to year. However, if paragraph 101 of the proposed standard does provide the external auditor the flexibility to recognize the cumulative knowledge gained from the results of previous audit work, then we are comfortable with this aspect of the proposed standard and the following comments are not necessary.

We believe that the proposed standard maybe overly prescriptive, requiring external auditors to perform the same level of testing year over year regardless of the results of the previous year control environment testing and cumulative knowledge obtained. Specifically, as it relates to rotating tests of controls for significant accounts and disclosures, we believe the proposed standard does not allow the auditor to exercise judgment regarding the level of testing from year to year on processes that have little to no change.

AT&T recommends that the external auditor be permitted to exercise judgment as to the extent of testing of controls related to significant accounts and disclosures based on their cumulative knowledge and testing results after the initial year of implementation. In order to provide a better basis for the external auditor to rely on testing by management, perhaps the Board should consider proposing broad guidelines related to the frequency of testing internal controls by management when the external auditor would apply a rotation testing approach. Additionally, it would be helpful if these broad guidelines would include the extent of management testing required that would enable the external auditor to rotate tests of internal controls regardless of whether those internal controls changed from year to year.

We appreciate the Board's consideration of our point of view and comments and we would welcome the opportunity to discuss any of these issues at your convenience. If you have any questions regarding this letter, please feel free to contact me at (908) 234-4250.

Sincerely,

N.S. Cyprus

Public Company Accounting Oversight Board
Office of the Secretary
1666 K Street, NW
Washington, DC 20006-2803

Re: PCAOB Rulemaking Docket Matter No. 008;
Proposed Auditing Standard – An Audit of Internal Control over Financial Reporting
Performed in Conjunction with an Audit of Financial Statements

Thank you for the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) proposed auditing standard relating to audits of internal control over financial reporting (the Proposal). Included herein are responses to the specific questions. However, we have also included several general comments that we believe warrant the Board's attention.

Section 404 of Sarbanes-Oxley (the Act) specifically requires the independent accountant to attest and report on management's evaluation of internal control and procedures for financial reporting. Financial institutions with assets greater than $500 million are already required to obtain an independent auditor attestation on management's assessment of internal controls over financial reporting. The commentary accompanying your Proposal notes that "the Federal Bank regulator representative present at the Board's Roundtable indicated that experience with the Federal Deposit Insurance Corporation Improvement Act of 1991, which requires internal control reporting similar to Section 404 of the Act, revealed instances where the auditor used the work of internal auditors to an inappropriately high degree, where the auditor himself or herself did not perform sufficient work to provide a reasonable basis of his or her opinion". We believe this statement to be reflective of the execution or competence of specific individuals and not necessarily an indictment of existing attestation standards or existing management processes in place at all financial institutions.

We are particularly concerned that financial institutions, which have developed comprehensive processes to evaluate internal controls over financial reporting will be subject to significant additional expense without corresponding benefit.

We believe that the Proposal goes far beyond the requirements of the law by requiring an audit of internal control over financial reporting, rather that an attestation regarding management's assessment of those controls. In that regard, given the breadth and complexity of the work required to perform an audit of internal controls in conjunction with the considerable differences in the manner in which internal controls are established and implemented at various organizations. We believe that independent accountants be afforded considerable flexibility in using their professional judgment to determine both the scope of their work and the extent to which they can rely on the work of others. We believe this to be particularly appropriate given the fact the independent accountant will also be required to issue an opinion on the financial statements.

We believe the Board should follow the approach set forth in statement of Auditing Standard No. 65, which allows the auditor to assess the competency and objectivity of the internal audit function and make judgments about the extent to which the work of internal audit can be ruled upon.

We also believe that the Proposal has an inherent conflict with one of the basic premises of the Act, which is to ensure auditor independence. The Act specifically prohibits the independent accountant from a range of non-audit services including internal audit co-sourcing. However, the Proposal as currently crafted has the potential to significantly increase work required by the independent accountant that could be defined as internal audit in nature. Given the significant variance in the cost structures of an independent accounting firm and an internal audit division, the Proposal could result in significant cost increases with far less actual internal control coverage.

The Act requires that audit committees be directly responsible for the appointment, compensation, and oversight of the independent accountant. Additionally, New York Stock Exchange (NYSE) Rules require audit committees to perform specific functions concerning supervision of the independent accountant's work. The Proposal requires that the independent accountant is to perform an assessment of the effectiveness of the audit committee. Accordingly, we believe the Proposal creates an inherent conflict of interest and potentially violates established independence rules. We believe that corporate governance rules established by the NYSE provide adequate requirements for review of the audit committee performance.

We recognize that the Board faces a significant and difficult challenge in developing a standard that effectively addresses concerns surrounding the reliability of financial information without creating unworkable or impractical implementation problems. We believe your consideration of our comments, in conjunction with leveraging existing standards already in place at financial institutions, would provide a standard that fulfills the requirements and intentions of the Act as well as provide flexibility to covered companies.

Selected Questions
(Numbers refer to question numbers in the Proposed Standard.)

1. No, The Act requires the PCAOB to establish standards governing the independent accountants attestation on management's assessment of the effectiveness of internal control over financial reporting. We believe the intent of the Act is to ensure that management understands its responsibility for the internal control environment and establishes sufficient processes to determine that the internal control environment is operating effectively. Correspondingly, we believe the scope of independent accountant attestation should be to determine that management has established appropriate processes and evaluation techniques. In our opinion, requiring an audit of internal control over financial reporting goes well beyond the requirements of the Act and has the potential to put the independent accountant in the roll of management as primarily responsible for the adequacy of internal controls.

2. Yes. We believe the Proposal has basically redefined what constitutes the procedures necessary to provide an opinion on the financial statements by stating that the auditor cannot audit internal control over financial reporting without also auditing the financial statements.

3. Yes. However, in reality it's still not practical to have a separate firm report on internal controls. The work they do would be duplicative.

4. Yes. Appendix E gives appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized organizations.

5. No. The Board should not establish further rules governing audit personnel's academic background or experience in auditing financial statements. There are sufficient rules governing competency of staff in the professional standards. These standards merely need to be enforced.

6. Yes. It's obvious that the auditor would need to evaluate management's assessment, and to do so they must have considerable understanding of the control environment. This was the case prior to the proposed standard and is even more apparent now. However, we believe that the auditor should be afforded considerable judgment in determining the reliance that can be placed on the work of others.

7. Yes. The criteria should provide consistency between how management documents and the documentation auditors expect to review.

8. No. Inadequate or lack of documentation should not be considered an internal control deficiency. The key is whether the controls are functioning and effective. The auditor should evaluate whether the controls are adequate. In order to do this evaluation they may need to prepare their own documentation or utilize documentation by management. There are situations in which simple processes could be determined to be well controlled without documentation.

9. Yes. Walkthroughs allow the auditor to observe the process, and confirm their understanding.

10. No. The auditor should be allowed to use walkthrough procedures performed by internal auditors. External auditors should be able, in most cases, to test and rely on the work of internal audit just as they do in the audit of financial statements.

11. No. A control should be tested initially and then only changes to the control should be required to be tested in subsequent periods. It would be inefficient to test the same control each year. A rotational testing, combined with benchmarking, should be sufficient to conclude on management's assertions.

12. External auditors should be able, in most cases, to rely on the work of internal audit. External auditors should be permitted to rely on the judgment of internal audit for testing of processes after performing an evaluation and testing of internal audit work in accordance with existing guidelines. The Proposal states that many functions must be performed and tested by the external audit firm. Many of these functions would require duplicative work by the external auditor that is excessive and unnecessary.

13. No. The audit should be risk based and not static based on three categories of controls. As stated in the response to question

Number 12, external auditors should be permitted to evaluate and rely on the work of internal audit.

14. No. As written, the Proposal may cause a reduction in the coverage by internal audit. If certain procedures are required to be performed by external auditor, management may reduce internal audit coverage in an effort to avoid duplication. Given existing cost structures as well as the specific expertise and institutional knowledge that qualified internal auditors provide, this could result in less audit coverage at a significantly increased cost

15. No. The Proposal does not give enough flexibility. The flexibility in determining the extent of reproducing the work of others should not be based on the three categories of control but be risk based with the use of sampling. Existing professional standards provide sufficient guidance on evaluating and relying on internal audit.

16. No. The Proposal is unclear and limits overall judgment. The Proposal sets requirements that are too prescriptive and limits management and internal audits judgment. Management establishes all major processes. Companies document the flow of processes. Significant work, concern, and time go into the development and documentation of processes. External auditors should be permitted to establish a basis and rely on the judgment of management and internal audit for establishment of processes and internal testing thereof.

17. No. Proposal uses the term “significant” to narrowly. The Proposal refers to “significant” as “more than remote” or “likelihood of occurrence” to refer to areas of deficiencies. This level is too low of threshold for the use of “significant” and seems to be at a lower level than current auditing standards.

18. Yes. The examples in Appendix D are helpful.

19. Yes. The auditor would need to evaluate the severity of all identified internal control deficiencies to determine if they are significant deficiencies, a material weakness or just a deficiency.

20. No. Clearly material weakness and significant deficiencies should be reported to management in writing. However, for lesser weaknesses, we believe the method of reporting should be left to the professional judgment of the auditor.

21. Yes. The matters are appropriately classified.

22. No. FFIEC and Stock Exchange rules provide for audit committee review. The FFIEC established expectations for effective audit committees. Further, the NYSE and NASDAQ established new corporate governance rules that include criteria for effective audit committees. The COSO framework also provides for assessment of internal controls and the "tone at the top".

23. No. Proposal violates the SEC auditor independence rules. The Proposal requires that the public accounting firm is to perform an assessment of the effectiveness of the audit committee. The Sarbanes-Oxley Act requires that public accounting firms report to the audit committee. Separately, the public accounting firm is hired/chosen by the audit committee and the company pays the accounting firm. External accounting firms would not be in the position to be adequately independent to opine on the effectiveness of the audit committee.

24. No. The auditor should be required to issue an adverse report, if they conclude that there is ineffective audit committee oversight.

25. No. A single material weakness is rarely the cause, but rather the combination of several material weaknesses. Flexibility should be given as to the nature of the weakness and as to whether other mitigating controls exist.

26. No. Per the Proposal, either a material weakness exists or it does not.

27. No. An audit opinion shall not be required, only attestation to managements assertion of whether internal controls are effective. Sarbanes-Oxley directs the PCAOB to establish standards governing the independent auditor's attestation and reporting on management's assessment of the effectiveness of internal control over financial reporting.

28. No. The independence rules should establish the nature of non-audit services that can be provided.

29. Yes. Consulting services as it relates to internal controls and internal audit services.

30. Yes. Requiring the auditor to provide an attestation on management's assessment of internal controls over financial

reporting is sufficient. Additionally, we believe the quarterly requirements (excluding the fourth quarter) are appropriate.

31. No. We do not believe that requiring a different level of responsibility, as it relates to changes in internal control made in the fourth quarter, is appropriate. If management identifies and corrects a material weakness, and it is reported to the audit committee with no subsequent year-end financial statement impact, we do not believe disclosure in the annual report is necessary.

Thank you for the opportunity to comment.

Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements

Ladies and Gentlemen:

Bank One Corporation ("Bank One") is pleased to have the opportunity to comment on the above referenced Proposed Auditing Standard ("Proposed Standard"). Bank One is the nation's sixth-largest bank holding company, with assets of more than $299 billion.

Bank One supports the general theme of the Proposed Standard, which requires the external auditor to take additional responsibility in evaluating the effectiveness of internal control over financial reporting. However, Bank One has two primary comments regarding specific tenets of the Proposed Standard and three additional comments where we believe the proposed guidance is either unnecessarily rigid or requires additional clarification and enhancement.

Primary Comments
In general, we believe the Proposed Standard unduly limits the reliance that can be placed upon the work performed by internal audit by not recognizing the independence of internal audit from management. It also does not permit the external auditor to exercise sufficient professional judgment and discretion when performing an audit of internal control over financial reporting. In addition, the Proposed Standard prescribes too low of a threshold to be workable when evaluating a significant deficiency or material weakness.

(1) The Proposed Standard should permit more reliance to be placed on Internal Audit and allow the external auditor more discretion when conducting an audit of internal control over financial reporting

Internal audit is chartered with providing an objective viewpoint of an organization and will, in larger organizations, functionally report directly to the audit committee (and only administratively to management). Furthermore, the audit committee must annually approve internal audit's

[1] Paragraph 42 of the Proposed Standard states, "As part of understanding and evaluation of management's process, the auditor should obtain an understanding of the results of procedures performed by others. Others include internal audit and third parties working under the direction of management, including other auditors and accounting professional engaged to perform procedures as a basis for management's assessment."

detailed audit plans, including budgets and staffing, and assess the performance of the internal audit function. This reporting alignment allows internal audit to remain independent from the decisions made by management. In cases where the internal audit department is "competent" and "objective,"[2] and where it reports directly to the audit committee, the external auditor should be allowed to rely more extensively on internal audit's test work. This includes test work performed for routine and non-routine transactions, including the routine portion of the period-end financial reporting process and walkthrough testing of significant processes.

In a financial statement audit, the external auditor is allowed to rely on the work performed by internal audit, provided that the external auditor follows the guidance in SAS No. 65. It seems only reasonable, prudent and effective that the external auditor be allowed to follow the same guidance when performing an audit of the internal control over financial reporting. Following the same guidance, the level and amount of reliance that is placed on the internal audit function would then be left to the external auditor's professional judgment and discretion.

Based on this rationale, discretion should be given to the external auditor when conducting walkthrough tests of a company's significant processes, testing of controls in the control environment, testing of controls in the period-end financial reporting process and testing of controls that may have a pervasive effect on the financial statements. For large financial institutions that are heavily regulated, internal audit may already perform the same procedures that the Proposed Standard mandates to the external auditor. As the Proposed Standard is currently written, the external auditor would be required to duplicate this effort while ignoring the competency and objectivity of internal audit. This duplication of effort will result in an undue burden on management.

We recommend that the Proposed Standard make a clear distinction between management and internal audit. Also, it should make specific reference to SAS No. 65 and allow the external auditor to follow this guidance when performing an audit of internal control over financial reporting. Finally, the Proposed Standard should allow the external auditor discretion to determine whether its direct testing or internal audit's testing will provide the primary evidence for the audit.

(2) The threshold for a "significant deficiency" and "material weakness" is too low and is inconsistent with FDICIA and SEC guidelines

The Proposed Standard requires the external auditor to issue an adverse opinion when a material weakness has been identified. However, we believe the Proposed Standard sets the threshold for evaluating what constitutes both a significant deficiency and material weakness far too low in relation to existing auditing guidance. In addition, in designing systems of internal control over financial reporting, an organization must balance the cost of the control with the benefit of assurance over accuracy and integrity of financial reporting. To design a system of internal control which adequately captures all events which are more than inconsequential in amount and which may have more than a remote likelihood of occurring may be cost prohibitive, or in some cases, functionally impractical. Furthermore, the Proposed Standard should ensure that the

[2] The terms "competent" and "objective" are used in the same context as the terms are used in SAS No. 65, *"The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements."* It would be expected under an audit of internal control over financial reporting that the external auditor would assess the competency and objectivity of the internal audit department as further described in SAS No. 65, paragraphs .09 - .11.

concepts of "significant deficiency" and "material weakness" are defined consistently with guidelines that are currently being utilized by banking regulators. This will help to ensure consistent application of the Proposed Standard and will help to reduce confusion in the marketplace.

The Proposed Standard introduces the concepts of "more than a remote likelihood" and "more than inconsequential in amount" when evaluating internal control deficiencies, creating a significantly broader and lower threshold for what constitutes a significant deficiency and material weakness than currently exists. By definition, misstatements assessed as having more than a remote likelihood of occurrence and being more than inconsequential in amount could be interpreted as inclusive of any deficiency identified during the audit of internal control over financial reporting. This essentially characterizes any internal control deficiency as a significant deficiency or material weakness. This could result in the external auditor improperly classifying any deficiency as significant or material when such deficiency may actually have a minimal impact on the financial statements. Furthermore, we believe that the definition of a significant deficiency and material weakness in the Proposed Standard is inconsistent with the concept of "materiality" as described in Staff Accounting Bulletin (SAB) No. 99, *"Assessing Materiality."* These terms should be consistent if an auditor is to report on both the financial statements and on internal control over financial reporting.

Assuming that it is not the Board's intention to require *all* identified deficiencies to be classified as either significant deficiencies or material weaknesses, we recommend that the Proposed Standard clarify that the threshold for both a significant deficiency and material weakness is a level where the risk of misstatement is "at least reasonably likely" and "material." This would provide consistency with the "reasonable assurance" and "reasonable likelihood" terminology utilized in Paragraph 183 of the Proposed Standard and similar terminology used in SAB No. 99.

The definitions of material weakness and reportable conditions, as defined in SAS No. 60, are widely accepted and used in current practice to make assessments on internal control over financial reporting under the FDICIA Act of 1991. The Proposed Standard creates the possibility of inconsistency in reporting on internal controls as financial institutions are subject to both FDICIA regulations and Section 404 of the Sarbanes-Oxley Act of 2002. Based on current guidance, financial institutions would be required to report reportable conditions and material weaknesses on two different levels of criteria. This could result in conflicting assessments on internal control over financial reporting by management and the external auditors during the same time period. This could cause inconsistency in the reporting on internal control over financial reporting to investors and regulators. We recommend that the Proposed Standard utilize the definitions in SAS No. 60, *"Communication of Internal Control Matters Noted in an Audit,"* SAB No. 99 and FDICIA.

Additional Comments:

(3) The Proposed Standard should not prescribe what circumstances constitute a significant deficiency or material weakness

In paragraph 126, the Proposed Standard lists specific circumstances that should represent, at a minimum, a significant deficiency and could be a strong indication of a material weakness. A material weakness or significant deficiency should be based on facts and circumstances unique to the underlying situation. It should not be prescribed in a list that precludes or inhibits the external auditor's professional judgment and discretion.

While we agree certain circumstances may be more indicative of a significant deficiency or material weakness, each underlying situation should be evaluated according to the facts and circumstances and should be based on the external auditor's judgment and discretion. The Proposed Standard should be amended to provide that the circumstances in Paragraph 126 be characterized as indicators, not requirements.

For instance, when financial statement audits are performed, differences in views between management and the external auditor concerning judgments related to the interpretation and subsequent application of complex accounting standards or judgments in estimates and assumptions may arise. When significant judgment is involved in the interpretation and application of complex accounting standards for which current guidance is vague and subject to interpretation[3] or when there is significant judgment pertaining to valuations and estimates, there may be times when the resolution of differing views could result in a proposed audit adjustment even though adequate and effective controls over financial reporting may be in place.

(4) The procedures and scope of work to be performed by external auditors when providing a consent on the report of internal control over financial reporting

In paragraphs 181 and 182, the Proposed Standard requires that the external auditor perform bring-down procedures from the date of his or her report on the internal control over financial reporting to the date of the consent. However, the Proposed Standard is silent on (1) the types of bring-down procedures the external auditor is expected to perform and (2) the level of comfort that the external auditor is expected to provide in a consent. The Proposed Standard would be better served if it provided general guidance on the types of procedures that external auditors are to perform when providing consent to reissue the report on internal control over financial reporting. In addition, the Proposed Standard should clarify that the scope of an external auditor's bring-down procedures would be to identify any adverse changes in internal control over financial reporting during the intervening period that would have had an impact on the external auditor's report.

(5) Scope extension to contingent liabilities

Paragraph 74 of the Proposed Standard requires that the external auditor obtain evidence about the effectiveness of controls for all relevant assertions related to all significant accounts and disclosures in the financial statements. Appendix B, paragraph B19 provides guidance that an auditor should follow in identifying significant accounts related to contingent liabilities.

[3] SFAS No. 133, SFAS No. 140 or FIN No. 46 are just a few complex accounting standards where there is neither accounting consistency across companies nor consistency across external audit firms regarding all interpretations. SFAS No. 133, SFAS No. 140 and FIN No. 46 refer to the following accounting standards: Statement of Financial Accounting Standards (SFAS) No. 133, *"Accounting for Derivatives and Hedging Activities,"* as amended by SFAS No. 138 and SFAS No. 149; SFAS No. 140, *"Accounting for Transfers and Servicing of Assets and Extinguishment of Liabilities – a Replacement of FASB Statement No. 125"*; and FIN No. 46, "*Consolidation of Variable Interest Entities – An Interpretation of ARB No. 51."*

We believe the scope of the Proposed Standard is excessive in requiring the external auditor to assess the potential impact that contingent liabilities may have on the financial statements or disclosures thereto when such contingent liabilities are inconsequential (or not reasonably estimable) and the likelihood of occurrence is less than probable.[4] The example in paragraph B19 would suggest that the external auditor evaluate all contingent liabilities (legal, environmental, etc.) for which there is a remote possibility of occurrence but could have a significant potential impact on the financial statements. While it is necessary to have controls over financial reporting related to the capture of contingent liabilities, the Proposed Standard should limit the scope of the audit work that external auditors need to perform. External auditors should only be required to evaluate the internal controls related to identifying, processing and disclosing material contingent liabilities.

Bank One appreciates the opportunity to comment on the Proposed Standard. If you have any questions on this comment letter or would like any additional information, please do not hesitate to contact either Melissa J. Moore at (312) 336-4060 or Jeffrey T. Rigg at (312) 954-3311.

Very truly yours,

Melissa J. Moore
Controller and
Chief Accounting Officer

Jeffrey T. Rigg
General Auditor

[4] The terms "probable" and "reasonably estimable" are used in the same context as paragraph 3 of SFAS No. 5, *"Accounting for Contingencies."*

RE: PCAOB Rulemaking Docket Matter No. 008

Proposed Auditing Standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements*

Dear Mr. Secretary:

BDO Seidman, LLP respectfully submits the following comments on the Public Company Accounting Oversight Board's ("PCAOB" or "Board") proposed auditing standard ("the proposed standard") governing the independent auditor's attestation and reporting on management's assessment of the effectiveness of internal control over financial reporting referred to in Sections 103(a)(2)(A) and 404(b) of the Sarbanes-Oxley Act of 2002 ("the Act"). BDO Seidman, LLP is pleased to serve on the Task Force of the PCAOB considering implementation issues and the AICPA Task Forces that developed draft standards prior to the effective certification date of the PCAOB, and since that date has been discussing practical implementation issues.

We recognize the importance of establishing and enforcing standards that will restore confidence in our financial reporting environment and are anxious to participate further in the initiatives of the PCAOB and other regulatory bodies to advance the quality of our professional standards. We appreciate the dedicated effort necessary to develop quality standards.

In addition to the direct questions posed by the Exposure Draft, there are several overarching points related to the proposed standard we would like to communicate, as follows:

Lack of Preparer Guidance

We have previously communicated to the PCAOB (Letter dated August 6, 2003 to Douglas R. Carmichael, Chief Auditor) our concern that the preparer community lacks effective guidance relating to the extent of documentation and testing required to meet its responsibilities under Section 404 of the Act and the related SEC rules. In the absence of such guidance, the auditor must apply judgment on a case-by-case basis when assessing the adequacy of the documentation and testing performed by the preparer to support its assertion. We find it unreasonable to require the expression of an audit opinion covering a subject matter that is effectively "undefined."

Preparers are anxiously seeking guidance from their auditors as to their documentation and testing responsibilities under the Act and SEC rules. It is possible that auditors providing this guidance might be misconstrued as providing legal advice, or impairing the independence of the auditor. We understand that the PCAOB may not be able to mandate preparer responsibilities. We do acknowledge the criteria for auditor evaluation of preparer documentation in the proposed standard, which we believe are very helpful. However, we urge the PCAOB to work with the SEC to provide the necessary implementation standards and guidance to the preparer community.

BDO Seidman, LLP

Phone 212-885-8000
Fax 212-885-1299

Lack of Preparer Document Retention Guidance **-** The final standard should be expanded to include guidance relating to the retention of internal controls documentation and testing by the preparer. This is especially important in this standard, as auditors have not previously performed audits of internal controls as now envisioned.

An issue related to both audit documentation and the lack of current preparer guidance, is the lack of any specific documentation retention requirements for preparers. For example, some preparers are currently documenting and testing their internal controls using web-based tools. These systems may be set up so that documentation can be updated on a contemporaneous basis as elements of the systems change. In addition, preparers may use a proprietary software product to document their activities and software-licensing issues could make it difficult for the auditor to obtain or utilize the assessment. We believe that preparers should maintain an archived copy of the controls documentation that relate to each year's management assertion. We also believe that any software, licenses or tools needed for the auditor to review the documentation of the entity should be made available by the entity. In the absence of assurances that such documentation will be retained, the auditor may need to obtain copies of the preparer's documentation to include in the auditor workpapers and retain such documentation as evidence of the documents reviewed. In that regard, we believe it is inappropriate and inefficient for auditors to become the repository of corporate records.

This issue is broader than audits of internal controls, but has arisen as particularly troublesome in this context. Many preparers in our marketplace that have begun their 404 projects related to the internal controls documentation and testing had not initially considered this issue in their plans.

Some may believe that such an archived, indexed record may already be required under regulations requiring the retention of documentation supporting matters contained in SEC filings or under the existing "books and records" provision of the 1934 Exchange Act (13(b)). We do not think these provisions are currently worded broadly enough to clearly require the retention of management's support for its 404 assertion. Nevertheless, we have observed that the need to retain such documentation has not been universally recognized as a requirement by all preparers. Therefore, the final standard should include "the adequate retention of documentation of controls, evaluation of design effectiveness, and testing and monitoring of operating effectiveness" as an expected attribute that could, if absent, be a presumptive indicator of a material weakness.

Overall Efficiency of the Standard

While we believe the auditor's attestation regarding the effectiveness of internal control should contribute to better financial reporting, the underlying standard should recognize that there are a number of elements of existing auditing requirements and recent regulatory actions that already provide a significant measure of cost-effective public protection and risk reduction. Notably:

- The Implementation of Corporate Anti-Fraud Programs (recommended in Statement of Auditing Standards No. 99 "Consideration of Fraud in a Financial Statement Audit " and a component of an effective corporate control environment under the COSO framework)
- The implementation of the required auditing procedures and inquiries outlined in SAS 99, which are being applied for the first time this year.
- Improvements in the investigatory and legal processes wherein corporate executives will be investigated and prosecuted for fraud.
- Improvements in corporate governance to ensure independent and competent directors and effective audit committees

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

- A more effective industry-wide inspection program to ensure firm compliance with the form and substance of the standards, and to ensure the firms' focus on the proper "tone at the top" in their organizations.

In that context, we are concerned that the current proposed standard requires redundant and excessive procedures to be performed by the auditor during an audit of internal controls. While we acknowledge the importance of significant auditor involvement in testing the work of management, in many places the auditor is required to go well beyond the traditional audit concept of testing and examining evidence. For example, the auditor is required in all significant processes to perform all the walkthrough procedures, and to perform all the procedures necessary to assess general controls and the control environment. We believe these requirements will not significantly contribute to more effective internal controls audits, and will unnecessarily raise the related auditing costs. We recommend the final standard better reflect the concept of testing by the auditor. Of course, this is subject to evaluating the objectivity and competence of internal auditors, contracted service providers, management or employees performing the documentation, testing and monitoring required of companies by the Act.

We have provided specific suggestions regarding this matter in our responses to questions 10, 14, 15 and 20.

The Proposed Auditing Standard Does Not Create a Cohesive and Comprehensive Body of Auditing Literature

In addition to addressing the issues related to the reporting and performance of audits of internal controls, the proposed standard modifies existing literature not directly related to the audit of internal controls.

For example, paragraph 138 states that "the auditor should perform substantive procedures for all relevant assertions for all significant accounts and disclosures" (emphasis added). Also, paragraph 141 states that "the auditor's substantive procedures must include reconciling the financial statements to the accounting records." These new audit requirements are not related to the audit of internal controls. While we believe these requirements are appropriate, and believe they are consistent with the "risk assessment" Exposure Draft of the AICPA, we are concerned about their subtle placement in this document.

These issues are neither highlighted in the text nor discussed in the briefing paper. Thus readers might not identify these changes in the literature. Additionally, if the existing AICPA standards adopted by the PCAOB as interim standards are not marked for conforming changes, the body of auditing literature applicable to audits of public companies may become confusing and contradictory. We strongly recommend the PCAOB clearly indicate any and all changes to its adopted interim standards as part of its exposure process.

It is our understanding that the body of AICPA standards applicable to private company audits conducted under AICPA standards will continue to grow and evolve. We assume the interim standards adopted by the PCAOB would not reflect changes in the AICPA standards after their adoption date as interim standards, and therefore that literature would be static for public company audits unless modified by the PCAOB. Therefore, it is likely that the two bodies of standards will diverge over time. Accordingly, to make the auditing literature relating to public companies clear and to maintain quality auditing in public company audits, we strongly recommend a "marked for changes" version of any paragraph or section edits of the adopted

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

interim standards necessary as conforming changes be released with the new adopted standards of the PCAOB.

While we support the PCAOB's development of quality control standards, we recommend that they be presented in the appropriate section of the PCAOB Professional Literature. If there are very narrow implementation issues relating to a subject matter of a standard, we do not object to including that narrow guidance in a section of the auditing standard, but encourage such guidance to also be repeated in the PCAOB Quality Control Literature, where it otherwise would be expected to appear.

Effective Date

It is our understanding that after approval of a final standard by the PCAOB, an additional exposure period by the SEC is required. Therefore, a final "published" rule is unlikely until well into 2004. We believe this will not provide time for issuers to complete their documentation, evaluate and test controls, and correct any deficiencies identified, nor an opportunity for the auditing firms to ensure the requisite trained personnel are in place to perform the procedures required by the final standard. Most firms will find it impossible to provide timely training on the final standard during the "busy season," even though many auditors already have orientation and training in the subject matter.

Under these time constraints we see a risk that the implementation of the final standard for accelerated filers that must begin reporting on internal controls for years ending after June 15, 2004 will raise the potential for mistakes and misunderstandings that could undermine the intention of this requirement to restore investor confidence.

In that regard, we urge the PCAOB to make a recommendation to the SEC to delay the effective implementation of the final standard for accelerated filers. We believe it appropriate, assuming no further delays in issuing the standard, to require the audit of internal controls to accompany the financial statements of entities whose fiscal years end on or after October 15, 2004, but no earlier than six months after the final standard is published.

PCAOB Comment Letter – Draft Responses to Questions

Questions regarding an integrated audit of the financial statements and internal control over financial reporting:

1. Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting?

Yes. We believe the "audit" terminology clearly communicates the service being performed to users of financial statements and distinguishes the service from an attestation service performed under the standards of the AICPA which we believe should still be available to public entities for internal or other purposes.

2. Should the auditor be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements?

Yes. We believe that the auditor performing an audit of internal controls under the PCAOB auditing and related standards must also audit the financial statements. This is a clear requirement of Rule

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

2-02 of Regulation S-X and is mandated by Section 404 of the Sarbanes-Oxley Act.

It is our understanding that the final standard will replace the current AICPA AT Section 501 guidance in the PCAOB standards literature. In that circumstance, there would be no public company auditing literature guiding an attest service relating to internal controls unless performed in conjunction with an audit of the financial statements. However, we can envision a circumstance where such an attest service might be requested without requiring a full financial statement audit, such as a pre-merger attestation to evaluate to the effectiveness of controls of that entity as of a specific date or an attestation engagement for an interim financial period. In our view, an attestation service can be performed under AICPA AT 501 standards in such circumstances.

3. Rather than requiring the auditor to also complete an audit of the financial statements, would an appropriate alternative be to require the auditor to perform work with regard to the financial statements comparable to that required to complete the financial statement audit?

With respect to the required audit of internal controls accompanying the annual audit of the financial statements, we believe the rules are clear that a division of auditor responsibility is not permitted, and thus the concept of "comparable" work is not relevant in that context.

Questions regarding the costs and benefits of internal control:

4. Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?

No. We believe the proposed standard does not give adequate guidance on how internal control audits differ when conducted for small and medium size businesses. While we do not believe there should be a lower standard for evaluating or reporting on the effectiveness of internal controls in smaller enterprises, we acknowledge the techniques of auditing the internal controls of such smaller issuers will likely differ.

We believe the example in the Appendix, suggesting that management oversight might compensate for a missing or ineffective control, improperly implies that management supervision is an acceptable alternative to controls. We believe such an implication may be used by many entities to excuse missing or ineffective controls. However, recent history is replete with examples where management is the problem, and not the control.

We also think it inappropriate that the responsibility for defining the different small company environment and the associated audit responsibilities in these environments rests with the auditor. We are not aware of any guidance that would aid in achieving a consistent approach across companies and among firms on this issue. Absent guidance tailored to the small and medium sized issuers or changes in the reporting options, the proposed standard will likely result in a large proportion of smaller issuers receiving adverse opinions.

We do not feel a remedy for this is to weaken the value of an unqualified opinion on internal controls for smaller entities. The public will be unable to identify when an unqualified audit report may mean something different because the entity's controls were evaluated according to a small entity standard. We would rather see a deferral of the implementation date for smaller entities (perhaps using a non-accelerated filer definition) pending further research and experimentation in providing and reporting on this service.

BDO Seidman, LLP

Question regarding the audit of internal control over financial reporting:

5. Should the Board, generally or in this proposed standard, specify the level of competence and training of the audit personnel that is necessary to perform specified auditing procedures effectively? For example, it would be inappropriate for a new, inexperienced auditor to have primary responsibility for conducting interviews of a company's senior management about possible fraud.

No, we believe this level of guidance in the public company auditing standards is unnecessary and not a response to an identified issue. We believe the interim AICPA standards adopted by the PCAOB adequately address this issue in the existing general and field work standards for auditing and attestation engagements.

Questions regarding evaluation of management's assessment:

6. Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?

Yes, both management's assessment and the underlying effectiveness of internal controls are important for the auditor to consider when rendering an opinion on internal controls. Management's assessment is a public communication that has great flexibility permitted in its form and content. That document should not be misleading by commission or significant omission or a presentation that obscures important information from the reader. To render an audit report on internal controls, the auditor must accumulate sufficient evidence of controls effectiveness.

7. Is it appropriate that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation?

Yes, we believe that providing examples of such criteria are appropriate. As we stated earlier, we suggest the final standard also list the preparer's failure to plan for and retain (archive) its documentation of its controls and its evaluation, testing and monitoring to support its assessment as a potential material weakness.

8. Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?

Yes, we believe it appropriate to require the auditor to assess the significance of the deficiency on a case-by-case basis. At this time, as commented previously, law or regulation does not specify the level and format of documentation required of preparers. In the absence of such guidance or a benchmark, we do not believe that an imposition of an automatic categorization of an undefined condition as a significant deficiency or material weakness will have any value in user reporting. We do encourage a re-visitation of this point if either by practical experience in applying the requirements or legislation, a more objective definition of what constitutes "inadequate documentation" can be developed.

Paragraph 46 says: "In evaluating the deficiency as to its significance, the auditor should determine whether management can demonstrate the monitoring component of internal control over financial

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

reporting in the absence of documentation." We do not understand how, if an objective and clear definition of a documentation deficiency can be agreed, obvious documentation deficiencies can be overcome in such cases, and in the absence of any such rationale, recommend this guidance be changed to state affirmatively that documentation deficiencies ordinarily cannot be overcome.

Questions regarding obtaining an understanding of internal control over financial reporting:

9. Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?

Yes. Walkthroughs to confirm the auditor's understanding of the design and implementation of controls are well established in auditing practice, and we believe would be performed in many circumstances, even if not required. We concur that such procedures are important to perform, but also caution that they do not provide sufficient evidence of manual control operations. They are simply a "sample of one."

10. Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors, or others?

We believe it important that auditors perform many of the critical walkthroughs for significant systems and accounts. However, we believe that walkthroughs performed by others (assessed as competent and objective) on all controls and to a greater extent on less critical control operations, could be tested by the auditor to still achieve a high degree of audit assurance, in lieu of requiring that they be redundantly performed 100% by the auditor. Following this approach would represent a significant cost saving to businesses over the proposed approach. We believe a properly implemented testing approach would accomplish the desired protection for the pubic at a lower cost.

Additionally, we believe that the current wording of the standard would require that, say, if revenue were identified as a significant account, then walkthroughs of <u>all</u> revenue processes, regardless of their significance or materiality are required. Paragraph 79 of the draft states the requirement that the auditor "should trace <u>all</u> types of transactions and events, both recurring and unusual, from origination through the company's information systems until they are reflected in the company's financial reports." The extent of work required by setting the scope to <u>"all"</u> could be extraordinary for a large, distributed enterprise, and is inefficient.

We believe the concept of a "significant process" in this proposed standard when used as a basis for assessing which controls require walkthroughs, for example, has a profound impact on how management and the auditor view the controls for an entity. We believe it worthwhile to provide examples of what the proposed standard intended by the use of this term. This is fundamental to a common understanding between the auditor and preparer.

A remedy that should be considered is the requirement to consider measures of significance or materiality when identifying the necessity of performing walkthroughs, and whether the auditor in all circumstances must perform such walkthroughs.

Currently, we believe the guidance in paragraph 79 of the proposed standard requiring auditor walkthroughs is in conflict with the guidance in Appendix B 13. Under B13, "locations or business units that are not important, even when aggregated with others" do not require any auditor action. Yet, the provisions of paragraph 79 might require a walkthough of a transaction type at these

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

locations. Furthermore, if the location was not previously documented and tested by management, then the walkthrough of a transaction to "confirm" the documented control makes no sense. We therefore support the documentation, assessment and selective testing of all locations by management if the auditor might have some responsibility to perform procedures at those locations

We support the broad performance of walkthroughs by management in more instances than required of the auditor as an element of their procedures to support their assertion.

Question regarding testing operating effectiveness:

11. Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?

We believe that evidence needs to be accumulated annually that controls are effective in order to issue an audit report on internal controls. In our view, management needs to fully test these important elements to the extent necessary to provide a high degree of assurance annually as part of their monitoring function. However, from an audit perspective, once it is established that a control is effective, and a system as well as the environment in which it operates has not changed, the passing of a calendar date alone should not change that basic conclusion.

With respect to the most critical controls over all relevant assertions for all significant accounts, we believe that at a minimum the auditor devote some attention each year to each of those controls. However, we believe it would be more efficient, with no loss of effectiveness, to encourage the rotation of testing emphasis on controls (not the rotation of controls testing). While some controls might, based on a risk assessment and entity testing findings, warrant extensive testing annually by the auditor, we believe a more effective audit could be performed when the auditor would be encouraged to focus on certain controls on a periodic basis, extending the analysis and testing of some of these controls As reflected in SAS 99, varying the nature and extent of procedures performed from year to year is an effective strategy to achieve a high degree of assurance on the subject matter and prevent/detect fraud. On balance, the increased depth of testing in some areas should compensate for the lesser level of testing in others.

We believe this concept is already reflected in paragraph 101 of the proposed standard. However, if this was not intended, then the proposed standard should be clarified.

Questions regarding using the work of management and others:

12. To what extent should the auditor be permitted or required to use the work of management and others?

The auditor should be permitted to use the work of management and others within or engaged by the company to the extent supported by the auditor's assessment of their objectivity and competence. Generally, management would not be considered to be as objective as those outside the entity or of internal auditors, and their work might not be relied on, or relied on significantly less than if an outsourced competent service provider or objective internal audit function performed the same work.

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

We cannot identify any circumstances where the auditor should be required to use the work of management or others within or engaged by the company. Since the independent auditor has the professional responsibility for his or her opinion, such a requirement would be inappropriate.

However, we acknowledge that the engagement of specialists by auditors may be more frequently encountered than before under this standard due to the specialized nature of many topics in, for example, information technology based controls. Where an engagement team does not possess the requisite skills and knowledge to evaluate the design of or perform tests of a complex, technology based control, for example, a resource should be engaged to assist the auditor. In these cases we would expect that the auditor would continue to follow the provisions of SAS 73.

We also ask the Board to clarify whether its guidance in the proposed standard (Appendix B) on the use of service organizations is intended to modify the exiting SAS 70 literature, and if so, how. One area of likely significant implementation questions will include the role of service organizations and SAS 70 reports as they relate to the required audit of internal controls.

13. Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?

We believe the categories are appropriate and helpful as a conceptual aid for auditors to understand the requirements of the proposed standard. However, as noted in several of the following responses, we have concerns that the proposed auditor requirements related to these three categories require adjustment in the final standard.

14. Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

Yes to the first question. Appropriate recognition is given to the value internal audit can bring to the organization and the overall audit process.

But the answer to the second question is more complicated, as we feel the mix of procedures required in the proposed standard is inefficient and ineffective.

We do not agree with the proposed standard's requirement that all the assurance the auditor receives with respect to general controls and IT controls need come solely from the auditor's procedures. In circumstances where the objectivity and competence of the internal auditor or others is assessed as high, we believe it appropriate and cost effective to permit some assurance be taken for work performed by others in these areas. We concur with the assessment of the importance of these areas overall, but believe the objectives can be achieved by requiring that most, but not necessarily all, assurance come from the independent auditor's procedures.

We also do not agree with the proposed standard's requirement that the auditor can rely "without limitation" on the work of others with regards to controls over routine processing. This can be interpreted as permitting the auditor to rely solely on others for this work. We believe it inappropriate to permit such limited involvement in controls over transactions that constitute a large portion of the transactions processed by most entities. We support the requirement in paragraph 107 that the auditor reperform some procedures as a basis for reliance and conduct some independent tests of the controls over routine processing. We believe that most of the assurance in this area could come from work performed by others who are assessed as objective and competent. However, we are mindful that many of the unfortunate incidents leading to corporate failures took place in

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

BDO Seidman, LLP

organizations that had internal audit staffs that were assessed as objective and competent. Thus, we believe in all circumstances the auditor should perform some procedures in each category of classification of controls.

15. Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?

We believe that it is appropriate in this standard to provide flexibility in the extent of reperformance required in a particular circumstance. Paragraph 107 states that if the auditor intends to use the work of others, "the auditor should reperform some of the tests of controls originally performed by others." This level of guidance seems appropriate.

We believe it would be inefficient, and without an associated reduction in risk, to require the reperformance of each test performed by others on which the auditor intends to place some reliance. When work is performed by individuals or separate organizations (whose objectivity and competence is separately assessed) we believe it would be appropriate in the application of reperformance guidance to confirm the assessment of the competence of the work of that person by reperforming a sufficient level of that work to corroborate the competence with which the work was performed. Thus, a strong Firm-wide organization of internal auditors could require fewer reperformance tests to achieve the auditor's objectives than a loose organization of independent contractors performing the same procedures at different locations. In general, we believe the objectives embodied in the word "all" can in many instances be achieved at a lower cost and without a loss in quality if careful consideration is given to the principles of testing.

16. Is the requirement for the auditor to obtain the principle (sic. principal) evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?

Yes. However, it needs to be explicitly recognized in the standard that this is an auditor judgment, and not subject to an exact mathematical measurement.

Questions regarding evaluating results:

17. Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?

In our view the use of the concept "remote likelihood" in the definition of a significant deficiency will needlessly and inappropriately sweep many issues into this category. We would favor a tolerance threshold that is considerably higher than remote (e.g., reasonably possible).

We urge the PCAOB to continue to gather practical examples and further develop this guidance as professional experience grows in this area.

18. Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

Yes. We encourage the PCAOB to consider an outlet such as a "Q&A" publication that can help create more consistent applications. The examples seem rather clear cut, but the more difficult decisions will be in the gray areas.

Our comments in other sections of this letter extend to the examples provided.

19. Is it necessary for the auditor to evaluate the severity of all identified internal control deficiencies?

Yes. It is necessary to make judgments of the significance and severity of all identified deficiencies We do not believe the profession yet has the requisite experience in these areas to set narrow guidelines requiring a specific treatment for specific identified deficiencies that are less than significant.

20. Is it appropriate to require the auditor to communicate all internal control deficiencies (not just material weaknesses and significant deficiencies) to management in writing?

No. Paragraph 191 refers to deficiencies from all sources such as regulators, internal auditor reports, etc. We believe that for a large and complex organization this is an unreasonable requirement that will be very costly. We believe that isolated and insignificant deficiencies may need only be communicated to local management. Deficiencies identified by internal audit or regulatory auditors or others that have already been communicated to management should not have to be repeated by the auditor. The requirement to prepare a written report should be limited to deficiencies that, in combination with other deficiencies, raise the risk of a potential significant deficiency in an account, assertion or location, plus all significant deficiencies and material weaknesses found. We note that an audit committee may request a written report of all deficiencies of any nature and significance. However we do not feel such a report should be mandated.

21. Are the matters that the Board has classified as strong indicators that a material weakness in internal control exists appropriately classified as such?

Yes. However, see our response to question 22 with respect to the proposed separate evaluation of the audit committee. We believe that the indicators listed in paragraph 126 should also include "the absence of sufficient evidence to support the responsible party's evaluation of the operating effectiveness of internal control constitutes a material weakness," as suggested in the AICPA draft standard forwarded to the PCAOB.

22. Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting? <u>And</u>

23. Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?

Corporate governance is a critical component of the control environment. The audit committee, as that role has been strengthened recently by the rules of the stock exchanges, is an increasingly important element of the governance process. However, we disagree with the requirement in the proposed standard for the auditor to assess the effectiveness of the audit committee as a separate element of the internal control environment in order to determine whether a weak audit committee might be indicative of a material weakness in internal controls. COSO acknowledges the importance of the audit committee function, but does not single out this function. Rather, it considers it within the context of the board of directors and other Control Environment elements.

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

BDO Seidman, LLP

We believe it is not possible for the auditor to provide implicit assurance on the effectiveness of the audit committee. In our view, the auditor is not in a position to observe all the meetings, communications and actions of the audit committee as a basis for making such an assessment. We have difficulty envisioning the evidence and procedures that would support this assessment. While an auditor may be able to distinguish some weaker from stronger audit committees, and may observe an act or condition calling into question the effectiveness of the committee, an overall assessment of effectiveness is still a very subjective assessment.

Moreover, since the auditor is hired and retained by the audit committee, the requirement that the auditor conclude separately on the effectiveness of the audit committee creates a clear conflict. The imposition of such a requirement will likely hinder effective and open communication between the audit committee and the auditor at a time when better communication should be encouraged.

We also ask that regulators and the PCAOB understand that smaller entities have been responding to the requirements that audit committees improve in quality, but this is an ongoing process. The imposition of a requirement at this time to separately assess the audit committee may not have the desired effects on communication and continued improvement.

We urge that the final standard not require a specific assessment of the audit committee, but acknowledge its place within the governance structure and control environment.

If the final standard continues to require a separate assessment of the audit committee, we suggest the standard also make clear that management must also make a separate assessment of the audit committee as a basis for management's assertion

23. Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?

See response to question 22 above.

24. If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the audit engagement?

No. We see no basis for requiring the auditor's withdrawal from the engagement nor any benefit to the investing public or the business community from leaving the entity without an auditor based solely on this one issue. We believe that communicating this weakness provides better information for investors than the lack of an auditor's report resulting from the auditor's withdrawal. We believe that regulatory action would be more effective than auditing standards as a way to correct such deficiencies.

Questions regarding forming an opinion and reporting:

25. Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management?

No. We believe there are circumstances where the issuance of an "except for" opinion by the auditor is appropriate. While Item 308 of Regulation S-K precludes an unqualified opinion where

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

there are material weaknesses, we believe that a qualified opinion is not precluded. Furthermore, the adopted interim standard AT 501, which the SEC specifically cites in its conclusions, precludes an unqualified opinion in the presence of a material weakness, but permits a qualified opinion.

26. Are there circumstances where a qualified "except for" conclusion would be appropriate?

Yes. For example, if a merger occurs at or near year-end, it may not be practicable to identify or correct any material weaknesses in internal controls of such entity in the short time between acquisition date and the year-end. In those circumstances, it seems unnecessarily harsh to require an adverse opinion unless the acquired business is highly significant to the consolidated entity. This may be common in the acquisition of a private entity where an opinion on internal control has not previously been rendered. To require an adverse opinion would present the issuer in an inappropriately bad light and could even chill the market for acquisitions made late in the year. In those cases, it would be appear more informative for the user to issue a qualified opinion.

In many smaller entities it will be impossible to create an effective segregation of duties over some functions to avoid a material weakness. Similarly a qualified opinion is more useful to readers than an adverse opinion when other compensating controls have been established and are operating effectively.

We are also concerned that the excessive use of the adverse opinion resulting from the guidance in the proposed standard will lessen the potential message to readers when such a conclusion is truly warranted. We believe that adverse opinions should provide a signal of the magnitude of a pervasive weakness such as when there is severely inadequate documentation or testing or an inattention to internal controls in general.

27. Do you agree with the position that when the auditor issues a non-standard opinion, such as an adverse opinion, that the auditor's opinion should speak directly to the effectiveness of the internal control over financial reporting rather than to whether management's assessment is fairly stated?

We believe the auditor's report should be clear that it covers the effectiveness of internal controls in all cases. We do not believe the extent of work required to attest to management's assertion rather than to issue an audit opinion on internal controls should differ.

It is our view that the issue of the auditor's attesting to management's assessment has already led to significant confusion in the business community as to the auditor's role and extent of procedures that auditors are required to perform to issue such a report. We believe the user community will better understand the nature and extent of auditor involvement when an auditor issues an opinion on internal control.

Questions regarding auditor independence

28. Should the Board provide specific guidance on independence and internal control-related non-audit services in the context of this proposed standard?

If the PCAOB intends to include narrow, subject focused guidance on the subjects in this standard, that guidance should also be repeated in the Independence and Quality Control sections of the PCAOB literature. We think that the SEC independence guidance and the guidance in this standard are sufficient at this time.

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

BDO Seidman, LLP

We acknowledge the PCAOB's authority to write the auditing standards for public companies in whatever format it wishes, but think that to the extent that its proposed structure for its literature will be organized somewhat along the lines of the existing literature will be more useful. Accordingly we believe it should not commingle general independence, attest and general quality control standards guidance with auditing performance and reporting standards.

29. Are there any specific internal control-related non-audit services the auditor should be prohibited from providing to an audit client?

Yes. We believe the SEC has provided significant guidance in this area, and those examples need not be repeated here.

Questions regarding auditor's responsibilities with regard to management's certifications:

30. Are the auditor's differing levels of responsibility as they relate to management's quarterly certifications versus the annual (fourth quarter) certification, appropriate?

Yes, we believe that differing levels are appropriate, but urge the Board to not expand the Section 404 requirement to cover or appear to cover quarterly procedures regarding internal controls. See our response to question 31.

31. Is the scope of the auditor's responsibility for quarterly disclosures about the internal control over financial reporting appropriate?

Paragraph 186, in referring to quarterly procedures states "Determine, through a combination of observation and inquiry, whether significant changes in internal control over financial reporting may introduce significant deficiencies or material weaknesses in the design of internal control over financial reporting". We believe that in using the terms "observation" and "Determine," this requirement goes beyond the nature of procedures required for reviewing financial reporting information required under SAS 100, and is an expansion of scope we do not support.

In that regard, we believe the auditor's procedures regarding controls at the interim period should be limited to inquiries, and in the case of inconclusive or contradictory information, the auditor should apply whatever procedures considered necessary to resolve the issue.

In addition, review procedures are not determinative, but rather are a basis for creating an awareness of any material modifications necessary in the circumstances.

We also have not been able to conclude whether quarterly closing and related controls are intended to be swept-in under the Section 404 audit standard. However, we find no legislative, regulatory or other support to expand the 404 requirements to cover controls over interim reporting. We encourage the PCAOB to clarify its intention. We do not support including such procedures at this time.

If quarterly internal control procedures are required by the PCAOB, it would be most logical that they be required to be performed contemporaneously with the quarterly filing and the nature and extent of procedures be defined to promote consistency in application. While a retrospective evaluation of the quarterly closing and reporting controls may be possible, the risk of a weakness being identified in a subsequent procedure, after management has certified to the period, is an

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

undesirable result. We note the quarterly reporting timeframe is currently significantly constrained due to shortened filing times for accelerated filers, and increased involvement by the auditors in the review of financial information under SAS 100.

Any requirement that Section 404 engagements include interim controls tests should also be communicated to preparers, as some preparers are not currently including quarterly procedures in the scope of their Section 404 projects.

If quarterly responsibilities related to internal controls (beyond inquiries) are imposed, we believe that they should only become effective for the first quarter following the first annual reporting period for which a Section 404 audit opinion is rendered. Prior to this date, management's documentation, testing and monitoring over these quarterly controls may not be in place, and the auditor might not have an adequate basis for making an assessment. Moreover, such timing would be consistent with the SEC's transition approach for Exchange Act Rules 13a-15(d) and 15d-15(d), which require issuers to begin evaluating changes in internal control over financial reporting on a quarterly basis. Issuers are not required to comply with these rules until the first periodic report due after the first annual report that must include a management report on internal control over financial reporting.

Other Matters

Sampling

We believe the first sentence in the second bullet in paragraph 102 is incorrect as stated. In general, sample sizes for tests of controls do not increase as the number of control procedures increase. The exception to the rule is that for very small populations (say, less than a couple of hundred items), fewer items need to be examined. The example given is a small population of controls operating infrequently, and small populations such as this do require fewer items to test. However, the general statement in the first sentence is not supported by sampling theory or the guidance in the Audit Sampling Guide. Since attribute samples are seeking comfort that exceptions do not exceed some tolerable rate, increasing population size (once a threshold population size is reached) does not increase the required sample size.

The sentence referred to is generally true in all cases where substantive tests based on dollar values is performed. In a substantive test, the precision of the substantive test is linked to materiality (which is a specific amount), so, as the population grows, the sample size necessary to test for misstatement grows. We do not believe that the proposed standard intended that tests of controls be designed as substantive tests, using materiality thresholds to drive the sample size. Therefore, we believe the sentence should be corrected or clarified.

The Relationship Between Preparer and Auditor Test Levels

A common question asked by preparers is how much testing are they required to perform. As we mentioned earlier in this comment letter, this is a result of the lack of guidance for preparers. This often brings into question the relationship between the extent of testing of auditors and that of preparers. It is our view that the final standard should reflect that when auditors have assessed the documentation and testing by management and concluded that management has achieved a high level of assurance that their assertion concerning internal control is supported, that auditor test levels can often be expected to be less than those used by management. This is because the auditors have a significant and important piece of evidence the preparer did not have prior to their testing – management's analysis and test results. Thus, the levels of tests by management to

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

achieve a high assurance of effective operation should be greater than the levels required of auditors in their tests of internal control.

The Use of the "All" Requirement in the Proposed Standard

When the term "all" is used it provides no room for judgment for application of procedures that are effective and efficient. We believe the term "all" applies more appropriately to management's need to be very thorough in identifying, documenting and testing controls. It has been a long-standing practice that the auditor could practically and economically limit his or her procedures by testing. While we can envision circumstances where "all" might be the right scope, in many cases it will cause the performance of unproductive and expensive procedures. Examples from the proposed standard include:

> 114 As part of this evaluation, the auditor should review ***all*** reports issued during the year by internal audit (or similar functions, such as loan review in a financial institution) that address controls related to internal control over financial reporting and evaluate any internal control deficiencies identified in those reports.
>
> 191 In addition, the auditor should communicate to management, in writing, ***all*** deficiencies in internal control over financial reporting (that is, those deficiencies in internal control over financial reporting that are of a lesser magnitude than significant deficiencies) identified during the audit and inform the audit committee when such a communication has been made.

We recommend that the final standard reconsider the use or concept of "all" throughout the document. In our view, if the preparer has done a good job in documentation, testing and monitoring, and has demonstrated an adequate basis for its assessment, "all" will rarely be the correct requirement for the independent auditor.

Safeguarding of Assets

We believe that there will be a considerable number of implementation questions on the auditor's responsibility for identifying and testing controls related to the safeguarding of assets. We believe a mechanism, such as a PCAOB staff Q&A document, can help provide consistent and timely answers to questions about which controls should be included in the controls assessment and how they should be tested.

For example, in a retail operation, is the failure to use security cameras or merchandise theft tags a weakness? Does the auditor need to test or have a security expert test such controls if they are represented to be in use? Are poor pricing policies a control weakness? Is inefficiency a control weakness? Should controls be established to prevent the loss of customer lists and intellectual property and to what degree of security must these controls operate to be considered effective?

We believe this subject area can quickly mushroom into something unintended such that every business problem might be articulated in terms of it being evidence of an absence or failure of controls.

Additional Specific Comments

BDO Seidman, LLP

1. Paragraph 2 should be modified to directly address benefit plans that file Form 11-K. The SEC staff has recently informally stated that such issuers are not subject to the reporting requirements of Section 404.

2. Paragraph 33 introduces a level of audit committee pre-approval for "internal control-related services" that appears to exceed the pre-approval requirements in the SEC rule, since they must be "specifically" pre-approved.

   The SEC set the requirements for the pre-approval of services after due process. In our view, if modifications of those requirements are considered necessary, we would expect those modifications to come from the SEC.

3. Paragraph 34 says internal control auditing requires more than ordinary attention to maintaining independence. This implies that auditors can give only "ordinary" attention in "ordinary" engagements, which presumably include audits of financial statements. We don't understand the rationale for this statement or what extraordinary measures the auditor needs to take. We also do not agree that this requires any more diligence regarding independence than other attest engagements.

4. Paragraph 57 – The fifth bullet refers to complying with listing standards. We do not understand the reason for this. First, not all issuers are subject to the listing standards (because not all are listed). Second, the listing standards deal with the composition and activities of the audit committee and thus only deal indirectly with reliable financial reporting.

5. Paragraph 94 focuses on timing from the standpoint of work at an interim date vs. work at the "as of" date. The final standard should also provide guidance on what to do when the auditor is hired after the "as of" date.

6. Paragraph 126 – The first sentence should say that the following "should *usually* be regarded …" There are often cases where a restatement of financial statements is not due to any weakness in internal control (e.g., cases where accounting or disclosure is responsibly reviewed at all levels of the company and at the highest levels of the auditing firm, but a restatement is still required due to the insistence of the SEC staff based upon differing judgment).

7. Paragraph 134 states: "the auditor should obtain evidence that internal control over financial reporting has operated effectively for a sufficient period of time, which may be less than the entire period (ordinarily one year) covered by the company's financial statements." We believe the term "sufficient" in this case is unclear. We assume the Board means that they must operate for a long enough time to allow for testing of their effectiveness (e.g., a few weeks or a month for frequent controls), and not over an extended time during the year.

8. Paragraph 156 says that when separate reports are issued on the audits of the internal control over financial reporting and the financial statements, an auditor needs to add to the report on the financial statements audit a reference to the audit of the internal control over financial reporting. Shouldn't the auditor also add a comment to the report on the internal control audit referring to the financial statements audit?

.

BDO Seidman, LLP

330 Madison
New York, NY 10017-5001
Phone 212-885-8000
Fax 212-885-1299

9. Paragraph 173 seems to presume that management would disclose in its report on internal control over financial reporting a subsequent event that materially affects the effectiveness of the controls. We do not believe there is currently any specific SEC requirement for management to make such disclosure until the subsequent quarter, in which the change occurred. Therefore, we believe the PCAOB should clarify its view on management's disclosure requirement in the final standard. If the PCAOB believes that disclosure is implicitly required, the PCAOB should add a footnote or use some other means to fully explain the rationale for this conclusion. This will ensure that auditors and issuers focus on this point

10. Paragraph 181 presumes that reports on internal control are "part" of a registration statement and subject to Securities Act liability. We question whether this is the case, as such reports are required in Securities Act filings only when the issuer *elects* to use a short-form registration statement that requires the issuer to incorporate the most recent annual report by reference.

11. B15 states: "the evaluation ordinarily would not extend to controls at the equity method investee…" We cannot envision a circumstance where it should, and unless one can be identified we suggest the word "ordinarily" be struck.

* * * * *

We appreciate your consideration of our comments and suggestions, and would be pleased to communicate or meet with the PCAOB and its staff to clarify any of our comments.

Please direct comments to Wayne Kolins National Director of Assurance at 212-885-8595 Wkolins@bdo.com or Lynford Graham, National Director of Auditing at 212-885-8551 Lgraham@bdo.com.

Re: PCAOB Rulemaking Docket Matter No. 008

Dear PCAOB Members:

Thank you for the opportunity to comment on the proposed rules contained in PCAOB Release No. 2003-017 (Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements).

BellSouth Corporation is a Fortune 100 communications services company headquartered in Atlanta, GA, serving more than 45 million customers in the United States and 14 other countries. With one of the largest shareholder bases in America, we have assets of almost $50 billion and employ approximately 77,000 individuals.

Overall, we express general support for the proposed auditing standard (the "Proposed Standard"). In addition, we support, and agree with, all of the issues addressed in the comment letter filed by the **American Society of Corporate Secretaries** earlier today. Specifically we are concerned about the following provisions of the Proposed Standard:

- Oversight of Effectiveness of Audit Committee. We believe that it would be inappropriate for the external auditor to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting, given that the audit committee is itself responsible for hiring the external auditor. Further, we believe that any additional benefit to be gained by requiring the external auditor to evaluate how audit committee members are nominated and selected would be marginal at best, and would be far outweighed by the time, costs and efforts that such an evaluation would require.

- Communications. We question the benefit of requiring the external auditor to communicate to audit committees when written communication to management regarding all deficiencies in internal control over financial reporting identified during the audit has been made. It seems likely that most audit committees will find it difficult to simply accept this information without requesting additional information about that communication, causing them to spend needless time on insignificant deficiencies.

- Reliance on Work of Others. We believe that the sections covering using the work of others are too restrictive and will lead to a duplication of work between internal auditors and external auditor. Further, the Proposed Standard is not conceptually consistent with the flexible risk-based approach in SAS No. 65. In addition, we believe the requirement that the auditor's own testing must provide the principle evidence for the auditor's opinion is subject to significant interpretation. We believe the Board should reconsider its approach with respect to the amount of reliance an auditor is able to place on the work of internal audit and management.

- Terminology. We strongly agree with ASCS that the Board's proposed definitions of "significant deficiency" and "material weakness" are unworkable. We request that the Board consider instead using definitions that depend on whether there is a reasonable possibility that individual or aggregated deficiencies would lead to a material adjustment in the financial statements, in the case of significant deficiencies, and on whether it is reasonably likely the deficiencies would lead to a material adjustment in the financial statements, in the case of material weaknesses.

- Qualified Attestation. We are extremely concerned that shareholders and the public will not understand situations in which a company receives an adverse opinion on the effectiveness of internal control over financial reporting due to a material weakness that did not result in a material misstatement in the financial statements. Therefore, we request that the external auditor be permitted to determine whether its opinion should be "qualified" rather than "adverse."

Respectfully submitted,

Re: PCAOC Rulemaking Docket Matter No. 008

Ladies and Gentlemen:

As a former auditor and accounting standard setter, and as a present member of the audit committee of three large publicly held corporations, I read your exposure draft on auditing internal control with interest. Accounting firms, corporate managers, and others will comment in detail on what is a very comprehensive document. I wish to make just a few general observations and then comment on one specific provision of the draft.

General Concern About the Extensive Amount of Testing

In general, I support independent auditor involvement with and reporting on internal control. However, the current draft strikes me as “overkill,” requiring much more specific testing by the independent auditor than is necessary. In particular, my impression is that the draft allows insufficient reliance on the work of internal auditors. Frankly, I believe that internal auditors may be more experienced and better prepared to test some internal controls than external auditors. Another impression is that the independent auditors would have to do unnecessary, frequent re-testing of controls that haven’t changed from period to period.

The PCAOB needs to consider the benefits of a required audit of internal control vs. the incremental costs. Costs are relatively easy to measure, at least after the fact. I note that the Committee on Corporate Reporting of Financial Executives International estimates that audit fees likely will increase by 30-50% if the exposure draft is adopted without change. My reading of the draft and general familiarity with the present costs of audits leads me to believe that that range is a reasonable estimate.

What then will be the estimated benefits against which such actual costs should be compared? I have heard two principal arguments for mandating audits of internal control. First, that required audits of internal control will lead investors to place more confidence in financial reports, to counter concerns that such confidence has declined as a result of recent restatements and accounting frauds. And, second, that if we are able to prevent even a single Enron or WorldCom and the resulting loss to investors the money will be well spent. The former reason is hard to evaluate although it certainly seems reasonable. I'm particularly concerned, however, about the second reason.

As a member of the Special Investigative Committee of the Board of Directors of WorldCom, I saw (after the fact) the terrible financial reporting fraud, and I helped the company try to determine what happened and how to prevent reoccurrences. You can view the Special Investigative Committee's final report in the SEC Edgar system. On pages 223 through 263 of that report the Committee discussed the work of Arthur Andersen. Without going into great detail here, it is fair to state that Arthur Andersen had evaluated WorldCom's internal controls as being very strong, such that they could do limited substantive testing using a "controls based audit." I fully recognize that an accounting firm's evaluation of internal control for purposes of planning the audit is nowhere near the same as an audit of internal control. However, I submit that if Arthur Andersen could have been so off base with respect to the general quality of internal control under the "old rules," there is no assurance that they would have caught the problems under the "new rules."

PCAOB Board members obviously have to make a tough judgment as to how much detailed work must be mandated in an audit of internal control. But I make the above observations so you are clear that sloppy auditing or an extremely well designed fraud may still cause some frauds to be undetected. As one observer recently commented, is it necessary for all public companies to have to take chemotherapy because a few of them could develop cancer? I urge you to carefully consider the comments of others who make suggestions to reduce some of the excessive detail in the draft while maintaining the overall objective.

<u>Evaluation of the Audit Committee</u>

My specific comment deals with your questions 22 through 24. I think it would be a mistake to require independent auditors to evaluate the effectiveness of the audit committee and consider an ineffective committee to be a material weakness. First, I think such a requirement would create a direct conflict. Under Sarbanes-Oxley audit committees have to hire and fire independent auditors. The audit committees on which I serve have already adopted procedures for the committee to evaluate the performance of the auditors annually. And, as part of our very open discussions with the auditors, we seek their feedback on how the committee's performance might be enhanced. However, requiring the auditors to specifically evaluate the audit committee's effectiveness creates a situation where either party could, effectively, "vote the other party off the island." That could lead to a very wary relationship between the parties rather than the positive, open communications that are needed.

Second, I am concerned about how the independent auditors would determine what is or isn't "effective performance" by an audit committee. While the draft does provide some limited implementation guidance in paragraph 57, this would inevitably be a tough judgment call. (I suspect that the only time an accounting firm would conclude that an audit committee was ineffective was at the same time the firm had decided to resign from the engagement.) I am particularly concerned about the first sentence of paragraph 58 that says, "As part of evaluating the independence of committee members, the auditors should evaluate how audit committee members are nominated and selected <u>and whether they act independently from management</u> (emphasis added)." Ideally, the audit committee should work closely with both management and the external auditors. The language cited would suggest that each of these parties has separate interests, which shouldn't be the case.

Finally, do you really want to put accounting firms in the position of "validating" the performance of audit committees in the event of subsequent lawsuits resulting from accounting problems? Think of the Enron situation.

Assuming that Arthur Andersen had concluded that the Enron audit committee was operating in an effective manner, when problems later developed would that shield the audit committee from any responsibility and place all of the blame on the auditors?

It certainly makes sense for the independent auditors to consider the work of the audit committee as part of the overall control environment. However, specifically requiring an evaluation and, in particular, possibly considering the audit committee to represent a material weakness just doesn't make sense to me. Chairman McDonough noted in a recent speech to the National Association of Corporate Directors that this particular provision struck him initially as problematic although it grew on him as he thought more about it. I feel that his first impression was correct.

Other

As a final comment, I am concerned about the inclusion, in several places in the draft, of statements that the document only specifies minimum procedures and additional work may be necessary. (An example is paragraph 40 – "The auditor could also evaluate additional relevant factors when planning the audit of internal control over financial reporting.") Those statements could cause accounting firms to expand their detailed procedures even more for fear that the SEC, a court, or some other after-the-fact critic could challenge them. When I was in public accounting we referred to such language as "hanging words" – the verbiage that plaintiff attorneys would seize on to challenge even the most reasonable audit performance. Given that this document already calls for an extremely comprehensive amount of work by the independent auditors, I urge you to reconsider whether these catchall phrases are necessary.

Please note that these are my personal comments and should not be attributed to my university nor to any of the corporations on whose boards I sit. If you have any questions about my comments, please call me.

Sincerely,

Dennis R. Beresford

Subject: comments on #008

As a senior financial executive in a public company that is subject to the internal controls assessment and independent auditor opinion on our assessment I am deeply concerned with the direction that this rulemaking is going. Prior to joining my current employer I had the pleasure of working for two of the remaining four large public accounting firms.

I am impressed by many of the comments you have received thus far, especially by the fact that many of my peers and individual investors have pointed out several of the challenges facing businesses as we work in good faith to implement these rules.

The Profession Comes First

Having worked for many years in two of the largest public accounting firms as a financial auditor I am all to familiar with the efforts which were made by our national practice office and our local regional offices to ensure that our approaches, methodologies, pricing, and pay-scales were “closely aligned” with our competitors. We were taught to compete – but to never undercut our competitors. We were taught to try to attract talent from a competitor – but only in limited quantities so as to prevent their management from going to our management and raising “raiding” allegations. We were taught to never undermine or undercut our competition in the market place for fear that it would make the whole profession look bad.

Occasionally we had a renegade employee or partner who got a little too aggressive in the marketplace. Whenever this happened the regional director would call in the partner and his goals would be “re-prioritized.” Sometimes, these partners would be transferred to other positions or accounts. The partners were taught two primary principles: “never lose an account” and “never start a competitive turf war with one of the other major firms.”

Optics Are Everything

It was always clear that each firm offered essential the same solutions. It was not uncommon for us to receive “briefing sessions” from senior partners communicating how we should respond to particular issues that from time to time confronted the profession. These sessions usually were restricted to the partner ranks and included detailed “talking points” to make sure that we all communicated a consistent and positive message. During these sessions the views and opinions of the other firms were openly shared and discussed. More often then not it was clear that the position we were taking would be consistent with the position that our competitors took. For me this occurred during the Savings & Loan Crisis.

A Client’s View

Now, sitting on the other side of the table as a client, I see how destructive these incestuous relationship really are. When I ask my external audit partner and their competitor to share with me their perspective on a particular current event – the answer is always the same. There is no intellectual insight or value provided when these accounting-robots churn out their standard fast-food accounting checklists and policy directives. On the major issues the firms consistently provide a standard well-coordinated message.

Having been raised within the public accounting community it is fairly transparent to me that this is occurring. What is more surprising to me is the fact that the firms often ask their clients to assist in them in their endeavors to share information with one another. Our external auditor has asked us to secure competitive intelligence on their behalf as well as to share “confidential” information with key contacts at other firms. The intent is clear – to send a message, a signal, to their competition on where they area headed on a particular issue. Although they must have direct channels of communication at the top of these firms there is a significant amount of activity that occurs at lower levels in the firms.

Clandestine Partnerships?

Personally, I believe that this type of activity has increased significantly over the past few years. This is especially true in how consistent the message has become among the large firms in what they perceive as being required and how significant their role needs to be when we discuss Sarbanes-Oxley. Our external auditors have recommended to us that not only do they need to participate, to a significant degree, on the overall project steering committee but they have also suggested to us that one of their competitors is better qualified then another (non big four) competitor to assist us in our endeavors. They have obviously established a "teaming" relationship with the other large firm in our (geographic) area. They "highly recommend" that this particular competitor perform those services that they cannot perform for us (namely some of the testing activity). This seems odd – but one can only assume that their competitor provides them with a similar endorsement.

What is disturbing to is that in our situation, we had two additional competitive bids from other firms (one big four and one non-public accounting firm). The non-public accounting firm actually presented what we considered a very robust approach to Sarbanes-Oxley compliance. We felt they could provide significant value to our organization. Their approach was unique and absolutely different then the proposals we received from the other larger firms. They came to the table with a software solution to help us document controls. They had a better approach around some of our key business systems and were able to demonstrate some specific experience and skills in this area. And, they were significantly less expensive (by a magnitude of 35-40% less) then their big-four counterparts. Overall, we felt more comfortable with their approach and their people.

Using Audit Fees As a Hammer

Unfortunately, our external auditors advised us that if we used this firm they would likely have to re-perform many of the procedures. The net effect would be our total costs (using this third party) would be equal to or greater then the fees we would pay by using our external auditors "preferred partner." This caught our attention. It was made very clear to our management team: we either worked with our auditor to participate on the project and use their big-four counterpart or we risked having them come in and re-perform many of the same procedures that we proposed to do internally with the assistance of this other firm.

We have deferred our decision until your rules are finalized. But, we are very uncomfortable with where this is headed. It was made clear to our company at least that our external auditors would have the final say on how our project was organized. They arrogantly used the term "pay me now or pay me later" when speaking with our executive team.

Our CEO was so offended by that remark that he asked me to write this letter to you. He feels as if our external auditor has been put in a position of unbridled power. He is questioning how we can justify to our shareholders paying millions of dollars per year to comply with these requirements. He is devoted to meeting the letter and spirit of the law. However, we are increasingly irritated by what he perceives as unrelenting pressure by our auditors to incur costs needlessly and to incur costs for initiatives that provide no meaningful value to our shareholders. This brings me to our second point.

Repackaging Non-Audit Services

Our external auditors have brought a number of different teams of specialist to meet with us. Some to talk about our accounting systems, some to talk about our networks, some to talk about our tax structures, and finally some to talk about our consolidation system. In each situation the story is about the same. They would like to bring in their team of "specialists" to help us develop a business continuity plan, a state and local tax compliance program, an attack and penetration assessment of our network, or an improved financial close process using some new consolidation software.

In each of these situations the goal is to help us comply with Sarbanes-Oxley (404) and get some real business value (cost savings?) at the same time. The idea is interesting. Hire the specialist to help improve our business processes or risk points and achieve a positive return on our investment in Sarbanes compliance. Our auditors have proposed that by taking on these special "404-related" projects they could help us ease the "compliance burden" and get real value from our documentation initiative. The catch? In everyone of these discussions they refer to these projects as "audit related."

We have asked them to put their ideas into proposals that we can share with our audit committee who has to approve all projects where the external auditor is engaged to provide additional services. Our auditors have steadfastly refused these requests. They have hinted that in order to gain audit committee approval for these projects they need to be "audit related" and that they need to "protect" our audit committee by not suggesting (in a proposal or presentation) that these are anything but something related to the audit. They have pointed that we are allowed to engage them for audit related activity and that these 'special projects' should fall into that category of services.

Obviously we are fairly skeptical about this approach. Our Senior Management team has more integrity then that. My CEO has stated that he will have nothing to do with these types of dealings and that the tactics and principles of our auditors are absolutely unacceptable. He does not want us to enter into any agreement with out external auditor that is not fully and completely disclosed to our audit committee and board of directors. The suggestion and innuendo by our auditors is disconcerting to say the least. But they are not alone. We have had conversations with some of the other Big 4 firms and they have also indicated that they are often required to call things “audit related” when in fact they are clearly more then “audit related”. Some of my colleagues at other companies have expressed to me privately that they have these same sorts of discussions with their external auditors.

For this reason, we would believe that your rules should clearly state that the external auditor is prohibited from assisting in documentation of internal controls or any other service not directly related to the performance of a financial statement audit.

Subtle Threats

Our external auditors have placed us in an uncomfortable position. There is incredible pressure to do what they want to ensure that we secure a clean audit opinion. We have taken the internal position, with the support of our Board of Directors, that our external auditors should be completely barred from providing any service other then the audit itself. They should not be allowed to provide tax, information technology, internal audit, operational audit, or any other service to their audit clients.

We have communicated our Boards intent to our Coordinating Partner and several members of their team. We are trying to maintain a positive relationship with them and are reluctant to switch providers because we believe that these tactics are fairly uniform among the large firms. Any clarity you can provide in your rules to address these types of behaviors and to send a clear message to auditors that this type of behavior is unacceptable will be greatly appreciated. For the most part, we think we can meet the requirements and we would like the freedom to prove that we care about internal controls as much if not more then our external auditors.

Sincerely,

Silvio Berlusconi

RE: PCAOB Rulemaking Docket Matter No. 008

Dear Sir/Madam:

The undersigned wishes to comment on behalf of The Boeing Company (the "Company") on the Proposed Auditing Standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements.* The Company supports the issuance of a new standard for auditing internal control; however, we wish to convey certain comments on the proposed standard, as set forth herein. Our comments pertain to the following general topics:

- Auditor professional judgment
- Definitions of "significant deficiency" and "material weakness"
- Audit Committee oversight
- Superseded controls

Auditor professional judgment

Existing auditing standards generally allow for broad application of auditor judgment. Despite certain audit failures that have occurred recently, the audit process overall has functioned effectively. We believe the new standard for audits of internal control over financial reporting should continue to allow the auditor to exercise judgment in designing audit tests and evaluating results. Related to the proposed standard, we have comments on the use of auditor judgment related to certain areas, including walkthroughs, use of the work of others, and evaluation of internal control deficiencies. In each situation indicated below, we believe incorporation of auditor judgment is necessary to produce results that are truly representative of the underlying circumstances.

Walkthroughs

The proposed standard requires the auditor to perform a walkthrough for all significant processes of a company. In question 10, the PCAOB asks whether it is appropriate to require that the walkthroughs be performed by the auditor himself, rather than allowing the auditor to use the walkthrough procedures performed by management, internal audit, or others. While we agree that walkthroughs provide evidence that supports the process flow of transactions, the design of controls and whether controls are in operation, we believe that it is neither practical nor necessary for the auditor to perform a walkthrough for *all* significant processes. The effort involved in complying with this aspect of the proposal, as written, would require a very large time commitment by company personnel and the auditor, and would result in unduly high audit fees. Rather than requiring the auditor to perform a walkthrough of each significant process, we suggest the auditor use professional judgment to determine which of the significant processes require an auditor-performed walkthrough to support the auditor's opinion.

In performing a walkthrough, the proposed standard states that the auditor should include *all types of transactions and events* that flow through a significant process. Because of the varying materiality and significance of different types of transactions, we believe that it is neither practical nor necessary for the auditor to include "all types of transactions and events" in a walkthrough of a process. Rather, we suggest that a walkthrough include a representative sample of transactions and events for the process, selected by the auditor using professional judgment.

Use of the work of others

The proposed standard requires the auditor to perform enough testing first-hand, that the auditor's original work provides the principal evidence for the auditor's opinion, hence subjecting the amount of reperformance of other parties' tests to auditor judgment. In question 15, the PCAOB asks whether the proposed flexibility in determining the extent of reperformance of the work of others is appropriate, or whether the auditor should be specifically required to reperform a certain level of work. We believe the proposed flexibility afforded to auditors is appropriate. Because the quality and extent of work performed by management, internal audit, and others varies depending on many factors, we believe a prescriptive approach would be inappropriate. Professional judgment should be relied upon to tailor the auditor's reperformance efforts based on the competence, objectivity, timing, and extent of the work of others. Likewise, we believe reperformance should not require duplication of each and every test performed by the initial party.

The proposed rule also specifies several areas in which the auditor shall not use the results of testing performed by others, including certain controls that are part of the control environment, controls over period-end financial reporting, information technology general controls, and walkthroughs. In question 12, the PCAOB asks to what extent the auditor should be permitted or required to use the work of others. We believe use of the work of others should be at the auditor's discretion, and should not be explicitly precluded in any circumstance. The auditor should be permitted to exercise professional judgment in determining the extent to which the auditor can incorporate the use of testing by others.

Evaluation of internal control deficiencies

The proposed rule indicates that the auditor must determine whether internal control deficiencies constitute significant deficiencies or material weaknesses. In question 19, the PCAOB asks whether it is necessary for the auditor to evaluate the severity of *all* identified internal control deficiencies. We believe such evaluation is necessary. The auditor should evaluate the significance of a deficiency in internal control by considering the likelihood and potential magnitude of a possible misstatement in the financial statements, using professional judgment.

In question 8, the PCAOB poses a similar question, asking whether inadequate documentation is an internal control deficiency, for which the auditor must assess the severity, or whether it should automatically be deemed a significant deficiency or material weakness. Our response is that inadequate documentation should not be prescriptively evaluated or automatically designated, but subjectively analyzed in the context of the entire internal control structure. In fact, we believe more broadly that none of the controls and circumstances listed in paragraphs 123 and 126 should be automatically designated as significant deficiencies or material weaknesses (or strong indicators thereof). We believe the auditor's professional judgment is required to appropriately analyze the specific circumstances surrounding the internal control deficiency.

Definitions of "significant deficiency" and "material weakness"

The proposed rules include new definitions for control deficiencies, including "significant deficiency" and "material weakness." In question 17, the PCAOB asks whether the new definitions of these terms will provide for increased consistency in the evaluation of deficiencies, and asks how the definitions can be improved. We believe the new definition for a significant deficiency requires further clarification as described below.

Current auditing literature defines the terms significant deficiency and material weakness as follows:

> *Significant deficiency / reportable condition (significant deficiency has same meaning as reportable condition, per the SEC):* a significant deficiency "in the design or operation of internal control that could adversely affect the entity's ability to initiate, record, process, and report financial data consistent with the assertions of management in the financial statements."
>
> *Material weakness:* "a condition in which the design or operation of one or more of the internal control components does not reduce to a relatively low level the risk that misstatements caused by error or fraud in amounts that would be material in relation to the financial statements may occur and not be detected within a timely period by employees in the normal course of performing their assigned duties."

The proposed rules define the terms significant deficiency and material weakness as follows:

> *Significant deficiency: "*a significant deficiency is an internal control deficiency that adversely affects the company's ability to initiate, record, process, or report financial data reliably in accordance with generally accepted accounting principles. A significant deficiency could be a single deficiency, or a combination of deficiencies, that results in more than a remote likelihood that a misstatement of the annual or interim financial statements that is more than inconsequential in amount will not be prevented or detected."

Material weakness: "a material weakness is a significant deficiency that, by itself, or in combination with other significant deficiencies, results in more than a remote likelihood that a material misstatement of the annual or interim financial statements will not be prevented or detected."

The proposed new definitions are written more prescriptively and narrowly than the existing definitions. The definition in the proposed standard of "significant deficiency" is comprised of two main components: 1) "more than a remote likelihood" of a misstatement, involving 2) an amount that is "more than inconsequential." We believe the first component referencing "more than a remote likelihood" is well understood by management and auditors, as the term "remote" is specifically indicated to have the same meaning as in SFAS No. 5. The term "remote" is broadly applicable and regularly used in certain other accounting assessments. By referring to the term "remote," we interpret that the PCAOB intends to clarify the previous use of the term "could" that is contained in the existing definition, and we support such clarification.

However, in the second component of the definition, the term "inconsequential" is not well understood. Further, the examples currently included in Appendix D do not elaborate on the meaning of this concept, except to indicate that the scenarios deemed significant deficiencies were not material. We believe the "more than inconsequential" threshold should be defined and explained more fully to reduce diversity in interpretation among management, the auditor, the audit committee, and any other interested parties.

Audit committee oversight

The proposed rule sets forth requirements for the auditor to evaluate the effectiveness of the audit committee as part of the control environment and monitoring components of a company's internal control over financial reporting, and includes specific factors related to audit committee effectiveness that the auditor should evaluate. We agree that the effectiveness of the audit committee is an important aspect of the control environment and monitoring components of a company's internal control over financial reporting. However, we suggest that the list of specific evaluation factors be omitted, and replaced by reliance on the guidance provided in the COSO framework. In describing the control environment, the COSO framework identifies the audit committee as playing an important role in establishing an effective "tone at the top" for an organization. The COSO framework also provides a list of specific matters related to the audit committee that might be considered in an evaluation of the control environment. We believe that the guidance in the COSO framework is sufficient.

Additionally, the proposed rule provides a list of circumstances that are automatically regarded as at least a significant deficiency (and possibly a material weakness). Ineffective oversight by the company's audit committee is included in that list. We believe the auditor's professional judgment is required in all cases to determine the severity of identified internal control deficiencies, and that no deficiencies, including ineffective oversight by the company's audit committee, should be automatically designated as significant deficiencies or material weaknesses (or strong indicators thereof).

Superseded controls

From time to time, companies implement changes to their controls. The proposed rule indicates that when such changes occur, the auditor may need to evaluate controls that have been superseded if the new controls have not been in effect for a sufficient period. Because management's assertion and the auditor's opinion are expressed as of a certain date, we believe the auditor should not be required to evaluate controls that were superseded and replaced before the date being reported on. We believe superseded controls are irrelevant to the reports of management and the auditor, as both are stated as of a particular point in time.

Finally, we wish to express our concern over the high potential costs to companies, and ultimately the investing public, to compensate the auditor for the extensive audit effort required to comply with the proposed regulations. Based on these proposed rules, we expect a sharp increase in audit fees, in addition to higher internal costs required to support management's internal control assessment. While we generally support the overall intent of the proposed auditing standard, we ask the PCAOB to focus on the cost-benefit relationship and impact of decisions made, being mindful of the value that will be gained for investors.

Sincerely,

James A. Bell

RE: PCAOB Rulemaking Docket No. 008

Dear Sir/Madam:

Boise Cascade Corporation (Boise) would like to take this opportunity to comment on your proposed auditing standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements* (proposed standard). We thank the Public Company Accounting Oversight Board (PCAOB) for the opportunity to comment on this proposed important new standard.

Boise is a large international Fortune 500 company with major investments in paper manufacturing and distribution, building material manufacturing and distribution, and office supplies distribution. Boise commends the PCAOB for taking this significant step in improving corporate governance and the quality of financial reporting. Boise takes corporate governance very seriously and has established integrity as a key corporate value. However, we believe there are specific opportunities to reduce the significant cost to implement the proposed standard and, at the same time, improve the quality of controls and financial reporting.

Our specific comments and recommendations are as follows:

1) We believe the proposed standard does not allow the auditor to place appropriate reliance on the work of management and the internal auditor. To ensure compliance with The Sarbanes-Oxley Act, companies have established, or are establishing, extensive processes to document and evaluate key controls over financial reporting. A large part of this work is aimed at areas the proposed standard specifically prohibits reliance upon management (walkthroughs, control environment, general IT controls, fraud prevention and reporting, and financial reporting). We believe high quality control documentation and evaluation on the part of management should facilitate the work performed by both the internal and external audit functions. Additionally, we believe the external auditor should be able to place much more reliance on a competent and objective internal audit function. There should be no areas specifically prohibited from reliance. Reliance should be based upon risk assessment, objectivity, and competence.

2) We believe the proposed standard is too prescriptive and detailed. We believe all constituents, including the investing public, would be better served by a more principles-based approach with the scope driven by risk assessment, judgment, and analytical procedures. The proposed standard does not differentiate enough between well-controlled companies and poorly-controlled companies in the type of

reliance on management and required audit procedures. This could have the unintended consequence of punishing well-controlled companies with duplicative procedures and tests.

3) We believe the company's Board of Directors should be responsible for evaluating the effectiveness of the Audit Committee, not the external auditor as required by the proposed standard. The current requirement creates a significant conflict of interest as the Audit Committee is normally charged with oversight of the external auditor.

4) We believe the definition of significant deficiency should be changed and clarified. The current definition would require a large number of minor control issues to be reported (those that are not judged material but that are judged more than inconsequential) and would have the effect of losing the impact of reporting the most important issues.

5) We believe the external auditor should be allowed to use judgment in determining whether partial reliance on the results of testing from prior years is acceptable. In this area, the proposed standard does not appropriately recognize the importance of cumulative knowledge or the importance of risk assessment and judgment in setting scope.

6) We believe the external auditor should not be required to duplicate the work performed by management and internal audit in forming their opinion on internal controls. Instead, they should take into consideration the amount and quality of internal control documentation, evaluations, and testing performed.

7) We believe the "point-in-time" nature of the external audit opinion needs to be re-evaluated. The requirement of the proposed standard to ensure that the external auditors update their work as of the audit date will place a large burden on the external auditors and management to complete significant work after year-end. This may impact the quality of the audit work on the financial statements.

We appreciate this opportunity to comment on the proposed standard.

Ted Crumley
Senior Vice President and Chief Financial Officer

Dear Sir or Madam,

BP plc appreciates the opportunity to comment on PCAOB Release No. 2003-017, Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements. We support the intent of the proposed standard and believe, overall, that providing users of the financial statements with both management's assessment of the effectiveness of internal control and an independent auditor's evaluation of that assessment will increase financial information quality, raise investor confidence and, in the long term, improve the efficiency of capital markets. We would, however, like to offer several comments relative to the draft standard which BP believes could lessen the impact of the standard on companies without reducing its effectiveness.

First, with regard to Question No. 7, it is useful that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation. However, the list is narrowly prescriptive rather than a guide to the types of documentation that should be considered. Therefore, it is limiting of other potential documentation alternatives that may provide equal or greater support and understanding of internal controls.

On Questions No. 9 and 10, we believe that, while the objectives to be achieved through walkthroughs by the auditor as described in the proposed standard are laudable, walkthroughs of the extent implied will significantly increase cost with limited, if any, incremental value. We believe the scope of walkthroughs implied by the proposed standard is excessive relating both to the potential number of processes impacted and the level of detail within a process at which the walkthrough is performed. We believe that it is reasonable for the auditor to perform walkthroughs on a limited and test basis; however, consistent with our view on Question 12 below, it is also appropriate for the auditor to review and rely on walkthroughs performed by management and/or internal audit where the auditor is able to confirm the effectiveness of a company's processes.

19 November 2003

Public Company Accounting Oversight Board

Regarding Question 11, we believe it is both quite costly and unnecessary to require the auditor to obtain evidence of the effectiveness of controls each year independently. Annual cycling of detailed testing is a logical and practical alternative that we believe still provides the assurance intended by the proposed standard. If significant organizational, systems, or process changes have occurred during a period, the auditor should apply judgment to determine which would warrant expanded or off-cycle testing.

Regarding Question 12, as indicated above we believe the auditor should be permitted to use the work of management and others to a much greater degree than described in the proposed standard. The prescriptive list of areas where the auditor should not use or should limit the use of work performed by others is unnecessarily restrictive. We believe the auditor can develop an informed opinion on the effectiveness of internal controls based upon a combination of direct evaluation and review of internal control testing performed by others and that combination can and should vary depending upon the circumstances.

In regards to Question 17, we believe that the proposed standard may result in a level of precision and certainty that is both impracticable and unwarranted, resulting in a level of effort that is quite costly to businesses and, inevitably, to the capital markets themselves. Specifically, we are concerned with the proposed standard which defines a significant deficiency as "an internal control deficiency, or combination of deficiencies, that results in a more than remote likelihood that a misstatement of the annual or interim financial statements that is more than inconsequential in amount". We regard this definition as infeasible to implement, and would suggest a definition that considers both probability and magnitude, while not being so all encompassing that a significant deficiency loses its meaning and importance. Furthermore, we believe the combination of the concepts of "aggregation", "more than remote likelihood", and "more than inconsequential in amount", taken together, will result in a considerable level of detailed documentation and testing by the auditor (even when effective management processes are in place) and hence result in significant cost for little incremental benefit to either the company or its investors. While perhaps a matter of interpretation, the combined concepts also appear to result in a different level of confidence than the "reasonable assurance" principle also articulated in the proposed standard.

19 November 2003

Public Company Accounting Oversight Board

Lastly, we see inherent and irreconcilable difficulties in the concept introduced by the standard of the independent auditor evaluating the audit committee. This concept creates the potential for serious conflicts of interest when the independent auditor, who is retained by and whose compensation is determined by the audit committee, is required to evaluate its effectiveness. The audit committee is an important component of the overall control environment; however, we would suggest an alternative approach be considered whereby the auditor would perform a general assessment of the audit committee during the Control Environment review and only undertake a more detailed review if significant issues with the audit committee's processes are identified.

We appreciate your consideration of our comments.

Your sincerely,

I Macdonald

Reference PCAOB Rulemaking Docket Matter No. 008

Dear Members of the Board:

Thank you for your invitation to comment on PCAOB Rulemaking Docket Matter No. 008. As the Chief Financial Officer of a large NYSE listed company, I strongly believe I can offer unique insights into specific issues in your proposed auditing standard.

In general, I believe that adoption of the recommendations outlined in your proposed standard would be of significant value in strengthening corporate governance and the audit process to enhance public trust in the integrity of financial reporting systems. However, I take strong exception to the direction you propose in Appendix A, paragraphs 79 and 80.

Paragraph 80 specifically states that the auditor walkthroughs should encompass "the entire process of initiating, recording, processing and reporting individual transactions." Paragraph 79 states that "the auditor should trace ***all*** types of transactions and events, both recurring and unusual, from origination through the company's information systems until they are reflected in the company's financial reports."

The amount of work required by this standard is unnecessary and unproductive. Within any significant process, such as the revenue cycle, there are many types of transactions and events, some more significant than others. It is my understanding and belief that the intent of Sarbanes-Oxley section 404 is to document and test the ***significant*** processes, transactions, and ***key*** controls that are relevant to the company's financial statements. Tracing and testing of all types of transactions and controls is overly burdensome and cost-prohibitive.

Sincerely,

Phoebe A. Wood

Reference: PCAOB Rulemaking Docket Matter No. 008

Ladies/Gentlemen:

This letter is providing our comments to PCAOB Release No. 2003-017, "Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements", issued October 7, 2003. Generally speaking, we believe the proposed standard is over-reaching and will be unduly burdensome. We believe the cost to comply with the proposed standard will far outweigh any of its intended benefits.

Our specific comments below are numbered to coincide with the specific questions asked by the PCAOB in the summary document issued with the proposed standard.

Question #10:

Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use the walkthrough procedures performed by management, internal auditors, or others?

Response:

We believe it should be permissible for auditors to rely on the walkthroughs performed and documented by internal auditors assuming the auditors have determined, in their professional judgment, the internal auditors are independent and qualified to properly perform and document such work.

The redundancy of effort, and cost, of this duplicate work is not productive. The auditor's should be allowed to use their judgment in evaluating where they can rely on internal auditors' work in this area and in which areas they should do such work themselves.

Question #12:

To what extent should the auditor be permitted or required to use the work of management and others?

Response:
We believe the auditor should have the ability to make the judgment as to how much work performed by management or internal auditors they can use. This judgment would, of course, be based on the auditor's assessment of the quality of the internal auditors performing such work.

Question #13:

Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?

Response:
We do not believe auditors should be precluded from relying on work performed by internal auditors in the control environment. Quality, in-depth, and ongoing work done by internal auditors in key areas, such as systems controls and controls over the period-end financial reporting process, can be extremely time consuming to adequately perform and document. Reliance on such work can significantly enhance the efficiency of the audit of controls without compromising the evaluation and testing process.

Question #14:

Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

Response:
We believe the proposed standard does not give appropriate recognition to the work of qualified and independent internal auditors. Once again, the duplicate effort and additional cost of have two qualified groups of auditors performing the same work is unnecessary.

Question #16:

Is the requirement for the auditor to obtain the principle evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?

Response:
We do not believe this should be a hard and fast rule that automatically precludes the use of internal audit work to effectively a prescribed extent. The auditor should be able to judge the extent to which they can rely on internal audit work, and which areas they need to perform work themselves.

Question #22:

Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?

BROWN SHOE

Response:

No. The auditors report to the Audit Committee; they should not evaluate the Committee.

Question #23:

Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee oversight?

Response:

We believe state law, the Federal securities law, the rules and regulations of the SEC and the NYSE more than adequately govern the role of the audit committee. It is the responsibility of the Board of Directors and counsel to the Board of Directors to assure that the audit committee is properly fulfilling its role and responsibilities. We do not believe requiring the auditors to evaluate the audit committee is an appropriate responsibility and is an unnecessary burden to place upon the auditors. In addition, without specific guidelines, or measurable criteria, specifically defining what qualifies as adequate, or appropriate, oversight of a company's external financial reporting and controls over such reporting, the auditor is in uncharted waters and could lead to wide variations in practice and application.

We recognize and support the need for strong internal controls over financial reporting and realize compliance with Section 404(a) of the Sarbanes-Oxley Act of 2002 is a major undertaking in terms of time, effort and money. At the same time, we believe that since the responsibility for compliance falls to the company, auditors should be able to rely upon the work already done by the internal auditors to the extent they are comfortable in doing so after performing the prescribed assessments. If the proposed standard is issued as it has been drafted, we believe a great deal of redundancy in time and effort will be required and the costs of audits will increase significantly, if not exponentially – without any proven additional benefit to investors. From a practical standpoint, we also wonder where the major auditing firms will find the number of experienced and trained auditors to perform this additional work.

We appreciate the opportunity to respond to the proposed standard and respectively request that Board consider our comments.

Sincerely,

Richard C. Schumacher

Re: ***PCAOB Rulemaking Docket Matter No. 008 (Proposed Auditing Standard – An Audit Of Internal Control Over Financial Reporting Performed In Conjunction With An Audit Of Financial Statements)***

Ladies and Gentlemen:

The following comments are submitted on behalf of the Business Roundtable, an association of chief executive officers of leading corporations with a combined workforce of more than 10 million employees in the United States and $3.7 trillion in annual revenues. The Business Roundtable strongly supported enactment of the Sarbanes-Oxley Act of 2002 (the "S-O Act"), and we support the efforts of the Public Company Accounting Oversight Board (the "Board") to implement the S-O Act. We appreciate the opportunity to provide you with our views on the Board's recent proposed auditing standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements* (the "Proposed Standard").

Scope of the Proposed Standard

Under Section 404 of the S-O Act ("Section 404"), management is required to prepare an internal control report that, among other things, is to include an assessment of the effectiveness of the internal control over financial reporting for the issuer. Section 404 separately requires a registered public accounting firm to "attest to, and report on, the assessment made by management of the issuer." Although the statute envisions a discrete responsibility for the auditor under Section 404 – attesting to, and reporting on, management's internal control assessment – the Proposed Standard appears to expand the scope of the auditor's responsibility beyond that contemplated under Section 404. By proposing at the outset that the auditor's attestation required under Section 404 be characterized as "an integrated audit of the financial statements and internal control over financial reporting," we believe that the Proposed Standard proceeds from an incorrect premise.

To fulfill Congress's mandate under Section 404, an auditor clearly needs to perform sufficient attest procedures to reach a conclusion regarding management's own assessment and evaluation of the issuer's internal control over financial reporting. These attest procedures need to be robust and aligned with the scope of the auditor's responsibility under Section 404. However, by proposing that the auditor conduct an audit of the internal control over financial reporting, the Proposed Standard embraces a level of testing that is more extensive than that contemplated under the statute. If Congress had intended the auditor to conduct a full-blown audit of an issuer's internal control over financial reporting, it would have expressed such intent by using the term "audit" rather than "attest," and it would have made clear that the scope of such "audit" extended to the entirety of the issuer's internal control over financial reporting and not just management's assessment of this function. Accordingly, we urge the Board to revisit the scope of the Proposed Standard.

In addition to our concerns around the scope of the standard, we believe that the standard as currently drafted, does not permit an auditor enough latitude to exercise its judgment with respect to what is an appropriate level of testing for the specific company. In companies that have strong control environments, routine transactional processing should only require a minimal amount of detailed testing of the controls. Further, the amount of detailed testing should vary by not only the type of transaction stream, but also by the auditor's judgment as to the risk of a material weakness or significant deficiency based on the control environment, including external factors. For example, the payroll cycle would have regular checks by employees and tax regulators, and therefore, an auditor might deem most of the risk to come from unauthorized people being paid and focus detailed testing on that area. In addition, we believe that auditors should be permitted to vary the level of testing from year to year based upon whether there have been changes in the documented controls.

Finally, we believe that a standard that more appropriately focuses on the significant issues around business risk, fraud prevention and detection would better serve the needs of investors rather than the very prescriptive detailed testing approach in the Proposed Standard.

Using the Work of Management and Others

The Proposed Standard sets forth several principles that limit the ability of the auditor to rely on the work of management and others in conducting the required attestation. Specifically, the Board proposes to prohibit reliance on the work of management and others when the internal controls at issue relate to the prevention or detection of fraud that is reasonably likely to have a material effect on the issuer's financial statements and to restrict reliance where the internal controls relate to non-routine transactions. Reliance is essentially only unfettered where the controls relate to routine processing. In addition, the proposal requires that the auditor's own work, on an overall basis, form the basis for the required attestation.

These proposed restrictions may have been suitable if the proposal were being adopted as a stand-alone effort to enhance internal control over financial reporting, but it is not. The S-O Act and the rules adopted by the U.S. Securities and Exchange Commission (the "SEC") to implement Section 404 already bolster the internal control over financial reporting function. Under Section 404, management is required to design and evaluate the effectiveness of the internal control over financial reporting, to prepare an annual report evaluating this function, and to certify as to the effectiveness of these internal controls. Our members and their financial and accounting teams take these new obligations very seriously. The proposed restrictions on the auditor's ability to rely on the work of management and others give insufficient credit to the significant steps that issuers are taking to comply with the Section 404 requirements.

Rather, the Proposed Standard would require auditors to develop and obtain separate and extensive evidence about whether the internal controls are effective. Consistent with the statutory requirement that the auditor attest to management's evaluation of these controls, the auditor should be able to exercise its judgment in deciding whether to rely on management's or others work with respect to the entire range of internal controls, not simply controls for routine processes. This approach will eliminate duplicative, unnecessary testing that would increase issuers' costs significantly with only questionable benefit, if any, for investors.

The final standard also should reflect attestation procedures that allow auditors to place greater reliance on testing performed by internal auditors. The internal audit function is set up to serve as a separate check on the financial reporting process in addition to the work performed by the external auditor. Yet, the Proposed Standard subjects the work performed by internal audit to the same proposed guidelines for reliance to which others within an issuer organization would be subjected. The final standard should allow an auditor to place greater reliance on work performed by internal audit where the outside auditor views the internal auditor to be sufficiently independent and competent.

Accordingly, the final standard should allow the auditor greater flexibility in determining whether to place reliance on the work performed by management and others within the issuer, including, in particular, the internal audit function.

Evaluation of the Effectiveness of the Audit Committee

The Proposed Standard provides that the auditor should evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting as part of its attestation requirements. The Board proposes that this evaluation should include, among other things, review of the audit committee's independence from management, compliance with applicable listing standards, and the level of involvement and interaction with the auditor (including the committee's role in appointing, retaining and compensating the independent auditor).

We believe that this proposed requirement is particularly inappropriate given the audit committee's direct responsibility for the appointment, compensation, retention and oversight of the registered public accounting firm under Section 301 of the S-O Act and implementing SEC and securities markets rules and listing standards. By creating a dual evaluation standard for the auditor and audit committee, the proposal would establish a clear conflict of interest. Moreover, the audit committee has responsibilities that go well beyond those in which it interacts with the external auditor, and the auditor does not have any particular expertise with respect to such issues as the independence of individual audit committee members from management. Accordingly, we believe that this aspect of the proposal is ill-conceived, and we urge the Board to eliminate it.

Definitional Issues

We have additional concerns about certain of the definitional aspects of the Proposed Standard. First, the Board proposes a "more than remote likelihood" standard to evaluate whether a deficiency rises to the level of a "significant deficiency" and whether a significant deficiency rises to the level of a "material weakness." This proposed standard creates an unreasonably low threshold for placing a purported deficiency into the "significant deficiency" category and for placing a purported "significant deficiency" into the "material weakness" category. We believe the current standard for determining whether the control component reduces to "a relatively low level" the risk of misstatement is more appropriate for each of these definitions, and we urge the Board to adopt this standard.

Second, the definition of "significant deficiency" also includes the concept that the deficiency at issue must be one that results in an inability to prevent or detect fraud that results in a misstatement that is more than "inconsequential in amount." It is unclear what this phrase is intended to mean; more than "inconsequential in amount" could mean relatively de minimis amounts to any given issuer. This construction could lead to the reporting of deficiencies that are by no means material, simply because they represent a perceived, consequential dollar amount. We therefore also urge the Board to replace this vague construction with a "materiality" concept, which has a more familiar and developed meaning under the securities laws.

* * *

We appreciate your consideration of these comments, and we would be happy to discuss these matters further or to meet with you if it would be helpful.

Sincerely,

David L. Shedlarz

Office of the Secretary: Re: Rulemaking Docket Matter 008

I am writing to you on behalf of the California Public Employees' Retirement System (CalPERS). CalPERS is the largest public pension system in the U.S., with approximately $148 billion in assets. We manage the retirement benefits and health insurance on behalf of nearly 1.4 million members.

CalPERS is very supportive of the PCAOB efforts to improve standards of financial reporting by publicly-traded companies and to improve standards of auditing those financial statements. CalPERS appreciates the opportunity to comment on the Proposed Auditing Standard – An Audit of Internal Control over Financial Reporting Performed in Conjunction with an Audit of Financial Statements. CalPERS expresses general support of the objectives of the Proposed Auditing Standard.

In addition, CalPERS would like to offer the following comments on some of the specifics of the Proposed Auditing Standard which is pursuant to Section 404(b) as well as Section 103(a)(2)(A) of the Sarbanes-Oxley Act of 2002.

1. <u>Management Assessment of Internal Controls.</u> Section 404(b) of Sarbanes-Oxley requires that "each registered public accounting firm that prepares or issues the audit report for each issuer shall attest to, and report on, the assessment {of internal controls} made by management of the issuer." The intent seems to be that management should make the assessment and the audit firm shall then gather sufficient competent evidence to attest to the validity, degree of validity, or non-validity of the assertion. We believe that the opinion on management's internal control assessment should have a graded scale rather than simply pass or fail. Implicit in this section of Sarbanes-Oxley is that the auditors will not be auditing their own work in preparing their opinion.

As a best practice for corporate governance, CalPERS believes that the Audit Committee should be involved in setting internal control policies and that management should execute these policies. We believe that part of the rationale in having management prepare the assessment is to encourage management to continually be involved in the internal control structure, procedures and evaluation, and to take ownership of the assessment. This serves to keep management informed of and contributing to improvements in the internal control structure, which is essential to the success of the internal control structure.

The proposed standard raises the question of reliance on the work of management and "others" by the external auditors. We will address this question by first discussing reliance on the work of management, then the internal auditors, and finally address the question of reliance on work of the remaining "others."

Work of Management; the external auditors should not simply rely on the work of management, but should review the process by which the assessment was obtained, and re-perform and test the assessment *as necessary*. Nevertheless, we agree an integrated audit of internal control and financial statements is necessary. However, reliance on the work of Internal Auditors should assist the external auditor in formulating an opinion. (Question 1-3, 6 of the Proposed Auditing Standards) *(*AICPA's Statements on Standards, AT Section 501.13 – Components of an Entity's Internal Control and Section 501.14-.15 Limitations of an Entity's Internal Control)

Reliance on Work of Internal Auditors. An important responsibility of the internal auditors is to continually evaluate, test and monitor internal controls of an entity. Therefore, the external auditors would determine if the Chief Internal Audit Executive is organizationally independent and review the qualifications of the internal auditors and the quality of their work so that they can determine the degree of reliance on the work of the internal auditors. The International *Standards for the Professional Practice of Internal Auditin*g provides the framework for independence and objectivity and competence of work performed by internal auditors. Ideally, the Chief Audit Executive should report functionally to the Audit Committee and administratively to the Chief Executive Officer. We also believe that the relationships of the Audit Committee, the External Financial Statement Auditor, other External Auditors, and the Internal Auditors are well outlined in the Example Audit Committee Charter endorsed by the Association of Public Pension Fund Auditors (APPFA). This Example Audit Committee Charter is available on their web site (www.appfa.org) in the References and Links section, and is enclosed as an attachment. (Also, guidance in AU Section 322, The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements provides direction to the external auditors in assessing the competence and objectivity of internal auditors.)

Reliance on Outsourced Internal Audit Work – Potential Conflicts of Interest. Previously, we commented on the independence of and qualifications of internal auditors as factors that the external financial statement auditor should evaluate when determining whether or not they could rely on the work of the internal auditors. We believe a potential conflict of interest would occur if internal audit work is totally outsourced to another CPA firm. Because of mergers and restructuring there are few audit firms that are the dominant members of the AICPA in which these firms would be evaluating each others work. This situation has the same potential problems that occurred when the AICPA members performed the PEER reviews of each other and did not find any substantial problems. Consequently, it would be counter-productive to create a similar situation with respect to the relationship between the external financial statement auditor and the outsourced internal audit function.

Reliance on the Work of the Remaining "Others." Reliance on the work of the remaining "others" should be up to the discretion of the External Financial Statement Auditor. They should use the same criteria as when determining whether or not to rely on the work of internal auditors. These criteria are independence, qualifications, competence and the quality of the work.

In conclusion, CalPERS believes that the external audit firm should first review the process by which management arrived at its assessment of internal control, and then look directly at and test the company's internal control as required in order to gather sufficient competent evidence for forming an attestation opinion on management's assessment of the internal control structure. The external financial statement auditors may rely on the work of internal auditors and others as described above. (Questions 4-5, 9-16 of the Proposed Auditing Standard)

2. <u>Evaluation of the Audit Committee's Role in Internal Control.</u> The question of who should evaluate the Audit Committee's role in internal control deserves careful attention. Ideally, this evaluation should be performed by experts who are independent of the Audit Committee and independent of the company. Since the external audit firm is hired by the Audit Committee, the external audit firm cannot be independent of the Audit Committee. Therefore, we believe that the full Board should hire specialists from a different firm to perform this evaluation. We suggest that an optimal solution is to seek this evaluation from a firm that is not a CPA firm and is free from this potential source of conflicts of interest. This will allow the CPA firms to concentrate their core business of audit and attestation work, and to be in a position to review and evaluate the work performed by others without potential conflicts of interest.

   In the event that the External Financial Statement Auditor determines that there is an internal control weakness with regard to the Audit Committee, then this should be reported in writing to the full Board. The full Board is then responsible for investigating and correcting the deficiencies. In addition, the external auditor should consider the facts in rendering their opinions on the internal control assessment by management and their opinion on the financial statements. (Questions 22-24 of the Proposed Auditing Standard)

3. Experience Levels of Audit Staff. CalPERS believes that the PCAOB should define the minimum experience levels expected of various levels of audit staff. In addition, we believe that companies should formulate their own contracts with the audit firms so they can add experience requirements beyond the PCAOB minimum. Contract terms should include minimum qualifications and specifications of experience for the audit firm, key personnel, and audit staff. These terms should include the right to approve changes in key personnel. (Question 5 of the Proposed Auditing Standard)

Although, we do not directly respond to all 31 questions we believe our comments provides the PCAOB an overview of CalPERS' response.

In summary, CalPERS reiterates its appreciation of the work that the PCAOB is performing and the opportunity to participate in the process. CalPERS believes that this work is essential for the integrity of the financial markets, and CalPERS looks forward to continual interchange of information and ideas with the PCAOB. If you have any questions regarding our comments on the two proposed rules, please contact Ted White, Director of Corporate Governance, at (916) 341-2731, or Larry Jensen, Chief of the Office of Audit Services, at (916) 795-0802.

Sincerely,

Mark Anson
Chief Investment Officer

Office of the Secretary: Re: Rulemaking Docket Matter 008

We would like to elaborate on our comment # 2, Evaluation of the Audit Committee's Role in Internal Control, in our prior correspondence dated November 21, 2003. In our prior letter we questioned whether the external audit firm can perform an independent review of the Audit Committee. We believe that a *potential* conflict of interest arises if the external audit firm reviews the role of the Audit Committee in internal control. However, we would look to the PCAOB to determine whether a conflict *in fact* has occurred, and we would further look to the PCAOB to exercise its authority to enforce the independence of the external audit firm with respect to a review of the Audit Committee.

Again, CalPERS wishes to express its continued support of the PCAOB in its efforts to improve the standards of financial reporting by publicly-owned companies and the standards of auditing by external audit firms. We appreciate the opportunity to participate in the process of enhancing the financial integrity of our financial markets.

Sincerely,

Mark Anson

Example Audit Committee Charter

Endorsed by the Association of Public Pension Fund Auditors (APPFA)

The following Example Audit Committee Charter captures many of the best practices used at the present time, July of 2003. Of course, no example charter encompasses all activities that might be appropriate to a particular audit committee, nor will all activities identified in an example charter be relevant to every committee. Accordingly, this example charter may be tailored to each committee's needs and governing rules. Moreover, as applicable laws, rules and customs change, the audit committee charter should be updated.

Endorsement by the Association of Public Pension Fund Auditors (APPFA) means that this document is intended as a starting point of reference and as a guide to public pension systems in formulating and/or revising their own charters. To the extent that a public pension fund has unique circumstances, different applications and modifications of the example passages may be desirable.

Audit Committee Charter

PURPOSE

The purpose of this "Example Audit Committee Charter" is to assist the Board of Directors in fulfilling its fiduciary oversight responsibilities for the**:**

(1) Financial Reporting Process,
(2) System of Risk Management,
(3) System of Internal Control,
(4) Internal Audit Process,
(5) External Audit of the Financial Statements,
(6) Engagements with Other External Audit Firms,
(7) Organization's Processes for Monitoring Compliance with Laws and Regulations and the Ethics Policy, Code of Conduct and Fraud Policy,
(8) Special Investigations and Whistleblower Mechanism, and
(9) Audit Committee Management and Reporting Responsibilities.

AUTHORITY

The audit committee has authority to conduct or authorize investigations into any matters within its scope of responsibility. It is empowered to perform the following functions, which are numbered according the purposes listed above:

(1) Financial Reporting Process

- Oversee the reporting of all financial information.

- Resolve any disagreements between management, the external auditor and/or the internal auditor regarding financial reporting.

Example Audit Committee Charter

(2) System of Risk Management

- Provide the policy and framework for an effective system of risk management, and provide the mechanisms for periodic assessment of the system of risk management, including risks of the information systems, and risks of business relationships with significant vendors and consultants.

- Oversee all consultants and experts that make recommendations concerning the risk management structure and internal control structure.

(3) System of Internal Control

- Provide the policy and framework for an effective system of internal controls, and provide the mechanisms for periodic assessment of the system of internal controls, including information systems, and internal control over purchases from significant vendors and consultants.

- Ensure that contracts with external service providers contain appropriate record-keeping and audit language.

- Seek any information it requires from employees-all of whom are directed to cooperate with the committee's requests, or the requests of internal or external parties working for the audit committee. These parties include the internal auditors, all external auditors, consultants, investigators and any other specialists working for the audit committee.

(4) Internal Audit Process

- Appoint, compensate, and oversee the work of the Chief Audit Executive and oversee the work of the internal audit unit.

- Serve as the primary liaison and provide the appropriate forum for handling all matters related to audits, examinations, investigations or inquiries of the State Auditor and other appropriate State or Federal agencies.

(5) External Audit of the Financial Statements

- Appoint, compensate, and oversee the work of the certified public accounting firm employed by the organization to audit the financial statements.

- Pre-approve all auditing, other attest and non-audit services performed by the external financial statement audit firm.

(6) Engagements with Other External Audit Firms

- Appoint, compensate, and oversee the work of any other certified public accounting firm employed by the organization to perform any audits or agreed-upon-procedures other than the audit of the financial statements.

(7) Organization's Processes for Monitoring Compliance with Laws and Regulations and the Ethics Policy, Code of Conduct and Fraud Policy

- Provide the policy and framework for compliance with laws and regulations, and provide the mechanisms for periodic assessment of compliance, including compliance by significant vendors and consultants.

- Communicate with the Board regarding the organization's policy on ethics, code of conduct and fraud policy as it relates to internal control, financial reporting and all auditing activities.

Example Audit Committee Charter

(8) Special Investigations and Whistleblower Mechanism

- Retain independent counsel, accountants, or other specialists to advise the committee or assist in the conduct of an investigation.

- Ensure creation of and maintenance of an appropriate whistleblower mechanism for reporting of financial statement fraud and other fraud and inappropriate activities.

(9) Audit Committee Management and Reporting Responsibilities

- Receive and review reports on all public disclosures related to the purpose, authority and responsibilities of the Audit Committee. Consider having a Disclosure Subcommittee for this purpose.

- Report to the Board on the activities, findings and recommendations of the Audit Committee.

(1 – 9) Comprehensive Communication Responsibility

- Meet with the organization's officers, external auditors, internal auditors, outside counsel and/or specialists, as necessary.

COMPOSITION

The audit committee will consist of at least three and no more than seven members of the Board of Directors. The Board or its nominating committee will appoint committee members and the committee chair.

Each committee member will be both independent and financially literate. At least one member shall be designated as the "financial expert," as defined by applicable legislation and regulation.

MEETINGS

The committee will meet at least four times a year, with authority to convene additional meetings, as circumstances require. All committee members are expected to attend each meeting, in person or via tele- or video-conference. Meeting notices will be provided to interested parties in conformance with applicable laws, regulations, customs and practices. The committee will invite members of management, external auditors, internal auditors and/or others to attend meetings and provide pertinent information, as necessary. It will hold private meetings with auditors {Subject to open meeting laws} and executive sessions as provided by law. Meeting agendas will be prepared and provided in advance to members, along with appropriate briefing materials. Minutes will be prepared.

Example Audit Committee Charter

RESPONSIBILITIES

The committee will carry out the following responsibilities:

(1) Financial Reporting Process

- Obtain information and training to enhance the committee members' expertise in financial reporting standards and processes so that the committee may adequately oversee financial reporting.

- Review significant accounting and reporting issues, including complex or unusual transactions and highly judgmental areas, and recent professional and regulatory pronouncements, and understand their impact on the financial statements.

- Review with management, the external auditors, and the internal auditors the results of the audit, including any difficulties encountered.

- Review all significant adjustments proposed by the external financial statement auditor and by the internal auditor.

- Review all significant suggestions for improved financial reporting made by the external financial statement auditor and by the internal auditor.

- Review with the General Counsel the status of legal matters that may have an effect on the financial statements.

- Review the annual financial statements, and consider whether they are complete, consistent with information known to committee members, and reflect appropriate accounting principles.

- Review other sections of the annual report and related regulatory filings before release and consider the accuracy and completeness of the information.

- Review with management and the external auditors all matters required to be communicated to the committee under generally accepted auditing *Standards.*

- Understand how management develops interim financial information, and the nature and extent of internal and external auditor involvement.

- Review interim financial reports with management and the external auditors before filing with regulators, and consider whether they are complete and consistent with the information known to committee members.

- Review the statement of management responsibility for and the assessment of the effectiveness of the internal control structure and procedures of the organization for financial reporting. Review the attestation on this management assertion by the financial statement auditor as part of the financial statement audit engagement.

Example Audit Committee Charter

(2) System of Risk Management

- Obtain information about, training in and an understanding of risk management in order to acquire the knowledge necessary to adequately oversee the risk management process.
- Ensure that the organization has a comprehensive policy on risk management.
- Consider the effectiveness of the organization's risk management system, including risks of information technology systems.
- Consider the risks of business relationships with significant vendors and consultants.
- Reviews management's reports on management's self-assessment of risks and the mitigations of these risks.
- Understand the scope of internal auditor's and external auditor's review of risk management over financial reporting.
- Understand the scope of internal auditor's review of risk management over all other processes, and obtain reports on significant findings and recommendations, together with management's responses.
- Understand the scope of any other external auditor's or consultant's review of risk management.
- Hire outside experts and consultants in risk management as necessary.

(3) System of Internal Control

- Obtain information about, training in and an understanding of internal control in order to acquire the knowledge necessary to adequately oversee the internal control process.
- Ensure that the organization has a comprehensive policy on internal control and compliance.
- Review periodically the policy on ethics, code of conduct and fraud policy.
- Consider the effectiveness of the organization's internal control system, including information technology security and control.
- Consider any internal controls required because of business relationships with significant vendors and consultants.
- Understand the scope of internal auditor's and external auditor's review of internal control over financial reporting, and obtain reports on significant findings and recommendations, together with management's responses.
- Understand the scope of internal auditor's review of internal control over all other processes, and obtain reports on significant findings and recommendations, together with management's responses.
- Review the role of the internal auditor's involvement in the corporate governance process, including corporate governance documentation and training.
- Ensure that contracts with external service providers contain appropriate record-keeping and audit language.
- Direct employees to cooperate with the committee's requests, or the requests of internal or external parties working for the audit committee. These parties include the internal auditors, all external auditors, consultants, investigators and any other specialists working for the audit committee.

Example Audit Committee Charter

(4) Internal Audit Process

- Obtain the information and training needed to enhance the committee members' understanding of the role of internal audits so that the committee may adequately oversee the internal audit function.
- Oversee the selection process for the chief audit executive.
- Assure and maintain, through the organizational structure of the organization and by other means, the independence of the internal audit process.
- Ensure that internal auditors have access to all documents, information and systems in the organization.
- Ensure there are no unjustified restrictions or limitations placed on the Chief Audit Executive and internal audit staff.
- Review with management and the Chief Audit Executive the charter, objectives, plans, activities, staffing, budget, qualifications, and organizational structure of the internal audit function.
- Receive and review all internal audit reports and management letters.
- Review the responsiveness and timeliness of management's follow-up activities pertaining to any reported findings and recommendations.
- Receive periodic notices of advisory and consulting activities by internal auditors.
- Review and concur in the appointment, replacement, or dismissal of the Chief Audit Executive, if allowed by state law.
- Review the performance of the Chief Audit Executive periodically.
- Review the effectiveness of the internal audit function, including compliance with The Institute of Internal Auditors' *Standards for the Professional Practice of Internal Auditing.*
- On a regular basis, meet separately with the Chief Audit Executive to discuss any matters that the committee or internal audit believes should be discussed privately {Subject to open meeting laws}.
- Delegate to the Chief Audit Executive the management of the contract for the external financial statement auditor, and the management of the contracts for any other certified public accountants.
- Designate the Chief Audit Executive as the primary point of contact for handling all matters related to audits, examinations, investigations or inquiries of the State Auditor and other appropriate State or Federal agencies.

Example Audit Committee Charter

(5) External Audit of the Financial Statements

- Obtain the information and training needed to enhance the committee members' understanding of the purpose of the financial statements audit and the role of external financial statement auditor so that the committee may adequately oversee the financial statement audit function.

- Review the external auditor's proposed audit scope and approach, including coordination of audit effort with internal audit.

- Review the performance of the external financial statement audit firm, and exercise final approval on the request for proposal for, and the appointment, retention or discharge of the audit firm. Obtain input from the Chief Audit Executive, management and other parties as appropriate.

- Define the services that the external financial statement auditor is allowed to perform and the services that are prohibited.

- Pre-approve all services to be performed by the external financial statement auditor.

- Review the independence of the external financial statement audit firm by obtaining statements from the auditors on relationships between the audit firm and the organization, including any non-audit services, and discussing these relationships with the audit firm. Obtain from management a listing of all services provided by the external audit firm. Obtain information from the Chief Audit Executive and other sources as necessary.

- Review and approve the audited financial statements, associated management letter, attestation on the effectiveness of the internal control structure and procedures for financial reporting, other required auditor communications, and all other auditor reports and communications relating to the financial statements.

- Review and approve all other reports and communications made by the external financial statement auditor.

- Review the responsiveness and timeliness of management's follow-up activities pertaining to any reported findings and recommendations.

- On a regular basis, meet separately with the external financial statement audit firm to discuss any matters that the committee or auditors believe should be discussed privately {Subject to open meeting laws}.

- Provide guidelines and mechanisms so that no member of the audit committee or organization staff shall improperly influence the auditors or the firm engaged to perform audit services.

- Ensure production of a report of all costs of and payments to the external financial statement auditor. The listing should separately disclose the costs of the financial statement audit, other attest projects, agreed-upon-procedures and any non-audit services provided.

Example Audit Committee Charter

(6) Engagements with Other External Audit Firms

- Obtain the information and training needed to enhance the committee members' understanding of the role of the other external audit firm(s) so that the committee may adequately oversee their function(s).

- Review the other external audit firm's (firms') proposed audit or agreed-upon-procedures scope and approach, including coordination of effort with internal audit.

- Review the performance of the other external audit firm(s), and exercise final approval on the request for proposal for, and the appointment, retention or discharge of these audit firm(s).

- Pre-approve the scope all services to be performed by the other external auditor.

- Review the independence of the other external audit firm(s) by obtaining statements from the audit firm(s) on relationships between these audit firm(s) and the organization, including any non-audit or non-attest services, and discussing the relationships with the audit firm(s). Obtain from management a listing of all services provided by the other external audit firm(s). Obtain information from the Chief Audit Executive and other sources as necessary.

- Review and approve the reports of the audits and/or agreed-upon-procedures.

- Provide a forum for follow up of findings from the audit reports or agreed-upon-procedures.

- Meet separately with the other external audit firm(s) on a regular basis to discuss any matters that the committee or staff of the audit firm(s) believe should be discussed privately {Subject to open meeting laws}.

- Ensure production of a report of all costs of and payments to other external audit firm(s). The listing should separately disclose the costs of any audit, other attest projects, agreed-upon-procedures and any non-audit services provided.

(7) Organization's Processes for Monitoring Compliance

- Review the effectiveness of the system for monitoring compliance with laws and regulations and the results of management's investigation and follow-up (including disciplinary action) of any instances of noncompliance.

- Review the findings of any examinations by regulatory agencies, and any auditor observations, including investigations of misconduct and fraud.

- Review the process for communicating to all affected parties the ethics policy, code of conduct and fraud policy to organization personnel, and for monitoring compliance therewith.

- Obtain regular updates from management and organization legal counsel regarding compliance matters.

- Monitor changes and proposed changes in laws, regulations and rules affecting the organization.

Example Audit Committee Charter

(8) Special Investigations and Whistleblower Mechanism

- Institute and oversee special investigations as needed.
- Provide an appropriate confidential mechanism for whistleblowers to provide information on potentially fraudulent financial reporting or breaches of internal control to the audit committee.

(9) Audit Committee Management and Reporting Responsibilities

- Regularly report to the Board of Directors about all committee activities, issues, and related recommendations.
- Perform other activities related to this charter as requested by the Board of Directors, and report to the Board.
- Provide an open avenue of communication between internal audit, the external financial statement auditors, other external auditors, management and the Board of Directors.
- Review any other reports that the organization issues that relate to audit committee responsibilities.
- Confirm annually that all responsibilities outlined in this charter have been carried out. Report annually to the Board, members, retirees and beneficiaries, describing the committee's composition, responsibilities and how they were discharged, and any other information required by rule, including approval of non-audit services.
- Evaluate the committee's and individual member's performance on a regular basis, and report to the Board.
- Review and assess the adequacy of the committee charter annually, requesting Board approval for proposed changes, and ensure appropriate disclosure as may be required by law or regulation.

Washington, DC 20006

RE: PCAOB RELEASE NO. 2003-017;
DOCKET MATTER No. 008

Office of the Secretary:

This letter is sent to register the California State Teachers' Retirement System's (CalSTRS) support of the Public Company Oversight Board (PCAOB) proposed auditing standard regarding the attestation to the adequacy of internal controls. As you are aware, CalSTRS is a public pension fund, established for the benefit of California's public school teachers over 90 years ago. CalSTRS has assets of approximately $103 billion; $43 billion of this amount is invested in the domestic equity market. These assets represent the retirement plan for approximately 715,436 participants. The long-term nature of CalSTRS' liabilities has made us keenly interested in efforts to restore investor confidence in the capital markets. CalSTRS supports the efforts of the PCAOB to improve standards of financial reporting by publicly traded companies and to improve the ability of investors to rely on the financial statements put forth by corporations.

CalSTRS believes that the enactment of the Sarbanes-Oxley Act of 2002 was an important milestone for investors, but we also recognize that the great majority of the implementation of the legislation falls to the Securities and Exchange Commission (the Commission) and the PCAOB. We support both the Commission's and the PCAOB's efforts to accommodate the timelines articulated in the Sarbanes-Oxley Act. We do not intend to answer all 31 questions put forth by the PCAOB in its requests for comment on the issue, but we do want to register our support for an integrated audit standard and for the continued supremacy of the board of directors as the fiduciary responsible to investors in public companies.

CalSTRS believes that the external auditor should attest to and report on the internal controls assessment made by management/the issuer. Further, we believe that the board's independent audit committee should set the policies and standards relating to internal controls and have in place a procedure for informed knowledge of their application. We do not believe that the external auditor should evaluate the audit committee; we believe the standards of diligence and duty expressed in the audit committee charter, along with the various attestations and certifications required by the SEC, and the Sarbanes-Oxley Act should perform this function for investors. We believe that such a rule would pose an impossible conflict of interest for both the audit committee and the external auditor and that this tension would not serve the investors' goal of obtaining a fair opinion on the accuracy of the issuer's financial information.

CalSTRS does not believe that mandating that the external auditors perform a separate audit of the internal controls is cost effective for investors; on the one hand, the PCAOB seems to reason that the most burdensome costs will be assumed in the first year of the rule and that economies will come in subsequent years. That may be a fallacy, as seemingly, these economies would come from routine checking of the criteria/ standards/procedures imposed in the first year. This would make it a rote exercise and of little benefit to investors; so, why mandate the establishment of a system whose maintenance will not do the job that the PCAOB envisions? The independent directors are the members of the audit committee and have a fiduciary responsibility to investors in that capacity; we support letting them fulfill that responsibility. We believe that the independent audit committee should set up controls and procedures to mitigate the risks associated with inadequate internal controls and/or inaccurate financial reports. The PCAOB may want to review the charters and opine on the audit committee's diligence in mitigating the risks to the public.

Finally, we believe that the external audit opinion should be a single one; we do not support the proposal that the integrated audit result in two opinions: one on internal controls and one on the financial statements. We believe that this will be confusing to investors and will not aid in the goal of more reliable financial reporting. It is possible that internal control over financial reporting could be bad and that the reported figures present a true and accurate record, but we think it best to contain this in a single opinion.

Thank you for the opportunity to comment on this matter. If you would like to discuss this letter, please feel free to contact me directly. We are filing this comment electronically in the interest of timeliness, but you may reach me at 916-229-3706 by phone and certainly by the email address on this communication.

Sincerely,

Jack Ehnes

Dear Sir:

Re: PCAOB Rulemaking Docket Matter No. 008
Proposed Auditing Standard - An Audit of Internal Control Over Financial Reporting
Performed in Conjunction with an Audit of Financial Statements

The Canadian Bankers Association (CBA), appreciates the opportunity to provide comments on the Public Company Accounting Oversight Board's proposed auditing standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements*.

The CBA is the main professional industry association, representing over 40 of Canada's domestic and foreign-owned chartered banks. Several of our member institutions are subject to the reporting requirements of the Securities Exchange Act of 1934. The CBA is also a principal contributor to the development of accounting standards that affect Canadian banks. Our member institutions make a significant contribution to the Canadian economy and six of our largest members represent, in aggregate, total assets under administration of approximately Canadian $2,863.4 billion dollars.

Our detailed comments appear in the attached Appendix. We would be pleased to answer any questions that you may have in respect of our comments.

Sincerely,

Original signed by Kelly Shaughnessy

APPENDIX

Comments of the Canadian Bankers Association on the Proposed Auditing Standard - An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements

Questions Regarding Using the Work of Management and Others:

Question 12. To what extent should the auditor be permitted or required to use the work of management and others?

We are of the view that the auditor should be free to exercise his/her professional judgment, under the guidance of the existing generally accepted auditing standards, in determining whether and to what extent the auditor can reasonably place reliance on the work of management and others. Consequently, we do not believe that the extent to which the auditor may rely on the work of others needs to be prescribed.

Question 13. Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?

We do not believe that the extent to which the auditor may rely on the work of others needs to be prescribed. It is our view that organizations should be encouraged to have robust documentation and assessment processes. To that end, our members have made efforts to supply quality evidence to their external auditors, which has been used to reduce the extent of the auditors' independent testing.

Question 14. Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

We do not believe the proposed standard places sufficient emphasis on the work of internal audit. It does not give adequate recognition to the depth of experience and business knowledge resident in our members' internal audit groups. It is our view that, to the extent that such groups are competent and objective, their work should be relied upon extensively by the external auditor and that such extent need not be prescribed.

In particular, we disagree with the proposal that the auditors should not rely on others for certain information technology controls and walkthroughs.

In our member banks' organizations, the effectiveness of pervasive controls over information technology is critical to the successful execution of their business strategy. As a result, our members make substantial investments in objective and competent specialized internal audit expertise to provide assurance that these controls are designed and operating effectively for both efficiency and effectiveness, as well as for the reliability of financial reporting. These resources require in-depth knowledge of our varied and complex technology systems. Our members' external auditors have traditionally placed a high level of reliance on these pervasive technology controls and have utilized internal audit testing to a large extent in reaching their conclusions about these controls.

The proposed standard is suggesting a full duplication of effort in this area for which there is no clear benefit to the issuers or investors. The requirement will necessitate substantial new investments in technology expertise by public accounting firms that will need to be financed in the first instance by issuers, and ultimately by investors.

Similarly, the requirement to have external auditors perform walkthroughs themselves does not give adequate recognition to the depth of experience and business knowledge resident in internal audit groups. While we agree that some reperformance would be appropriate in this area if reliance is placed on the work of management and others, we believe that efficiencies can be achieved if the external auditors are permitted to use this work to support their conclusions.

Question 16. Is the requirement for the auditor to obtain the principal evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?

We do not believe that the benchmark of principal evidence is appropriate. There is no doubt that the auditor must obtain evidence that management's assertion is reliable and that the internal controls are actually in place and effective. It is our view that existing auditing standards provide sufficient guidance as to the appropriate level of effort and involvement of the auditor in executing their work and determining whether or not, and to what extent, to rely on the work of others.

The introduction of this new term raises interpretive issues in respect of the role of auditors that are unnecessary and potentially costly and divisive. Inasmuch as the concept of *principal evidence* is open to interpretation, it may lead an auditor to perform more work than necessary in circumstances where substantial testing and documentation by management, internal audit and other third parties is already in place.

<u>Questions Regarding Evaluating Results:</u>

Question 17. Will the definitions in the proposed auditing standard of significant deficiency and material weakness provide for increased consistency in the valuation of deficiencies? How can this definition be improved?

Identification of significant deficiencies and material weaknesses is necessarily an area that involves the exercise of professional judgment. Consistency is always difficult to achieve in such an area. An important step to achieving consistency will be to ensure that the definitions used in the draft standard are compatible with the overall definition of internal control and how companies evaluate and seek to mitigate risk. We have serious concerns on these matters, as discussed below.

We have concerns that the definitions of significant deficiency and material weakness in internal control in the proposed standard are impractical and overly prescriptive, inasmuch as the definitions imply that an excessively high level of assurance must be obtained in order to conclude that internal control is effective. Both of these definitions refer to deficiencies that result in "a more than remote likelihood" that financial statement errors of a certain magnitude will occur. By way of example, human error remains a constant potential issue in respect of internal control and, as such, renders the possibility of more than a remote likelihood that a misstatement will occur, and as consequence, the standard of a "more than remote likelihood" can not be achieved. The business success of our members emanates from managing rather than avoiding risk. The manner in which our members assess their controls, likewise, should allow for some risk tolerance, including acknowledgement of cost/benefit considerations.

We note that existing auditing standard AT 501 provides additional useful guidance that does not appear in the proposed auditing standard. We suggest that these qualitative considerations be brought into the final attestation standard. In particular, the notion set out in paragraph .40 of AT 501 that the consideration of whether a deficiency represents a material weakness should include consideration of the overall control environment. In recent corporate failures, many of the problems were caused by weak overall control environments and inappropriate "tone at the top." The organizations represented by our members place a high importance on having strong overall control environments and ensuring that executives and employees live up to these high standards. The significance of deficiencies in internal control cannot be properly evaluated without consideration of these matters.

The definition of internal control contemplates providing reasonable assurance that transactions are reported as required by GAAP. The proposed definitions of significant deficiency and material weakness are incompatible with paragraph 16 of the proposed standard, which indicates that management's assessment of internal control effectiveness is at the level of reasonable assurance, as is the auditor's opinion. Paragraph 16 further states that "reasonable assurance includes the understanding that there is a relatively low risk that material misstatements will not be prevented or detected on a timely basis." We suggest that existing GAAS definitions of significant deficiency and material weakness should be used instead of those proposed in the draft.

Other Comments: Use of Service Auditors Report

The wording with respect to the operating effectiveness of outsourcing arrangements described in Appendix B, paragraphs B35 to B38, implies that an auditor should place reliance on a service auditor's report as the primary source of assurance. We are of the view that a determination in favour of stronger reliance can be made from an assessment of management's processes for controlling risk. Effective management of issuers' outsourcing arrangements is in the interest of both their shareholders and their customers. The processes for controlling risk is embedded in contract negotiations, service level agreements and monitoring, input and output controls, and in some cases through the contractual right of strong internal audit areas to monitor and report on these activities.

Within the Canadian context, a "Service Auditors Report" takes the form of a section 5900 report. These reports contain less detail than the more pervasive SAS 70 review, and are typically prepared at the outsourcers' fiscal year end, which may differ more or less significantly, from the fiscal year end of our members. The lack of clarity around a "significant period of time" as noted in paragraph B37, means that our members run the risk of incurring considerable incremental costs should the definition be for a period that is less than 12 months.

CARD®*decisions* Response to Proposed Auditing Standard:

"AN AUDIT OF INTERNAL CONTROL OVER FINANCIAL REPORTING PERFORMED IN CONJUNCTION WITH AN AUDIT OF FINANCIAL STATEMENTS

TABLE OF CONTENTS

EXECUTIVE SUMMARY

Will the draft standards improve the quality and quantity of information on internal control over financial reporting?

Our view is no, they will not. We believe Congress intended to reinforce management's accountability for reliable financial reporting by requiring auditors evaluate and form an opinion on management's assertions on internal control effectiveness. These standards are primarily for auditors to form a direct subjective opinion on internal control effectiveness through traditional audit approaches. These approaches have been in use for decades and have often proven to be ineffective.

The standards require significant revisions to focus the attention of external auditors on opining on the reliability of management's assertions on control and to guide the auditor in forming an opinion directly on the quality of those assertions.

Will the draft standards improve the capability and motivation of managers and work groups to provide more reliable assertions on internal control effectiveness and to be accountable for those assertions?

Our view is no, they will not. There is little guidance for auditors, managers, work groups Boards or any other stakeholder on the various approaches, methodologies, tools and technologies available for assessing, designing, documenting and reporting on internal control effectiveness.

There is little incentive for managers and work groups to fully and candidly divulge disclosure risks, particularly those classified as "material weaknesses".

The standards as drafted are dominated by a discussion of controls (1309 references) in the absence of serious attention to and analysis of disclosure risks (76 references). Although the proposals will generate substantial revenue for the external auditing profession and add a major ongoing assurance burden in companies, we believe they will do little to cost effectively solve the real problems.

The standards require significant revision to recognize and discuss the approaches, methodologies and tools used by assurance professions, particularly the use of criteria based approaches to forming an opinion on the quality of and reliability of management assessments.

Will the draft standards help drive down or even justify the cost of control over financial reporting?

Our view is no, they will not. They simply justify more auditing and more controls. They provide little guidance or useful definition as to what constitutes effective control and material/significant deficiencies. We believe the standards as drafted will result in a large increase in formal assurance costs with only limited positive impact.

The standards should be significantly revised to recognize more powerful and objective approaches to documenting, assessing, designing and reporting on controls and control effectiveness and to assessing the cost effectiveness of controls over financial reporting.

GENERAL COMMENTS

General comments on the Proposed Standards are set out here.

1. Will these proposed standards increase the quality and quantity of information on risks and controls related to financial disclosure?

The standards as drafted will not produce more and better information on risk and control over financial reporting.

For the most part, stakeholders will be given Pass/Fail assessments of internal control effectiveness over financial reporting developed by external auditors, supplemented by explanations of significant deficiencies or material weaknesses. The basic design of the internal control framework, its strengths and accepted deficiencies will not be reported to stakeholders. There is no framework for doing so proposed in these standards.

We see the continuation in this standard of subjective belief-based, not fact-based, auditor-driven opinions on what constitutes effective control.

We see little guidance to help auditors assess and report on the reliability of management's assertions on internal control effectiveness.

The standards as drafted struggle with concepts of "deficiencies, significant deficiencies and material weaknesses" that are for all practical purposes, indefinable and subjective to a degree that makes external disclosure of these subjective views dangerous.

Other assurance professions, most notably quality, environmental and safety professionals have developed very effective tools, methods and criteria for evaluating and reporting on risk and control in their fields. They have created meaningful analytical tools useful for identifying root cause problems and providing practical, rather than dogmatic solutions.

What is needed?

What is needed is a paradigm shift.

Stakeholders need to be able to come to their own conclusion on the role of internal control effectiveness in investment decisions and to be able to make risk acceptance decisions based on the stated level of internal control effectiveness in a corporation. A framework for gathering and reporting this information is required. Pass/Fail assessment do little to meet these needs.

Stakeholders need to be able to compare changes in a company's internal control structure over time and to compare one company to another, just as they now compare financial statements.

The information in disclosures on internal control effectiveness likely to result from these proposed standards will not support such an analysis.

It would be unthinkable to replace published financial statements with an auditor's subjective opinion on a company's financial health.

It is not sufficient to provide an opinion on internal control effectiveness without a positive framework to support such an opinion.

What is needed is a criteria-based approach to evaluating internal control over financial reporting.

Bond rating agencies rate corporate debt against defined criteria and publish credit ratings that have real financial consequences for creditors and that are relied upon by investors.

In the quality movement, the Baldrige model is an example of a system that measures a company's quality framework against defined, weighted, published criteria. ISO standards provide another example. Management makes assertions as to the criteria in place and auditors evaluate the reliability of those assertions.

The Basel Capital Accord on bank safety (Basel II) provides another powerful framework for assessing governance and the management of risk and control.

Principles from all of these frameworks could be adapted to reporting on internal control effectiveness over financial reporting.

The auditing profession, internal and external, has consistently failed to predict governance failures in the past. There is no reason to believe these proposed standards will make a difference, other than reducing returns to shareholders and retarding economic growth.

We believe the auditing profession can best add value by providing a framework for disclosing information on risk and control status such that stakeholders can make their own informed investment decisions.

2. Do these proposed standards improve the capability of managers, work groups and others to make reliable financial disclosures and to make reliable assertions on the effectiveness and status of risk and control over financial reporting?

Our conclusion is no, they do not.

The proposed standards do recognize the need to address the capability of auditors in the area of control assessment. They do not address the capability required by managers and work groups to make and support reliable assertions on internal control effectiveness over financial reporting. They do not define a common body of knowledge, tools, methodologies, approaches or technologies for assessing and reporting on internal control effectiveness over financial reporting. COSO 2003 can help in that regard. COSO 1992, although a big advancement in 1992, is not up to the task.

In order to conclude that the capability of managers and work groups to provide more reliable assertions on the status of risk and control over financial reporting is increased, much more is required to provide Boards, managers, work groups and auditors with skills training, rigorous, reliable methodologies and useful tools for describing, assessing, designing and reporting on internal control effectiveness and standards for assessing the reliability of those assertions.

For the most part, the proposed standards speak a language that is outmoded and invalid. The draft standard provides little in the way of analytical tools and guidance to managers and work groups. They appear to represent control assessment beliefs that have been in use for decades. The same decades that numerous corporate governance failures have occurred.

What is needed?

We believe that the required body of knowledge exists and the skills, methodologies and tools to increase the capability of all those involved in the financial reporting process are available. In our response to Question 5 we have provided some specific examples.

3. Will these proposed standards motivate managers and work groups to provide better and more reliable information and disclosures on risk and control related to financial reporting?

Our conclusion is no, they will not.

Managers and work groups who report “deficiencies” will effectively and immediately be penalized with adverse opinions by their auditors, more burdensome internal controls, negative market reactions and higher external audit fees. Yet we know “deficiencies” in internal control over financial reporting as defined in the proposed standards have existed for decades in hundreds even thousands of successful public companies.

As written, the proposed standards require auditors to recognize the quality of work done by managers and work groups in supporting their assertions on internal control effectiveness, but the proposed standards require substantial direct verification of internal control by auditors rather than examining and focusing on the reliability of management’s representations on control and risk status.

Unless the burden of accountability for making reliable assertions on internal control over financial reporting is clearly and exclusively assigned to managers and work groups, and they are evaluated specifically on the quality and reliability of their representations, their motivation to do so competently and reliably will be weak. Auditors will do it for them. Why should they do it themselves?

What is required?

We believe the standards should be revised to encourage a risk based approach to control design, to encourage management's candid disclosure of significant residual risks and where unacceptably high residual risks exist, to provide management with recourse to substantiate external disclosure with supplemental substantive testing and confirmation.

Standards that promote direct examination of internal control effectiveness by auditors will inevitably shift accountability away from management and with it any motivation for providing reliable representations.

Stakeholders deserve to know the quality of management's representations on the effectiveness of the external disclosure risk management systems those managers design and maintain.

4. Will these proposed standards allow a reduction in the cost and burden of implementing effective control over financial reporting?

We believe the standards as proposed will significantly increase the cost of control and the cost of non-value adding assurance. We are concerned that the increase in control will not be justified and will not result in more effective internal control over financial reporting and will not produce more reliable financial disclosures.

We believe the standards as proposed provide the auditor with justification to do more auditing. They do not add value for stakeholders of the financial reporting process.

The proposed standards use the word control(s) a total of 1309 times and the word risk(s) 76 times. All of the major advances in this field over the past decade center on identifying and measuring risks first, and only when that step has been done, and done well, examining mitigators/controls.

While word counts in the proposed standards may be only a crude measure of their emphasis and balance, we do not believe that the increased emphasis on examining controls in a vacuum from risks is appropriate.

We believe the notion of judging the design and operating effectiveness of controls as proposed in these standards, in isolation from risk or from a competent assessment of cost/benefit is fundamentally flawed.

What is needed?

The standards should be revised to give equal weight to identifying risks, examining controls and evaluating the current acceptability of the current residual risk status.

We believe the standards should adopt the concept of a portfolio of controls and an assessment of residual risk over each major disclosure line item, note and supplemental disclosure.

We believe an explicit assessment of residual risk (using an acceptable risk model and a criteria based control model) for each disclosure line item or note is intellectually more reliable and much more useful than an auditor's subjective opinion on control effectiveness.

We believe that by providing support for assertions on control effectiveness over external financial reporting management should also demonstrate they have driven the cost of control to the lowest level possible that produces an acceptable level of residual risk. To not focus on both elements in concert does a disservice to investors and to society in general.

CARD®*decisions*' Response to PCAOB

Questions regarding an integrated audit of the financial statements and internal control over financial reporting:

1. Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting?

Response: No. Management must be required to make and substantiate assertions on internal control effectiveness over financial reporting.

The auditor's opinion must be focused on the reliability of management's assessment of internal control over financial reporting.

An auditor's attestation of management's assessment of internal control and an auditor's direct opinion on internal control effectiveness are significantly different and are arrived at using different audit procedures.

Few, if any, of the recent corporate governance failures were predicted by either internal or external auditors from their direct opinions on internal control effectiveness. This is true in spite of companies spending large sums on internal and external auditors.

Requiring management to make and support assertions on internal control effectiveness, and requiring auditors to form an opinion on the quality and reliability of those assertions will dramatically improve the quality of financial reporting.

The auditing profession has not demonstrated that it is capable of forming consistently reliable opinions on internal control effectiveness There is nothing in these draft standards to address that severe and historic deficiency since it encourages the use of methods that have been in use for over 25 years and a control model developed 12 years ago.

To suggest that auditors must prove the reliability of management's assertions primarily by performing their own direct audit of internal control effectiveness suggests that the profession does not know how to distinguish a reliable set of management assertions on internal control effectiveness from an unreliable set of assertions on internal control effectiveness.

These standards as drafted recognize the need for the auditor to review management's assessment of internal control over financial reporting, but they stop well short of what is required to form an opinion on the quality and reliability of managements assessment Instead, they are primarily draft standards guiding the auditor in providing their own separate and direct opinion on internal control.
Unlike an auditor's opinion on management's assertions over its financial statements,

CARD®*decisions*' Response to PCAOB

little guidance is provided for managers to prepare and support a reliable assertion on internal control effectiveness over financial reporting.

There is no basic principal of organizing information on internal control assertions analogous to the way financial statements organize and present financial information.

There are no generally accepted and useful criteria of risk and control analogous to GAAP, and there are no adequate standards to guide auditors in forming an opinion on those management's assertions on internal control.

The standards, guidance and criteria for management to make assertions and auditors to form opinions on assertions on internal control over financial reporting are a huge missing link in the financial reporting process and one the Board is in an historic position to remedy. COSO ERM 2003 provides an initial, partially useful framework. COSO 1992 is not sufficient.

In order for an auditor to provide an opinion on management's assertions, new standards are required to provide a basis for an auditor to provide such an opinion. Such standards would require development of criteria of risk and control against which management's assessment could be measured and would require the recognition of methodologies and tools appropriate for management and work groups to use. Such standards would also specify the knowledge and skills required by management in order to prepare an assertion on internal control effectiveness.

Precedent exists for the development of such criteria and standards. The Baldrige quality model is an example of weighted criteria against which an organization's ability to produce quality products and services can be judged. Similar models and criteria exist to judge safety.

The Baldrige criteria and effective safety frameworks are based on the premise that quality and safety cannot be "inspected" into an organization.

The Basel Capital Accord on bank safety (Basel II) provides a powerful framework for assessing governance and the management of risk and control.

The history of the auditing profession would suggest that reliable financial reporting will not be "audited" into organizations.

A new paradigm is required by the auditing profession.

The PCAOB should significantly revise these draft standards to provide guidance for managers and work groups to make reliable assertions on internal control effectiveness and for auditors to form an opinion on the reliability of those assertions.

CARD®*decisions*' Response to PCAOB

2. Should the auditor be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements?

Response: No.

The question should be reversed.

"Should the auditor be prohibited from performing an audit of the financial statements without first forming a satisfactory opinion on the reliability of management's assertions on control effectiveness over financial reporting?"

The answer to the question framed this way is yes. Reliable management assertions on internal control effectiveness should be a prerequisite for an auditor to proceed with the audit of financial statements.

An opinion that management's assertions are not reliable should be considered a material weakness. An audit of the financial statements should not be undertaken until management provides reliable assertions on the status of internal control over financial reporting.

Assessing the reliability of management's assertions on internal control effectiveness should be the subject of a separate standard, however forming an opinion on the reliability of those assertions will likely involve some reperformance of procedures or substantiation of financial statement amounts.

If the auditor finds management's assertions on control effectiveness reliable and, subsequently, during the audit of the financial statements, finds information to contradict the assertions being relied upon, a material weakness should be declared.

3. Rather than requiring the auditor to also complete an audit of the financial statements, would an appropriate alternative be to require the auditor to perform work with regard to the financial statements comparable to that required to complete the financial statement audit?

Response: No.

Evaluating and testing the basis for and reliability of management's assessment of internal control over financial reporting is significantly different than an audit of the financial statements.

It says little for the concept of internal control over financial reporting and management's assertions if professional auditors cannot directly examine internal control and the quality of management's assertions without performing an audit of the financial statements. This does not mean that substantive testing will not be required.

CARD®*decisions*' Response to PCAOB

If the only evidence of the reliability of internal control over financial reporting or management's assertions thereon lies in the accuracy of the financial statements, the notion of any evaluation of internal control should be abandoned.

Question regarding the costs and benefits of internal control:

4. Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?

Response: Yes. Management may choose to develop its assertions on internal control effectiveness over financial reporting in a variety of ways and to rely in its assertions on various types and levels of internal control to achieve its financial reporting objectives.

The proposed standards recognize the concept that effective control can be achieved in a variety of ways.

However far better criteria are required to define more definitively what is meant by effective internal control over financial reporting and the notion of its equifinality.

Pass/Fail approaches to evaluate internal control effectiveness are inappropriate and do not provide the information required by stakeholders. Imagine if credit ratings were reduced to Pass/Fail judgments.

COSO 2003 provides a starting point for identifying and categorizing criteria of control, but both the original and proposed revision to COSO are far too broad to support detailed analysis, design or assessment of the status of risk and control systems.

A strong argument can be made that COSO 1992 does not meet the Board's criteria for a suitable framework for management's assessment of internal control. Although a major contribution in 1992, it has not progressed and, unlike Baldrige or the ISO standards, does not have an improvement framework.

A strong argument in favor of the proposed 2003 COSO is its inclusion of an enterprise risk framework and a process. This is essential.

Modern assurance practitioners must insist on a rigorous risk assessment as a first step in the design, evaluation or testing of controls.

In order for management to make reliable assertions on control effectiveness over financial reporting, they must develop or be provided with tools they can use to design, evaluate and report on risk and control and these tools must be practical and understandable.

CARD®*decisions*' Response to PCAOB

It will not be possible to ask management to make reliable assertions on internal control effectiveness with the tools the profession has provided them with to date. COSO speaks an auditor's language, not the language of a manager or work group.

Question regarding the audit of internal control over financial reporting:

5. Should the Board, generally or in this proposed standard, specify the level of competence and training of the audit personnel that is necessary to perform specified auditing procedures effectively? For example, it would be inappropriate for a new, inexperienced auditor to have primary responsibility for conducting interviews of a company's senior management about possible fraud.

Response: Yes.

Guidance is essential in this area. The knowledge and skill required to competently evaluate control has increased enormously. The profession has a widespread reputation for promoting low level control practices and relying on micro control activities whose worth is dubious in the absence of any evaluation of the underlying disclosure risk.

It is worth noting that these draft standards proposed by the Board, contain over 1300 references to control(s) and only 76 references to risk(s), a strong indication of their focus.

Professional audit practices, tools, approaches or skills have not fundamentally changed in recent years in spite of evidence that old ways of auditing have often failed.

Substantial changes must be made in the body of knowledge, the skills, practices and technology used by the profession.

Furthermore, it is an appropriate role of the auditing profession, if not the Board, to suggest the knowledge, methodologies, standards, tools and skills required by management to make reliable assertions on control effectiveness over financial reporting.

Ideally, the guidance in these draft standards should be understandable and useful to managers in making their assertions and not just used by auditors in forming opinions on management's assertions.

The very definition of internal control over financial reporting could be dramatically simplified to refer to anything management or work groups do to manage risks and achieve reliable external financial reporting.

The auditing profession and management has consistently underrated the knowledge

CARD®*decisions*' Response to PCAOB

and skills required to design, implement, sustain and evaluate cost effective systems of internal control.

Examples of some of the knowledge required of modern auditors are:

- COSO 2003 or alternative approach to risk and control design and assessment such as the ANZ Risk Management Standards.
- Defining and prioritizing risks and financial disclosure objectives.
- Using generally accepted risk source models and other techniques to identify categorize and evaluate risks/threats to financial disclosure for the entire organization, sub-units, specific accounts and note disclosures and to create specific disclosure objectives and disclosure risk profiles/risk maps.
- Critically evaluating and using control models such as COSO and CoCo to identify, evaluate and optimize the cost of control portfolios.
- Developing reliable descriptions of residual risk status including concerns, indicator data, impact information, impediments with respect to internal controls over financial disclosure.
- The five major approaches to direct report audits and management self-assessments and business reasons for adopting self-assessment approaches to risk and control management. (Note that these Draft standards recognize only one of these five approaches).
- Barriers and implementation strategies for self-assessment approaches as a means of obtaining management assertions on risk and control and related risk acceptance decisions.
- The evolution of Generally Accepted Control Criteria ("GACC") including all major control and quality models.
- The evolution of Generally Accepted Risk Criteria ("GARC") including the leading risk standards and frameworks from around the world.
- Integrating insurance and risk transfer decisions with risk and control design analysis and decision-making.
- Linkages between Basel Committee requirements for financial institutions in the area of risk and control and the linkages between the 5 stages of enterprise risk management described in *Operational Risk: The Next Frontier* study published by the RMS, ISDA and British Bankers Association and other major approaches such as COSO 2003..
- The business case and benefits for enterprise risk management system as a means of driving, integrating and sustaining ongoing assessments and evaluations of internal control over financial reporting.
- Strategies to integrate performance management, risk and control management,

CARD®*decisions*' Response to PCAOB

assurance management and knowledge management with financial reporting.

- Completing quality assurance reviews (audits) of risk and control analysis completed by management and work units to evaluate the reliability of management's assertions.
- Basic principles used to develop estimates of the cost of control and the cost of assurance

Questions regarding evaluation of management's assessment:

6. Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?

Response: No.

An auditor's opinion focused on the reliability of management's assertions on internal control effectiveness over financial reporting is required.

Such an opinion would require an evaluation of the scope, processes, tools, methodologies, participants, and quality procedures in place and used by management in preparing and supporting their assertions on internal control effectiveness.

Such an opinion would also require some direct examination of evidence of internal control, but the opinion itself and the focus of the audit evidence would be on the reliability of management's assertions and not on opinion on internal control effectiveness.

Management must be fully responsible for its opinion on internal control effectiveness and status.

These draft standards do not provide sufficient guidance to allow an auditor to express such an opinion.

If the existence of effective systems of internal control and the reliability of management's assertions over internal control effectiveness cannot be directly examined and opined on, as opposed to an examination of the results of effective internal control, then the profession should remove any discussion of internal control from its standards and focus entirely on substantive verification of account balances and reliability of note disclosures.

An auditor's direct evaluation of internal control over financial reporting has been historically unreliable, will be not be improved by these draft standards, and is not in any way a substitute for an opinion on management's assertions on control effectiveness over financial reporting.

CARD®*decisions*' Response to PCAOB

7. Is it appropriate that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation?

Response: No.

Criteria to evaluate the adequacy of management's documentation is secondary.

Criteria are needed to evaluate the reliability of management's assertions on internal control over financial reporting.

Specifically, criteria are needed to evaluate the scope, processes, tools, methodology, participants, quality assurance mechanisms management and technology, if any; management uses to make its assertions on internal control effectiveness.

Standards governing documentation may be a subset of the broader criteria. But the extent and quality of the documentation is secondary to the content and procedures the auditor must follow.

Specifically, there is no provision in the draft standards relating to the auditor's evaluation of management's assessments of risk to determine what could prevent adequate disclosure for financial statement line items, note disclosure or other matters. For example, what constitutes a sufficient analysis of risks to a reliable external disclosure as a basis for identifying critical controls that should be tested is not discussed.

There is no reference to the use of risk models in assessing risk. While the use of COSO 2003 is encouraged, its flaws when used for more than macro level risk and control analysis and design at a specific disclosure process level are not recognized in these draft standards.

Arguably the original 1992 COSO framework does not meet the requirements for a framework suggested by these draft standards. The 2003 revisions are preferable in that they still require some risk assessment but they require improvement to be useful to management.

Only one approach, the process based assessment approach, is suggested in this standard as a methodology for assessing controls related to financial disclosure. At least four other assessment approaches are in general use individually or in combination.

There is little reference to the use of control and risk self-assessment approaches or guidance on how or where such approaches may be appropriate to evaluate risk and control in spite of the use of self assessment by many assurance professionals and many companies.

CARD®*decisions*' Response to PCAOB

Without a rigorous risk assessment, key controls will not be identified, assessed or documented by management or properly considered by auditors. Nor is it likely that management will find the control evaluation process credible and valuable.

These draft standards are overwhelmingly focused on imposing controls that the auditor subjectively believes may be effective. A word count reveals that the word control(s) appears over 1300 times in the draft standards while the word risk(s) appears only 76 times.

The draft standards do not provide guidance on what constitutes adequate risk assessment and only limited guidance on tools, methodologies and approaches to assess, design and report on control effectiveness.

An opinion on management's assertion on internal control effectiveness is not possible without reviewing the quality of managements risk assessment over disclosure.

8. Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?

Response: Yes.

The questions posed in #8 are too narrow. The draft standards should deal with far more than documentation. The draft standards should deal with the content as well as the amount and quality of the documentation. Ideally the draft standards would also recognize, if not prescribe, the appropriate use of technology for documentation of risks, controls and residual risk status.

Management can and must be responsible for defending its assertions on control effectiveness over financial reporting. In addition to documentation, the auditor should examine the scope, processes, methodology, approach, participants, and tools, including technology, used by management in documenting risk, control and residual risk acceptance decisions.

The reliability of management's assertions on internal control effectiveness can be called into question if any of these factors are flawed.

CARD®*decisions*' Response to PCAOB

Questions regarding obtaining an understanding of internal control over financial reporting:

9. Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?

Response: Yes.

Walkthroughs are a minor part of the auditor's examination and insufficient to form an opinion either on management's assertions or on internal control itself.

Another more relevant way of asking the question is "Are the criteria sufficient to evaluate management's assertions on internal control effectiveness or to directly verify internal control effectiveness discernable to an auditor performing a walkthrough of the company's significant financial processes?"

The answer to that question is no.

Walkthroughs in the context of these draft standards take place at the transaction or system level. They may be an appropriate measure where the auditor requires evidence that processes are functioning as described by management. But they are not worthy of the attention they receive or the reliance placed on them in these draft standards.

They are indicative however of the relatively narrow view of internal control implied by the draft standards.

Many modern criteria based control and quality frameworks weigh leadership, capability, measurement and commitment far more heavily than the control activities susceptible to walkthroughs. In fact, some virtually ignore micro level control activities on the theory that if the broader elements are in place, control activities will follow.

Generally, breakdowns in control activities that would be seen in walkthroughs should be seen as symptoms of fundamental control issues and not as problems in and of themselves (e.g. employee failure to comply with a policy may be a symptom of poor training or a failure of management to make objectives and priorities clear).

What role did failures of transaction based processes play in the fraudulent and inaccurate financial reporting of the last decade? Little or none in many instances.

It is unlikely that walkthroughs would have detected the root causes of fraudulent financial reporting and inaccurate financial disclosure that these draft standards attempt to address.

The root causes of fraudulent financial reporting do not lie at the process or transaction

CARD®*decisions*' Response to PCAOB

level of the organization.

When criteria are developed for the evaluation of internal control over financial reporting, the usefulness of walkthroughs as an evaluative procedure can be assessed.

The corporate financial reporting failures that led to the formation of the PCAOB will not be found by walkthroughs.

Walkthroughs might reveal individual process failures or inefficiencies but they will not look on the right level, on the right things, on the right behaviors or on the right people to be of significant use to achieve the goal of these draft standards.

The extent of their use should be a matter for practitioner discretion and not a matter for these draft standards.

Effective Internal control over financial reporting lies in the behavior of the organization's leaders and its employees. The quality of the organization's leadership and its influence on the behavior of the organization must be considered.

Unreliable financial reporting is essentially a quality problem. The quality movement has determined that the drivers of quality in manufacturing, like the drivers of quality in financial reporting, begin far from the factory floor.

10. Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors, or others?

Response: No.

It is appropriate for the auditor to query management's processes for evaluating and reporting on the effectiveness of internal control over financial reporting.

It is appropriate for the auditor to ask management how they ensure that controls are operating as described.

If management does not perform a walkthrough of significant processes, or demonstrate reliable knowledge of the controls in use, a deficiency should be noted and the reliability of their assertions on internal control effectiveness adjusted downward by the auditor.

Where management is relying on controls susceptible to verification by walkthrough, it is reasonable for the auditor to ask for evidence of the walkthrough.

CARD®*decisions*' Response to PCAOB

Question regarding testing operating effectiveness:

11. Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?

Response: No.

It is management's job to obtain evidence of the effectiveness of controls annually, management's job to determine the most relevant assertions annually and management's job to demonstrate annually to the auditor that they have done so and done so reliably.

It is the auditor's job to form an opinion on the reliability of management's assertions.

In the course of forming an opinion on management's assertions it will be appropriate to review some of the evidence provided by management to support their assertion.

Accordingly, for the most part, the evidence the auditor will be obtaining to support an opinion on management's assertions will be based on the evidence management provides. Such evidence will consist of the scope, processes, tools, level and quality of employee involvement, approach used and technology employed as well as information on risks, controls and residual risk status with respect to achieving the objectives of reliable financial reporting.

In particular, in evaluating management's assertions on control effectiveness over financial reporting, the auditor should pay particular attention to the risk assessment process undertaken by management to identify and evaluate the risks to accurate financial reporting.

Questions regarding using the work of management and others:

12. To what extent should the auditor be permitted or required to use the work of management and others?

Response: The work performed by management and others in forming an opinion on internal control effectiveness should be the primary source of audit evidence.

The auditor should be required to specifically evaluate the quality and reliability of work provided by management and others and to assess and report its reliability. In particular this includes management's representations on the controls in use and on residual risk status.

CARD®*decisions*' Response to PCAOB

If the auditor does not find the work performed by management or others to be complete, accurate or reliable, the auditor should provide an opinion to that effect.

Assessing the reliability of work performed by management and others may include reperformance of portions of that work.

However, only if and when the auditor cannot rely on the assessment work of management and others should it be disregarded.

Where the work performed by management and others to form an opinion on internal control effectiveness is insufficient and unreliable, the deficiency should be remedied before the auditor proceeds to express an opinion on the financial statements.

These draft standards should provide specific guidance on how to form an opinion on the reliability of assessment work performed by management and others.

13. Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?

Response: No.

The three categories of controls, specifically those that are part of the control environment, controls over the period end financial reporting process and controls that have a pervasive effect on the financial statements, if they are truly important, are exactly the areas where management must make and support its strongest assertions.

These three areas are those in which the auditor must provide the highest level of assurance over management's assertions.

If an external auditor cannot rely on management's assertions in these areas, they should report a material weakness and not proceed further until the inaccurate or even fraudulent assertions are remedied.

This places a significant and completely appropriate burden on management to honestly and competently describe, document and support their assertions in these areas. It places a significant and completely appropriate burden on the Board and the profession to provide the necessary standards and criteria to guide management in preparing and documenting their control effectiveness assertions.

The auditing profession has not demonstrated to date that it is capable of directly and consistently providing reliable opinions on internal control effectiveness in these areas. Management letters on control produced by external auditors have been criticized by our clients all over the world.

These are precisely the areas where investors and all other stakeholders must find

CARD®*decisions*' Response to PCAOB

management's assertions reliable and where an auditor's opinion on the reliability of those assertions will have most value.

This is the area where the PCAOB should be focusing its standard setting activities.

Forming an opinion on management's assertions will require verification by the auditor and the extent and nature of the verification will be based to some degree on professional judgment and will involve some degree of reperformance to test the reliability of management representations.

But if management cannot or does not provide reliable representation on control effectiveness, all stakeholders who rely on an auditor's opinion should be told.

14. Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

Response: No.

These draft standards do not appropriately recognize the role played today by internal auditors, the role they could play in the future and the value of the work they perform.

Internal auditors are an important part of the internal control framework and the work they do must be evaluated as part of the audit of management's assertions on internal control over financial reporting.

A new and very appropriate role of internal auditors is to evaluate the organizations risk and control management's processes. This is one of the new Internal Audit Standards issued by the Institute of Internal Auditors. If internal auditors are professionally and technically competent and provide reliable information on the state of internal control and the reliability of management representation on risk and internal control management, it should be relied upon to a significant degree.

If the work of internal auditors is found to be unreliable, the external auditor should report a major deficiency in internal control that is, with certainty, a material weakness.

Failing to assess the quality and competence of the work performed by internal auditors as a basis for relying on such work is a significant omission in these draft standards.

Internal auditors must be held fully accountable for the quality of their work. That includes work assessing control directly and work reporting the reliability of management self-assessments.

CARD®*decisions*' Response to PCAOB
15. Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?
Response: No. Flexibility in determining the extent of reperformance of the work of others is appropriate. Reperformance may be efficient, but reperformance is not a substitute for forming an opinion on the reliability of management's assertions on internal control effectiveness. Reperformance should primarily be considered as a means of obtaining assurance where the highest level of assurance is required. The extent of its use should be at the discretion of the auditor and not mandatory.
16. Is the requirement for the auditor to obtain the principle evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?
Response: No. Management is responsible for providing the principal evidence to support internal control effectiveness representations. The auditor is responsible for obtaining evidence that management's assertions are reliable. Evidence for this opinion will primarily lie in an examination of the scope, tools, procedures, methodologies, approaches, participants and technology employed by management in arriving at the assertion. The amount of work to be performed by the auditor should be directly related to the quality of management's assertions on internal control effectiveness. Standards to guide the auditor in the evaluation of management's assertions are required and those standards should address the amount of principal evidence on internal control effectiveness to be obtained by the auditor.

CARD®*decisions*' Response to PCAOB

Questions regarding evaluating results:

17. Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?

Response: No.

It is safe to assume that every company required to report under Sections 302 and 404 will have, at any given time, a number of deficiencies, many of them significant.

It is also safe to assume that every public company will, over time, have one or more material weaknesses.

Candid disclosure and correction of significant deficiencies and material weaknesses will be discouraged by these draft standards.

The quality of a company's system of internal control over financial reporting and management's assertions should be rated and disclosed with reference to criteria.

Investors, regulators and other stakeholders may make their own judgments and act accordingly.

Similarly, public companies will occasionally experience financial losses or write-offs.

Denying an opinion on financial statements because of a financial loss or write-off would not be acceptable.

Investors, employees and other stakeholders may come to their own conclusion on stakeholder risk when given reliable information on the external disclosure processes.

The Baldrige quality model provides for scoring an organizations quality framework against a set of weighted, predefined criteria. The criteria are regularly updated and improved.

Bond rating agencies similarly score and publish corporate credit ratings based on established criteria related to credit worthiness.

Some rating organizations are assigning and publishing corporate governance ratings for public companies based on defined and disclosed assessment criteria.

The Board and the auditing profession have the opportunity to develop a similar method for assigning a score or rating on internal control effectiveness.

Such a system, to be credible and rigorous, would require input from the profession and

CARD®*decisions*' Response to PCAOB
from companies. It would allow investors and others to compare companies over time and across industries. Defined criteria would be updated regularly. It would make the evaluation of internal control effectiveness transparent to management, employees, other stakeholders, auditors and regulators.
18. Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?
Response: No. Examples must focus on situations where management's assertions are determined to be unreliable. Examples should also include situations where management has disclosed significant deficiencies or material weaknesses and proposed remedies or substituted other procedures to support the reliability of external disclosures. For years, external auditors have chosen, in their audit of financial statements to perform substitute substantive testing rather than rely on internal control effectiveness. Management may wish to do the same if they believe significant deficiencies or material weaknesses exist. Internal control effectiveness must be measured against defined criteria and not against subjective auditor driven opinions of deficiencies and weaknesses. Examples must include sample of reporting against criteria of risk and control.
19. Is it necessary for the auditor to evaluate the severity of all identified internal control deficiencies?
Response: No. It is necessary for management to evaluate the severity of all identified internal control deficiencies. It is appropriate for the auditor to review management's process for doing so as part of their evaluation of management's assertions on internal control over financial reporting.

CARD®*decisions*' Response to PCAOB

20. Is it appropriate to require the auditor to communicate all internal control deficiencies (not just material weaknesses and significant deficiencies) to management in writing?

Response: Yes.

It is the responsibility of management to report all disclosure risks and internal control deficiencies (not just material weaknesses and significant deficiencies, however defined) to the auditor.

It is not intellectually possible for management to form an opinion on internal control effectiveness over financial reporting without knowing the deficiencies that are being accepted. Effective control can be defined as an acceptable level of deficiencies related to external financial disclosure. It stands to reason that they must be known and assessed to be responsibly considered acceptable by management.

The completeness and detail with which management reports disclosure risks and internal control deficiencies is a measure of the quality of their assertions on control effectiveness over financial reporting.

If the auditor finds additional deficiencies not reported by management, they must be reported to management and management's process for evaluating control effectiveness adjusted.

Auditors must take into account any deficiencies they find that were not reported by management in forming their opinion on the reliability of managements assertion on control effectiveness.

21. Are the matters that the Board has classified as strong indicators that a material weakness in internal control exists appropriately classified as such?

Response: Yes.

These indicators would contradict any management assertion that internal control over financial reporting is effective.

22. Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?

Response: No.

Management should consider the role of the Board during their self-assessment of internal control over financial reporting. External auditors are hired by the audit

CARD®*decisions*' Response to PCAOB
committee. Reporting on their employer's competence directly is an inherent conflict of interest. Criteria are required to assess the role and reliability of the Board in assessing control over financial reporting.
23. Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?
Response: No. It is difficult to believe auditors, appointed by the Board, remunerated by the Board and evaluated themselves by the Board, could be considered credible in forming an opinion on the audit committee's oversight. This section, if it stands, will almost certainly cause external auditors to give unreliable opinions.
24. If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the audit engagement?
Response: Yes.
Questions regarding forming an opinion and reporting:
25. Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management?
Response: No. Management may disclose a material weakness yet still provide reliable support for financial disclosures through other means. If internal control is evaluated against defined criteria and given a score this question becomes irrelevant. It is possible for a company to be assigned an extremely low score against a set of defined criteria. Investors, regulators and other stakeholders may be guided accordingly. Similarly, it is possible for a company to report huge losses, even to enter bankruptcy, while conforming to GAAP.

CARD®*decisions*' Response to PCAOB
26. Are there circumstances where a qualified "except for" conclusion would be appropriate?
Response: No. Internal control effectiveness should be scored against predefined criteria. Direct opinions on internal control effectiveness are extremely subjective and have proven to be of limited value.
27. Do you agree with the position that when the auditor issues a nonstandard opinion, such as an adverse opinion, that the auditor's opinion should speak directly to the effectiveness of the internal control over financial reporting rather than to whether management's assessment is fairly stated?
Response: No, for all the reasons cited in our other responses.
Questions regarding auditor independence:
28. Should the Board provide specific guidance on independence and internal control-related non-audit services in the context of this proposed standard?
Response: Yes.
29. Are there any specific internal control-related non-audit services the auditor should be prohibited from providing to an audit client?
Response: Yes. If the auditor is providing an opinion on management's assertions on internal control effectiveness, it is difficult to see how the auditor can be independent if they provide any internal control-related services or play a significant role in producing any of the external disclosures including tax provisions, deferred tax balances and many others. The question might better be "Are there any specific internal control-related non audit services a client should be permitted to obtain from their auditor?" Many external auditors play a significant role in determining a client's tax provision and interpreting generally accepted accounting principles. This is an inherent conflict. Many auditors play a significant role advising on interpretation of GAAP or on appropriate financial disclosure. These roles have an inherent conflict. Surveys indicate a high percentage of companies (40% to 50%) select control

CARD®*decisions*' Response to PCAOB
assessment software recommended or provided "free" by their auditor. Auditors have a huge influence on companies internal control frameworks when they recommend software or propose "best practice" controls or control checklists. These represent significant inherent conflicts, particularly when providing an opinion on the reliability of management's assertions on internal control effectiveness.
Questions regarding auditor's responsibilities with regard to management's certifications:
30. Are the auditor's differing levels of responsibility as they relate to management's quarterly certifications versus the annual (fourth quarter) certification, appropriate?
Response: Yes.
31. Is the scope of the auditor's responsibility for quarterly disclosures about the internal control over financial reporting appropriate?
Response: Yes.

Professional Profile

Bruce W. McCuaig, B.Comm., CA·CIA, CCSA

Bruce McCuaig joined CARD®*decisions* in 1995. Prior to joining CARD®*decisions* Bruce held senior executive positions with Gulf Canada in Calgary and Toronto and Gulf Oil Corporation in Houston, Texas. While General Auditor of Gulf Canada Resources in 1987, Bruce implemented the original work team self-assessment concepts, including development of officer and board level presentations outlining the benefits of this new approach. He directed the first series of CSA pilots conducted during the summer of 1987 presented by Tim Leech and Paul Makosz.

Bruce's experience includes extensive audit and financial management in the oil and gas industry, both upstream and downstream, as well as exposure to the mining and banking sectors.

Since joining the firm in 1995 Bruce has worked with clients around the world training and overseeing complex, innovative Enterprise Risk & Assurance Management ("ERAM"), Control & Risk Self Assessment ("CRSA"), and Collaborative Assurance & Risk Design ("CARD® ") implementation initiatives in public and private sector clients ranging in size from individual departments to some of the world's largest multi-national corporations.

Bruce is an experienced speaker, author and presenter, participating regularly in international conferences on the subject of control self-assessment and publishing in professional audit and financial journals.

Some of Bruce's specific experiences and achievements include:

- General Auditor of Gulf Canada from 1983 to 1988 with responsibility for directing over 80 professional staff.
- Pioneering the use of a conceptual control framework for training, assessment and reporting purposes in Gulf Canada in the fall of 1986.
- Co-authoring a technical response to the Treadway Commission exposure draft in 1986 outlining the benefits of control self-assessment and the use of a control model for training and reporting.
- Co-authoring two important articles on Gulf's initial experience with and learnings from the control self assessment experience: "Is Everything Under Control? A New Approach to Corporate Governance", McCuaig/Makosz, Financial Executive Magazine, January/February, 1990 and "Ripe for a Renaissance", McCuaig/Makosz, Internal Auditor Magazine, December, 1990.
- Winner of Internal Auditor Magazine's Outstanding Contributor Award for 1990.
- Frequent speaker at IIA Conferences, Control Assessment Conferences and Government/Industry Associations.
- Hands-on experience assisting clients with complex enterprise risk management and enterprise risk implementations in large client organizations.
- Training and consulting for public and private sector staff in Canada, the U.S., the U.K., Holland, Greece, Australia, New Zealand, Malaysia, Hong Kong, the Middle East and Africa.
- Wrote "The Genesis of CSA", CSA Sentinel, May 1997 and "Audit, Assurance and CSA", Internal Auditor Magazine, June 1998.
- Co-authored "CRSA Current State of the Art, Its Origins and Impacts" published in Control Self-Assessment for Risk Management and Other Practical Applications published by John Wiley & Sons.

Professional Profile
Tim J. Leech, FCA·CIA, CCSA, CFE, MBA

Tim J. Leech is the founder and President of CARD®*decisions* Inc. based in Mississauga, Ontario, Canada. Previously, Tim was the Managing Director of the Canadian subsidiary of Network Security Management Ltd., part of the Hambros Bank group of companies headquartered in London, England. He also served as Director - Control & Risk Management Services with The Coopers & Lybrand Consulting Group in Toronto after a varied career with Gulf Canada in Toronto and Calgary. He holds a Master in Business Administration degree majored in human resources and was elected Fellow of the Institute of Chartered Accountants in recognition of distinguished service to the profession.

Leech's practice includes enterprise-wide risk and assurance management; Collaborative Assurance & Risk Design™ ("CARD®") software development, training and consulting; control and risk self-assessment ("CRSA") training and implementation services; specialized litigation support services; business ethics advisory services; internal audit training and consulting; and control/risk governance consulting services. He has provided training for public and private sector staff located in Canada, the U.S., the European Community, Australia, South America, Africa and the Middle and Far East. Leech has received worldwide recognition as a pioneer in the fields of enterprise risk and assurance management, Collaborative Assurance and Risk Design, and control and risk self-assessment.

Some of Leech's experiences and achievements include:

- pioneering and developing a work team driven approach to control and risk management and reporting that has been recognized globally as a leading edge, control and risk management tool;
- developing Collaborative Assurance and Risk Design™ training methods and software used by major organizations around the world. Some of the organizations that have acquired licences over the past decade to use CARD® training tools internally include: BellSouth, British Gas, Shell U.K., Georgia-Pacific, NatWest Bank, University of California, CIBC, Mobil, Cabot Corporation, Ansett Airlines, TD Bank, NorthEast Utilities, Chiquita Brands, Compart, City of Detroit, Telephone and Data Systems, Telstra, Western Mining, Canada Life, and Australian Taxation Office;
- numerous T.V. appearances, a national radio show, and a monthly column on control, ethics, and fraud related topics;
- authoring technical papers in response to exposure drafts of control governance studies in the U.S., the U.K., and Canada including reports by the Treadway Commission, COSO, Cadbury, and CoCo internal control research projects and the new standards exposure from the IIA;
- developing technical material for research studies on CSA/CRSA including the IIA report CSA: Making the Choice, the IIA research study CSA: Experience, Current Thinking and Best Practices and a text published by John Wiley titled "Control Self-Assessment for Risk Management and Other Practical Applications";
- delivery of expert witness services and testimony during civil and criminal actions related to fraud, secret commissions, conflict of interest, breach of contract, and officer/director due diligence;
- developing training tools that have proven effective in a wide range of nationalities and cultures. Training on CARD® methods and tools is available in English, Spanish, German, Dutch, French, and Italian through Oxley Fitzpatrick in the U.K., Rosés Auditores in Spain, and participating KPMG offices located around the world;
- member of the I.I.A. Enterprise Risk & Self-Assessment Advisory Panel and author of the IIA CCSA practice exam; and
- primary author and developer of CARD®*map* software - the world's first Collaborative Assurance and Risk Design™ groupware. CARD®*map* software is used by major companies and public sector organizations around the world.

Dear Board Members:

Cardinal Health, Inc. ("Cardinal") respectfully responds to the invitation to comment on *Proposed Auditing Standard-An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements* ("Document"). Cardinal is a leading provider of products and services supporting the health-care industry. Cardinal, which is headquartered in Dublin, Ohio, employs more than 50,000 people on five continents and produces annual revenues of more than $50 billion. We appreciate this opportunity to provide you with our views on the Document.

As Cardinal is not a public accounting firm, a number of questions were not applicable or it was not appropriate for Cardinal to respond. As such, Cardinal's responses to select questions are listed below. The question from the Document is restated in bold type and Cardinal's response follows in normal type.

- **Question 1: "Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as an audit of internal control over financial reporting?"**

  No, we do not believe that it is appropriate to refer to the work proscribed by the relevant provisions of the Sarbanes-Oxley Act ("Act") as an audit because it is our belief that in order to do such the rules are inaccurately interpreting the mandate of the Act. The Act specifically calls for an attestation of management's assertion, not for an audit of the internal control structure. We believe that the PCAOB rules should only address what Congress mandated in the Act and not expand upon them.

- **Question 8: "Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?"**

  We believe that it is appropriate to state that inadequate documentation is an internal control deficiency, the severity of which should be evaluated by the auditor. However, the rules should not lose sight of the fact that the key objective is to provide investors with assurance that the company has an effective system of internal controls surrounding financial reporting in place and operating. Lack of adequate documentation may in fact be just that, while strong controls are in place and operating effectively.

- **Question 13 and Question 14: "Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?" and "Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?"**

  Regarding paragraph 104, we strongly disagree with prohibiting the use of the results of testing performed by a competent and objective internal audit function in the following areas:

  - Controls over the period-end financial reporting process, and
  - Information technology general controls on which the operating effectiveness of other controls depend.

  Internal audit functions routinely exhibit complete competence in performing this work and are, in most cases, not involved in the design and performance of procedures in both of these areas. To completely discount and disregard the validity of past reliance that the independent auditors have placed on internal auditors in financial statement audits is in no way justified. We would concur that the independent auditor should exercise careful judgment in these areas as to how much re-performance of the internal auditor's work should occur, but to dismiss the value that a competent and objective internal audit function can contribute in these areas is ungrounded, especially internal audit functions that are complying with professional standards established by the Institute of Internal Audit's "Standards for the Professional Practice of Internal Auditing."

  Similarly, the guidance in paragraph 10 that the use of procedures performed by internal audit should be limited for non-routine and nonsystematic transactions plus areas where the risk of control failure is high seems unduly restrictive. It would, perhaps, be more reasonable for the standard to require the independent auditor obtain direct independent evidence in these areas to complement the work done by the internal auditor. However, to proscribe that in all cases the independent auditor's use of internal audit's work in these areas be limited is an unmerited diminution of the effectiveness and reliability of a competent internal audit function.

- **Question 17: "Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies?"**

  While the new definitions may promote consistency, we believe that the new definitions are too restrictive and may be interpreted as setting unrealistically low thresholds. We believe that the concept of "remote likelihood" and "more than inconsequential" used to define a significant deficiency and "remote likelihood" used to define a material weakness set unnecessarily low hurdles for companies. We believe that lowering the threshold will have unintended and chilling consequences in the business world and urge the PCAOB to reconsider these definitions before issuing the final rules. In addition, we would like to see the final rules address the role of mitigating controls in the text and examples. Finally, we believe that further clarity is required affirming that a significant deficiency or material weakness is not automatically present in financial processes involving a large volume of transactions that requires reserve provisions for transactional conflicts pending further research and negotiation. We believe these situations would typically not be considered as a significant deficiency or material weakness.

- **Questions 25 and 26: "Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal**

control over financial reporting, consistent with the required reporting model for management?" and "Are there circumstances where a qualified "except for" conclusion would be appropriate?"

Paragraph 115 of the draft standard essentially states that if the independent auditor determines that there is a material weakness, then an adverse report must be issued. This requirement, when taken in combination with the new material weakness definition in paragraph 9 imposes a substantially lower hurdle that in our view is unrealistic. "Remote likelihood" appears to be an unnecessarily conservative and somewhat arbitrary restriction for a judgment that will result in an adverse report. In addition to reconsideration of "remote likelihood," we believe there should be some reconsideration of a qualified report for isolated or less pervasive material weakness situations, reserving the adverse report for those circumstances with several material weaknesses and an overall weak control environment.

- **Other matters:**
  - Cardinal is a company that will, under current regulations, be required to provide management certification and auditor attestation in its annual report for the year ended June 30, 2004. As such we are currently working to meet these anticipated requirements. This process is a significant undertaking and, given the fact that the PCAOB will not even propose final rules to the SEC until January 2004 and that the SEC will not issue final rules until sometime thereafter, it seems unrealistic to hold companies to an effective date of 6/15/2004. We urge the PCAOB to request the SEC to delay the effective date until a later date, to ensure the appropriate amount of time to get this critical auditing standard right the first time.
  - We urge the PCAOB to provide guidance or relief in situations where major acquisitions occur close to a company's fiscal year end. The proposed rules should not hinder how businesses operate but the magnitude of work involved to evaluate acquired companies financial reporting internal control structures will hinder management's ability to attest as of fiscal year end when large acquisitions have been completed in a close proximity to the acquirer's fiscal year end.

Sincerely,

Richard J. Miller

Richard J. Miller
Chief Financial Officer

Re: PCAOB Rulemaking Docket Matter No. 008

Ladies and Gentlemen:

Caterpillar Inc. commends the Public Company Accounting Oversight Board (“the Board”) and its staff for the thorough and expeditious manner in which you have discharged your responsibilities. Caterpillar would like to thank you for the opportunity to comment on your proposed auditing standard, *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements* (“the proposed standard”).

For more than 75 years, Caterpillar Inc. has been building the world's infrastructure, and in partnership with Caterpillar dealers, is driving positive and sustainable change on every continent. A Fortune 100 company, Caterpillar is the world's leading manufacturer of construction and mining equipment, diesel and natural gas engines and industrial gas turbines. The company is a technology leader in construction, transportation, mining, forestry, energy, logistics, electronics, financing and electric power generation.

Over the years, Caterpillar has built a solid reputation as a highly ethical company. We recognize and take seriously our role in restoring public confidence in Corporate America, including our responsibility to maintain an effective system of internal controls. We also acknowledge that the external auditor’s independent oversight role is critically important to this restoration. Accordingly, we support, in principle, the Board’s goal of enhancing the effectiveness of internal control over financial reporting. However, we believe the proposed standard exceeds the intended requirements of Section 404 of the Sarbanes-Oxley Act (“the Act”) and is insensitive to the cost of compliance for U.S. companies and audit firms. We believe the proposed standard, as written, sets forth requirements that create a cost disadvantage and operational disruptions for U.S. companies versus foreign competitors. In our opinion, the disadvantages to implementing the proposed standard will far outweigh the benefits to investors in public companies.

Please accept our comments to the Board's specific questions in Attachment I in the constructive manner in which they are intended. The following summarizes our key observations and concerns:

- ***Adverse consequences and costs of implementation and on-going compliance with the proposed standard***

  We believe the following provisions of the standard will impose significant, unintended consequences and costs to implement and comply on a continuing basis:

  Restricting the auditor's reliance on the work of management and others -- In our opinion, paragraphs 103-110 represent the most onerous provisions of the standard and will cause significant and unnecessary duplication of effort by the external auditor, internal auditors, and management. **We strongly object to the limitations placed on the external auditor in relying on the work of others.** We agree that the work of others cannot replace the work of the external auditor. However, we believe the auditor should be allowed to rely on competent, objective internal auditors, and to a large extent management, similar to the reliance permitted under Statement of Auditing Standards No. 65 (SAS 65), *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements*. This reliance should not be limited to the internal auditor's tests of routine transactions and processes.

  We understand the importance of auditor independence from management. **However, the collaborative relationship that often exists between the external and internal auditors is extremely effective and cost-efficient in providing the broadest audit coverage and greatest level of assurance to investors.** This collaborative assurance is greatly reduced under the proposed standard.

  Furthermore, we believe the scope of the auditor's work under the proposed standard exceeds the scope intended in Section 404 of the Act. In our opinion, the scope of the auditor's work was intended to be an attestation of management's assertion of the process used to evaluate the effectiveness of internal controls; not an audit of internal controls. Requiring the same level of assurance from both management and the auditor will unnecessarily require significant and duplicative work.

  Prescriptive audit procedures -- We do not believe the proposed standard sufficiently permits the external auditor to use professional judgment in designing and executing audit strategies and procedures. For the same reasons the Board concluded internal control is not "one-size-fits-all," audit procedures should not be "one-size-fits-all." It is our belief the auditor should be allowed the latitude to apply audit strategies and procedures based on the auditor's trained and professional judgment, the size and complexity of the organization, and the competence and objectivity of management.

We agree that walkthroughs of significant processes, limited rotation of audit procedures, and year-to-year unpredictability of testing can all be effective audit procedures and strategies. However, we believe the application of these strategies and procedures should be the discretion of the auditor based on the numerous and varied factors affecting management's assertion regarding the effectiveness of its internal controls.

Appropriate consideration of well-controlled companies -- We agree with the Board that an effectively designed internal control framework, must have the five components of internal control. However, we believe the proposed standard focuses too narrowly on the auditor's responsibilities with respect to only two of those components -- *Control Activities* and *Monitoring.* We do not believe the proposed standard's restricted use of others' work and the prescriptive nature of the audit procedures enable the auditor to consider the *Control Environment, Risk Assessment, and Information and Communication* components of the framework in determining the nature, timing and extent of his/her work.

A strong internal control framework, including proper interaction of the five components, should enable the auditor to rely on the work of others, rotate audit focus, and design audit strategies and procedures that are commensurate with the internal control risk environment.

- ***Evaluating the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting***

We agree that an effective audit committee is an important monitoring control and is essential in maintaining an effective control environment. Accordingly, effective audit committee oversight is yet another control expected in the overall internal control framework. Therefore, in our opinion, the specific requirement that the external auditor evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting is unnecessary. Furthermore, because the audit committee is charged with oversight of the auditor, including their appointment, compensation, and dismissal, this relationship could preclude the auditor from making an unbiased evaluation.

Additionally, we do not believe it is appropriate for the auditor to evaluate aspects of the audit committee where there is no measurable criteria (e.g., amount of time the audit committee devotes to control issues), or require the auditor to evaluate aspects of the audit committee for which the board of directors has already performed (e.g., independence of audit committee members from management, committee's compliance with listing standards, whether the committee includes a financial expert).

We believe the audit committee is best evaluated by the board of directors.

- ***Definitions and reporting of significant deficiency and material weakness in internal control over financial reporting***

  Under the proposed standard, a significant deficiency or material weakness can exist as either a single deficiency or a combination of deficiencies. In our opinion, the definitions as worded, could guide the auditor to evaluate a single internal control deficiency as a significant deficiency or material weakness without regard to the entire internal control framework or other mitigating controls. We urge the Board to recognize that an effective internal control framework consists of numerous, interrelated control activities and processes and that a single control is seldom effective on a standalone basis. Rather, the effectiveness of controls depends on all five components of the control framework.

  Furthermore, we believe the terms *"more than inconsequential"* and *"more than remote"* unreasonably lower the bar, vis-à-vis FAS No. 5, in evaluating whether control deficiencies represent reportable conditions. In our opinion, terms used in the definitions in paragraphs 7 through 9 of the standard should be more closely aligned with FAS No. 5.

* * * * *

We welcome the opportunity to discuss these issues at your convenience. If you have questions regarding this letter, please contact Mr. Ali Bahaj at (309) 675-4212.

Sincerely,

Ali M. Bahaj
Vice President
Auditing & Compliance Division
Caterpillar Inc.

Attachment I
Responses to Specific Questions

Questions regarding an integrated audit of the financial statements and internal control over financial reporting:

1. *Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting?*

   No, we believe that if Congress intended for the external auditor to perform an "audit" of internal controls, Section 404(b) of the Sarbanes-Oxley Act ("the Act") would have been so written. In our opinion, the scope of the auditor's work was intended to be an attestation of management's assertion of the process used to evaluate the effectiveness of internal controls; not an audit of internal controls. Requiring the same level of assurance from both management and the auditor will unnecessarily require significant and duplicative work.

   In its report (Report 107-205) of major provisions of the Act, The Committee on Banking, Housing and Urban Affairs states that, "In requiring the registered public accounting firm preparing the audit report to attest to and report on management's assessment of internal controls, the Committee does not intend that the auditor's evaluation be the subject of a separate engagement or the basis for increased charges or fees." Prior to the Board's issuance of the proposed audit standard, Financial Executives International reported that, "In this new regulatory environment, companies will have to add financial staff and pay significantly higher auditing fees - projected at 20 percent to 200 percent over pre-Enron/Andersen fees."

2. *Should the auditor be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements?*

   We believe the auditor should perform both an attestation of management's assertions regarding internal control and perform the audit of the financial statements.

3. *Rather than requiring the auditor to also complete an audit of the financial statements, would an appropriate alternative be to require the auditor to perform work with regard to the financial statements comparable to that required to complete the financial statement audit?*

   As stated in the response to question two above, we believe the same auditor should perform both an attestation of management's assertions regarding internal control and perform an audit of the financial statements.

Question regarding the costs and benefits of internal control:

4. *Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?*

   We appreciate that the Board acknowledges internal control is not "one-size-fits-all," and, to a great extent, depends on the size and complexity of the company. However, as evidenced by proposed restrictions placed on the external auditor's reliance on management, we do not believe the standard gives appropriate consideration or importance to a strong control environment ("tone-at-the-top") and sophistication and competence of management, including internal audit, which may be present in larger companies.

Question regarding the audit of internal control over financial reporting:

5. *Should the Board, generally or in this proposed standard, specify the level of competence and training of the audit personnel that is necessary to perform specified auditing procedures effectively? For example, it would be inappropriate for a new, inexperienced auditor to have primary responsibility for conducting interviews of a company's senior management about possible fraud.*

   No, we believe that existing attestation and audit standards provide sufficient guidance in the supervision of audit personnel. We believe that penalties to audit firms provide sufficient incentive to ensure their personnel possess the necessary professional competencies and training to conduct attestation engagements.

Questions regarding evaluation of management's assessment:

6. *Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?*

   No. Please refer to our response to question 1. We do not believe that the auditor should provide the same level of assurance as management. We believe the collaborative effort of the external auditor, internal auditor and management provides investor the broadest, most cost-efficient assurance regarding a company's system of internal accounting controls.

7. *Is it appropriate that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation?*

   We believe the Board has provided an appropriate level of criteria to enable the auditor to exercise judgment in evaluating the adequacy of management's documentation.

8. *Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?*

   We believe the auditor should be permitted to evaluate whether the absence of documentation represents an internal control deficiency. The absence of internal control procedural documentation does not alone represent a deficiency that would lead to misstated financial statements. However, the absence of management's evidential documentation that controls are operating effectively, could call into question the validity of management's assertion. In our opinion, neither the absence of procedural documentation nor the absence of evidential documentation represent de facto evidence those internal controls are non-existent or ineffective.

   We believe the absence of documentation represents a <u>potential</u> internal control deficiency that the auditor should evaluate to determine whether the severity warrants elevation to significant deficiency or material weakness.

<u>Questions regarding obtaining an understanding of internal control over financial reporting</u>:

9. *Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?*

   We agree that walkthroughs are an extremely effective and necessary procedure in identifying and understanding the operation of internal controls in complex transaction systems. However, we believe the auditor should be permitted to exercise professional judgment in selecting and designing audit procedures and testing strategies.

10. *Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors or others?*

    We do not believe the external auditor should be precluded from relying on the results of walkthrough procedures conducted by others, such as a competent internal audit function or even management. In addition, paragraph 101 of the standard appears to preclude the year-to-year rotation of audit procedures. We do not agree that full, detailed walkthrough procedures be conducted annually, if the auditor is satisfied, through inquiry and validation, that process change controls and IT general controls over processes and systems are operating effectively.

<u>Question regarding testing operating effectiveness</u>:

11. *Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?*

    Again, we believe the auditor should be permitted to exercise professional judgment in determining the nature, timing and extent of audit procedures. One factor used by the auditor is the cumulative knowledge and evidence obtained in previous years.

    In addition, we believe an effective internal control framework should include process change controls. Therefore, we believe evidence of the effectiveness of controls can be efficiently obtained every year if the auditor is satisfied, through inquiry and validation testing, that process change controls and IT general controls over processes and systems are operating effectively.

<u>Questions regarding using the work of management and others</u>:

12. *To what extent should the auditor be permitted or required to use the work of management and others?*

    We are sensitive to the need for the external auditor to maintain an "arms-length" relationship with management. However, we believe the Auditor Independence provisions of Title II of the Act will achieve the desired relationship. We believe restrictions placed on the external auditor in paragraphs 103–110 are not sensitive to the public company representative's concerns voiced at the Board's July 29 roundtable discussions. In our opinion, paragraphs 103-110 represent the most onerous provisions of the standard and will cause a significant and unnecessary duplication of effort.

    We understand the work of others should not replace the work of the external auditor, in whole or in part. Rather, we believe that the external auditor should be able to attest to management's assertion on the effectiveness of internal controls by understanding management's evaluation process through auditor testing on a sample basis and through re-performing work conducted by management and internal auditors on a sample basis.

    Furthermore, internal auditors performing their work in accordance with the Institute of Internal Auditors' Standards for the Professional Practice of Internal Auditing should be relied upon, by the external auditor, to conduct their work with competence and objectivity. Of course, we recognize the external auditor will be required to re-perform certain work of internal audit to develop a basis on which to judge the internal auditors' competence and objectivity.

13. *Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?*

    We believe the three categories outlined by the Board are appropriate. However, as stated in our cover letter and in our response to question 12 above, we believe paragraphs 104-106 of the Standard unnecessarily restrict the external auditor's use of others' work.

    We believe the external auditor, subject to his/her professional judgment and direction, should be able to use the results of controls testing performed by internal auditors, and to a large extent, by management. For example, we believe internal audit can competently and objectively carry out audit tests of those areas specifically restricted by the standard including: fraud controls, controls over period-end financial reporting, IT general controls, walkthroughs, significant non-routine and non-systematic transactions, and controls over significant accounts where the external auditor has assessed the risk of failure as high.

14. *Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?*

    As stated in our cover letter and in responses to questions 12 and 13 above, we do not believe the standard permits enough reliance on the work performed by internal auditors and creates unnecessary duplication of work between the internal and external auditors.

    Furthermore, the monitoring component of an effective internal framework should include an internal audit function. If, through adequate re-performance of a sample of their work, the external auditor has judged the internal auditors to be competent and objective, then the external auditor should be permitted to use the work of internal auditors.

15. *Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?*

    We agree the auditor should have the flexibility in determining the extent of reperformance of the work of others. However, consistent with our responses to questions 10-14, we believe the Standard does not permit the auditor enough latitude in applying professional judgment to the design and execution of audit procedures. We believe Congress did not intend for compliance with the Act to increase audit fees. Therefore, we believe the Standard should allow for more flexibility in reperformance.

16. *Is the requirement for the auditor to obtain the principle evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?*

    Again, the auditor should be permitted to exercise professional judgment in determining the evidence necessary to attest to management's assertion on the effectiveness of internal controls. It is the auditor's responsibility to evaluate the credibility of the evidence obtained. If this concept remains in the final standard, "principle evidence" should be better defined.

Questions regarding evaluating results:

17. *Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?*

    We believe that definitions are necessary. However, we believe the terms "more than remote likelihood" and "more than inconsequential in amount" significantly lower the bar for determining when and internal control deficiency is considered significant vis-à-vis existing authoritative literature – FAS 5. We see no reason for the proposed standard definitions to differ from FAS 5. Again, we believe the auditor should use professional judgment in determining whether an internal control deficiency is a reportable condition.

18. *Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?*

    We agree the examples in Appendix D are helpful in applying the definitions of material weakness and significant deficiency. However, the examples do not demonstrate how other components of the internal control framework could help to mitigate weaknesses in control activities or minimize the likelihood of significant deficiencies or material weaknesses.

19. *Is it necessary for the auditor to evaluate the severity of all identified internal control deficiencies?*

    Yes, it is essential the auditor evaluate the severity of all identified internal control deficiencies. However, deficiencies should not be evaluated as a standalone control but rather in the context of all five components of the control framework and in relation to company-level controls and mitigating controls.

20. *Is it appropriate to require the auditor to communicate all internal control deficiencies (not just material weaknesses and significant deficiencies) to management in writing?*

Currently, our external auditor reports internal control weaknesses noted while conducting the financial statement audit. We believe it is appropriate for the auditor to report internal control deficiencies that warrant the attention of management. However, we believe it is unnecessary for the auditor to report internal control deficiencies that management is already aware of or is addressing via remedial actions.

21. *Are the matters that the Board has classified as strong indicators that a material weakness in internal control exists appropriately classified as such?*

We agree that most of the matters identified by the Board represent strong indicators, but not represent de facto evidence, that a potential material weakness in internal control may exist.

22. *Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?*

We agree that an effective audit committee is an important monitoring control and is essential in maintaining an effective control environment. Accordingly, effective audit committee oversight is yet another control expected in the overall internal control framework. Therefore, in our opinion, the <u>specific requirement</u> that the external auditor evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting is unnecessary.

In addition, we believe this provision could be construed a conflict of interest for the auditor. Because the audit committee is charged with oversight of the auditor, including appointment, dismissal and compensation, this conflicting interest could bias the external auditor's evaluation of the audit committee.

In addition, we believe the criteria, outlined in paragraph 57 of the standard, against which the external auditor is expected to evaluate the audit committee, are either immeasurable or already performed by the board of directors.

We believe the audit committee is best evaluated by the board of directors.

23. *Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?*

No. Please refer to our response to question 22. In addition, audit committee members' expertise and background is varied and broad generally well exceeding that of the auditor. Accordingly, the auditor would only be able to evaluate the audit committee on an incomplete set of criteria.

24. *If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the audit engagement?*

No. Please refer to our response to question 23. We do not believe the auditor is in a position to objectively evaluate the audit committee.

If the requirement of the auditor to evaluate the effectiveness of the audit committee survives the final standard, we believe the decision whether to withdrawal from the engagement should be at the auditor's discretion. Furthermore, we believe it is inappropriate to presuppose the severity of ineffective audit committee oversight as warranting withdrawal from an engagement vis-à-vis other material weaknesses.

Questions regarding forming an opinion and reporting:

25. *Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management?*

Yes, we believe it is appropriate for the auditor to express an adverse opinion on the effectiveness of the company's internal controls if a material weakness exists. However, this conclusion is only appropriate if the auditor is not satisfied that other controls within the five components of the control framework have not effectively mitigated the weakness. In addition, an adverse opinion is inappropriate if management remedies the weakness before the date of management's assertion.

26. *Are there circumstances where a qualified "except for" conclusion would be appropriate?*

    Yes. For example, we believe that outsourcing a significant service or a material acquisition, particularly a non-U.S. company, in the fourth quarter would not allow sufficient time for management to assess, and the auditor to attest, as to the internal controls of the acquired company. In these examples, a qualified opinion would be appropriate.

27. *Do you agree with the position that when the auditor issues a non-standard opinion, such as an adverse opinion, that the auditor's opinion should speak directly to the effectiveness of the internal control over financial reporting rather than to whether management's assessment is fairly stated?*

    If the auditor concurs with management, we believe the auditor's report should refer to whether management's assessment is fairly stated. If however, the auditor does not concur with management, then the auditor's opinion should speak directly to the effectiveness of internal control over financial reporting.

Questions regarding auditor independence:

28. *Should the Board provide specific guidance on independence and internal control-related non-audit services in the context of this proposed standard?*

    Yes, additional guidance may be helpful.

29. *Are there any specific internal control-related non-audit services the auditor should be prohibited from providing to an audit client?*

    We believe the external auditor should be prohibited from designing and implementing internal controls that have a significant impact over financial reporting.

Questions regarding auditor's responsibilities with regard to management's certifications:

30. *Are the auditor's differing levels of responsibility as they relate to management's quarterly certifications versus the annual (fourth quarter) certification, appropriate?*

    Yes, we believe the limited scope the auditor's responsibility related to management's quarterly certifications are appropriate. However, we believe the scope of the auditor's work should be limited to inquiry of management and review of internal audit reports. We do not believe it is practicable for the auditor to observe whether significant changes in internal control have occurred over significant accounts each quarter.

31. *Is the scope of the auditor's responsibility for quarterly disclosures about the internal control over financial reporting appropriate?*

Please refer to our response to question 30 above. We believe the scope of the auditor's quarterly procedures should be limited to inquiry.

Re: PCAOB Rulemaking Docket Matter No. 008

Dear Sir or Madam:

On behalf of our client, a New York Stock Exchange and Fortune 1000 company, we enclose the attached comment letter in response to PCAOB Rulemaking Docket Matter No. 008, "*Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements*," proposed by the Public Company Accounting Oversight Board on October 7, 2003.

If you require any additional information, or if we can provide you with any other information, please contact me at 314-259-2510 or R. Randall Wang at 314-259-2149.

Best regards,

Gregory A. Billhartz

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, D.C. 20006—2803

Dear Sir or Madam:

Reference: PCAOB Rulemaking Docket Matter No. 008

By way of reference, I am the Controller of a New York Stock Exchange and Fortune 1000 company in the primary business of manufacturing non-durable consumer products. We operate at 29 locations within sixteen states and with separate corporate headquarters. We sell to retailers throughout the United States. We generally compete with companies who are privately owned.

In response to PCAOB Rulemaking Docket Matter No. 8—PROPOSED AUDITING STANDARD—AN AUDIT OF INTERNAL CONTROL OVER FINANCIAL REPORTING PERFORMED IN CONJUNCTION WITH AN AUDIT OF FINANCIAL STATEMENTS (the "Proposed Rules"), we offer the following comments:

Question 4—Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?

Response: Although within the Proposed Rules the Board acknowledges the facts that "internal control is not 'one- size-fits-all'", and that "the Board expects that the auditor will exercise reasonable professional judgement in determining the extent of the audit of internal control and perform only those tests that are necessary to ascertain the effectiveness of the company's internal control," the Proposed Rules appear to ignore these statements. The Proposed Rules mandate the scope and level of review regardless of the characteristics of an issuer. Specifically, Question 5 asks whether the Board should specify the level of competence and training necessary to perform specified auditing procedures effectively. This question assumes a standard can be created that applies to audit procedures of all types of issuers. We submit that since auditing procedures must be tailored to the characteristics of each issuer, no standard could be developed that would have satisfactory universal application. Compliance and training must be the responsibility of, and be subject to [the discretion of], the auditing firm and should not be dictated by rule. In addition, Question 11, asks " Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?" You appear to answer your own question in a previous paragraph when you state "However, each year's audit must stand on its own. Therefore the auditor must obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year." Again, this appears to eliminate any judgment the auditing firm may have on where to spend its resources to achieve the overall goal of reporting on internal controls. In our view, the auditor should be able to determine the nature and extent of testing based upon its assessment of risks and costs/benefits. Further, it is our opinion that developing a "cookie cutter" approach to auditing internal accounting controls, where procedures, timing and materiality are specified by rulemaking bodies, will result in a false sense of security and will carry a much higher cost. In the event a rule dictates a de novo review of an issuer's controls, issuers will pay for audit work that is not necessary with respect to previously accepted controls.

Question 12—To what extent should the auditor be permitted or required to use the work of management and others?
Question 13—Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?
Question 14—Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?
Question 15—Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?
Question 16—Is the requirement for the auditor to obtain the principle evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?

Response—In our opinion, the answer should depend upon the judgment and work of the auditor and should not be specified by rulemaking bodies. The profession already has guidance as to when it is appropriate, and not appropriate, to rely upon the work of internal auditors. Specifically, in our own case, we have engaged an independent Big Four auditing firm to perform internal audit work. This firm operates under the direction of the Audit Committee and the Controller. If our auditors cannot use the work performed by our internal audit firm in any significant way, we would have to reconsider whether an internal audit function so designed had any benefit compared to the costs. In our view, eliminating or reducing the internal audit function would clearly be a step backward.

Question 22—Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?

Response - It is our opinion that the Proposed Rules will require the auditor to evaluate aspects of the audit committee for which there is no objective and measurable criteria (process used and time spent on internal control and financial reporting issues) and will require the auditor to evaluate aspects of the audit committee which the board of directors, with the assistance of the company's legal counsel, has already performed (independence of the audit committee members, financial experts, etc). In addition, it is our opinion that the requirement appears to expand the definition of internal control over financial reporting and the criteria established in "*Internal Control – Integrated Framework*" issued by The Committee of Sponsoring Organizations of the Treadway Commission. It appears that the Proposed Rules would make the auditor ultimately responsible for audit committee functions, internal controls and financial reporting. The proposed rules turn corporate governance on its head. Directors and officers are ultimately responsible for a corporation's management and financial reporting. The proposed rules alter this responsibility by mandating the audit scope, unduly limiting the use of audit work performed by others, and making auditors the ultimate evaluator of director performance.

Other issues—

Timing of Standards. Based upon the current timetable, it appears that a final standard will not be available until at least March 2004. If this is the case, it will be unlikely that our auditors can evaluate the final standards, develop a testing program and complete all tests at, as currently specified, all 29 locations prior to our fiscal year end. It is a significant, unanswered question as to whether resources exist currently in order to discharge these tasks in the time allotted. We are very concerned that this requirement will place an undue burden and cost upon our management and auditors that will ultimately be borne by our shareholders. Further, our auditor and management will be focused on the Board's final rules and their application at a time when focusing on the actual audit should be the primary concern. We believe the rules should apply to the first fiscal year following adoption unless the rules are adopted less than six months prior to the start of a fiscal year. In such a case, the rules should not apply until the next subsequent fiscal year.

Cost of Compliance. Although we concur with the goals of the Proposed Rules (improved internal controls and financial reporting), we are very concerned about the costs associated with these goals and the cost/benefit relationship. Our goal has always been to develop and maintain an internal control environment to ensure our financial statements are not only in accordance with generally accepted accounting principles, but is prepared using the most appropriate accounting principles. We have been on the forefront in stressing ethics in all behaviors and in fostering a control environment focussed on "doing the right thing" no matter what the impact on "reported earnings". However, it is our opinion that if the Proposed Rules are issued in their current form, our cost of compliance will increase dramatically. We are not in a position to routinely raise prices to cover the incremental costs. Further, because many of our competitors are privately held companies who will not be subject to these incremental costs, we will not be able to remain competitive. Accordingly, it is our opinion that we may be forced to take what may be considered drastic actions in order to reduce our costs. Such steps will reduce costs but they will only negatively impact the quality of our operations and management.

Bruce A. Jackson Corporate Vice President, Finance
Chief Financial Officer

February 17, 2004

Public Company Accounting Oversight Board
1666 K Street, NW
Washington, DC 20006-2803

Dear Sirs:

I am the Chief Financial Officer of a NYSE listed company with revenues of approximately $510 million. We just were told by our auditors, PricewaterhouseCoopers, that they expect our audit fee to triple in 2004 because of the costs associated with Section 404 compliance. The key issue seems to be that the proposed rules do not permit auditors to use judgment or materiality considerations to focus their auditing procedures on areas of greater internal control risk. Further, they say that your rules will require them to do the work required to issue an opinion on our internal control systems, rather than an opinion on our review and testing of our internal control systems, which I believe was intended by Congress.

Our company has a long history of outstanding internal controls, and no material errors, adjustments or fraud have occurred in my 15 years here as CFO. Therefore, I cannot understand how you could be writing rules that would require my auditors, and my staff, to spend twice as much time examining our internal controls as they do examining the company's financial statements. What sense does it make for regulators to require more than two-thirds of our effort to be spent on perhaps 5% of the value that auditors deliver to shareholders?

I hope you understand and carefully consider the consequences of your rule-making on companies such as ours. We cannot afford to throw hundreds of thousands of dollars away for a huge project which has little or no value to our shareholders, just because a few large companies made some ill-advised financial reporting decisions a couple of years ago. The rules must give auditors the ability to assess risk in planning their work, and to focus their efforts only on areas or controls which could have a material effect on the company's financial statements. Further, the auditors' scope of report should address only their review of our review and testing of internal controls, and not be expanded beyond the level of work called for in Sarbanes-Oxley. Otherwise, the waste of time and money will be astronomical, without shareholders receiving any substantial benefit.

Very truly yours,

Bruce A. Jackson
Corporate Vice President-Finance
and Chief Financial Officer

COMMENTS ON THE PROPOSED AUDITING STANDARD AN AUDIT OF INTERNAL CONTROLS OVER FINANCIAL REPORTING

General Comments

This is a powerful document that should do much to deter, as well as detect the frauds and related behaviors that have been so costly to investors and have weakened confidence in the securities markets. Its strength is that it is comprehensive and definitive, and that it adds important new control features such as walkthroughs, Audit Committee oversight and attention to fraud controls.

The critical specific comments that follow are intended to improve an already strong document.

Framework Used by Management

<u>Paragraph 14 and Appendix A illustrative reports</u>

COSO and professional standards make it clear that financial reporting controls do not prevent or detect <u>indirect effects</u> on the financial statements of violations of laws and regulations or problematic operating controls. They also place limitations on the inclusion in financial reporting controls of those controls that are related to the acquisition, use and disposition of assets. The audit report should make these limitations clear to the public.

Reasonable Assurance

<u>Paragraphs 16 and 18</u>

Existing auditing standards do not state that "reasonable assurance" means "a high level of assurance". SEC Release 33-8238 does not define that term. Heretofore, the term "reasonable assurance" has been open to interpretation and a high level of assurance may not have always been sought, much less achieved.

Because management is not bound by this auditing standard, management might apply a lesser standard than "high". This potential problem should be dealt with by stating clearly that auditors will not affirm management's assessment of internal control effectiveness unless the auditor has a "a high level of assurance" that controls are effective.

<u>Paragraph 153(h) and Appendix A illustrative reports</u>

The scope paragraph should use the words "a high level of assurance" rather than "reasonable assurance".

Fraud Considerations in an Audit of Internal Control

Paragraphs 24 through 26

This standard should forge a stronger link to the fraud standards in AU 316 (or preferably SAS 99). This is needed because the fraud standard discusses control risks and those risks should be addressed early on in the audit of internal control. A minimum step would be to state that attention to the fraud risk factors mentioned might help to identify the controls to be tested and that high levels of fraud risk should increase the extent of controls testing.

It would be helpful to reference SAS 99, paragraphs 51 through 67.

Management Fraud

A separate section of the standard should deal with the internal control issues related to this pervasive cause of the financial statement restatements of recent years. Low level fraud or error is not the reason the Sarbanes Oxley Act was passed.

Under certain circumstances the auditor should intensify the auditing of controls related to the prevention or detection of management fraud and should exercise a heightened degree of professional skepticism. If the auditor has a high level of concern about management behavior, the auditor should consider whether and how to use forensic techniques to uncover management fraud.

The following are some of those circumstances:

- Weaknesses in Paragraph 24 controls point toward management
- Walkthrough discussions with company personnel have identified concerns about management, or find that control personnel are vulnerable to manipulation.
- There are unexplained discrepancies in the accounting records, unexplained conflicting or missing evidential matter, or serious problematic relationships between the auditor and management
- Unauthorized transactions involving management have occurred
- The auditor has concerns, even concerns that are intuitive, about management bias, integrity or ethics.

Authorization of Transactions

A separate section of the standard should deal with control issues related to authorization of transactions. Proper *authorization of receipts and expenditures* and *detection of unauthorized acquisition, use and disposition of assets* are imbedded in the definition of internal control.

The standard should require the auditor to consider the levels of authority appropriate for the authorization of the various types of transactions, the circumstances in which explicit authorization should be required, and the need for documentation of explicit approvals.

Examples of areas where effective authorization controls are especially important should be cited. Those include general ledger entries, transactions involving management or management compensation, changes in sales or loan terms, speculative derivative transactions, transactions subject to 8K reporting, and changes in computer systems.

Foreign Operations

Paragraph 39 or elsewhere

Mention should be made of the fact that the personnel of business units located outside the United States may sometimes lack comparable ethical standards and knowledge of US accounting standards, and therefore control risks are likely to be higher. The control and accounting requirements of the Foreign Corrupt Practices Act have not eliminated these higher risks.

Risk Assessment

Paragraph 50, 102 or elsewhere

More should be said about how:

- The auditor should use management's risk assessment
- The auditor should pursue his or her own observations about risk
- The level of risk should affect the selection of controls to be tested and the extent of testing.

There is specific guidance on identifying controls to be tested in the proposed standard. This may incorporate risk-based judgments by the draftsmen of the proposed standard. But, the auditor's judgment of risk should be another important determinant of the controls to be tested, and risk should always be considered in deciding on the extent of testing.

If risk of misstatement is a concern and control effectiveness is to be judged solely on the basis of tests of transactions, some additional guidance on the extent of testing should be included in the standard. When testing repetitive processing of transactions, the auditor should be required to sample at least enough transactions to detect, with a high level of confidence, one error if there are any errors in the process.

Audit Committee Effectiveness

Paragraph 56

The nature and extent of the relationship between the auditor and the Audit Committee enables the auditor to identify some of the conditions that indicate significant control deficiencies, but does not permit an affirmative conclusion about oversight effectiveness. This limitation should be more clearly stated. It is also necessary to state that the auditor's responsibility to investors and other users of audit reports is paramount, and that functional responsibility to the Audit Committee should not interfere with nor limit the auditor's evaluation of conditions that indicate the possibility of significant control deficiencies.

Paragraph 57

The following should be added to or integrated with the bullets in the proposed standard:

- Level of involvement with the fraud controls mentioned in Paragraph 24, especially those that the Sarbanes Oxley Act and listing standards make the Audit Committee's direct responsibility, e.g. handling complaints.
- Level of concern with the scope of audits, and the degree of follow-up on the findings and recommendations of the auditors.
- Responsiveness to issues raised by the auditors, including those required by auditing standards to be communicated to the Audit Committee
- Level of involvement in accounting for complex transactions and in reviewing related party transactions.
- Competence of Audit Committee members, i.e. all members should be at least "financially literate" as defined by the 1999 Blue Ribbon Committee and one or more members should qualify as an "audit committee financial expert" as defined by SEC rule.

Paragraph 58

While laudable in its objective, this paragraph is not sufficiently operational in its present form. More should be said about how Audit Committee members' actions indicate lack of independence. And, what is said about the process of selecting members should be modified. The comments on the process are true, but the examples suggest processes that may not always be good indicators of independence. Qualifying words are needed. Also, "friends" should be replaced by a broader statement, such as the one in the third sentence of the following paragraph.

Listing standards establish a number of rules for independence, but otherwise give the Board of Directors the responsibility for making the independence determination. If the rules are not observed, that alone may indicate a lack of independence. Not addressed by the rules are the economic and interpersonal relations between company officers and directors unconnected with their company roles that can compromise independence. Auditors may learn of these relationships and should take them into account in evaluating the independence of Audit Committee members. But these relationships, without other evidence, are not ordinarily sufficient to conclude that there is a lack of independence.

Actions of the Committee can reinforce concerns about relationships. Or, actions alone may be sufficient to conclude that there is a lack of independence. Auditors may observe that members are unduly deferential to management, and auditors are often in position to observe Audit Committee members' reactions and follow up when issues involving management arise. Especially significant is lack of concern and follow up by members to those issues where the CEO or CFO may obtain an actual or potential economic benefit and there is a hint of bias or of questionable ethics or integrity.

Paragraph 59

Significant deficiencies should be communicated in writing to the full Board of Directors.

Information Technology and its Effect on Internal Control

Paragraph 70 and elsewhere

Paragraphs 16 through 20 of AU 319 referenced in paragraph 70 describe some of the risks and other challenges an auditor faces in a computer environment. But these AU 319 paragraphs are not very helpful. Guidance elsewhere in the proposed standard indicates the importance of general controls, but doesn't deal with other control issues. Paragraph 107 appears to overstate the reliance that may be placed on general controls. Additional references should be made to AU 319.30 through .32, AU 319.68 and.69, AU 319.77 through 79, and AU 319.110.9. These paragraphs provide a better picture of the important control issues and what the auditor might do.

Because of the critical and overarching importance of IT controls in many companies, the auditor should seek to obtain a high of confidence in the design and operation of computer controls. These should normally include accounting related application controls as well as general controls. The standard should require the use of computer auditing techniques in most situations and, when complex systems are encountered, the use of experienced IT auditors to make the controls evaluation

Performing Walkthroughs and Related Documentation Requirements

Paragraphs 79 through 83, and Paragraph 145 and elsewhere

The following ideas for improvement should be addressed:

- In following the process flow the auditor will encounter computer processing. In order to understand the flow it may be necessary to reprocess the documents that the auditor is using in the walkthroughs through the computer system.
- In tracing events, the auditor will need to understand how events that should lead to accounting are first identified, and whether that identification is timely.
- The potential for collusion, falsified documentation and controls override makes management fraud and unauthorized acts the most difficult control problem facing the auditor. Questioning company control personnel is an audit tool that should not be neglected. The questions in Paragraph 81 that the auditor may ask should also include whether control personnel think the controls they administer are effective, whether they have ever questioned the authenticity of documents and approvals, and whether they have ever been asked to overlook a control violation. This kind of questioning can be a very effective test and can help the auditor to identify management fraud. If these questions are included in the standard, auditors will be more inclined to ask them and potential management objections to the questioning will be muted.

- In tracing events and transactions auditors may find that there are insufficient accounting controls in one or more areas. In which case, auditors should explore whether adequate control is established by operating or compliance controls. But, in so doing the auditor should keep in mind that these controls may operate less stringently than accounting controls. In these situations the auditor should be alert to the possibility that operating personnel may be involved in collusion and/or creation of false documentation.
- Walkthroughs will expose the auditor to the economics of the business and provide an opportunity to determine or help to determine the substance of transactions
- The walkthroughs of processes are essentially systems evaluations and systems can be complex. Some companies will use computer-assisted techniques to document transaction flows, control points and related controls, and the control improvements needed. Others may use manually prepared flow charts with similar information noted on them. The auditor may find this documentation useful as a starting point for the audit. Other companies will rely on narrative descriptions that may not be satisfactory when systems are complex. The auditor should be prepared to utilize advanced documentation techniques that show (a) the control points, control objectives and related risks, (b) the controls in place and the tests made, and (c) the findings on effectiveness.

Signing the Auditor's Report

One member of the PCAOB suggested that the audit partner and the concurring partner sign the audit report. This would strengthen the sense of responsibility of those who make the ultimate decisions on how to apply this standard. It would also help to focus legal liability for a false report. This suggestion should be adopted by PCAOB.

Re: PCAOB Rulemaking Docket Matter No. 008

To the Public Company Accounting Oversight Board:

We are pleased to present our comments on *Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements.*

Summary of Our Comments:

While we generally agree with most of the proposed standard, we take exception to the inference of "limited reliance" on internal audit for the internal control audit. This seems to be inconsistent with existing auditing literature, which provides for considerable reliance on internal audit for financial statement audits. We believe these elements will drive up the cost of the internal control audit, putting a substantial burden on medium-sized companies such as ours. Furthermore, we think that there is terminology in the proposed statement that needs clearer definition, and examples. Our detail comments follow.

Questions regarding an integrated audit of the financial statements and internal control over financial reporting:

1. *Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting?*

   Yes.

2. *Should the auditor be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements?*

   Yes. Given the fact the two audits are integrated with each other, there is no other practical way to perform the internal control audit.

3. *Rather than requiring the auditor to also complete an audit of the financial statements, would an appropriate alternative be to require the auditor to perform work with regard to the financial statements comparable to that*

required to complete the financial statement audit?

No. Would be much too costly and difficult to coordinate.

4. *Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?*

   Not entirely.

   The proposed standard is very complex and involved. Being a medium-sized company, we are very concerned that the cost of the internal control audit will be excessive (both soft and hard dollars), and will be a significant burden to comply with. We are concerned that we will be held to the "highest bar", more appropriately fit for the largest of companies, who have the staff and resources to handle each element of the standard.

   Unfortunately, Appendix E, "Special Internal Control Over Financial Reporting Considerations for Small and Medium-Sized Companies", only addresses small companies. It does not discuss or give guidance for medium-sized companies such as ours. While this may be difficult to articulate, we do recommend that the Board take this into consideration and set forth how the internal control audit might differ for a medium-sized company. It may be helpful to mention the level of documentation required and the like.

5. *Should the Board, generally or in this proposed standard, specify the level of competence and training of the audit personnel that is necessary to perform specified auditing procedures effectively? For example, it would be inappropriate for a new, inexperienced auditor to have primary responsibility for conducting interviews of a company's senior management about possible fraud.*

   This seems to be adequately addressed in Paragraphs 30 and 31.

6. *Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?*

   Yes.

7. *Is it appropriate that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation?*

   Yes.

8. *Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?*

We believe that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate. We can envision circumstances where the lack of documentation may not have any effect on internal controls over financial reporting.

9. *Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?*

Not entirely. We think the standard should mention that "walkthroughs" are often performed in connection with an audit of the financial statements, and therefore, are not always a "new" procedure for purposes of an internal control audit.

10. *Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors, or others?*

We believe that there are cases where the auditor can use (and perhaps rely on) walkthrough procedures performed by internal auditors.

11. *Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?*

We believe the proposed standard generally allows "previous years" audit evidence to be considered in the current year's audit. We suggest that the Board consider giving more specific guidance in this regard. For instance, there may be certain accounts and disclosures where the auditor knows (from the audit of the financial statements) that no changes in internal controls have taken place in the current year.

12. *To what extent should the auditor be permitted or required to use the work of management and others?*

See responses to Questions 13 and 14.

13. *Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?*

No.

a. We would like to see a more precise definition of “control environment”.

b. We believe that more guidance is necessary to specifically define controls that have a “pervasive effect” on the financial statements. Paragraph 104 cites the example of information technology controls. However, we find it confusing when it is stated that “certain” information technology general controls have a pervasive affect. Our question is “which ones”?

   Lastly, auditors performing financial statement audits have usually relied on the work of internal auditors in the area of information technology general controls and other technology areas. Paragraph 104 and the example in Appendix B20-B23 suggests that auditors cannot rely on internal audit work for the internal control audit. We find it inconsistent that auditors can rely on internal audit in a pervasive area for the financial statement audit, but not for the internal control audit. We suggest that this be reconsidered. We also cannot understand why auditors have singled out information technology as an area for non-reliance.

c. Regarding Paragraph 105, we suggest that more definition be given to cases where the auditor is “limited” in using the results of testing performed by others. While we generally agree that higher risks are prevalent in (a) accounts involving significant judgments and estimates and (b) accounts where the risk of failure of controls is high, we also suggest that examples be given. In addition, we suggest that a definition be furnished for what it means to have “limited” use of testing by others in these situations.

14. *Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?*

We believe that the proposed standard does not place enough emphasis and preference on the work of internal auditors. We find a general inconsistency in the proposed standard and AU Sec. 322 “The Auditor’s Consideration of the Internal Audit Function in an Audit of Financial Statements”. The proposed standard seems to imply that reliance on the work of internal auditors should be significantly limited in audits of internal controls, whereas AU Sec. 322 permits greater reliance on internal audit in audits of financial statements. If the two audits are integrated, we believe the standards should be the same.

See our response to Question 13. We believe that Paragraph 104 of the proposed standard should not impose the requirement of non-reliance on the results of testing performed by internal audit in the 4 areas cited. As we have stated in our responses to Question 10 and 13, there may be cases where the auditor can significantly benefit and rely upon the work of internal auditors.

15. *Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?*

    We believe that flexibility in reperformance is especially important in cases where the auditor is relying on the work of the internal auditors.

16. *Is the requirement for the auditor to obtain the principle evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?*

    No. We believe that existing auditing literature allows the auditor to place reliance on the work performed by internal auditors. This should be incorporated into the "benchmark".

17. *Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?*

    The definitions seem appropriate.

18. *Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?*

    The examples in Appendix D are helpful.

19. *Is it necessary for the auditor to evaluate the severity of all identified internal control deficiencies?*

    Yes.

20. *Is it appropriate to require the auditor to communicate all internal control deficiencies (not just material weaknesses and significant deficiencies) to management in writing?*

    No. The materiality considerations set forth in Paragraphs 21-23 cover this area adequately. To require the auditor to communicate every internal control deficiency would seem to go way beyond the spirit of the proposed standard. It would also put the auditor in the unenviable position of communicating all internal control deficiencies, including those cited by internal auditors and the like.

21. *Are the matters that the Board has classified as strong indicators that a material weakness in internal control exists appropriately classified as such?*

    Yes.

22. *Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?*

    Maybe. We raise the question as to whether there is an inherent conflict for the auditor, due to the fact that Audit Committee employs the auditor?

23. *Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?*

    Yes.

24. *If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the audit engagement?*

    No, unless such a weakness would cause the auditor to also withdraw from the audit of the financial statements.

25. *Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management?*

    Yes.

26. *Are there circumstances where a qualified "except for" conclusion would be appropriate?*

    Yes, Example A-3 is a good use of an “except for” opinion.

27. *Do you agree with the position that when the auditor issues a nonstandard opinion, such as an adverse opinion, that the auditor's opinion should speak directly to the effectiveness of the internal control over financial reporting rather than to whether management's assessment is fairly stated?*

Yes.

28. *Should the Board provide specific guidance on independence and internal control-related non-audit services in the context of this proposed standard?*

See Question 29.

29. *Are there any specific internal control-related non-audit services the auditor should be prohibited from providing to an audit client?*

We believe that this is adequately covered in Paragraphs 32 – 35. However, the last sentence of Paragraph 33 seems to imply that it is acceptable for the auditor to provide internal control related non-audit services, as long as such services are approved by the Audit Committee. This seems to conflict with the spirit of the independence rules set forth in the proposed standard. We think the Board needs to be clear on this issue.

30. *Are the auditor's differing levels of responsibility as they relate to management's quarterly certifications versus the annual (fourth quarter) certification, appropriate?*

Yes.

31. *Is the scope of the auditor's responsibility for quarterly disclosures about the internal control over financial reporting appropriate?*

Yes.

Re: PCAOB Rulemaking Docket Matter No. 008 – Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements

Ladies and Gentlemen:

Citigroup Inc. appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (the "Board" or "PCAOB") Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements. Citigroup is supportive of the Board's efforts to establish professional standards governing the independent auditor's attestation and reporting on management's assessment of the effectiveness of internal control.

We agree with the overall objective of the proposed standard, and believe that a new auditing standard will assist a company's independent auditors in reporting on management's assessment of the effectiveness of internal control. However, as explained more fully below, we believe that certain aspects of the proposed standard should be reconsidered. In general, we believe that the standard is too prescriptive and that independent auditors must have significantly more flexibility to determine the nature and scope of their testing, including the extent of their reliance on the work of others, in order to form an opinion on the effectiveness of a company's internal controls. We are particularly troubled that the proposed standard does not adequately recognize the benefits of a strong internal audit function.

The accounting abuses which led to the Sarbanes-Oxley Act and this proposed auditing standard resulted from the breakdown of key controls over high-risk areas of financial reporting. By prescribing limits on the extent to which the auditor can use the work of management and others, the proposed standard draws the auditor's attention and resources away from areas of high audit risk to areas that, for many companies with sophisticated systems, would otherwise be deemed to represent low audit risks (e.g., internal controls related to certain routine and recurring period-end financial reporting processes).

Using the Work of Management and Others

The proposed standard prescribes certain circumstances where the independent auditor would be precluded from using the results of testing performed by management and others. These prohibitions include:

(1) Controls that are part of the control environment, including controls specifically established to prevent and detect fraud that is reasonably likely to result in material misstatement of the financial statements;

(2) Controls over the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; to initiate, record, and process journal entries in the general ledger; and to record recurring and nonrecurring adjustments to the financial statements (for example, consolidating adjustments, report combinations, and reclassifications);

(3) Controls that have a pervasive effect on the financial statements, such as certain information technology general controls on which the operating effectiveness of other controls depend; and,

(4) The proposed auditing standard would not allow the auditor to use the work performed by management or others to satisfy the requirement to perform walkthroughs.

Additionally, the proposed standard prescribes two areas where the independent auditor's use of the results of procedures performed by management and others should be limited:

(1) Controls over significant non-routine and nonsystematic transactions (such as accounts involving significant judgments and estimates); and,

(2) Controls over significant accounts, processes or disclosures where the auditor has assessed the risk of failure of the controls to operate effectively as high.

The specific internal controls in place, the inherent risks underlying those controls, and the competency of management, internal audit and others in reviewing and testing those controls, may vary greatly from company to company. The limitations and prohibitions the proposed standard places on the use of the work of management, internal audit and others, are unduly focused on specific types of controls without regard to the risks inherent in those controls. As a result, the proposed standard requires excessive independent testing by the auditor where the inherent audit risk might be deemed low. The standard should place more emphasis on the identification of those controls that represent the greatest audit risk and focus on the independent auditor's exercise of professional judgment in assessing those controls. The proposed standard should be amended to permit the independent auditor to use the work of management and others based on their assessment of the risks being reviewed, their understanding of the control environment, and the competency of the party performing the primary work. Furthermore, the auditor should be permitted to reduce the scope of their testing in favor of the work of others in recurring audits of those controls, especially where those controls are deemed to have low inherent risk. This will promote a more effective and efficient audit, particularly for large and complex organizations.

Limitations related to routine processes

We believe that the limitations related to the period-end financial reporting process, including controls over procedures used to enter transaction totals into the general ledger; to initiate, record, and process journal entries in the general ledger; and to record recurring and nonrecurring adjustments to the financial statements, are unduly restrictive. In paragraph 106, the proposed standard supports the independent auditor's use of the work of management and others to assess controls over the routine processing of significant accounts and disclosures, without specific limitation. For a company with sophisticated systems, the controls over the period-end financial reporting process are basic and routine and we believe that the limitations on the independent auditor's use of the work of management and others are contradictory to the guidance in paragraph 106. These controls are extensively reviewed, monitored and tested by management and internal audit. The blanket limitations related to the routine processes noted above will result in an excessive amount of work for the independent auditor in areas where it would be more sensible and efficient to use the work of others. We believe that the independent auditor should have full discretion in terms of their use of the work of others in these areas, particularly where the inherent audit risks are deemed low.

Limitations related to non-routine and non-systematic transactions

We believe that the limitation related to significant non-routine and nonsystematic transactions (such as accounts involving significant judgments and estimates) is too restrictive. Such controls could encompass a broad spectrum of activities with varying levels of audit risk. Certainly, the audit risks inherent in many such controls require that the auditor perform the primary work, but the assessment of other controls with lower audit risk should be subject to the auditor's discretion. The proposed standard indicates that the reliance on the work of management and others in such circumstances should be "limited", but there is no explanation of what "limited" means. We believe that the independent auditor should evaluate each type of transaction and, using their professional judgment, determine the scope of their work and the extent of their testing based on their knowledge of related internal controls, documentation of processes, the competence of company personnel involved and the auditor's overall familiarity with these non-routine and non-systematic transactions.

Limitation related to walkthroughs

While Citigroup supports the notion that walkthroughs are important, their extent and timing should be left to the judgment of the auditor. The proposed standard does not allow the independent auditor to use the work performed by management or others to satisfy the requirement to perform walkthroughs. Walkthroughs are described as encompassing the entire process of initiating, recording, processing and reporting individual transactions, and controls for all five internal control components and fraud. We believe that this limitation is too broad in scope and that it will lead to the independent auditor's duplicating the work of internal audit in many cases. The limitation also fails to recognize that where certain processes are static it is not efficient or cost effective to prohibit using the work of management and others. In a large and complex organization, this limitation will place an overwhelming burden on the auditor that will draw their resources away from addressing more substantive issues where the audit risk is greater. We believe that the independent auditor should be permitted to use their professional judgment in determining where it is appropriate to use the work of internal audit and others to complete a walkthrough of controls. At the very least, the standard should permit the auditor to rotate its walkthrough testing, alternating with the internal auditor, so that the auditor can focus on areas of change and higher risk.

Limitations related to the work of internal audit

We are particularly troubled that the proposed standard does not adequately recognize the benefits of a strong internal audit function. The independent auditor should be able to place considerable reliance on the work of internal auditors if internal audit is sufficiently independent of management, has a strong reporting relationship directly with the audit committee and performs appropriate tests of controls. In a large and complex multi-national company such as Citigroup, the internal audit function performs a critical role in assessing the company's internal controls. At Citigroup, the internal audit group includes more than 700 professional audit staff who perform an independent and objective review of the Company's operations and procedures and report their findings to management and the audit committee. Their work includes a rigorous assessment of the Company's risk and control environment through the evaluation of financial, operational, and administrative controls; risk management practices; and adherence with laws, regulations and company policies. During 2003, Citigroup's internal audit group is expected to spend approximately 1,000,000 hours performing their work, including approximately 175,000 hours reviewing and testing technology operations with the majority covering information technology general controls. The internal audit function is independent of management and reports directly to the audit committee. Internal audit has no authority or responsibility for the activities it audits. Additionally, they neither develop nor install systems or procedures, prepare records, or engage in any other activity that would normally be audited.

As noted above, the independent auditors are limited from using the work of internal audit with respect to walkthroughs and in the assessment of certain important processes including the assessment of controls over the period-end financial reporting process, over procedures used to enter transaction totals into the general ledger; to initiate, record, and process journal entries in the general ledger; and to record recurring and nonrecurring adjustments to the financial statements. These functions are generally not where audit risk lies. The proposed standard also prohibits the use of the work of internal auditors in the testing of certain information technology general controls on which the operating effectiveness of other controls depends. However, in paragraph 108, the proposed standard acknowledges that, "Internal auditors would normally be expected to have greater competence with regard to internal control over financial reporting and objectivity than other company personnel. Therefore, the auditor may be able to use the results of their procedures to a greater extent than the results of procedures performed by others. This is particularly true in the case of internal auditors who follow the International Standards for the Professional Practice of Internal Auditing issued by the Institute of Internal Auditors. At companies where the importance of the internal audit function results in a high degree of competence and objectivity and their work is extensive, the auditor could use their work to the greatest extent an auditor could use the work of others."

We are very concerned that the limitations imposed by the proposed standard do not recognize the competency and objectivity of the internal audit function and the significant amount of effort this group puts forth in performing their duties. It seems irrational that our internal audit group will perform approximately 175,000 hours auditing technology operations including IT general controls, and the proposed standard would preclude the independent auditor from using that work. These limitations will only serve to marginalize the efforts of the internal audit function to the detriment of the overall control environment. In determining the extent to which they will use the work of internal audit, the independent auditor should determine whether the internal audit function is independent of management, if they are qualified to do the work and whether the scope of their testing is adequate. Regardless of the work done by the independent auditor, management will continue to require internal audit's attention to these areas. This will result in a duplication of effort and significant additional cost with no real benefit. In order for management to complete its assessment of internal controls, management and internal audit are necessarily involved in the review and testing of critical areas, and we feel strongly that the independent auditors should have the flexibility to consider those efforts when determining the scope of their testing.

Requirement for the Auditor's Work to Provide the Principal Evidence for the Audit Opinion

In addition to the limitations described above, the proposed standard requires that, on an overall basis, the auditor's own work must provide the principal evidence for the audit opinion (paragraph 109). It is unclear what is meant by "principal evidence". Since internal controls may affect many individual account balances and related financial statement disclosures, it is difficult to relate the testing of a particular internal control to the either the size of an individual account balance, a particular disclosure or the financial statements taken as a whole. Moreover, when any level of reliance is placed on the work of others it may be impossible to assert that the independent auditor has met the "principal evidence" threshold. Should "principal evidence" be measured in terms of hours worked, the number of individual transactions tested, or the size of individual items tested? Should it be measured in terms of individual account balances at a point in time affected by a particular control or is it somehow measured by the risk inherent in a particular control?

We believe that it will not be possible to measure in a meaningful way the testing performed by the independent auditor against the work performed by management and others to determine whether the independent auditor's own work has provided the principal evidence for the audit opinion. This is particularly true since the independent auditor, management, internal audit and others will be assessing internal controls with varying levels of inherent risk that affect the same individual account balances. For a large, complex company such as Citigroup, we believe that achieving the level of "principal evidence" that is required by the proposed standard (regardless of how that is measured), will necessitate that the independent auditor perform an unreasonable amount of testing in light of the extensive work performed by the internal audit group and management. At a high level, the concept of "principal evidence" may be relevant to the question of whether to base the opinion in part on the report of another auditor, but is not operable in respect of the interrelated controls that may be tested by both the auditor and others. We believe that the requirement that the independent auditor's own work provide the principal evidence for the audit opinion should be removed from the standard as it is inoperable and is likely to cause considerable confusion. The primary consideration should be whether the overall scope and nature of the work performed supports the audit opinion, and we believe the standard provides sufficient guidance for the independent auditor to plan and perform the audit to obtain reasonable assurance about the effectiveness of internal control without the "principal evidence" requirement.

Use of a Service Auditor's Report

The proposed standard directs an auditor to determine whether management has evaluated the operating effectiveness of controls based on procedures sufficient to assess their operating effectiveness. Such procedures include the use of a service auditor's report. However, the proposed standard does not provide adequate guidance with respect to which service auditor reports are required and how often the reports should be obtained. With respect to financial statement audit reports, SAS 70 provides guidance as to the level of review and the types of service organizations that should be reviewed during an audit of financial statements. SAS 70 states that the significance of the controls of the service organization to those of the user organization depends on the nature of the services provided by the service organization, the nature and materiality of the transactions it processes for the user organization and the degree of interaction between the service organization's activities and those of the user organization. We encourage the Board to adopt similar guidance, as we believe that concepts of materiality of the controls related to service organizations and "facts and circumstances" determinations are appropriate to promote efficient and effective audits of internal control. We believe that an auditor should be permitted to limit his or her review to those service organizations providing services likely to have a material impact on the financial statements.

Furthermore, in the case of service organizations located where U.S. auditing standards are not applied, SAS 70 reports may not be available. We believe the Board should permit the use of comparable reports under non-U.S. generally accepted auditing standards.

Definitions of "Significant Deficiency" and "Material Weakness"

The Board is likely to receive many comments on the proposed standard's definitions of "significant deficiency" and "material weakness" because these definitions represent a lower threshold for reporting internal control deficiencies than the current definitions established in AU §325. These definitions are critical not only because of the reporting requirements they carry, but also because of the resources a company must employ to implement corrective action. As discussed in more detail below, we believe the proposed thresholds for identifying a significant deficiency and a material weakness are too low and this will cause management and the audit committee to focus limited company resources on issues that represent lower risks to financial reporting and may otherwise be sufficiently mitigated by compensating controls.

The proposed standard states that an internal control deficiency exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis. A "significant deficiency" is defined as an internal control deficiency (or a combination of internal control deficiencies) that, by itself or in combination with other internal control deficiencies, results in **more than a remote likelihood** that a misstatement of the company's annual or interim financial statements that is **more than inconsequential in amount** will not be prevented or detected. We believe that the threshold for identifying a significant deficiency is too low. Clearly the Board did not intend that every internal control deficiency should be considered a significant deficiency, however, we see very little space between the two. In practical terms, it will be very difficult to assert that any internal control deficiency does not meet the "more than a remote likelihood" and "more than inconsequential in amount" thresholds.

We would agree that management should address all internal control deficiencies. However, we are concerned the definitions as proposed present such a low threshold that management and the auditor may report items to the audit committee that are not indicators of "significant deficiencies", but are more recommendations of best practices or deficiencies that are otherwise sufficiently mitigated by compensating controls. In a large and complex organization with worldwide operations and multiple product offerings, certain internal control deficiencies that in the opinion of management and the auditors do not present a significant risk to the consolidated company will nonetheless be reported as "significant deficiencies". We believe that it will be more effective to provide a greater distinction between internal control deficiencies and significant deficiencies so that senior management and the audit committee can focus resources on those issues that warrant more attention. With this in mind, we suggest the Board consider adopting a threshold for identifying significant deficiencies that is at least “reasonably possible” as described in FAS 5.

The PCAOB has introduced the term “more than inconsequential” in the definition of a significant deficiency. We believe this is a new term in accounting literature and, as such, the proposed standard should provide guidance on how to determine if an amount is “more than inconsequential”. In order to ensure that the audit committee’s attention and company resources are focused on the most important internal control issues, we suggest that the Board adopt a definition such as “significant, but less than material”.

We are also concerned that the definition of a “material weakness” is inconsistent with the definition of that term under the SEC’s final rules relating to management’s assessment of the effectiveness of internal control over financial reporting. The SEC’s Section 404 Release refers to SAS 60 when defining a “material weakness”. The SEC’s Release states, “a "material weakness" is defined in Statement on Auditing Standards No. 60 (codified in Codification of Statements on Auditing Standards AU §325) as a reportable condition in which the design or operation of one or more of the internal control components does not reduce to a **relatively low level** the risk that misstatements caused by errors or fraud in amounts that would be material in relation to the financial statements being audited may occur and not be detected within a timely period by employees in the normal course of performing their assigned functions.” In contrast, the proposed standard defines a “material weakness” as “a significant deficiency that, by itself, or in combination with other significant deficiencies, results in a more than a **remote likelihood** that a material misstatement of the annual or interim financial statements will not be prevented or detected.” The difference between a “remote likelihood” and a “relatively low level” creates the possibility that there could be a difference in the application of the final auditing standard and the SEC’s Release. We believe that the definition in the proposed standard will be difficult to reconcile with the definition in the SEC’s Release. Accordingly, we believe that the proposed standard should adopt the existing AU §325 definitions of a material weakness and a significant deficiency (reportable weakness).

Identifying Significant Deficiencies

The proposed standard provides a list of certain circumstances that should be regarded as at least a significant deficiency in internal control and strong indicators that a material weakness in internal control exists. As indicated in paragraph 126 of the proposed standard, such circumstances include:

- Restatement of previously issued financial statements to reflect the correction of a misstatement.
- Identification by the auditor of a material misstatement in financial statements in the current period that was not initially identified by the company's internal control over financial reporting. (This is still a strong indicator of a material weakness even if management subsequently corrects the misstatement.)
- Oversight of the company's external financial reporting and internal control over financial reporting by the company's audit committee is ineffective. (Paragraphs 56 through 59 present factors to evaluate when determining whether the audit committee is ineffective.)
- For larger, more complex entities, the internal audit function or the risk assessment function is ineffective.

- For complex entities in highly regulated industries, an ineffective regulatory compliance function.
- Identification of fraud of any magnitude on the part of senior management.
- Significant deficiencies that have been communicated to management and the audit committee remain uncorrected after some reasonable period of time.

We believe that it is not appropriate to include such a list in the final standard. This list may be intended to create a bright-line standard for identifying significant deficiencies, but, in practice, we believe it will force the reporting of certain issues that do not rise to the level of a significant deficiency in the opinion of management and the independent auditor. Certain items on the list are vague and could be subject to a broad interpretation. For example, several of the items use the term "ineffective" which is not adequately defined in the proposed standard. We agree that the items on this list could easily rise to the level of a significant deficiency and even a material weakness. However, since the circumstances surrounding any of the items on this list and the potential impact on the internal control environment will vary for every company, we believe it is not appropriate to create such a bright-line for reporting significant deficiencies. We feel that the final standard should not include any specific list of deficiencies, significant deficiencies or material weaknesses.

Consideration of Regulatory Compliance in the Assessment of Internal Control

The proposed standard states that the operations and compliance with laws and regulations directly related to the presentation of and required disclosures in financial statements are encompassed in internal control over financial reporting. Where a company operates in highly regulated industries as Citigroup does, the consideration of compliance includes many areas that are directly related to financial reporting and many areas that are not. For example, sales practices, privacy standards, staff licensing requirements, and trade supervision are important areas of regulatory compliance, but they are not directly related to financial reporting. While such areas may be subject to review under other laws and regulations, we believe that these areas of regulatory compliance that are not directly related to financial reporting should be outside the scope of the proposed standard. Paragraph 126 of the proposed standard is written very broadly, indicating that for complex entities in highly regulated industries, an ineffective regulatory compliance function would be regarded as at least a significant internal control deficiency. We are concerned that this paragraph does not distinguish those areas of regulatory compliance that relate to financial reporting from the areas that do not. As written, this paragraph seems to imply that the independent auditor is required to perform an assessment of controls that are not directly related to financial reporting. There is no such requirement under the SEC's Release or this proposed standard and the auditor might not be in a position to determine if controls unrelated to financial reporting are effective. Notwithstanding our comment above regarding the list of significant deficiencies in paragraph 126, we recommend that the standard be amended to clarify that only regulatory compliance directly related to financial reporting is within the scope of the standard.

Reporting of "Except For" Conclusions

The Board has asked whether there are circumstances where a qualified "except for" conclusion would be appropriate. As the Board noted, the SEC's final rules implementing Section 404 state, "Management is not permitted to conclude that the registrant's internal control over financial reporting is effective if there are one or more material weaknesses in the registrant's internal control over financial reporting." We do not believe this precludes an "except for" conclusion.

There are certain circumstances where management and the independent auditor will not have an opportunity to assess the internal controls of a part of a company, particularly with respect to acquisitions that take place close to the reporting date. This will be a particular issue in acquisitions of certain non-public US companies and foreign companies that have not been subject to the requirements of Section 404. We believe that the inability to assess the internal control environment of a recently acquired business is not, by itself, indicative of a significant deficiency or a material weakness in internal control. In such circumstances, management should be permitted a reasonable amount of time, given the size and complexity of the acquired business, to assess the internal controls of the acquired company and the independent auditor should be permitted to issue an opinion that is "except for" the acquired business.

Audit Committee Pre-Approval of Internal Control-Related Services

The proposed standard expands the SEC's auditor independence rules related to pre-approval of non-audit services by requiring that any non-audit service related to internal control be specifically pre-approved by the audit committee, rather than being pre-approved as part of a category of non-audit services related to internal control.

The audits of internal control, in many cases, are required by regulators in the U.S. and overseas. In a large complex organization, there can be hundreds of such reviews required each year. The audits are normally part of the financial statement audit, or a separate engagement specifically for the purpose of issuing an opinion on the effectiveness of the internal control environment (FDICIA or SAS 70 reviews are two examples). To require the pre-approval of the audit committee for each and every internal control review would place undue burden on the audit committee. A specifically pre-approved limit for these type of reviews delegated to senior management would be more appropriate.

Documentation Standards

The proposed standard in paragraph 43 defines the standards for the external auditor to determine whether management's documentation provides reasonable support for its assessment of internal control effectiveness. The standard would dictate the exact items that the auditor would look for including:

- Design of controls over relevant assertions related to all significant accounts and disclosures in the financial statements, including all five components in paragraph 50.
- Information about how significant transactions are initiated, recorded, processed, and reported.
- Enough information about the flow of transactions to identify where material misstatements due to error or fraud could occur.
- Controls designed to prevent or detect fraud, including who performs the controls and the related segregation of duties.
- Controls over the safeguarding of assets.
- The results of management's testing and evaluation.

We believe that the requirement to include all five components of internal control as part of the individual documentation related to “all significant accounts and disclosures” is unduly prescriptive and will add tremendous burden to management’s assessment. While we support the need to document the five components of internal control as stated in paragraph 50, this can be done at a business level, or company level, and should not be required at an individual control level. We believe that paragraph 44, which allows for many forms of documentation and requires no one specific form of documentation, is the right standard that the PCAOB should adopt. Any list in paragraph 43 should include language stating that the items on the list are examples, and are not required at the individual control level. Alternatively, the list should be deleted and included as an appendix of examples. We are also concerned with the use of language such as “enough information” leaves this open to interpretation and should be deleted.

Overall, the level of documentation should be a matter of judgment depending on the level of complexity of the organization, size, systems etc., and no one approach to documentation should be prescribed.

Report Date

The proposed standard indicates that the independent auditor cannot audit internal control without also auditing the financial statements. As a technical matter, we do not believe that this requirement should preclude the independent auditor from issuing their report on internal controls at a date subsequent to the financial statement audit report date.

The proposed standard indicates that an auditor could issue an updated report on internal controls in response to the subsequent discovery of information existing at the date of their original report on internal controls if such information would have affected their internal control opinion (see paragraph 180). If the information leading to an updated internal control report does not impact the original financial statement audit opinion, this could create a situation where the revised internal control report and the audit report would have different dates. While we expect that the internal control report and the financial statement report will have the same date because the work on both will coincide, we believe it is more appropriate to tie the date of the internal control report to the completion of the fieldwork related to the assessment internal controls. Ultimately the dates on both reports will be driven by the underlying requirement for the reports (e.g., the requirement to file a certification with the SEC or the issuance of the financial statements). As a technical matter, we believe that the proposed standard should be amended to remove the requirement that the two opinions share the same date.

Conclusion

Citigroup is appreciative of the opportunity to comment on the proposed auditing standard and we thank you for considering our comments. If you have any questions regarding this letter, please contact me at your convenience.

Sincerely,

William P. Hannon
Controller

RE: PCAOB Rulemaking Docket No. 008

Dear Sir or Madam:

Commercial Federal Corporation (CFC) welcomes the opportunity to comment on the PCAOB's proposed auditing standard "An Audit of Internal Control over Financial Reporting Performed in Conjunction with an Audit of Financial Statements," as referred to in Section 404(b) of the Sarbanes-Oxley Act of 2002 (SOX). This comment letter is in direct response to the PCAOB Rulemaking Docket Matter No. 008.

CFC's primary subsidiary is Commercial Federal Bank (CFB). CFB is a $13 billion federal savings bank, headquartered in Omaha, Nebraska, and regulated by the Office of Thrift Supervision. CFB operates 192 branches across seven states, including Arizona, Colorado, Iowa, Kansas, Missouri, Nebraska, and Oklahoma. CFB has been subject to the provision of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) since its inception. And, specifically as it relates to SOX Section 404, FDICIA Section 112 since 1993.

We applaud the efforts of the PCAOB (the Board) as a major contributor to the landscape of enhanced governance and accountability investors rightfully expect. The Board's efforts to help restore credibility to integrity of corporate America's financial reporting processes and improve the associated oversight provided by the public accounting profession is definitely warranted. However, although we are all disheartened by the highly visible corporate misdeeds that resulted in the Sarbanes-Oxley legislation, we must also remember that overlaying excess burden and cost on the infrastructure of corporate America penalizes no one other than consumers and shareholders in the long-run. While good controls are, and should always be, cost-effective over the long-term, unnecessary and excessive validation, verification and duplication is cost-prohibitive and not in anyone's best interests. Caution should be exercised before we fully chastise the many by the misdeeds of the few through unnecessarily and onerous rules. Maybe unfortunately, but realistically, we cannot legislate, regulate or standard set corporate misfeasance and malfeasance out of existence. And, in an era of increasingly complex and evolving accounting rules, unintended restatements of financial results will undoubtedly continue.

The most troubling aspects of the proposal revolve around:

- the unwarranted and over-reaching transformation of the **attestation** of management's assessment of the effectiveness of internal control over financial reporting to an **audit** of internal control over financial reporting,
- the presumption that because there may have been some isolated instances of over-reliance on the work of others for banks under FDICIA results in a virtual elimination of any substantive reliance, and
- the inherent conflict of interest that gets created by having the auditors evaluate the audit committee.

The proposed standard solicits commentary on 31 specific questions. Contained below are our thoughts on those that we respectfully request the Board to revisit and/or reconsider:

1. Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting?

   Response to Question 1:
   The words in SOX Sections 103 and 404 require the auditor to "present an evaluation," "provide reasonable assurance," "contain an assessment of the effectiveness," and "attest to, and report on." A review of most any widely recognized dictionary will draw a distinction between an "audit" and an "attestation." An attest engagement has traditionally been distinguished from an audit. Congressional intent seems to be that an attestation be performed, not an audit. Furthermore, this is what was also the intent of FDICIA and, as has been often quoted, the intent of SOX in this context was to closely mirror FDICIA. And, lastly, even the SEC recently signaled this distinction in its implementing release on SOX Section 404 by referring to the auditor's report on management's assessment as an attestation report (not an audit report) which is to be made in accordance with standards for attestation engagements. Therefore, we believe that the guidance should not outline how to perform an audit of controls, but rather should be implementing congressional intent by focusing on how to properly evaluate management's assertion. If the Board does not consider revision of the standard and extend the opportunity for the auditor to perform a more measured and appropriate assessment of the process leading to management's assertion, whereby greater reliance can be placed on the work of others, then the auditor's extensive work/testing as outlined in the proposal ("control environment" controls, "period-end" controls, information technology "general controls, walkthroughs, significant nonroutine transactions, significant accounts, etc.) does become an audit.

4. Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?

   Response to Question 4:
   The issue is more of complexity, level of centralization, sophistication and amount of outsourcing, than solely an issue of size. How an auditor determines what the key controls over financial reporting are, and limiting the work to solely key controls, will be the primary factor. Where these key controls resultantly reside (centrally or decentrally, nationally or internationally, inside the company or outsourced, etc.) drives the complexity of the auditors work. The proposed standards suggests that "For a smaller, less complex company, the Board expects that the auditor will exercise reasonable judgment in determining the extent of the audit of internal control and perform only those tests that

are necessary to ascertain the effectiveness of the company's internal control." Is that not the case regardless of the size or complexity? Shouldn't the auditor exercise the same judgment taking into account all factors at <u>any company</u>?

8. Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of significant deficiency or material weakness in internal control?

<u>Response to Question 8:</u>
If management's documentation of the design of the internal controls and/or management's documentation supporting their assessment of internal control effectiveness is deemed to be inadequate by the auditor, that alone should not result in a de facto significant deficiency or material weakness. If adequate controls exist and the auditor can validate or otherwise determine such existence, even in the absence of adequate documentation, then there may not be a significant deficiency or material weakness. However, if due to the inadequacy of documentation, the control cannot be validated or otherwise determined to exist, then the facts and circumstances should drive whether there is a significant deficiency or material weakness. In coming to this conclusion, we need to be sure we are remembering the audience we are communicating to and what they want and/or need to know. We must also remember that the proposed standard suggests that a repeat significant deficiency would rise to the level of material weakness in a subsequent period if not cured in a reasonable time. Does an investor, reading management's assertion in concert with the auditor's attestation report, need or ever really care to know that there was a control documentation concern but otherwise the "financial results are fairly presented in all material respects?" Unless the documentation inadequacy would result in more than a remote possibility of material misstatement, does this really add any valuable information for the investing public? (See response to question #17 regarding the definition of significant deficiency.)

10. Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal auditors, or others?

<u>Response to Question 10:</u>
Walkthroughs are certainly a valid and legitimate audit evidence gathering technique, and judiciously applied, can be useful in testing a process and the associated controls. The auditor should determine what financial statement accounts and disclosures are worthy of testing by the use of a walkthrough technique, but there should be certain facts and circumstances where reliance on the work of others can be deemed to be acceptable. For instance, if a company's internal audit function had completed walkthroughs, and that internal audit function's work is determined to be independent and reliable, the auditor should first conduct selected reperformance tests. Assuming the internal auditor's work is assessed as reliable, then the auditor should be able to accept the remainder of the internal auditors walkthrough evaluation without performing any further work on his or her own. Completely dismissing the work of others in this instance, however, seems to be an unnecessary and overly burdensome (and cost ineffective) stance.

Importantly, however, walkthroughs are not always necessary. The focus should be on testing how management made their assessments, and performing tests as required to gain assurance regarding management's assessment process and the associated conclusions. These tests may or may not require the extensive walkthroughs currently specified in the proposed standard.

11. Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?

Response to Question 11:
We do not believe the concept of rotation of testing or evaluation makes inherent sense. If each year's management assertion and auditor attestation needs to stand on its own for the fiscal year being reported on, then each key control should be evaluated annually. To entertain the concept of rotation would call into question whether the controls being evaluated were key or critical controls, rather than supporting or secondary controls. The evaluation should only concern itself with key or critical controls that could, in their absence or failure, result in the potential for material financial reporting errors or restatements.

12. To what extent should the auditor be permitted or required to use the work of management and others?
13. Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?
14. Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?
15. Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?
16. Is the requirement for the auditor to obtain the principle evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?

Response to Questions 12, 13, 14, 15, 16:
The proposed standard defines three categories of controls and the extent to which the auditor may use the work of others for each category. These categories result in either a conclusion of "no reliance," "limited reliance," or "no limitations on reliance." However, the proposed standard also goes on to state that the auditor's own work must provide the principal evidence for the audit opinion. The interplay of these principles seems to result in very little reliance on the work of others in most any area of potential materiality. Even though there are no specific limitations on reliance on the work of others in areas of routine processing of significant accounts, how does the work become the principal evidence for the audit opinion without extensive independent work by the auditor or extensive reperformance work? The proposal seems to be building in a lot of redundant cost by not allowing greater reliance on the work of others. Once the auditor is done with:

- personally testing and evaluating all significant control environment controls,
- personally testing and evaluating all significant period-end financial reporting controls,
- personally testing and evaluating all significant pervasive controls (e.g., information technology general controls),
- personally conducting all necessary walkthroughs,
- personally assessing in some manner all controls over significant nonroutine and nonsystematic transactions, and

- personally assessing in some manner all significant accounts, processes, or disclosures,

what is there left to do of a material nature?

A highly qualified, competent, and independent internal audit function, duly assessed as such by the auditor, should result in a comfort level on the work they perform. This should, in turn, allow for a much greater reliance on the work of that internal audit function than the standard currently proposes. Acknowledging this in the standard will signal what is already true: the work of a competent and objective internal audit function is cost effective and can be relied upon to a great extent.

17. Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?

Response to Question 17:
The proposed standard's definition for significant deficiency is problematic. The determination of the deficiency as significant needs to be based on a multitude of factors beyond just the interpretation of the interplay of the concepts of "remote" and "inconsequential." Under the current proposal, any control weakness which could potentially (not actually) result in an error that is not inconsequential, would result in a significant deficiency. What does inconsequential mean? The dictionary defines it as "not relevant" or "of no importance." It seems that the threshold is set too low for "significance" -- anything that is more than not relevant or beyond no importance? The category of significant weakness should only include those weaknesses with enough importance to warrant the attention of the audit committee.

22. Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?
23. Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?
24. If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require that auditor to withdraw from the audit engagement?

Response to Questions 22, 23, 24:
No, it is not appropriate for the auditor to evaluate the effectiveness of the audit committee in any formalized manner. The auditor is hired, retained, fired, and the fees approved by the audit committee. Directly evaluating the hand that feeds you results in an inherent conflict of interest that is unacceptable. Of course, if the auditor determines that there are opportunities for the audit committee to improve or enhance their practices and/or processes based on their interactions with the company or the committee, the auditor has a professional responsibility to share those conclusions appropriately (with management, the audit committee, and/or the board of directors). However, mandating and formalizing such review, creates a conflict of interest that is not much different than the perceived (and actual?) conflicts the "independence" rules are trying to eradicate. A more practical conclusion may be to expect that the board's governance committee (or in the absence of such a committee, the full board) conduct/lead this evaluation. The governance committee of the board is part of the NYSE governance rules that will become effective in 2004.

If the Board does not reconsider this position (auditor evaluation of the audit committee), then question 24 comes into play. Although the audit committee has a significant role in setting the tone at the top of an organization, the management of the company has an even larger and more pervasive role in establishing and maintaining that tone. Although an ineffective audit committee might certainly result in a concern, that concern needs to be evaluated considering the situation in its entirety. If management has established and maintained an effective system of controls over financial reporting, yet the audit committee is deemed as "ineffective," that should not necessarily result in a material weakness. **Unless,** however, the ineffectiveness is considered to potentially result in more than a remote likelihood that a material misstatement would not be prevented or detected.

28. Should the Board provide specific guidance on independence and internal control-related non-audit services in the context of this proposed standard?
29. Are there any specific internal control-related non-audit services the auditor should be prohibited from providing to an audit client?

Response to Questions 28, 29:
Although there may very well be opportunities to further study and refine the prohibitions on non-audit services that may impair or impede independence of the auditor, we would suggest allowing some time for the existing standards to settle-in before revisiting this topic.

If you have any questions or would like to discuss the comments provided above, I can be reached by telephone at (402) 827-2538 or by e-mail at HalGaryn@CommercialFed.com.

Subject: PCAOB Rulemaking Docket Matter No. 008

Dear Sirs:

We appreciate the opportunity to respond to the Public Company Accounting Oversight Board (PCAOB) Proposed Auditing Standard *An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements.*

We have provided a response to the issues/questions provided in the exposure draft, which includes several issues we would like to encourage the Board to consider when finalizing the standard.

Issue 1:

We agree with referring to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting.

Issue 2:

We believe that the auditor should **not** be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements. A company may desire to contract for such an audit in order to identify and correct internal control deficiencies. We see no need to prohibit that, as long as the auditor who performs the financial statement audit also performs an audit of internal controls. Perhaps the Board anticipates an auditor could do an internal control examination under AICPA Attestation Standards which would not require a concurrent audit of the financial statements in order to meet the company's needs.

Issue 3:

We believe that the work performed for internal controls should also be used for the purpose of expressing an opinion on the financial statements so long as the same auditor has performed both

audits. The internal control audit should supplement the financial statement audit, not the other way around. We do not see the purpose of performing work comparable to that required to complete the financial statement audit because we do not understand why you would not want to issue statements if you have done that level of work. Also, see the comments at issue 2 for further details.

Issue 4:

We believe that there isn't a difference between small or larger companies when expressing an opinion on or auditing internal controls since you still have to have controls for each assertion. In addition, we do not see in the standard itself where the Board sets forth its expectation that "the auditor will exercise reasonable professional judgment in determining the extent of the audit of internal control and perform only those tests that are necessary to ascertain the effectiveness of the company's internal control." (This quotation is from the paragraph immediately preceding Question 4 in the lead-in to the proposed standard.)

Issue 5:

We do not believe that the board should dictate a specific level of competency. We are comfortable with the guidance as set forth in the proposed standard as it seems consistent with the current field work standards. The Board needs to leave some leeway for the exercise of professional judgment.

Issue 6:

We agree with the scope of the audit. The auditor should have to directly obtain evidence about whether internal control over financial reporting is effective. However, we do not believe the standard is clear about what the auditor would do in a situation in which management believes that because of budget constraints or other reasons, it is not cost effective to implement a control and the auditor disagrees or in a situation in which management has not assessed certain controls that they feel are not critical but the auditor feels are critical.

Issue 7:

Yes, we agree.

Issue 8:

We agree that it is appropriate to state that inadequate documentation is an internal control deficiency and the auditor should evaluate the severity. We therefore disagree that inadequate documentation should automatically rise to the level of significant deficiency or material weakness in internal control.

Issue 9:

We agree if the term "walkthroughs" is used in the traditional sense of physical observation and verification of the flow of documents. However, in an automated environment, a "walkthrough" may be difficult, if not impossible, to perform so there should be the opportunity for the auditor to achieve the same objectives using alternative approaches when necessary.

Issue 10:

We disagree. We believe that the walkthrough should not be required to be performed by the auditor him or herself. We believe that if the internal auditor is qualified and independent, the use of this internal audit documentation should be sufficient and reliable but only after verification. The use of a management walkthrough should never be used.

Issue 11:

To require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year seems to be excessive and unnecessary. There should be an annual evaluation of risk and a documented cycle of rotation where evidence on the controls are obtained during the agreed upon cycle or whenever significant changes occur.

Issue 12:

The auditor should be permitted and **not** required to use the work of others. The auditor should have the flexibility to use auditor judgment when it pertains to the work of others. The Board should expand or provide more detail on its reference to the auditor using the work of management.

Issue 13:

Yes, they are appropriately defined.

Issue 14:

At times, the proposed standard does not give the appropriate recognition to the work of internal auditors. The internal auditor is prohibited from performing walkthroughs that are relied on by external auditors. We believe this is a situation that should be allowed, based on the external auditor's judgment.

Issue 15:

We believe that the flexibility in determining the extent of reliance of the work of others is important. We believe that to the extent that the auditor can reasonably verify the independence of others performing the work, it is not necessary to re-perform or perform additional work as long as the results satisfy the auditor's objectives.

Issue 16:

Yes, we agree.

Issue 17:

The definitions are subjective so we do not believe they will necessarily result in increased consistency in the evaluation of deficiencies; however, we have no suggestions to correct this inherent problem.

Issue 18:

Yes, we agree that the examples in Appendix D are helpful and don't have any other specific examples that would provide further interpretive help.

Issue 19:

No, we don't believe that it is necessary for the auditor to evaluate the severity of **all** identified internal control deficiencies. We believe that whether a deficiency is evaluated should be subject to the auditor's judgment as there may be a control that the auditor is not relying on that would make the deficiency irrelevant.

Issue 20:

Yes, it is appropriate.

Issue 21:

Yes, the matters are appropriately classified.

Issue 22:

Yes, we agree the auditor should evaluate the effectiveness of the audit committee's oversight.

Issue 23:

Yes, we believe the auditors should be able to effectively carry out their responsibility.

Issue 24:

No, it is not necessary for the auditor to withdraw from the audit engagement. It is important for the users of the financial statements to have access to the adverse opinion on the effectiveness of internal control.

Issue 25:

We agree. If management says controls are not effective then it would be confusing to the reader if the auditor did not issue an adverse opinion.

Issue 26:

No, either the controls work or they don't. For example if management gives an adverse opinion, the auditor cannot give an "except for" opinion. (See question 25)

Issue 27:

We agree because by the auditor's opinion speaking directly to the effectiveness of the internal control over financial reporting it prevents confusion on part of the reader.

Issue 28:

We believe that what the Board has provided in the standard is appropriate.

Issue 29:

Yes, there should be some internal control-related non-audit services that the auditor should be prohibited from providing. As an example, GAO's Government Auditing Standards, general standards for independence—section 3.17 note f., indicates that "...certain nonaudit services impair the audit organization's ability to meet either or both of the overarching principles in paragraph 3.13 for certain types of audit work. For example, if the audit organization has been responsible for designing, developing, and/or installing the entity's accounting system or is operating the system and then performs a financial statement audit of the entity, the audit organization would clearly be in violation..."

Issue 30:

Yes, they are appropriate.

Issue 31:

Yes, it is appropriate.

We appreciate the efforts of the Board and the opportunity to provide our comments. Should you have any questions or need additional information regarding our response, please contact me or Martha Mavredes at (804) 225-3350.

Sincerely,

Walter J. Kucharski

RE: Proposed Auditing Attestation Requirements

Dear Sir/Madam:

The Community Bankers Association of New York State* appreciates the opportunity to comment on the proposed auditing standard governing the attestation and reporting of management's assessment of the effectiveness of internal controls. We believe that Section 404 of the Sarbanes-Oxley Act of 2002 was intended to impose similar requirements on general corporations that already exist for financial institutions under the Federal Deposit Improvement Act (FDICIA) of 1991. This law requires management of depository institutions with assets over $500 million to attest to the effectiveness of the institution's internal control structure. The institution's auditor then attests to management's assessment, but does not require another independent audit of the internal controls.

We strongly believe that the proposed new standard would add burdensome, expensive, and overlapping requirements on community banks. Furthermore, we believe that the new standard should conform to the previous requirement already mandated by Congress, or should provide an exemption for depository institutions already examined and supervised by federal banking regulators.

We respectfully request that new standards for public companies acknowledge the existing comprehensive system of regulation, examination, and supervision of insured banks and evaluate whether another layer of auditing expense is either reasonable or necessary.

Thank you for the opportunity to comment on this proposal.

Sincerely,

Mariel Donath

Re: PCAOB Rulemaking Docket Matter No. 008, "Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements"

FILED ELECTRONICALLY (comments@pcaobus.org)

Dear Board Members and Staff,

Thank you for the opportunity to comment on the Public Company Accounting Oversight Board's (the "Board") proposed rule, "Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements," Release No. 2003-017 (the "Proposed Standard"), which was issued October 7, 2003. We commend the Board on its comprehensive efforts to involve all relevant constituencies in formulating this auditing standard.

We have supported the efforts of the President, Congress and the Securities and Exchange Commission to enhance investor confidence in the integrity of our financial reporting system, including legislation and regulations requiring public companies to report on the effectiveness of their internal control. Accurate and reliable financial information is fundamental to investor confidence, and effective internal control over financial reporting plays an important role in assuring the integrity of financial reporting. However, even effective internal control provides only reasonable, not absolute, assurance financial statements are not materially misstated.

While audits of internal control over financial reporting may help improve investor confidence, it is important to balance the cost of these measures with resulting benefits. The proposed audit of internal control over financial reporting certainly would not have detected or prevented the egregious fraudulent financial reporting and business failures of the past two years if full financial statement audits were not sufficient to detect or prevent these abuses.

We are gravely concerned the Proposed Standard, in fact, will result in very significant costs, wholly disproportionate to the resulting benefits. Accordingly, we think the Board should use every possible means to mitigate the cost of these measures to registrants and, ultimately, investors.

2100 East Grand Avenue
El Segundo, California 90245
310.615.0311

- We have significant concerns with the overly broad and all-encompassing nature of the proposed definition of a significant deficiency as any deficiency where the likelihood of potential misstatement is more than remote and the magnitude is more than inconsequential. Deficiencies with a potential misstatement of more than “an inconsequential amount” would encompass substantially all deficiencies. This would make it difficult to distinguish more significant deficiencies in internal control over financial reporting from matters of far less importance and those unlikely to recur.

- We also have significant concerns regarding the exhaustive scope of required audit procedures; unnecessary restrictions on reliance auditors may place on the work of management, internal audit, and others; and the prohibitively high cost of these audit procedures without commensurate benefits.

- We strongly suggest the Board reconsider proposed guidance regarding enumerated circumstances where there is a presumption each circumstance represents at least a significant deficiency and a strong indication of a material weakness.

- Finally, we think the issues requiring reconsideration are so significant and pervasive that we suggest the Board reissue the Proposed Standard upon revision for further public comment to give adequate consideration to the viewpoints of all affected constituencies.

We have provided further information regarding these concerns, as well as other significant comments, concerns and suggestions, in the following paragraphs. We also have included detailed responses in Exhibit I to the specific questions for which the Board is seeking comment.

Definition of a Significant Deficiency

We think the definition of a significant deficiency is far too broad and all encompassing. Deficiencies with a potential misstatement of more than an inconsequential amount would encompass substantially all deficiencies. This would make it difficult to distinguish more significant deficiencies in internal control over financial reporting from matters of far less importance. We also think use of such a vague threshold as “inconsequential” would result in fairly significant diversity in practice since there is no existing usage of this term in either auditing standards or generally accepted accounting principles. Furthermore, we think this definition would mandate a standard which is virtually, if not wholly, unachievable for any large, global corporation.

Scope of Required Audit Procedures and Reliance on the Work of Management, Internal Audit, and Others

Generally, we think the Proposed Standard requires an excessive scope of work for the audit of internal control over financial reporting in that it (1) mandates certain controls be evaluated directly by the auditor (2) restricts the extent of reliance which the auditor may place on procedures performed by management, internal audit, or others and (3) prohibits the auditor from relying on work performed in prior years. As a result, the Proposed Standard would result in substantial duplication of efforts as to audit procedures performed in prior years, as well as between audit procedures performed by internal auditors and the external auditor.

More specifically, the Proposed Standard requires the auditor to directly perform all procedures, and not rely upon efforts of management, internal audit, or others, in the following areas:

- Controls which are part of the control environment, such as controls designed to prevent and detect fraud;

- Controls over the period-end financial reporting process;

- Controls which have a pervasive effect on the financial statements, such as information technology general controls; and

- Walkthroughs for all of the company's significant processes.

In principle, there is simply no reason the auditor should not be able to place reliance on the efforts of others in evaluating these controls, provided the auditor has:

- Evaluated the competence, objectivity and independence of the persons performing such work (as required under Statement on Auditing Standards No. 65), and

- Reperformed such tests, or directly performed such independent tests, as are necessary to corroborate the results of such procedures.

We think these restrictions will unnecessarily materially burden the entire economy with excess cost.

The extent of reperformance and independent tests should depend upon: the results of the tests performed by others; materiality, risk of misstatement, and degree of judgment or estimation associated with the related account balance or disclosure; degree of judgment required to evaluate the operating effectiveness of the control, subjectivity of the tests, and pervasiveness of the controls. Such reliance is particularly appropriate where testing has been performed by internal audit in accordance with the Standards for Professional Practice of Internal Auditing issued by the Institute of Internal Auditors ("IIA"), and where the internal audit function is independent and objective. In fact, in most cases, the company's internal audit personnel would be at least as well qualified, and in many cases better able, to evaluate these control areas than the external auditors based on their knowledge of the company's industry, business, practices and procedures, processes and information technology systems.

Furthermore, the auditor should be able to fully rely on work of experienced internal audit personnel for controls over significant non-routine and non-systematic transactions, such as accounts involving significant judgments and estimates, where such personnel are judged to be sufficiently competent and knowledgeable, as well as objective and independent from management.

Finally, the auditor should be able to place reliance on work performed in prior years where such work is relevant to the current period. An example of this would be tests of application program controls. If such controls are tested in connection with the initial implementation of a new system it would only seem necessary to test changes in subsequent periods, assuming the auditor has tested IT general controls (including program change controls) and determined such controls are effective. This approach is referred to as "baselining" application controls and is a long established, widely accepted practice in use in audits of service providers under Statement on Auditing Standards No. 70 ("SAS 70 audits"), as well as audits of IT controls in conjunction with audits of financial statements.

Cost Benefit Considerations

Based on the various factors discussed above we think the cost of audit work required under the Proposed Standard does not appear to be reasonable in relation to the benefits to be achieved. Financial Executive International estimates potential annual audit cost increases of 30-50%. Representatives of the big four public accounting firms have indicated to us the increase could, in fact, be significantly greater – up to a multiple of the current audit fee. We think they have underestimated its impact. There will be even more substantial costs for the affected public companies. Audits of internal control over financial reporting are generally thought to result in the following benefits: improvement of public confidence in our financial reporting system and, consequently, in our capital markets, and prevention of business and financial reporting failures such as Enron and WorldCom. While we think such audits may help improve public confidence we question whether such audits will have much, if any, impact on business and financial reporting failures such as Enron and WorldCom.

Expectations Gap

In addition to the overall cost benefit disparity, we are even more concerned with the widely held misperception that audits of internal control will eliminate business and financial reporting failures. We fear this "expectations gap" may serve to further undermine our markets if, or when, we experience the next serious business and financial reporting failure. At least in part, this "expectations gap" has, in fact, resulted from unrealistic expectations created by some of the recent rule-making initiatives. For example, the chief executive and chief financial officers of registrant companies must file quarterly and annual "certifications" under Section 302 of Sarbanes-Oxley. These "certifications" address: accuracy of financial statements filed with the SEC, effectiveness of disclosure controls and procedures, and changes in internal controls that could materially affect registrant financial statements.

We strongly disagree with this nomenclature. Terms such as "certification" and "ensure" imply a much higher level of assurance than can reasonably be applied to financial information and internal controls. As previously mentioned, internal controls provide reasonable, but not absolute, assurance that financial statements are not materially misstated. Financial statements present fairly a company's financial position, results of operations and cash flows in accordance with generally accepted accounting principles. These are not absolute standards. "Management certification" is far too strong a characterization. "Management representation" would more appropriately convey the degree of assurance investors should attach to such statements. It is precisely this type of rule making that widens, rather than narrows, the "expectations gap."

Evaluating the Effectiveness of the Audit Committee's Oversight of The Company's External Financial Reporting and Internal Control Over Financial Reporting

We think requiring the auditor to evaluate the effectiveness of the company's audit committee creates an inherent serious conflict of interests in view of the committee's responsibility for appointing the auditor. Additionally, it may also serve to further undermine effective relationships among the company's board of directors, audit committee, management and external auditor. We think it is appropriate for the auditor to consider performance of the audit committee in evaluating the company's control environment. However, we do not think it would be practical to require an evaluation of audit committee effectiveness in view of the inherent conflict.

Circumstances Regarded as at Least a Significant Deficiency and Strong Indicator of a Material Weakness

We do not think the following circumstances warrant the presumption it "should be regarded as at least a significant deficiency and is a strong indicator a material weakness exists" without further evaluation of all the relevant facts and circumstances:

- Restatement of previously issued financial statements.
- Ineffective oversight by the company's audit committee.
- Ineffective regulatory compliance.
- Fraud of any magnitude on the part of senior management.
- Significant deficiencies, which remain uncorrected.

We cannot presume any of the foregoing situations constitute either a significant deficiency or material weakness without further consideration of the specific facts and circumstances. For example, many restatements result from evolving developments in financial reporting and, in some cases, changes to prevalent practice mandated by the SEC or other rule-makers. As indicated previously, we do not think auditor evaluation of audit committee effectiveness is appropriate given the inherent conflict of interests. Assessment of the significance of deficiencies in regulatory compliance and management fraud would require some consideration of the significance of the amounts involved and, with respect to management fraud, the position and authority of personnel. Finally, there may be very good reasons certain significant deficiencies are not corrected, particularly given the definitional issues discussed above regarding significant deficiencies.

We also think audit adjustments identified by the company's auditors may not necessarily be indicative of a material weakness or even a significant deficiency. Audit adjustments of relatively subjective estimates, for example, may more nearly represent a difference in judgment than a deficiency in the estimation process itself.

In addition, we do not think it reasonable to define deficiencies as "at least a significant deficiency" without regard to the significance of the amounts involved and all other pertinent facts and circumstances. More specifically, the categorical classification of the following deficiencies as "at least a significant deficiency" does not seem appropriate:

- Controls over the selection and application of accounting principles.
- Antifraud programs and controls.
- Controls over non-routine and non-systematic transactions.
- Controls over the period-end financial reporting process.

Furthermore, changes in control procedures and practices, such as antifraud programs, controls and procedures, are not necessarily indicative of deficiencies. Controls and procedures evolve over time and adapt to business innovation, technology and consequent changes in overall business practices. Moreover, changes in accounting practices are likewise not necessarily indicative of deficiencies as prevalent practices evolve over time with changes and improvements in prevalent financial reporting and accounting practices.

<u>Auditor Responsibility for Reporting all Deficiencies to Management</u>

The requirement for auditors to report ALL deficiencies to management is, without any possible doubt, much too broad. Presumably this would require reporting deficiencies in internal control over financial reporting - even where effective mitigating controls exist. Perhaps consideration should be given to hierarchy of scale, which is common in large, multinational companies, where certain deficiencies are discussed and resolved at the local level and are not escalated further.

Auditor Responsibility for Quarterly Disclosures

The scope of the auditor's responsibility for quarterly disclosures about internal control is ambiguous and there is no requirement under the Sarbanes-Oxley Act for the auditor to perform work relative to the company's quarterly disclosures. Furthermore, the differing levels of auditor responsibility regarding the management's quarterly disclosures versus management's annual assessment may create more investor confusion and further widen the "expectations gap".

Areas for Additional Guidance

We suggest the Board consider providing additional guidance in the following areas:

- Expand on guidance regarding appropriate framework for IT controls:
    - Incorporate reference to "Control Objectives for Information and Related Technology" (COBIT), published by the IT Governance Institute.
    - Reference recent Discussion Document published by the IT Governance Institute and ISACA regarding applicable IT control objectives and controls ("IT Control Objectives for Sarbanes-Oxley: The Importance of IT in the Design, Implementation and Sustainability of Internal Controls Over Disclosure and Financial Reporting").
- Identify independence and internal control-related services, which would compromise auditor independence.
- Clarify independence issues where service provider audits are performed by the company's external auditor.
- Identify time frame necessary to establish newly instituted controls are effective.

We thank you for the opportunity to express our views in this letter. If you have any questions or would like to further discuss our comments, please feel free to contact Dennis Dooley at (248) 372-3306 or me at (310) 615-1728.

Sincerely,

Leon J. Level
Chief Financial Officer

Exhibit 1

Response to the Questions Set Forth in PCAOB Release No. 2003-017, "Proposed Auditing Standard – An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements" (the "Proposed Standard")

1. Is it appropriate to refer to the auditor's attestation of management's assessment of the effectiveness of internal control over financial reporting as the audit of internal control over financial reporting?

   Yes, we think it is appropriate to refer to the auditor's attestation of management's assessment as the audit of internal control over financial reporting.

2. Should the auditor be prohibited from performing an audit of internal control over financial reporting without also performing an audit of the financial statements?

   Yes, the audits of the financial statements and of internal control over financial reporting are complementary; performance of these audits by different auditors could potentially diminish the effectiveness of both audits.

3. Rather than requiring the auditor to also complete an audit of the financial statements, would an appropriate alternative be to require the auditor to perform work with regard to the financial statements *comparable* to that required to complete the financial statement audit?

   No, nothing short of a full audit of the financial statements would provide equivalent coverage. Furthermore, separate audits of the financial statements and internal control over financial reporting would generally not be cost effective.

4. Does the Board's proposed standard give appropriate consideration to how internal control is implemented in, and how the audit of internal control over financial reporting should be conducted at, small and medium-sized issuers?

   No comment.

5. Should the Board, generally or in this proposed standard, specify the level of competence and training of the audit personnel that is necessary to perform specified auditing procedures effectively? For example, it would be inappropriate for a new, inexperienced auditor to have primary responsibility for conducting the interviews of the company's senior management about possible fraud.

No, specification of the level of competence and training would be overly prescriptive.

6. Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?

   Yes, requiring the auditor to both evaluate management's assessment and obtain, directly, evidence about the effectiveness of internal controls is appropriate. Evaluating management's assessment without directly evaluating internal control over financial reporting would not provide a substantive basis for the auditor's report and would not meet expectations of investors and other users of the reports.

7. Is it appropriate that the Board has provided criteria that auditors should use to evaluate the adequacy of management's documentation?

   Yes, the Board's criteria regarding adequacy of management's documentation appears appropriate.

8. Is it appropriate to state that inadequate documentation is an internal control deficiency, the severity of which the auditor should evaluate? Or should inadequate documentation automatically rise to the level of a significant deficiency or material weakness in internal control?

   Yes, the assessment as to the significance of the deficiency should be subject to auditor judgment based on all the relevant facts and circumstances. Inadequate documentation would not necessarily represent a significant deficiency or material weakness, in and of itself.

9. Are the objectives to be achieved by performing walkthroughs sufficient to require the performance of walkthroughs?

   Yes, walkthroughs are a widespread practice and the objectives are sufficient to warrant inclusion of this procedure as a part of the audit of internal control over financial reporting.

10. Is it appropriate to require that the walkthrough be performed by the auditor himself or herself, rather than allowing the auditor to use walkthrough procedures performed by management, internal audit, or others?

    No, we do not think the walkthrough would necessarily need to be performed by the auditor. In principle the auditor should be allowed to use documented walkthroughs performed by management, internal audit, or others. The extent of the use of such walkthroughs and tests to be performed directly by the auditor would depend upon the facts and circumstances.

11. Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?

    No, the auditor should be able to place reliance on work performed in prior years where such work is relevant to the current period. An example of this would be tests of application program controls. If such controls are tested in connection with the initial implementation of a new system it would only seem necessary to test changes in subsequent periods, assuming the auditor has tested IT general controls (including program change controls) and determined such controls are effective. This approach is referred to as "baselining" application controls and is a long established, widely accepted practice in use in audits of service providers under Statement on Auditing Standards No. 70 ("SAS 70 audits"), as well as audits of IT controls in conjunction with audits of financial statements.

12. To what extent should the auditor be permitted or required to use the work of management or others?

    In principle, the auditor should be able to place reliance on the work of others, provided the auditor has:

    - **Evaluated the competence, objectivity and independence of the persons performing such work (as required under Statement on Auditing Standards No. 65), and**

    - **Reperformed such tests, or directly performed such independent tests, as are necessary to corroborate the results of such work.**

13. Are the three categories of controls and the extent to which the auditor may rely on the work of others appropriately defined?

    Generally, we think the Proposed Standard requires an excessive scope of work for the audit of internal control over financial reporting in that it (1) mandates certain controls be evaluated directly by the auditor and (2) restricts the extent of reliance which the auditor may place on procedures performed by management, internal audit, or others. As a result, the Proposed Standard would result in substantial duplication of work as to audit work performed in prior years, as well as between audit work performed by the internal auditors and the external auditor.

More specifically, the Proposed Standard requires the auditor to directly perform all work, and not rely upon efforts of management, internal audit, or others, in the following areas:

- **Controls which are part of the control environment, such as controls designed to prevent and detect fraud;**
- **Controls over the period-end financial reporting process;**
- **Controls which have a pervasive effect on the financial statements, such as information technology general controls; and**
- **Walkthroughs for all of the company's significant processes.**

In principle, there is simply no reason the auditor should not be able to place reliance on the work of others in evaluating these controls, provided the auditor has:

- **Evaluated the competence, objectivity and independence of the persons performing such work (as required under Statement on Auditing Standards No. 65), and**
- **Reperformed such tests, or directly performed such independent tests, as are necessary to corroborate the results of such work.**

We think these restrictions will materially unnecessarily burden the entire economy with excess cost.

The extent of reperformance and independent tests should depend upon: the results of the tests performed by others; materiality, risk of misstatement, and degree of judgment or estimation associated with the related account balance or disclosure; degree of judgment required to evaluate the operating effectiveness of the control, subjectivity of the tests, and pervasiveness of the control. Such reliance is particularly appropriate where testing has been performed by internal audit in accordance with the Standards for Professional Practice of Internal Auditing issued by the Institute of Internal Auditors ("IIA"), and where the internal audit function is objective and independent from management. In fact, in most cases, the company's internal audit personnel would be at least as well qualified, and in many cases better able, to evaluate these control areas than the external auditors based on their knowledge of the company's industry, business, practices and procedures, processes and information technology systems.

Furthermore, the auditor should be able to fully rely on work of experienced internal audit personnel for controls over significant non-routine and non-systematic transactions, such as accounts involving significant judgments and

estimates, where such personnel are judged to be sufficiently competent and knowledgeable, as well as objective and independent from management.

14. Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

    No, the auditor should be able to place greater reliance on the work of internal audit, including all the three categories of controls identified in the Proposed Standard (refer to response to question 13 above).

15. Is the flexibility in determining the extent of reperformance of the work of others appropriate, or should the auditor be specifically required to reperform a certain level of work (for example, reperform tests of all significant accounts or reperform every test performed by others that the auditor intends to use)?

    Yes, the extent of reperformance should be subject to auditor judgment based on all the relevant facts and circumstances.

16. Is the requirement for the auditor to obtain the principle evidence, on an overall basis, through his or her own work the appropriate benchmark for the amount of work that is required to be performed by the auditor?

    No, the auditor should not be required to directly perform any minimum level testing, nor restricted in the reliance he may place on the work of others. The auditor has ultimate responsibility for his opinion, but he should be able to place reliance on the work of others, provided adequate evidentiary matter supports the work and he is satisfied as to the competence, objectivity and independence of personnel performing the work. He should be able to base his opinion on the quality and sufficiency of the evidentiary matter.

17. Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?

    We think the definition of a significant deficiency is far too broad and all encompassing. Deficiencies with a potential misstatement of more than an inconsequential amount would encompass substantially all deficiencies. This would make it difficult to distinguish more significant deficiencies in internal control over financial reporting from matters of far less importance. We also think use of such a vague threshold as "inconsequential" would result in fairly significant diversity in practice since there is no existing usage of this term in either auditing standards or generally accepted accounting principles.

18. Do the examples in Appendix D of how to apply these definitions in various scenarios provide helpful guidance? Are there other specific examples that commenters could suggest that would provide further interpretive help?

    Except as noted below, the examples in Appendix D provide helpful guidance as to classification of significant deficiencies and material weaknesses.

    Intercompany procedures should not result in significant deficiencies or material weaknesses unless the intercompany balances do not eliminate without unreconciled differences in consolidation. If the intercompany balances eliminate in consolidation they have no effect on the financial statements and, as a consequence, deficiencies in internal control over itercompany balances could not result in significant deficiencies or material weakness.

19. Is it necessary for the auditor to evaluate the severity of all identified internal control deficiencies?

    Yes, the severity of internal control deficiencies must be evaluated by the auditor based on all the relevant facts and circumstances.

20. Is it appropriate to require the auditor to communicate all internal control deficiencies (not just material weaknesses and significant deficiencies) to management in writing?

    No, the requirement for auditors to report ALL deficiencies to management seems much too broad. Presumably this would require reporting deficiencies in internal control over financial reporting - even where effective mitigating controls exist.

21. Are the matters that the Board has classified as strong indicators that a material weakness in internal control exists appropriately classified as such?

    No, we do not think the following circumstances warrant the presumption it "should be regarded as at least a significant deficiency and is a strong indicator a material weakness exists" without further evaluation of all the relevant facts and circumstances:

    - **Restatement of previously issued financial statements.**
    - **Ineffective oversight by the company's audit committee.**
    - **Ineffective regulatory compliance.**
    - **Fraud of any magnitude on the part of senior management.**

- **Significant deficiencies, which remain uncorrected.**

We cannot presume any of these situations constitute either a significant deficiency or material weakness without further consideration of the specific facts and circumstances. For example, many restatements result from evolving developments in financial reporting and, in some cases, changes to prevalent practice mandated by the SEC or other rule-makers. As indicated previously, we do not think auditor evaluation of audit committee effectiveness is appropriate given the inherent conflict of interests. Assessment of the significance of deficiencies in regulatory compliance and management fraud would require some consideration of the significance of the amounts involved and, with respect to management fraud, the position and authority of personnel. Finally, there may be very good reasons certain significant deficiencies are not corrected, particularly given the definitional issues discussed above regarding significant deficiencies.

We also think audit adjustments identified by the company's auditors may not necessarily be indicative of a material weakness or even a significant deficiency. Audit adjustments of relatively subjective estimates, for example, may more nearly represent a difference in judgment than a deficiency in the estimation process itself.

22. Is it appropriate to require the auditors to evaluate the effectiveness of the audit committee's oversight of the company's external financial reporting and internal control over financial reporting?

    No, we think requiring the auditor to evaluate the effectiveness of the company's audit committee creates an inherent serious conflict of interests in view of the committee's responsibility for appointing the auditor. Furthermore, it may also serve to undermine an effective relationship between the company's board of directors, audit committee, management and external auditor. We think it is appropriate for the auditor to consider performance of the audit committee in evaluating the company's control environment. However, we do not think it would be practical to require an evaluation of audit committee effectiveness in view of the inherent conflict.

23. Will auditors be able to effectively carry out their responsibility to evaluate the effectiveness of the audit committee's oversight?

    No, we do not think the auditor could effectively evaluate the effectiveness of the company's audit committee due to the inherent conflict of interests.

24. If the auditor concludes that ineffective audit committee oversight is a material weakness, rather than require the auditor to issue an adverse opinion with regard to the effectiveness of the internal control over financial reporting, should the standard require the auditor to withdraw from the engagement?

No, if, in fact, this resulted in an actual material weakness we do not think the auditor should withdraw from the engagement.

25. Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management?

    Yes, we think consistency with the management reporting model is essential in this circumstance.

26. Are there circumstances where a qualified "except for" conclusion would be appropriate?

    No.

27. Do you agree with the position that when the auditor issues a non-standard opinion, such as an adverse opinion, that the auditor's opinion should speak directly to the effectiveness of the internal control over financial reporting rather than to whether management's assessment is fairly stated?

    Yes, we agree that expressing an opinion on management's assessment could result in confusion. Reporting directly on the effectiveness of the company's internal control over financial reporting better communicates to the report users the effect of such conditions, because directly reporting more clearly states the auditor's conclusions.

28. Should the board provide specific guidance on independence and internal control-related non-audit services in the context of the proposed standard?

    Yes, we suggest the Board identify independence and internal control-related services which would compromise auditor independence.

29. Are there any specific internal control-related non-audit services the auditor should be prohibited from providing to an audit client?

    Yes, we think the Board should specifically prohibit design and implementation and testing of internal controls over financial reporting, as well as direct assistance to the company in documenting and evaluating its controls. The Board should specifically indicate recommendations regarding internal controls arising from the auditor's audits of the financial statements and internal controls would not compromise their independence.

30. Are the auditor's differing levels of responsibility as they relate to management's quarterly certifications versus the annual (fourth quarter) certification, appropriate?

    No, we think the differing levels of auditor responsibility regarding the management's quarterly disclosures versus management's annual assessment may create more investor confusion and further widen the "expectations gap".

31. Is the scope of the auditor's responsibility for quarterly disclosures about the internal control over financial reporting appropriate?

    No, the scope of the auditor's responsibility for quarterly disclosures about internal control is ambiguous and there is no requirement under the Sarbanes-Oxley Act for the auditor to perform work relative to the company's quarterly disclosures.

Re: PCAOB Rulemaking Docket Matter No. 008,
Proposed Auditing Standard Regarding Internal Controls Over Financial Reporting

FILED ELECTRONICALLY (comments@pcaobus.org)

Dear Board Members and Staff,

We strongly urge the Board to provide a comment period for the proposed auditing standard regarding internal controls over financial reporting.

Your February 24 news release announced an open meeting to be held March 9 "to consider adopting an auditing standard for internal control over financial reporting." The release also states, "The text of the final standard will be posted to the Web site as soon as possible after the Board's meeting." It appears you received nearly 200 comment letters on this proposal, with wide ranging input and only three months to draft broad revisions. As one of many responsible, conscientious members of your public company constituency, we highly recommend a comment period following the March 9 open meeting. Much discussion in your public community indicated hopes for a published draft in advance of the open meeting. As the draft has not yet been exposed as of today, March 8, we can only assume the Board is planning adequate time for comment before the final standard is posted.

Thank you for your consideration. Please feel free to contact me at (310) 615-1728.

Sincerely,

Leon J. Level
Chief Financial Officer,
Computer Sciences Corporation

Dear Sirs

PCAOB Rulemaking Docket Matter Number 008

Proposed Auditing Standard – An Audit of Internal Control over Financial Reporting Performed in Conjunction with an Audit of Financial Statements

The Confederation of British Industry ("CBI") is the principal business association in the United Kingdom representing all sizes of both UK companies and foreign companies with places of business in the UK, and including UK companies who are listed or traded on the US securities markets.

We have been closely following the implications and requirements of Sarbanes – Oxley for UK companies affected, who are anxious to understand the implications of, and observe the requirements of, and understand the implications of, the US legislation and rules made by the SEC and other regulatory bodies which affect them.

Accordingly, the CBI welcomes the opportunity to comment on proposed rules and requirements which will affect UK companies with listings in the US.

Our comments are directed from the standpoint of seeking to ensure proportionate and appropriate rules, which will not result in excessive burdens or costs being placed on UK companies and their audit firms, whilst remaining consistent with the requirements of Sarbanes – Oxley.

Clive Edrupt – Company Affairs
DL: + 44 (0) 20 7395 8042 DF: +44 (0) 20 7836 1114 E: clive.edrupt@cbi.org.uk

Key issues for CBI member companies

1. Adverse audit opinions

We do not believe that a material weakness should automatically result in an adverse opinion. External auditors should use their professional judgement to determine whether a material weakness merits a qualified rather than an adverse opinion. The PCAOB could provide guidance on situations in which an adverse, rather than a qualified, opinion would be appropriate.

The SEC interpreted the requirements of section 404 to relate to internal controls over financial reporting. The proposed standard sometimes refers to 'internal control' and sometimes to 'internal control over financial reporting'. It is not always clear as to whether references to internal control in the text should be read as references to internal control over financial reporting. We suggest that the matter should be clarified at the beginning of the standard.

2. Reporting of control weaknesses

We suggest that the requirement for the external auditor to communicate *all* deficiencies to the audit committee will usually lead to excessive information for audit committees. This requirement should be amended to exclude all the deficiencies already reported by internal auditors, as well as enabling the grouping of similar types of deficiencies.

We do not accept the proposition that a significant deficiency that remains uncorrected after some reasonable period of time is a strong indicator of a material weakness. As an example, could this encompass a judgement that it is 'reasonable' not to correct a deficiency where the costs of the control exceed the benefits? A further issue is whether the aggregation principle applies in situations where a company has several deficiencies in unrelated areas. If it does, then adverse audit opinions may become common and their significance will be devalued.

3. Level of controls testing

The examples of control testing procedures illustrate that a very substantial amount of audit work is expected of external auditors at this basic level. The issuer is already required to carry out its own testing in this regard and those tests should yield the same results as external audit testing. We are not convinced that the requirement to test so much at this low level is necessary to protect investors.

Whilst we would expect basic low level controls to form an important element of the overall comfort obtained by CEOs and CFOs when making their certification, we would expect that they would represent a relatively low proportion. For example, high-level detective controls are typically a very significant element of overall comfort but they are not addressed in the examples.

4. Controls which do not naturally give rise to documentary evidence

Effectively designed controls are not always easy to demonstrate or document. For example, day to day supervision, coaching and reviewing of staff and their work in the accounting department are sound preventative controls but are ordinarily not documented on a continuing basis. Despite this, external auditors can often, by a process of enquiry and proper evidential corroboration, gain reasonable assurance that such controls exist and work effectively. The proposed standard indirectly plays down the importance of such controls and may encourage companies to prepare documentation that would not otherwise be necessary from a business point of view. We envisage that even routine meetings of management that act as a form of control, such as credit control meetings, will now have to be documented in detail to satisfy the perceived requirements of the standard. This will add additional cost and bureaucracy.

The operation of some IT controls may also not be easy to document to the level that may be perceived as necessary under the proposed standard. We question whether all this additional work on documentation will provide an increased level of protection for investors commensurate with the increased cost of compliance. We also question whether the proposals go further than the intentions of the Sarbanes-Oxley Act.

5. Weakness identification

The proposed standard requires the auditor to issue an adverse opinion regarding the effectiveness of internal control over financial reporting in case of one or more material weaknesses. This includes the identification by the external auditor of a material misstatement in the year-end financial statements that was not identified by the company’s internal controls, even if management subsequently corrects the misstatement prior to issuance of the financial statements.

This will have a profound effect on the relationship between an entity’s management and its external auditors, since it will increase resistance to adjustments proposed by external auditors. Even where the need for an adjustment is agreed, there will be unnecessary arguments as to which party identified the weakness incentive first. It may also make it difficult for external auditors to perform their work because management may try to keep them out until the preparation of the financial statements is at an advanced stage, thus ensuring that the auditor is not the first to identify adjustments.

We hope you find these comments helpful.

Yours faithfully

Re: PCAOB rulemaking Docket Matter No. 008
Comments on Proposed Auditing Standard

Dear Chairman McDonough:

As Members of Congress we are writing to you in connection with the Proposed Auditing Standard-An Audit of Internal Control Over Financial Reporting Performed in Conjunction With An Audit of Financial of Financial Statements. This standard requires Audit firms to attest not only to the reliability of a company's financial statements but also to attest to management's assessment of the effectiveness of the company's internal controls over financial reporting. The auditor would be required to understand the systems in place, design and test the system, and provide an analysis on the efficacy of that system.

This would not only be a major initiative for each auditing firm but will also significantly raise the audit cost for the company being audited. Both the auditing firm and the audited company would need to increase staffing to meet this new standard. It is our understanding that even major firms such as Microsoft have voiced concerns about the increased cost that would result from the new standard.

At this point in time there are only four major accounting firms (the Big 4) to perform auditing services on the largest 1000 public companies. This new standard developed to meet the requirements of Sarbanes-Oxley Section 404 (b), will in essence bundle all of this work within the Big 4 firms. In our opinion, this not only contradicts the White House strategy for increasing opportunities for small business, but could violate the spirit of Sarbanes-Oxley by encouraging self dealing amongst firms.

Therefore, we recommend that the standard require the large public accounting firms to subcontract smaller firms to perform the internal control testing requirements. The use of smaller less expensive firms will decrease the cost to the audited companies and provide these smaller firms with greater opportunities and experience in working with larger more sophisticated firms; an experience they can bring to their smaller clientele. The larger firms could provide leadership through oversight of the work.

In their comment to the PCAOB, the independent risk consulting firm Protiviti states,

> "The auditor should be allowed to rely on competent and objective internal auditors (or other similar parties, such as a separate process or risk control group which does not have the responsibility for executing processes) in the performance of walkthroughs that are effectively documented, provided the auditor is able to satisfy himself or herself about the adequacy of this work through appropriate procedures."

In addition, Price Waterhouse Coopers LLP, one of the Big 4 accounting firms, states in their response, in the section Use of the Work of Others

> "We believe that it is appropriate to consider the work of others in certain circumstances. We agree that the auditor's use of others' work must be subject to the auditor's overall conclusion, using professional judgment, that his or her own work provides the "principal" evidence for the auditor's opinion."

We hope you will strongly consider this proposal and include it in the final rule.

Sincerely,

Gregory W. Meeks

Re: PCAOB Release 2003-017
Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements

Dear Secretary:

The Council of Institutional Investors, an association of more than 140 corporate, public and union pension funds collectively holding more than $3 trillion in pension assets, is writing in support of the PCAOB's proposed auditing standard, "An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements."

Audited financial statements are one of the primary sources of information available to guide and monitor Council members' investment decisions. The integrity of these statements is critical to Council members and their millions of pension system participants and beneficiaries. Since effective internal controls are a cornerstone of reliable financial information, Council members are interested in ensuring that internal controls are as effective as possible.

The Council agrees that outside auditors should be responsible for more than simply evaluating the adequacy of management's process for determining whether internal controls are effective. The investing public expects the outside auditor to not simply audit the financial numbers but also to test the effectiveness of a company's internal controls.

The Council wholeheartedly supports the PCAOB's provisions requiring outside auditors to evaluate management's process for determining the effectiveness of internal controls and to test whether the controls are effective and management's determination is appropriate.

Massive accounting scandals in recent years—at large and small companies—have shined a spotlight on outside auditors, audit committees and their critical role in assuring high-quality financial reporting. The Council has supported legislative and regulatory efforts to enhance the independence of audit committees and to ensure greater audit committee and outside auditor accountability to shareholders.

As a result, the Council strongly supports the proposal requiring the outside auditor to evaluate the effectiveness of the audit committee's oversight of the external financial reporting process and internal control over financial reporting, including whether audit committee members act independently from management.

The Council commends the PCAOB for the thoughtful and comprehensive approach taken in this proposed rulemaking. Please contact me with any questions.

Sincerely,

Sarah A.B. Teslik

Re: PCAOB Rulemaking Docket Matter No. 008; Proposed Auditing Standard - An Audit of Internal Control Over Financial Reporting Performed in Conjunction with an Audit of Financial Statements (PCAOB Release No. 2003-017, October 7, 2003)

Ladies and Gentlemen:

Covington & Burling is pleased to respond to the request of the Public Company Accounting Oversight Board for comments on its Proposed Auditing Standard referred to above (as so proposed, the "Standard"). Our comments relate solely to the application of the Standard to consolidated or majority-owned subsidiaries ("Subsidiary Registrants") that have non-equity securities listed on a national securities exchange or quoted in an automated inter-dealer quotation system of a national securities association ("SROs"). We believe that the Standard does not make adequate provision for the Subsidiary Registrant exemption provided by the SEC in its recently adopted Rule 10A-3(c)(2) under the Securities Exchange Act of 1934. In addition, we wish to call to the attention of the PCAOB certain other issues unique to Subsidiary Registrants that are raised by the Standard.

As you know, Securities Exchange Act Rule 10A-3, which was adopted pursuant to Section 301 of the Sarbanes-Oxley Act of 2002, directs SROs to prohibit the listing of any security of an issuer that is not in compliance with prescribed audit committee standards. In response to comments received from Subsidiary Registrants and their parent companies on Rule 10A-3 as initially proposed, the SEC adopted an exemption to Rule 10A-3 as adopted for Subsidiary Registrants (the "Subsidiary Registrant Exemption") if the parent company (a) has a class of common equity securities (or similar securities) listed on an SRO and (b) is subject to, and otherwise in compliance with, Rule 10A-3.[1]

Evaluating the Effectiveness of the Audit Committee's Oversight of the Issuer's External Financial Reporting and Internal Control Over Financial Reporting

Evaluating Audit Committee Independence

Paragraphs 56-59 of the Standard prescribe standards for an auditor's evaluation of the effectiveness of an audit committee's oversight of an issuer's external financial reporting and internal control over financial reporting. The Standard directs auditors to place particular emphasis in the course of their evaluation on the independence of audit committee members from management and an issuer's compliance with applicable listing standards adopted pursuant to Section 301 of the Sarbanes-Oxley Act. These listing standards include Rule 10A-3.

In the SEC Audit Committee Release, the SEC explains that subjecting Subsidiary Registrants to the audit committee independence and other requirements of Rule 10A-3

> would add little additional benefit if the subsidiary is closely controlled or consolidated by a parent issuer that is subject to the requirements. Instead, imposing the requirements on these subsidiaries could create an onerous burden on the parent to recruit and maintain an audit committee meeting the requirements for each specific subsidiary.

Therefore, the SEC determined it was appropriate to exempt Subsidiary Registrants from the requirements of Rule 10A-3.[2] However, the Standard does not provide a corresponding exemption for Subsidiary Registrants.

We note that Rule 10A-3(d) requires an issuer utilizing certain exemptions from Rule 10A-3 to disclose in its annual report and proxy statement the nature of the exemption and its assessment of whether, and if so how, such reliance would materially adversely affect the ability of the issuer's audit committee to act independently and to satisfy the other requirements of Rule 10A-3. The purpose of Rule 10A-3(d) is to alert an issuer's securityholders that an issuer's audit committee may not be acting independently or have systems in place to insure effective oversight of the company's external financial reporting and internal control over financial reporting. Significantly, Rule 10A-3(d) does not require an issuer availing itself of the Subsidiary Registrant Exemption to make such disclosure or assessment. This, we believe, evidences further recognition by the SEC that reliance on the Subsidiary Registrant Exemption does not jeopardize the effectiveness of the Subsidiary Registrant's external financial reporting and internal control over financial reporting.

For the reasons stated above, we believe that evaluation under the Standard of the effectiveness of an audit committee's oversight of the company's external financial reporting and

---

[1] The SEC determined that this exemption was consistent with the purposes and policies of Section 301 of the Sarbanes-Oxley Act and the protection of investors. See Section II(F)(2) of SEC Release No. 33-8220, dated April 9, 2003 (the "SEC Audit Committee Release").

[2] Section II(F)(2)(a) of the SEC Audit Committee Release.

internal control over financial reporting and, in particular, the independence of audit committee members from management, should explicitly recognize that Subsidiary Registrants may be exempt from the application of Rule 10A-3 (including the audit committee independence requirements). The Standard should specifically affirm that the use by a Subsidiary Registrant of such exemption should have no negative effect on the auditor's evaluation of the effectiveness of an audit committee's oversight. By enacting the Subsidiary Registrant Exemption, the SEC has endorsed the view that investor protection is not compromised by exempting Subsidiary Registrants from the audit committee independence requirements (and the other requirements) of Rule 10A-3 where the parent company audit committee is providing that protection, and we strongly urge the PCAOB to endorse that view.

Evaluating the Effectiveness of an Issuer's Audit Committee in Other Contexts

Paragraph 56 of the Standard notes the important role that an issuer's audit committee plays within the company's control environment by setting a positive tone at the top and in monitoring components of internal control over financial reporting by challenging, and creating an environment where others within the Company are able to challenge, the company's financial activities. In order to eliminate any confusion over references to the term "audit committee" as used in paragraph 56 and throughout the Standard, footnote 12 of the Standard provides that if an issuer lacks an audit committee, all references to the audit committee in the Standard shall apply to the entire board of directors of that issuer. As such, footnote 12 reflects the definition of "audit committee" found in Section 3(a)(58) of the Securities Exchange Act of 1934. However, while footnote 12 removes this ambiguity in the audit committee/full board context, it does not address the similar situation that may exist in the Subsidiary Registrant context.

The Standard contains numerous references to the obligation of an auditor to make assessments of an issuer's audit committee's performance on matters other than independence.[3] In the Subsidiary Registrant context, each of these enumerated audit committee activities could be undertaken by any of: (i) the audit committee of a Subsidiary Registrant; (ii) the full board of a Subsidiary Registrant; or (iii) the audit committee of a Subsidiary Registrant's parent. We believe that a Subsidiary Registrant should be able to retain flexibility to allocate these responsibilities as it (or its parent) sees fit (so long as the parent company discharges its obligations to supervise the Subsidiary Registrant's audit committee under Rule 10A-3). For example, there may be circumstances where a Subsidiary Registrant's audit committee monitors its code of ethics while the audit committee of the Subsidiary Registrant's parent oversees the Subsidiary Registrant's external financial reporting process and internal control over financial reporting. We believe that the Standard should be clarified in order to avoid confusion as to what committee or equivalent body is performing the role of "audit committee" for purposes of the Standard and, at the same time, to maintain maximum flexibility for parent companies to manage their Subsidiary Registrants. The Standard should explicitly instruct Subsidiary Registrants and/or their parent companies to include in their management report a specific identification of the committee or equivalent body responsible for each required audit committee

[3] See, e.g., paragraphs 24-25, 39 (bullet seven), 53 (bullet five), 72 (bullet six) and 126 (bullets three and seven) of the Standard.

activity and instruct auditors to assess the committee or equivalent body so identified as being responsible for the particular audit committee activity.

Mandated Communications with an Issuer's Audit Committee

The Standard contains numerous provisions that either require an auditor to make certain communications to the issuer's audit committee or make reference to such communications. These required communications include the following situations in which shortcomings have been identified by an auditor: (a) an auditor's determination that management has failed to meet certain obligations under the Standard (paragraphs 20 and 128(f)); (b) an auditor's identification during the course of an audit of significant deficiencies or material weaknesses in controls (paragraph 100) or in internal controls over financial reporting (paragraphs 190-91); (c) the failure of management to disclose or identify a material weakness in its management report (paragraph 163, second bullet); (d) the presence of a material misstatement of fact in a management report (paragraph 176); (e) the failure of management to respond to an auditor's communication that changes to the issuer's disclosure about changes in internal control over financial reporting are necessary (paragraphs 188-89); and (f) an auditor's identification during the course of an audit of fraud or possible illegal acts (paragraph 192).

In order to avoid any ambiguity in the Standard as to which committee or equivalent body of a Subsidiary Registrant should receive mandated communications from its auditors, we believe that the Standard should clearly state that such required communications should be made to the same committee or equivalent body that pre-approves the retention of the auditor by or on behalf of the Subsidiary Registrant pursuant to Rule 2-01(c)(7) of Regulation S-X.

Section II.H of the SEC Audit Committee Release clarifies that a parent company's audit committee is permitted under Rule 2-01(c)(7) to perform the pre-approval function for any consolidated subsidiaries both with respect to the parent company's consolidated financial statements and with respect to the financial statements of any consolidated subsidiary that also is an issuer.[4] The SEC Audit Committee Release further notes that there may be instances where a controlled consolidated subsidiary issuer has its own audit committee. In this case, only the subsidiary audit committee need pre-approve the auditor's audit services under Rule 2-01(c)(7). Finally, the SEC Audit Committee Release reminded issuers that in circumstances where the SEC's rules require auditors to communicate directly to the issuer's audit committee, the same body responsible for the pre-approval of audit and non-audit services pursuant to Rule 2-01(c)(7) should be the body to whom these required communications are made by the issuer's auditor.

We believe that there should be an explicit statement in the Standard that an auditor must deliver required communications pursuant to the Standard to the same committee or equivalent body that pre-approves the retention of the auditor by or on behalf of the Subsidiary Registrant.

---

[4] Note that "controlled consolidated subsidiary issuers" is a subset of our defined term "Subsidiary Registrant," in that the latter term captures both consolidated subsidiaries and majority-owned subsidiaries. The Rule 10A-3(c)(2) exemption discussed in the first section of this letter applies to "a direct or indirect consolidated subsidiary or an at least 50% beneficially owned subsidiary of the issuer." The SEC discussion of the application of Rule 2-01(c)(7) in Section II.H of the SEC Audit Committee Release applies only to controlled consolidated subsidiary issuers and not to unconsolidated majority-owned subsidiary issuers. We do not believe that this distinction affects the analysis that follows.

This would have the benefit of removing any ambiguity in the Standard over what committee or equivalent body should receive communications required to be delivered to the "audit committee" pursuant to the Standard and harmonizing the Standard with the SEC's application of Rule 2-01(c)(7). We believe this can be most efficiently accomplished by adding a general statement to this effect to the Standard, rather than explicitly modifying each such reference.

* * *

We appreciate the opportunity to comment on the Standard. If you have any questions with respect to this letter or require any further information, please do not hesitate to contact the undersigned (212.841.1060: bbennett@cov.com) or David B.H. Martin (202.662.5128; dmartin@cov.com).

Re.: PCAOB Rulemaking Docket Matter No. 008 – Comments to the Proposed Auditing Standard, "An Audit of Internal Controls Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements"

To the Members of the PCAOB:

The Credit Suisse Group appreciates the opportunity to respond to the request of the Public Company Accounting Oversight Board (PCAOB) for comments on the Proposed Auditing Standard, "An Audit of Internal Controls Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements" ("Proposed Standard").

As a foreign private issuer listed on the NYSE, the Credit Suisse Group (CSG) is pleased to see the attention being given by the SEC and PCAOB to the protection of investors in publicly held companies to restore confidence in the financial markets. CSG believes the spirit of the Sarbanes-Oxley Act, section 404 ("SOX 404") will significantly contribute to restoring confidence in the investment community.

CSG believes the objectives of SOX 404 and the restoration and maintenance of confidence in the financial markets should be achieved in an efficient and cost-effective manner, which is also in the best interests of investors. CSG has identified three general areas in the Proposed Standard that it finds to be of concern in relation to the role of the external auditor in reviewing an organization's internal controls over financial reporting, including the related management assessment of these controls, the proposed definitions of significant deficiency and material weakness, and testing type, size and timing.

A. Auditing Management's Assessment vs. Direct Evidence by the External Auditor

This comment addresses elements of the following questions from the PCAOB:

6. Is the scope of the audit appropriate in that it requires the auditor to both evaluate management's assessment and obtain, directly, evidence about whether internal control over financial reporting is effective?

12. To what extent should the auditor be permitted or required to use the work of management and others?

14. Does the proposed standard give appropriate recognition to the work of internal auditors? If not, does the proposed standard place too much emphasis and preference on the work of internal auditors or not enough?

15. Is the flexibility in determining the extent of re-performance or the work of others appropriate, or should the auditor be specifically required to re-perform a certain level of work?

CSG's understanding of the initial basis of review for SOX 404 was that the external auditor would review management's assessment of internal controls over financial reporting. The Proposed Standard extends such review to encompass significant additional work by the external auditor to acquire "direct evidence" of the effectiveness of internal controls over financial reporting. In the spirit of SOX 404, CSG believes the Proposed Standard should focus primarily on ensuring that management is effectively assessing the company's internal controls over financial reporting.

CSG is concerned that such additional work by the external auditor to obtain direct evidence of the design and operating effectiveness of internal controls over financial reporting in addition to reviewing management's assessment:

- will lead to potentially a triple review of certain internal controls, as external audit, internal audit and management may review the same areas;
- will result in documentation and related testing work performed by management being re-created or re-performed by external audit to obtain direct evidence or to perform walk-throughs; and
- does not take sufficient account of the role of an existing, independent and effective internal audit function to provide external audit with additional support for its conclusions.

CSG recognizes that the external auditor must consider the materiality of specific financial statement line items, associated risk and the likelihood and impact of potential misstatements in performing its SOX 404 review work. CSG believes, however, that through the use of sound, professional judgment by the external auditor, the documentation and testing work that the external auditor should be permitted to rely on – including that of management's assessment – should extend further than suggested in the Proposed Standard.

Finally, CSG is concerned that if the external auditor is not permitted greater flexibility in relying on the process by which management performs this assessment and the quality of the results obtained, the additional costs associated with external audit fees and the duplicated efforts of company personnel to support the external auditor's direct evidence collection are not an effective use of the company's financial and other resources in light of the benefit to investors.

B. Material and Significant Weaknesses – Degree of Weaknesses Requiring an Adverse Opinion

This comment addresses elements of the following questions from the PCAOB:

> *17. Will the definitions in the proposed standard of significant deficiency and material weakness provide for increased consistency in the evaluation of deficiencies? How can the definitions be improved?*
>
> *25. Is it appropriate that the existence of a material weakness would require the auditor to express an adverse conclusion about the effectiveness of the company's internal control over financial reporting, consistent with the required reporting model for management?*
>
> *26. Are there circumstances where a qualified "except for" conclusion would be appropriate?*

CSG believes the definitions of "significant deficiency" and "material weakness" should be conformed to existing definitions in U.S. generally accepted auditing standards AU Section 325, *Communication of Internal Control Related Matters Noted in an Audit*, and AT Section 501, *Reporting on an Entity's Internal Control Over Financial Reporting*. CSG believes the Proposed Standard departs significantly from these existing accounting standards to make the threshold so low for determining significant deficiencies that there is almost no distinction between a deficiency in internal control over financial reporting and a significant deficiency. CSG is concerned that under the Proposed Standard most well-controlled companies would have significant deficiencies, and that would do nothing to improve the quality of financial reporting or investor understanding or confidence in financial reporting. Significant deficiencies in internal controls over financial reporting could become routine events, with little meaning for investors, causing companies and their management and internal and external auditors to use resources to report and correct deficiencies that are not commensurate with the effect they may have on the quality of financial reporting.

The Proposed Standard states that if one material weakness exists, or if several significant deficiencies exist that may aggregate to a material weakness, the auditor must issue an adverse opinion.

In the event a material weakness should exist, CSG believes that the external auditor should use its professional judgment to evaluate the type of weakness, mitigating controls, efforts to remedy the situation, as well as other relevant factors in assessing the impact on the audit opinion. The determination of the external auditor to issue a qualified or adverse opinion on the internal controls over financial reporting should be based on such evaluation and not solely on the quantitative existence of a material weakness, although cases will arise in which the quantitative effect of a material weakness results in a misstatement to the financial statements so material that the external auditor must issue an adverse audit opinion. The external auditor should have the flexibility to evaluate the efforts by an organization to correct, improve or mitigate areas of weakness, especially in the absence of material misstatements to the financial statements. Such efforts are a sign of effective internal controls to address new risks and weaknesses and resolve such issues promptly.

C. Testing Type, Size and Timing

This comment addresses elements of the following question from the PCAOB, in addition to addressing generally other elements of the overall section in the Proposed Standard on testing of operating effectiveness:

> *11. Is it appropriate to require the auditor to obtain evidence of the effectiveness of controls for all relevant assertions for all significant accounts and disclosures every year or may the auditor use some of the audit evidence obtained in previous years to support his or her current opinion on management's assessment?*

As performed during the course of normal audit work, auditors will regularly review the control risks, materiality of related financial statement line items and potential for misstatement, and historic experiences with various areas of a company's internal controls. CSG believes that the external auditor should be allowed to use its professional judgment based on, but not limited to, the above considerations, to determine which accounts and disclosures should be tested and whether or not these need to be tested on an annual basis. CSG recognizes that there will certainly be areas that the external auditor will, however, continue to test on an annual basis based on its judgment and risk assessment. CSG believes this same approach is relevant when reviewing management's assessment of the internal controls over financial reporting.

Related to the general topic of testing of operating effectiveness, CSG has the following comments:

The Proposed Standard includes examples of testing type, size and timing. These are discussed as being examples on which the external auditor could base the scope of its work. CSG believes that these should, however, be the basis for evaluating the quality of management's assessment and not the type, size and timing of testing necessarily expected of management in its assessment work.

CSG believes that testing type, size and timing should be a determination of management and be an integral part of assessing the adequacy of management's assessment process. Management will need to consider a number of factors in determining types and timing of tests and test size, including the nature of controls, frequency in which the controls are performed, potential impact and likelihood of risk addressed by the control.

The external auditor will subsequently have to judge whether management's assessment, including the testing type, size and timing, is effective and whether its basis for testing performance is appropriate.

We look forward to the completion of the final version of the Proposed Standard to enable an effective and efficient implementation of the requirements of SOX 404.

Should you have specific questions regarding our comments, we are pleased to discuss the practical concerns we have with members of the PCAOB.

Sincerely yours,

Philip Ryan

Subject: PCAOB Rulemaking Docket Matter No. 008

We are pleased to comment on the proposed Auditing Standard, "An Audit of Internal Control Over Financial Statement Reporting Performed in Conjunction with an Audit of Financial Statements." We understand the need to quickly prepare guidance for the numerous audits of internal control required by the Sarbanes-Oxley Act of 2002. Following are changes we suggest to improve the guidance in the proposed Standard and the resulting reports that will be issued.

1. The report on internal control over financial reporting that is included in the proposed Standard should be significantly revised. The proposed report is based on criteria that will be obscure to most users, and the report is not sufficiently descriptive or informative for most users.

First, the criteria referred to in the proposed report are not widely-known. Users now have a general understanding of "generally accepted accounting principles" and thus can absorb what that reference means when they read it in an auditors' report. Their understanding is assisted by the footnote disclosures of the accounting principles used. In the proposed report on internal control over financial reporting, however, the "criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission" does not provide this understanding to users. Quickly, what are these criteria? How does "Internal Control—Integrated Framework" relate to "internal control over financial reporting"? Who are the Sponsoring Organizations and what is their authority to specify something? Who or what is the Treadway Commission? Why should this Framework be used as a basis for reporting? What does this Framework say? Is the Treadway Commission still active and updating its work as needed? How can someone get a copy of what the Treadway Commission issued? Why does the auditor's report on financial statements refer to PCAOB standards while the report on internal control over financial reporting refers to Treadway Commission standards?

In short, users will not adequately understand the basis used to evaluate internal control over financial reporting, and thus are likely to not understand, or to misunderstand, the report. More discussion in the management report and the auditor report of the criteria used is needed.
